Climate Change

EU Ministers Agree to Cuts for Non-Emissions Trading Sectors

European Union environment ministers agreed in principle to implement a range of greenhouse gas emissions cuts through 2030 for certain sectors of their economies not covered by the EU's emissions trading system.

Coal Mining

Coal Plants Are Dying in America's Most Energy-Friendly State

Even in the heart of America's energy industry, coal can't catch a break.

Coal-Fired Power Plants

The End of Coal Will Haunt Navajo Power Station

Percy Deal, 67, lives in the same small, three-bedroom stone house he grew up in, situated in the remote Navajo village of Cactus Valley, Ariz. Like many homes in this part of the country, Deal's lacks running water, so once a month, he drives his pickup truck 17 miles to a public pump, where he fills three 55-gallon drums to bring back home. On the living room wall, his father's ceremonial feathers and sweat-stained cowboy hat hang over the couch next to a framed poem his father ...

Emissions Trading

EU Carbon Slides After Lawmakers Fail to Reach Overhaul Deal

European Union carbon allowances fell the most in almost three weeks after the bloc's negotiators failed to reach a deal Oct. 13 to overhaul the region's cap-and-trade program, prolonging uncertainty over the fate of a plan to alleviate a market glut.

Energy

Energy Regulator 'Sympathetic' on Perry's Coal, Nuclear Plan

Federal Energy Regulatory Commission Chairman Neil Chatterjee said Oct. 13 he's "sympathetic" to Energy Secretary Rick Perry's proposal aiming to prop up coal and nuclear plants in certain competitive energy markets.

Environmental Reviews

Green Investors Seek More Data from Companies, More Frequently

Annual sustainability reports just aren't cutting it as investors pump more money into ethical investment funds.

Hydropower

Canada Wants to Solve U.S. Nuclear Problems with Faraway Dams

The key to replacing aging nuclear plants in the U.S. Northeast may lie 1,000 miles away, along a remote river tumbling through the Canadian wilderness.

Regulatory Policy

White House Environmental Adviser's Confirmation Faces Logjam

President Donald Trump's pick for the White House's top environmental adviser faces a slow path to confirmation and strong opposition from Senate Democrats.

Renewable Energy

Rooftop Solar, Batteries Go on Every Home in Arizona Development

Arizona's ample sunshine will be put to work to eliminate utility bills for residents of a residential development planned for Prescott Valley, the largest U.S. planned residential community to use systems linking each home to create a neighborhood-wide power grid.

AIR
IPCC Sixth Assessment Report/Request for Nominations
AIR

Notice of the State Department, U.S. Global Change Research Program, announces a request for nominations for scientists to serve as coordinating lead authors, lead authors, or review editors on the Working Group I, II, and III contributions to the Intergovernmental Panel on Climate Change (IPCC) Sixth Assessment Report. The outlines for the contributions of the working groups were adopted at the 46th session of the IPCC Plenary. Nominations are due Oct. 17, 2017. Contact: Christopher Allison; State Department, Office of Global Change; 202-647-4295

ENDANGERED SPECIES
California/Marine Mammal Incidental Takes

ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of a request from the U.S. Coast Guard for authorization to take eight species of marine mammals incidental to pile driving activities for waterfront repairs at the USCG Monterey Station in Monterey, Calif. The applicant requests take by Level B harassment during in-water construction between Oct. 16, 2017, and Oct. 15, 2018. Comments are due Oct. 13, 2017. Contact: Stephanie Egger; NMFS, Office of Protected Resources; 301-427-8401

82 FR 42986 (09/13/2017)

Regulatory Update

FOOD SAFETY
Produce Safety Regulation/Agricultural Water
FOOD SAFETY

Proposed rule of the FDA would extend the deadlines for compliance with agricultural water provisions of the Produce Safety Regulation (80 FR 74354; 11/27/2015) for covered produce other than sprouts to four years after the relevant farm's compliance date for all other provisions of the regulation. The rule would establish the same deadlines for all agricultural water provisions as applied to nonsprout produce, while retaining date staggering based on farm size. The extension would provide additional time to address questions about implementation of certain provisions, including testing requirements for preharvest agricultural water. The rule is issued in compliance with Executive Orders 13563, 13771, and 13777, which require agencies to consider possible reductions in regulatory burden or increased flexibility for compliance. An Aug. 24, 2016, final rule (81 FR 57784) clarified the compliance dates for certain agricultural water testing provisions as originally established in the Produce Safety Regulation. Comments are due Nov. 13, 2017. Contact: Samir Assar; FDA, Center for Food Safety and Applied Nutrition; 240-402-1636. Citations: 21 CFR 112.41-112.50

GENERAL ENVIRONMENT AND SAFETY
Application to Export Electric Energy/J. Aron and Co.
GENERAL ENVIRONMENT AND SAFETY

Notice of the Energy Department, Office of Electricity Delivery and Energy Reliability, announces the receipt of an application from J. Aron and Co., of New York, for authority to transmit electric energy from the U.S. to Mexico as a power marketer for a five-year term using existing international transmission facilities. The applicant does not own or control any electric generation or transmission facilities and does not have a franchised service area. The energy proposed for export would be surplus energy purchased from third parties. The agency will make a final decision after an environmental impact assessment and a determination that the action will not have an adverse impact on the sufficiency of supply or reliability of the U.S. electric power supply system. Comments, protests, or motions to intervene are due Oct. 13, 2017. Contact: Angela Troy; DOE, Office of Electricity Delivery and Energy Reliability; 202-586-1411; Angela.Troy@hq.doe.gov

GENERAL ENVIRONMENT AND SAFETY
NCEH/ATSDR Board of Scientific Counselors Meeting
GENERAL ENVIRONMENT AND SAFETY

Notice of the National Center for Environmental Health/Agency for Toxic Substances and Disease Registry (NCEH/ATSDR) announces the cancellation of a Sept. 13-14, 2017, meeting of the Board of Scientific Counselors (82 FR 34674; 07/26/2017). The agenda would have addressed noise-induced hearing loss, the Flint Registry, program responses to the board's guidance and action items, the status of blood lead level reference value updates, and legislative requirements of the new Lead Exposure Poisoning Federal Advisory Committee. The agenda also would have included updates concerning the amyotrophic lateral sclerosis, lead poisoning prevention, and environmental health tracking programs. In addition, the agenda would have included updates from the center's director and from the NIH, the EPA, the National Institute for Occupational Safety and Health, and the Energy Department. The meeting is cancelled due to Hurricane Irma.

HAZARDOUS MATERIALS TRANSPORTATION
Railroad Safety
HAZARDOUS MATERIALS TRANSPORTATION

Notice announces the intention of the Federal Railroad Administration to seek OMB approval for four continuing information collection requests. The first collection addresses the movement of certain railroad freight cars without air brakes from initial terminal locations or through interchange locations under certain conditions (formerly Interstate Commerce Commission Order 13528) and associated labeling requirements. The second collection addresses the requirement for the dispatching of railroad operations in the U.S. to be performed in the U.S., with exemptions for dispatching from Mexico or Canada in emergency situations. The third collection addresses minimum safety requirements for camp cars provided by railroads as sleeping quarters to employees. The fourth collection addresses the requirement for a railroad or contractor that employs one or more safety-related employees to develop and submit a training program to the FRA for approval and to designate minimum training qualifications for each occupational category of employee. Comments are due Nov. 13, 2017. Contact: Robert Brogan; FRA, Office of Railroad Safety; 202-493-6292. Citations: 49 CFR 228, 232.3(d), 241, 243

HAZARDOUS MATERIALS TRANSPORTATION
Railroad Safety/Human Error in the Locomotive Cab, Locomotive Operating Mode
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the Federal Railroad Administration announces the submission of two new information collection requests to the OMB regarding the Department of Transportation's safety strategic goal as it relates to locomotives. The first collection addresses the identification and evaluation of potential for human error associated with the operation of systems and automation in the locomotive cab. The second collection addresses the design and evaluation of a prototype locomotive operating mode that allows operators to manually control a train by providing a

desired speed target while the control system determines the throttle notch changes required. Comments are due Oct. 13, 2017. Contact: Kim Toone; FRA, Office of Information Technology; 202-493-6132; Kim.Toone@dot.gov

PESTICIDES
Pesticide Enforcement Response/Dicamba Applications
Arkansas PESTICIDES

Proposed rule of the State Plant Board amends pesticide enforcement response regulations. The rule increases the maximum civil penalty to $25,000 for egregious violations from applications of dicamba, an auxin-containing herbicide, or any new herbicide technology released that results in significant off-target crop damage. The rule also defines "auxin pesticides," "egregious violation," "off-target," "off-target crop damage," and "damage." The proposal currently is in effect as an emergency rule, expiring Nov. 29, 2017. A hearing is scheduled for Sept. 21, 2017, in Little Rock. Comments are due Sept. 19, 2017. California Regions

AIR
Indirect Source Review
California Regions AIR

Notice of the San Joaquin Valley Air Pollution Control District announces an additional workshop on a proposed rule to amend regulations under Rule 9510 regarding indirect air pollution sources. The rule revises the applicability of nitrogen oxides (NOx) and particulate matter (PM-10) emission reduction requirements for large development projects that have not been subjected to a discretionary approval and specifies thresholds for large development projects. The rule also removes references to the URBEMIS urban emissions model and adds seismic safety retrofits to

the list of exemptions. In addition, the rule eliminates the $50,000 minimum fee deferral qualifier and down payment and specifies payment of applicable fees is required prior to generating any emissions. Finally, the rule clarifies that the off-site fee rate is based on the fee rate applicable at the time of invoicing, requires changes in project ownership to be reported, and revises definitions. The workshop is scheduled for Aug. 29, 2017, in Fresno and via teleconference and webcast. Comments are due Sept. 12, 2017. Controlling Pollution/Title V Operating Permits
Iowa AIR

Notice of the Environmental Protection Commission announces an additional hearing on and the extension of the comment period for a Jan. 18, 2017, proposed rule to amend regulations under 567 IAC 22.1 and .105 concerning control of pollution. The rule clarifies the types of mailing services that may be used to submit construction permit and Title V operating permit applications, specifies that applications are not required to be submitted by certified mail, and addresses electronic signatures and electronic media submission requirements. The rule also eliminates the requirement for certain construction permit applicants to submit a greenhouse gas form with the construction permit application for those applicants that indicate the project description includes no such emissions. In addition, the rule reduces to one the number of application copies that must be submitted for a Title V operating permit. The hearing is scheduled for Sept. 5, 2017, in Windsor Heights. Regulatory Update

WATER
TPDES General Permit/Construction Stormwater
Texas WATER

Notice of the Texas Commission on Environmental Quality announces the proposed amendment

and renewal of a Texas Pollutant Discharge Elimination System (TPDES) general permit (General Permit No. TXR150000) that authorizes the discharge of stormwater and certain nonstormwater from construction sites into or adjacent to water in the state. Dischargers would be required to submit a notice of intent (NOI) to obtain authorization to discharge under the permit. The permit also specifies when permit coverage can be obtained without submitting a NOI, when a waiver from permit coverage may be obtained, and when permit coverage under a separate individual TPDES permit must be obtained. A meeting is scheduled for Sept. 18, 2017, in Austin. Comments are due Sept. 18, 2017. Contact: TCEQ, Water Quality Division; 512-239-4671

Regulatory Update

Virginia

WATER
VPDES General Permit for Vehicle Wash Facilities and Laundry Facilities
Virginia WATER

Final rule of the Department of Environmental Quality, State Water Control Board, amends regulations under 9 VAC 25-194-10, -15, -40, -50, -60, and -70 to revise and reissue the Virginia Pollutant Discharge Elimination System (VPDES) general permit for vehicle wash facilities and laundry facilities that expires Oct. 15, 2017. The general permit establishes limitations and monitoring requirements for point source discharge of treated wastewaters from facilities to surface waters. The rule revises general permit provisions to clarify that vehicle washing includes towed small recreational boats; to require permittees to notify the municipal separate storm sewer system (MS4) owners before obtaining coverage under the general permit if their discharges are into an MS4; to clarify that inspections of the effluent include sheen, floating solids, visible foam, examination date and time, and examination personnel; and to require effluent to be free of sheen. The rule also requires discharges of vehicle wash water directly to a stormwater drain to provide inlet protection measures. The rule is effective Oct. 16, 2017. Regulatory Update

WATER
VPDES Permit for Potable Water Treatment Plants
Virginia WATER

Proposed rule of the Department of Environmental Quality, State Water Control Board, amends regulations under 9 VAC 25-860-10 through -70 regarding the Virginia Pollutant Discharge Elimination System (VPDES) permit for potable water treatment plants. The rule removes the requirement to submit a groundwater monitoring plan with the registration if the plan has been previously submitted and approved and allows the electronic submission of registration statements. The rule also removes the allowance for reduced monitoring for reverse osmosis plants, requires a corrective action plan when groundwater is contaminated, and revises the requirement for conducting whole effluent toxicity testing from facilities with certain maximum flows. In addition, the rule changes the effective date of the general permit to July 1, 2018, and

specifies an expiration date of June 30, 2023. A hearing is scheduled for Sept. 28, 2017, in Richmond. Comments are due Oct. 20, 2017. Contact: Elleanore Daub; DEQ; 804-698-4067; elleanore.daub@deq.virginia.gov

Regulatory Update

WATER
VPDES Permit/Petroleum-Contaminated Sites, Groundwater Remediation, Hydrostatic Tests
Virginia WATER

Proposed rule of the Department of Environmental Quality, State Water Control Board, amends regulations under 9 VAC 25-120-15 through -80 (nonconsecutive) regarding the Virginia Pollutant Discharge Elimination System (VPDES) permit for discharges from petroleum-contaminated sites, groundwater remediation, and hydrostatic tests. The rule includes "associated distribution equipment" as components that can be hydrostatically tested under general permit coverage, requires permittees to notify a municipal separate storm sewer system (MS4) owner of a discharge at the time of registration under the general permit and to include a copy of that notification with the registration statement, and clarifies management practices for dewatering projects. The rule also establishes requirements for the management of hydrostatic discharge flows and clarifies reporting requirements for total residual chlorine data. In addition, the rule changes the effective date of the general permit to Feb. 26, 2018, and specifies an expiration date of Feb. 25, 2023. A hearing is scheduled for Sept. 28, 2017, in Richmond. Comments are due Oct. 20, 2017. Contact: Matthew Richardson; DEQ; 804-698-4195; matthew.richardson@deq.virginia.gov

From: POLITICO
Sent: Tue 10/17/2017 7:45:17 PM
Subject: BREAKING NEWS: Cochran returns to the Senate

Senate Appropriations Committee Chairman Thad Cochran (R-Miss.) has returned to Washington after spending several weeks at home recovering from medical issues, he said in a statement Tuesday.

"I am pleased to be back in Washington where I look forward to continuing work on the 2018 appropriations bills and to taking part in the debate on the budget and tax cuts," Cochran said. "I appreciate all the support and kind words I received while at home."

His office said Cochran is still being treated for urological issues and that could affect his work schedule at the Capitol. Senate Republicans plan to pass a budget resolution later this week and the absence of Cochran, a reliable GOP vote, could have complicated that goal.

Clean Power Plan Repeal Proposal Coming This Fall, EPA Says

The long-awaited proposal to repeal the Clean Power Plan is coming this fall, according to the EPA.

Contribution

Food Additive Maker's Superfund Complaint Too Skimpy

Emerald Kalama Chemical didn't include sufficient facts in its Superfund complaint to put a biosolids recycler on notice of the claims against it, the Western District of Washington ruled (Emerald Kalama Chem., LLC v. Fire Mountain Farms, Inc., 2017 BL 313963, W.D. Wash., No. 17-cv-5472, 9/6/17).

Cost Recovery

Ruling Sinks Shipyard's Superfund Claims

Passive migration of benzene from a former steel mill to an adjoining shipyard, with no "active" conduct by the mill's current owners, doesn't make them liable for a "disposal" under Superfund, the District of Maryland ruled (SPS LP v. Sparrows Point, LLC, 2017 BL 313775, D. Md., No. 14-cv-00589, 9/6/17).

Energy

Correction

The article "Rule Expediting Small Natural Gas Exports May Have Limited Impacts" dated Sept. 5 has been corrected to say that applicants cannot export more than 0.14 billion cubic feet per day of natural gas in order to qualify for the expedited approval process offered to small-scale natural gas exporters.

Energy

Energy Regulator Nominees Back Technology-Neutral Stance

Republican and Democratic nominees for the Federal Energy Regulatory Commission agreed that the agency should be technology neutral when it comes to regulating electric

power generation, differing from a pro-coal stance of the current FERC chairman.

Energy
Trump's Trade Barrier Push Threatens U.S. Energy Profits, Critics Say
Trade expansion poses the biggest potential boon to U.S. energy companies, yet the Trump administration's rhetoric threatens that prospect, said several speakers at an event to discuss NAFTA renegotiations.

International Climate
Democrats' Last-Ditch Effort to Aid Climate Fund Falls Short
A last-ditch Democratic effort to restore U.S. spending for a United Nations climate fund was narrowly repelled by Republican Senate appropriators Sept. 7 in a major step for President Donald Trump's campaign to zero out international aid to address climate change.

Mining
Chilean Court Order on Wetlands Impacts May Shut Kinross Mine
The future of Kinross Gold's mining operations in northern Chile could depend on whether the Canadian company successfully appeals a court decision limiting the amount of water it can extract from wells near sensitive wetlands.

Mining
Rare Earth Metals Electrified by China's Illegal Mining Clean-Up
Rare earth metals are booming again as a clampdown on wildcat miners in China crimps supply in the world's biggest producer, while the clean energy boom bolsters their use in everything from electric vehicles to wind turbines.

Motor Vehicles
Ontario to Pick Up Tab for Low-Carbon Commercial Trucks
Ontario businesses that lease or buy vehicles with low carbon dioxide emissions are eligible for rebates of up to 50 percent as part of the province's C$170 million ($140 million) incentives package.

Natural Resources
Interior Nominee Seeks Collaboration on Land Management
A nominee for a top role managing energy and other federal land resources said he would collaborate with state, local, tribal, private, and environmental advocacy interests to try to smooth out land management policies.

Pesticides
France Ready to Vote 'No' on EU's Glyphosate Renewal Plan
France will not support a proposal extending the European Union's authorization of glyphosate through 2027 and will work with farmers to find alternatives to the herbicide, according to the prime minister's office.

Renewable Energy
Brazil's Rattled Wind Power Supply Chain Looks Ahead
Suppliers in Brazil are hoping the upcoming energy auctions will kick-start a jittery wind-power sector that's trying to deal with the country's worst recession in decades, officials from several companies told Bloomberg BNA.

Renewable Energy
China Eyes 707 Megawatts of Pilot Wind Farms Free of Subsidies
China, the world's biggest clean-energy investor, selected 707 megawatts of wind power

pilot projects that will receive the same subsidy-free payment for electricity as coal plants.

Renewable Energy

South Korea Pours Millions Into Building Solar Panels on Landfills

Landfills are not just for garbage anymore. At least not in South Korea where the government and a landfill operator are coordinating to place solar power facilities at four disposal sites.

Trade Policy

Buoyed by WTO Ruling, Argentina Seeks U.S. Biodiesel Duties Deal

Argentina is negotiating a "price-volume" deal with the U.S. that could suspend preliminary antidumping duties, a Foreign Ministry official said Sept. 7.

Vehicle Fuels

U.S. Ethanol Industry Asks Trump to Intervene in Brazil Dispute

U.S. ethanol producers will ask the Trump administration to intervene in a trade dispute with Brazil as tensions between the industry and foreign competitors continue to escalate.

Wyoming Natural Resource Data Collection Laws Target Free Speech

A challenge to a pair of Wyoming laws that restrict the ability to collect natural resource data on public lands was reinstated by the U.S. Court of Appeals for the Tenth Circuit (Western Watersheds Project v. Michael, 2017 BL 314483, 10th Cir., No. 16-cv-8083, 9/7/17).

Subject: Morning Media: Murdoch wants Bannon out -- Is Laura Ingraham the next Fox host? -- Scaramucci show soldiers on

By Hadas Gold | 08/15/2017 06:23 AM EDT

With Alex Weprin

A BEVY OF NEWS ABOUT FOX NEWS WENT DOWN YESTERDAY. Let's break it down:

RUPERT MURDOCH WANTS STEPHEN BANNON OUT -- CNN reported earlier this week that the media mogul, and regular adviser to President Donald Trump, dined at the White House earlier this month. Now we know more. According to The New York Times, Murdoch urged Trump to fire Chief Strategist and former Breitbart Chairman Stephen Bannon. That Murdoch isn't a fan of Bannon doesn't surprise many -- the Times says he's been "in open warfare with Mr. Bannon since the spring." In fact as Breitbart White House correspondent Charlie Spiering pointed out, Bannon has been open about his feelings on Murdoch, telling The Hollywood Reporter after the election last year that the Murdochs "got it more wrong than anybody" and that "Rupert is a globalist and never understood Trump."

"Dems, CEOs, est. GOP and Conservatives, Media, all want Bannon gone - same forces never wanted Trump win - Bannon in full honey-badger mode," Spiering added on Twitter yesterday.

-- Can we just take a moment to note how we're barely blinking at the idea that the head of a news network (Murdoch took over operations at Fox News after its former CEO Roger Ailes was pushed out) is a regular adviser to the president? How does that affect the work of the actual journalists at Fox News?

IS LAURA INGRAHAM GETTING HER OWN PRIMETIME FOX NEWS SHOW? Matt Drudge tweeted and then posted on his website yesterday "FALL PREVIEW: Laura Ingraham's prime time to shine! After years in the trenches, much deserved." Ingraham has long been a presence at Fox and was once a regular guest host. I had started hearing rumblings last week that there might be a primetime shakeup at Fox. My Fox sources said it's just talk for now, but a possible lineup I'm hearing could see "The Five" move from 9 p.m. back to its original 5 p.m. time slot; Bret Baier's "Special Report", Martha MacCallum's "The Story", and "Tucker Carlson Tonight" remaining in their respective 6 p.m., 7 p.m. and 8 p.m. slots; Sean Hannity could be moved up to his previous timeslot at 9 p.m., which would open up Laura Ingraham to a possible 10 p.m. slot. (I've also heard the suggested that Ingraham could also take the 9 p.m. slot for a head-to-head with Rachel Maddow at MSNBC). Of course Eric Bolling's situation is still up in the air - the network says he's still suspended pending an ongoing harassment investigation so that could change things. But Ingraham in the primetime lineup would add a big name (and a woman) to the network which has been increasingly battling with MSNBC for primetime ratings. Fox sources I spoke to said nothing concrete has happened yet, but they take Drudge reports about Fox seriously, considering his past record on scoops about the network (Hannity also

retweeted Drudge's tweet). Ingraham declined to comment and a Fox spokesperson did not respond to requests for comment.

FOX NEWS' GREGG JARRETT GOT A TRUMP EXCLUSIVE THAT THE CHANNEL BARELY TOUCHED for most of the day. Around midday yesterday the Fox anchor posted the story -- from a "conversation" with the president at his New Jersey golf club over the weekend -- that Trump would seriously consider pardoning the former longtime sheriff for my hometown county in Arizona, Joe Arpaio. But though the story posted around 1 p.m., it was not featured or mentioned on air until that evening. Usually exclusive scoopy stories like this would get major airplay and reporters would be sent promos -- but if you were watching Fox News yesterday afternoon it was not mentioned until "Special Report," which did not even note that the interview was done with a Fox News correspondent. We reached out to Fox News to ask whether this was a formal interview, what the nature of the conversation was (why was Jarrett at Trump's golf club?) and why Fox was barely mentioning an exclusive (which garnered several other news stories) that would normally be heavily promoted by the network.

FOX PAID $50 MILLION TO SETTLE SEXUAL HARASSMENT ALLEGATIONS IN THE LAST YEAR according to 21st Century Fox's annual 10-K filing with the Securities and Exchange Commission. "$50 million of costs related to settlements of claims arising out of allegations of sexual harassment and discrimination at the Company's Fox News Channel business," the filing notes. As New York Times reporter Emily Steel noted on Twitter , "That figure does not include payouts to the men ousted because of sexual harassment allegations. That was $40m to Ailes + $25m to O'Reilly."

Good morning and welcome to Morning Media! Until Aug. 16 you can reach me at hgold@politico.com / and forever more at @Hadas_Gold. Morning Media is edited by **Alex Weprin** (**@alexweprin** / **alexweprin@gmail.com**) and produced with writing/reporting help from **Cristiano Lima**. (**clima@politico.com** / **@ludacristiano**). **Archives**. **Subscribe.**

SINCLAIR'S RISKY REGULATION GAMES, via Alex Weprin: Sinclair Broadcasting, the local TV giant, has been aggressively lobbying for changes to FCC regulations since before President Trump took office in the hopes of securing a larger national footprint. As The New York Times noted , that lobbying seems to have paid off, as the FCC gave Sinclair a "UHF discount," effectively expanding the number of markets it can buy stations in. As Sinclair moves forward with its plan to buy Tribune Media's local TV stations, that move and others are coming under tougher scrutiny from public interest groups, and even some conservative cable news channels, that oppose Sinclair's expansion.

-- President Obama's FCC chairman, Tom Wheeler, wrote an op-ed for The Brookings Institution arguing that FCC chairman Ajit Pai has been too forgiving in his handling of the Sinclair-Tribune tie-up. "The richness of the record on this matter would suggest that even though the Trump FCC has bent the rules to facilitate such a merger, it is not in the public interest," Wheeler wrote.

TRUMP FINALLY DENOUNCED WHITE SUPREMACISTS BY NAME ON MONDAY, BUT HE ALSO QUICKLY PIVOTED TO AN ATTACK ON THE MEDIA, after facing

criticism for not calling out the white supremacists immediately following the events in Charlottesville on Saturday. Every broadcast network and cable news channel covered the statement, where Trump took no questions (remember that 'press conference' he teased last week?) At a second appearance on Monday to announce an investigation into China's trade practices, CNN's Jim Acosta managed to get in a couple quick questions, but when he asked if they could ask more, Trump said "But, you know, I like real news, not fake news," Trump said as he pointed at Acosta. "You're fake news." (More here from my colleague Nolan McCaskill.) Trump also took to Twitter to complain, saying he "Made additional remarks on Charlottesville and realize once again that the #Fake News Media will never be satisfied...truly bad people!"

-- Late last night the president retweeted a tweet about the national media 'ignoring' violence in Chicago. The tweet was from Jack Posobiec, a far-right media figure who helped push the Pizzagate conspiracy theory.

THE SCARAMUCCI SHOW IS ON FULL BLAST: After laying low for all of one week or so, the former White House Communications Director Anthony Scaramucci, whose 10-day tenure made plenty of news, is back in the public eye with a vengeance. "Mooch" appeared on ABC's "This Week," Stephen Colbert's "Late Show" on CBS, an ABC podcast, the celebrity news show Extra! and did a bevy of livestreams where he has has been taking questions. He's clearly loving the attention: Just watch how he reacts when Colbert urges him to answer questions as his alter ego "The Mooch."

REVOLVING DOOR:

-- Bloomberg Businessweek's Joshua Green (who just published a book about Stephen Bannon and Donald Trump called "Devil's Bargain") has joined CNN as a political analyst.

-- Fritzie Andrade has joined the New York Media (parent company of New York magazine) as director of video. Andrade will develop series for the company's brands, including Vulture, the Cut, Daily Intelligencer, Select All, and Grub Street. Andrade comes from Gizmodo Media Group, where she was executive video director.

-- Jen Peros is returning to US Weekly as managing editor after a stint at Entertainment Tonight, per The New York Post's Page Six.

SOUNDBITE: "Babies aren't groundhogs - they move and act different." [then-Bill de Blasio spokesman Phil Walzak, in an email to a New York Times reporter]

EXTRAS:

-- Vice is partnering with AirBnB to offer curated "experiences" in cities like New York, Paris and Cape Town. [WSJ]

-- GoDaddy and later Google pulled their hosting support for neo-nazi website The Daily Stormer, after it mocked the victim of Saturday's violence in Charlottesville, and praised the driver of the car that plowed into a group of anti-nazi protesters. [NBC News]

-- A Swedish journalist is missing after a homemade submarine she was on sank. The man who created the submarine originally said he dropped her off at port before the accident, but has since changed his story. [Washington Post]

-- "ABC World News" anchor David Muir is one of Esquire magazine's "mavericks of the year," featured in the September issue. Keep an eye on your newsstand.

-- Facebook is rolling out a trending news section on its mobile app, now with its own dedicated link. [TechCrunch]

-- "Austin Tice Has Been Missing in Syria for Five Years. His Family and Friends Haven't Stopped Searching For Him." [Washingtonian]

-- The producers of the AMC TV show "The Walking Dead" are suing the channel in a profit-sharing case that could top $1 billion in damages. [THR]

-- Brexit leader and Fox News contributor Nigel Farage is close to inking a deal with a Hollywood studio to tell the story of the referendum campaign. [Daily Express]

November 29, 2017

Today on Climate Beat . . .

. . . we put a finger in the wind, reporting on a survey from the group Climate Hawks Vote showing lawmakers' reactions to EPA's proposal to repeal the Clean Power Plan (CPP) are "substantially more muted" than responses to President Donald Trump's June announcement that he intends to leave the Paris climate agreement.

Speaking of the CPP repeal plan, our daily news roundup looked at the coverage of EPA's public hearing in West Virginia on that plan, including testimony from coal miners who are on opposite sides of the Obama administration's landmark climate policy.

An in climate risk news, EPA Administrator Scott Pruitt is doubting the link between climate change and more extreme hurricanes, charging that a recent federal climate science report does not discuss a "cause and effect" relationship, though he says such storms might be "enhanced in some way" by climate change.

Happy August Friday. STAT OF THE DAY -- from Michael Gordon and Eric Schmitt's A1'er in the New York Times: "'With all this talk, what I worry about is a serious miscalculation,' said James D. Thurman, a retired Army general who served as the top United States commander in South Korea from 2011 to 2013. 'Before we start talking about all these military options, we have to decide what are we going to do with the U.S. citizens over there.' He estimated that at least a quarter-million Americans would have to be moved." http://nyti.ms/2vV6PLC

-- 250,000 Americans!

FROM BEDMINSTER -- @realDonaldTrump at 7:29 a.m.: "Military solutions are now fully in place,locked and loaded,should North Korea act unwisely. Hopefully Kim Jong Un will find another path!" ***The president also retweeted Fox & Friends three times: One as a warning shot to Mitch McConnell, one to GOP senators not supporting him and another on American drone strikes in Somalia.***

THE BACK CHANNEL -- "Beyond bluster, U.S., NKorea in regular contact," by the AP's Matthew Pennington: "Beyond the bluster, the Trump administration has been quietly engaged in back channel diplomacy with North Korea for several months, addressing Americans imprisoned in the communist country and deteriorating relations between the long-time foes, The Associated Press has learned. It had been known the two sides had discussions to secure the June release of an American university student. But it wasn't known until now that the contacts have continued, or that they have broached matters other than U.S. detainees.

"People familiar with the contacts say the interactions have done nothing thus far to quell tensions over North Korea's nuclear weapons and missile advances, which are now fueling fears of military confrontation. But they say the behind-the-scenes discussions could still be a foundation for more serious negotiation, including on North Korea's nuclear weapons, should President Donald Trump and North Korean leader Kim

Jong Un put aside the bellicose rhetoric of recent days and endorse a dialogue. The contacts are occurring regularly between Joseph Yun, the U.S. envoy for North Korea policy, and Pak Song Il, a senior North Korean diplomat at the country's U.N. mission, according to U.S. officials and others briefed on the process." http://bit.ly/2uNmXKb

-- "U.S. has military options for handling North Korea -- but none are good," by Jacqueline Klimas and Bryan Bender: "The United States and its allies have military options for confronting North Korea -- including an all-out invasion, more limited air and missile strikes, cyberattacks or a covert effort to oust the regime of Kim Jong Un. But those scenarios carry enormous risks, including the possibilities of loss of life, loose nukes falling into terrorists' hands or the conflict spreading to a wider Asian war." http://politi.co/2uNfDyi

FOR THE PRESIDENT -- "A plan for North Korea, before this spirals out of control," by former NATO Supreme Allied Commander James Stavridis in The Boston Globe: "Dial down the rhetoric. Countering a young mercurial leader with a bad haircut sputtering about turning our ally South Korea into a 'sea of fire' with an old mercurial president sputtering about 'fire and fury the like the world has never seen' isn't helping anything. President Trump sounded vaguely like the Dragon Queen Daenerys of 'Game of Thrones' talking about her brood of dragons igniting Westeros. We need to model ourselves less on General George Patton and more on 'Cool Hand Luke" while not sinking to the level of Kim Jung Un's bombast."

--HIS OTHER RECOMMENDATIONS: "Dial up the intelligence and surveillance. ... Increase our missile defenses. ... Focus on cyber options. ... Dial up the intelligence and surveillance. ... Increase our missile defenses. ... Focus on cyber options. ... Build a regional approach. ... Train for and exercise the military options. ... Pressure China to 'walk the walk.' ... Take a sensible negotiating position. ... Make this an international issue." http://bit.ly/2uNAWzw

TRAVEL ADVISORY -- "Trump may make a quick return to D.C. on Monday," by Annie Karni: "President Donald Trump plans to interrupt his stay next week at Trump Tower with a quick out-and-back trip to Washington on Monday, according to an updated presidential schedule presented to local New York City law enforcement and reviewed by POLITICO. The president had been scheduled to arrive in New York City Sunday evening and hold two days of 'internal meetings' at his old home and office building on Fifth Avenue. He is now scheduled to fly back to Washington on Monday morning and return to Manhattan on Monday evening.

"It was not immediately clear why the president was returning to the nation's capital in the middle of his planned 17-day summer break. The White House has been undergoing major renovations in the president's absence, and the Oval Office has been cleared out for a refurbishment. West Wing staffers who stayed behind have been working out of the Old Executive Office Building across the street." http://politi.co/2hRBCD2

A LOOK BACK -- GARRETT GRAFF in POLITICO Magazine, **"The Madman and the Bomb:** The nuclear launch process once haunted Nixon's aides. 43 years later, is it finally time to reform the system?": "That unilateral launch authority is so powerful, so unchecked, and so scary that, years before Watergate, Nixon had turned it into its own geopolitical strategy, the so-called Madman Theory, with which he threatened the Soviets and the Vietnamese that he might actually be crazy enough to nuke Hanoi--or Moscow--if they didn't accede to his demands. The 'mutually assured destruction' of the Cold War was predicated on the idea that the leaders of both superpowers were rational enough to avoid a war that would end with the destruction of both nations. The Madman Theory forced the world to consider a more frightening option: That the man in charge of the nukes might not be rational at all.

"The world is contemplating that possibility again this week, as Kim Jong Un and President Donald Trump lob nuclear threats across the Pacific. Nearly 72 years to the day after a silver-plated B-29 bomber dropped an atomic bomb on the Japanese city of Nagasaki, killing more than 60,000 in an instant, and 43 years to the day after Nixon was stripped of the nuclear Football, the U.S. president threatened to rain 'fire and fury like the world has never seen' on Kim's isolated regime. North Korea, in turn, threatened to turn the U.S. mainland into a 'theatre of nuclear war' and announced plans to bracket Guam with nuclear-capable missiles. Are we watching two tough-talking 'madmen,' rational actors playing a calibrated game, or are we seeing something else?" http://politi.co/2hSdmAO

WE SAID THIS MORNING that Trump would not save money when Vladimir Putin expelled U.S. diplomats from Russia. He might, because he has also brought down the number of Russian workers. Trump said "now we have a smaller payroll. There's no real reason for them to go back." We took that as meaning diplomats. He might bring down the payroll when it comes to local, Russian employees.

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

TRUMP INC. -- "Trump D.C. hotel turns $2 million profit in four months," by WaPo's Jonathan O'Connell: "Donald Trump's company turned a $1.97 million profit at its opulent Trump International Hotel so far in 2017, dramatically beating its expectations and giving the first hard numbers to critics who charge that Trump is profiting from his presidency. The Trump Organization had projected that it would lose $2.1 million during the first four months of 2017 as it established a new hotel and convention business in the nation's capital, according to newly released federal documents.

"Instead the hotel, with its namesake in the White House down the street, is already turning a hefty profit and charging more for its rooms than most or all of the city's other hotels. ... Driving the profits are the extraordinary prices guests have been willing to pay for rooms, including members of Trump's Cabinet who have stayed or lived there, as well as big spending on food and beverages in the meeting areas, bar and restaurant -- spots frequented by members of Trump's inner circle and other Republican leaders. ... This year, guests have paid an average of $652.98 a night to stay there, beating the company's expectations by 57 percent." http://wapo.st/2fxm4TW

WAR REPORT -- "White House Divided: A battle over Afghanistan is raging in Washington," by The Weekly Standard's Peter Boyer: "To drive home the point that Trump wanted new ideas, Vice President Mike Pence, who presided over [an August 3 NSC principals committee meeting], tasked three men with preparing best-case options for the war. One of them was national security adviser H. R. McMaster, which was no surprise, given that he has taken the lead role in developing a new Afghan strategy since assuming his job in February. The other two men charged with presenting strategy options were more telling choices: Mike Pompeo, director of the Central Intelligence Agency, and Attorney General Jeff Sessions.

"Sessions, stalwart of the America First camp, has long been 'the biggest skeptic in the room' when the subject of a continued presence in Afghanistan arises in meetings of Trump's war cabinet, according to one participant in those meetings. Said another White House official, who is sympathetic to Sessions' position, 'The A.G. asks the same question: Is this what we were elected to do? And the answer to the question is no.'" http://tws.io/2uNAVvE

STRANGE TIMES -- SEUNG MIN KIM filing from Homewood, Alabama -- **"Contenders in Alabama GOP Senate race won't defend McConnell against Trump":** "President Donald Trump is eviscerating Sen. Mitch McConnell over the lagging Republican agenda, and none of the three main candidates in the increasingly nasty Senate GOP primary in this state are taking the majority leader's side. ... Even [Sen. Luther] Strange, a member of McConnell's rank and file, noted that he himself has also said, 'Mitch, get back to work.'

"'We all need to get back to work,' Strange told reporters after a county GOP meeting here Thursday night. 'I was part of the group of Republican senators who said we shouldn't even take a vacation. I don't know why we're taking a vacation. We should be working to pass the president's agenda and deal with the problems we failed to address last time.' When pressed about Trump's apparent lack of confidence in the majority leader, Strange noted that 'he's frustrated like I am, and this is no secret.' The incumbent senator added, however, that he didn't believe the Senate GOP conference needed new leadership." http://politi.co/2hQT9LG

2018 WATCH -- "Sinema aiming for Senate, Stanton preps for congressional seat," by KPNX's Brahm Resnik: "Democratic Congresswoman Kyrsten Sinema of Phoenix is planning a 2018 run for the U.S. Senate seat held by first-term Mesa

Republican Jeff Flake, according to sources familiar with Sinema's plans.

"At the same time, Phoenix Mayor Greg Stanton, another Democrat who's been undecided about his political future, is telling supporters he's preparing to run for Sinema's vacant seat next fall, according to sources familiar with Stanton's calls. Both moves would be long-awaited next steps by two of the leading Democratic officeholders in Arizona. If they go ahead, formal announcements of their plans could come in the next few weeks." http://bit.ly/2vM40fA

-- SINEMA has $3.2 million on hand.

DAVE WEIGEL in **GEORGIA -- "At raucous town halls, Republicans have faced another round of anger over health care":** Rep. Buddy "Carter, who peppered his answers with self-deprecating jokes, sometimes called on activists who'd dogged him before. In Brunswick, he quickly pivoted from a question about 'Zionist influence in our foreign policy' by promising to 'put America first.' After three different constituents asked him to say whether he supported the president's decision to ban transgender men and women from military service, he went from deferring 'to our commander in chief' to saying what he believed. 'I don't want 'em serving in the military,' Carter said, as dozens of constituents booed and more than a dozen walked out. 'I'm sorry.'" http://wapo.st/2hQgcGh

TODAY'S BEYOND THE BELTWAY -- The center isn't holding in California -- Jason Kander fundraises in Martha's Vineyard http://politi.co/2uN2AwT

-- "Daniel Loeb, a Cuomo Donor, Makes Racial Remark About Black Leader," by NYT's Shane Goldmacher: "The hedge fund manager Daniel S. Loeb, a prominent supporter of charter schools and a major financial backer of Gov. Andrew M. Cuomo and congressional Republicans, accused the African-American woman who leads the Democrats in the New York State Senate of having done 'more damage to people of color than anyone who has ever donned a hood.' Mr. Loeb made the reference, apparently to the Ku Klux Klan, in a posting on Facebook in response to an article in The New York Times this week in which the Democratic leader, Senator Andrea Stewart-Cousins, confronted Mr. Cuomo about prejudging her based upon race and gender. ... After The Times reported on his Facebook remarks, Mr. Loeb deleted them late Thursday night. 'I regret the language I used in expressing my passion for educational choice,' he said in a statement. 'I apologize to Senator Stewart-Cousins and anyone I offended. I have taken down the post from Facebook.'" http://nyti.ms/2hQeq87

-- @ShaneGoldmacher: "If you look at federal records, Loeb spent nearly $3 million on federal races in last 3 years, vast vast majority on GOP candidates."

ATTENTION JOHN KELLY -- ANDY CARD and **MACK MCLARTY** in the Dallas Morning News: **"3 pieces of advice for running the White House from veteran chiefs of staff"** -- "Trump ran on a promise to score dramatic early victories while shaking things up in Washington. Now, not much more than halfway through his first

year in office, he is finding that keeping either promise is far harder than it looks. But it is never too late to course-correct. The sooner he and his staff absorb the lessons all administrations must eventually learn, the more effective they will be." http://bit.ly/2uNAnWx

TRANSITIONS -- John Pouland is the new VP of local government affairs and business development for 50 State, LLC. He will be based out of their Austin, Texas office. He was previously a VP for government affairs and solutions at Philips. http://politi.co/2vMhLe0 ... **Margaret Anne Moore** is the new comms director for the House Homeland Security Committee. She was the broadcast comms adviser for Mitch McConnell.

SPOTTED last night celebrating the birthday of RNC's Alex Bingaman at The Observatory at the Graham Hotel: Alex Meyer, Ken Callahan, Hannah Chait, Katie Thompson, Todd Cheewing, Carter Nies, Taylor Pollins, Kelly Kundinger, Ali Pardo, Britt Carter, Caroline Potter and Ben DeMarzo (h/t Jake Wilkins)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Subject: Morning Energy: Peer-reviewed study finds Exxon misled public on climate — Monument decisions imminent — U.S. biodiesel sector gets trade win

By Anthony Adragna | 08/23/2017 05:40 AM EDT

With help from Esther Whieldon, Alex Guillén, Adam Behsudi and Eric Wolff

PEER-REVIEWED STUDY FINDS EXXON MISLED ON CLIMATE: Harvard researchers are out this morning with a peer-reviewed analysis concluding Exxon Mobil misled the public over the course of 40 years of climate change communications. After poring over its scientific research, internal company memos, and paid, editorial-style advertisements, the study concluded that 83 percent of Exxon scientists' peer-reviewed papers and 80 percent of the company's internal communications acknowledged climate science — but just 12 percent of its advertisements did so, and 81 percent actually doubted human activity's role in the problem.

"We conclude that ExxonMobil misled the public," the report concludes. "We stress that the question is not whether ExxonMobil 'suppressed climate change research,' but rather how they communicated about it." The study, supported by Harvard University Faculty Development Funds and by the Rockefeller Family Fund, acknowledges "textual analysis is inherently subjective" but says the overall trends are "clear." The findings will be published in the journal *Environmental Research Letters*.

Exxon, which did not have advance access to the study, did not immediately respond to a request for comment on Tuesday night. A spokesman for the fossil fuel giant previously said allegations from environmental groups it misled the public and investors on climate change were based on "distorted reports that they have commissioned and a distorted history of climate research that we've done openly with government bodies."

MONUMENT DECISIONS IMMINENT: Rumors are swirling around Washington that Interior Secretary Ryan Zinke may send over his verdict as soon as today on what to do with the nearly two dozen national monuments the White House put up for review. The House Natural Resources Democratic staff released a report complaining Zinke used a secretive review process, obscuring the true purpose was to open up lands for fossil fuel development. "If President Trump and Secretary Zinke don't listen, then the courts and the voters will teach them that our public lands are not industry playthings to dispose of as they see fit," Ranking member Raul Grijalva said in a statement.

Religious leaders weigh in: A group of Christian leaders sent Vice President Mike Pence a letter Tuesday urging the administration to "not rescind or rollback any designations" of the national monuments currently under consideration. They called the Antiquities Act an "important tool" for "protecting the special places of God's Creation where we play, pray and learn."

Irony alert: During an interview with Fox News' "Fox and Friends," Pence said he was in favor of building more monuments around the country rather than tearing down existing ones. "I'm

someone who believes in more monuments, not less monuments," he said in response to questions about whether statues commemorating the Confederacy should be removed. We'll see if that desire to preserve monuments extends to ones designated by other presidents. Remember Zinke already preliminarily suggested shrinking Utah's Bears Ears National Monument back in April.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and ACC's Jonathan Corley nailed Nashville as the biggest U.S. city to glimpse Monday's total eclipse. For today: What is the only U.S. state to grow coffee commercially? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

DO YOUR DUTIES: Biodiesel shipments from Argentina and Indonesia will face import duties after the National Biodiesel Board notched up an early victory in a trade case from the Commerce Department Tuesday, Pro's Eric Wolff reports. In light of the preliminary ruling, Argentine and Indonesian companies will have to pay a cash deposit on shipments to the U.S. to cover potential future penalties. The Commerce Department will now take comment on the preliminary ruling and then issue a final decision likely next year. Here are the decisions on Argentine and Indonesian biodiesel.

RIN-sanity: The price for credits in biodiesel jumped 8 cents on the news, to $1.17, the oil tracking service OPIS tells ME. Biodiesel credits are critical for refiners who need to buy them to comply with the Renewable Fuel Standard. EPA requires more ethanol blending than happens in reality, and some refiners buy the biodiesel credits to make up the difference. The ruling from Commerce has now raised their compliance costs.

MORE MURKOWSKI INTRIGUE: Zinke's July calendar, which the agency released Tuesday, was relatively light compared to prior months on meetings with energy industry interests. But it did provide further evidence that the secretary may have pressed Alaska Sen. Dan Sullivan on July 26 over Sen. Lisa Murkowski 's vote on the healthcare bill, something the secretary has not denied doing. Hours before calling Sullivan that day, Zinke had a number of White House meetings and calls, including with Vice President Mike Pence, then-White House chief strategist Steve Bannon and Trump's top energy aide Mike Catanzaro. Zinke's calendar did not include a call with Murkowski, but the senator has said they did talk that day.

Zinke's July calendar also included a meeting with President Donald Trump's daughter-in-law Lara Trump on wild horses and animal welfare issues and a call with a number of lawmakers on both sides of the aisle, including Senate Energy and Natural Resources Committee ranking Democrat Maria Cantwell.

Fascinating tidbit: From an excellent New York Times report on the simmering feud between Trump and Senate Majority Leader Mitch McConnell: "Senator Lisa Murkowski of Alaska told colleagues that when Mr. Trump's interior secretary threatened to pull back federal funding for her state, she felt boxed in and unable to vote for the health care bill." Back in late July, Murkowski told the Alaska Dispatch News that Zinke's forceful call didn't sway her vote on the healthcare bill.

FIRSTENERGY'S TOUGH SELL: FirstEnergy Solutions, a unit of FirstEnergy Corp., wanted the federal government to use it's emergency powers to save coal plants that teetered on the edge of insolvency — saving some of Trump supporter Robert Murray's coal mines that supply fuel for the plants — but it had a major problem: The power from the plants isn't deemed especially critical. The federal government has authority to keep plants open when crucial to local supplies, but PJM Interconnection, which manages the largest grid in the country, has plenty of power. In an April letter , the grid operator told Ohio Governor John Kasich that thanks to its capacity market, which pays power plants to remain on standby even if they don't run, it had 6 percent more power on reserve than it needed. The letter also said the operator maintained a robust process for managing retirements, and that typically new plants could come in to replace older ones.

That badly undermined FirstEnergy's position, as did the fact that the company asked for a three-year commitment to keep the plants operating. Normally the authority granted under section 202 of the Federal Power Act is used for short periods when there's an unexpected disruption, like when in April lightning struck a plant in Oklahoma, creating a need to change how nearby transmission operated for a few months. Keeping the plants open for so long would entail paying their owners to stay available — which presumably was FirstEnergy's point, but it adds costs for PJM and its ratepayers.

ICYMI: Pro's Alex Guillén and Eric Wolff look at how two wealthy backers of Trump — coal magnate Robert Murray and Wall Street billionaire Carl Icahn — failed to get their policy priorities turned into action despite the president's backing. Murray's failure to get DOE to use its emergency powers to force some Rust Belt coal-fired power plants to stay open, and Icahn's earlier inability to convince EPA to alter its ethanol rule, show the limits of trying to circumvent the federal bureaucracy even with a sympathetic ear in 1600 Pennsylvania.

INSIDE TRUMP WORLD'S NAFTA STRUGGLES: The Trump administration is grappling with its position on an investor-state dispute settlement mechanism in NAFTA, ratcheting up concerns among businesses eager to see the U.S. make a clear commitment to continue with the controversial provision as it has in past trade deals, according to sources with knowledge of the deliberations. The controversial international arbitration mechanism allows private companies to seek damages from government actions that violate their investment rights under a trade deal. Business groups, particularly in the oil and gas sector, have launched a full-court press on Hill offices to request that they put pressure on the administration to include the dispute provision. One lobbyist source said the energy sector's support of a modernized NAFTA deal hinges directly on the inclusion of ISDS.

Speaking of which, Trump on Tuesday night in Phoenix: "I think we'll probably end up terminating NAFTA at some point."

DEVIL'S IN THE DETAILS, GUYS: Trump's administration may seek to secure stakes in Afghanistan's vast mineral deposits — estimated at $1 trillion by one U.S. government report — as a way to offset ongoing military costs there, Pro's Ben Lefebvre reports . "We're looking at all those types of options," a senior White House adviser said. Analysts caution extracting and

processing tons of minerals from a war zone and then transporting them out of a country with little modern infrastructure won't be happening anytime soon.

MARK YOUR CALENDAR: A coal industry source tell ME the Energy Department's big grid study will finally be released on Thursday.

DAKOTA ACCESS COMPANY SUES 'ECO-TERRORIST' GROUPS: Energy Transfer Partners, the owner of the Dakota Access pipeline, filed a lawsuit Tuesday against Greenpeace International and Earth First!, asserting they worked to spread misinformation about the project and damage the company, Diamond Naga Siu reports. The federal racketeering lawsuit alleges the groups launched "attacks [that] were calculated and thoroughly irresponsible, causing enormous harm to people and property along the pipeline's route."

In response, Greenpeace USA General Counsel Tom Wetterer bashed the filing as the second "meritless" lawsuit filed against them by the law firm led by Trump's former personal attorney Marc Kasowitz. And Earthjustice President Trip Van Noppen called the lawsuit "an unprovoked and malicious attack on those who would use the power of the law and free speech for good."

EPA IG TO REVIEW TSCA DATA REPORTING: EPA's inspector general has begun an inquiry into chemical data reporting under the reformed Toxic Substances Control Act, according to a newly posted memo. The reformed law requires chemical makers and importers to give EPA key data about those chemicals used to review potential risks, and to update that data every four years. Investigators will look specifically at "how the EPA is ensuring that companies are compliant" and whether EPA is using that data to prioritize which chemicals to review for health and environmental risks.

PELOSI, OTHERS TALK MARINE MONUMENTS: House Minority Leader Nancy Pelosi, Reps. Jared Huffman and Jackie Speier , and others are hosting a public forum today at the Bay Model Visitor Center in Sausalito, Calif. on protecting national marine sanctuaries and monuments. As a reminder, Commerce Secretary Wilbur Ross has until Oct. 25 to send Trump a report on the potential for offshore fossil fuel production, among other things, in 11 marine national monuments and sanctuaries. Members of the public will have an opportunity to comment at the event, which kicks off at 10:30 a.m. PST and can be streamed here.

MAIL CALL! PUMP THE BRAKES ON LNG EXPORTS: The Industrial Energy Consumers of America sent a letter Tuesday to the Trump administration asking for a moratorium on additional approvals of natural gas exports. "If we export too much LNG, prices will eventually rise to global levels," Paul Cicio, the manufacturing group's president, wrote. "At that point, foreign nations demand for LNG will dictate what price Americans pay. This is certainly not in the interests of the American public."

ELECTRIC CONTRACTORS OPPOSE SUNIVA PETITION: The National Electrical Contractors Association sent a letter to the International Trade Commission Tuesday opposing an effort from Suniva and SolarWorld to have imported solar cells or panels slapped with steep tariffs. "We believe the proposed remedies will significantly harm American manufacturers of solar parts and panels and ultimately crush demand for solar installations nationwide," the group

wrote.

ME FIRST — CLEAN ENERGY WEEK EXPANDS! The Center for Liquefied Natural Gas has joined the steering committee of National Clean Energy Week, bringing the number of groups planning the events of the week of Sept. 25 to 29.

HERE'S ZINKE IN AN APRON: His wife, Lola, tweeted a picture of him cooking breakfast in a pretty sweet apron. Check it out here.

REPORT: HERE'S HOW TO BOOST RGGI: Resources for the Future released a report Tuesday outlining ways to strengthen the Regional Greenhouse Gas Initiative. Their top idea is a new mechanism known as an emissions containment reserve, which would be triggered when carbon allowance prices drop below a threshold that would be set to ensure it was still driving emissions reductions.

MOVER, SHAKER: Colin O'Neil has been promoted to legislative director at the Environmental Working Group where his portfolio includes agriculture and food, cosmetics and chemicals outreach efforts on Capitol Hill. Before joining EWG, he was director of government affairs at the Center for Food Safety.

Stories from POLITICO Pro

Exxon scrambles to contain climate crusade Back

By Andrew Restuccia | 05/09/2016 05:28 AM EDT

On Nov. 3, ExxonMobil dispatched its top lobbyists to Capitol Hill on an urgent mission — tamping down an escalating campaign aimed at making the country's largest oil company pay a legal and political price for its role in warming the planet.

The meeting marked a striking shift in Exxon's handling of the controversy. The notion of holding oil companies responsible for global warming, in the same way tobacco companies had to pay billions of dollars in damages over the health effects of cigarettes, had long been seen as a quixotic quest led by scruffy, oil-hating extremists. But POLITICO's interviews with dozens of activists, industry officials and lawmakers suggest that support for a legal crusade against Exxon is growing far beyond the political fringe — and now poses the biggest existential threat the company has faced in decades.

Just five days before the meeting on Capitol Hill, Democratic presidential front-runner Hillary Clinton had urged the Justice Department to investigate whether the petroleum giant spent decades deceiving the public about the threat of climate change. State attorneys general had Exxon in their sights as well, preparing to issue subpoenas that would eventually rope in virtually all of Washington's conservative policy apparatus. A four-year effort by green activists, scientists and lawyers to turn Big Oil's biggest player into the poster child for climate change — deliberately patterned after the successful campaign to take down tobacco — was shaking the descendant of John D. Rockefeller's Standard Oil empire to its core.

So the four Exxon executives arrived at the office of California Democrat Rep. Ted Lieu with one job: convincing four of their most vocal congressional critics that the company wasn't the polluting villain its enemies were making it out to be.

Exxon supports "sound climate policy" and has tripled its greenhouse-gas cuts since 2008, the executives boasted to the lawmakers in a 10-page glossy presentation, later obtained by POLITICO. Exxon was even on record in favor of a tax on carbon emissions — a climate remedy more radical than anything President Barack Obama has proposed.

The company left empty-handed, though, after refusing to directly answer questions about whether it had suppressed internal research that underscored the threat of climate change while publicly sowing doubt about climate science, according to people in the room.

The presentation made at least one thing clear, however: After years of shrugging off pressure from eco-activists, Exxon was showing signs of worry.

And Exxon wasn't the only one with reasons to be nervous.

***

Interviews with advocates on both sides of the feud reveal how quickly the anti-Exxon movement has sprouted, to the point that it's now consuming op-ed pages, airwaves and courtrooms across the country. Once merely intent on shaming the oil giant into better behavior, environmentalists are pursuing a strategy to discredit the company, weaken it politically and perhaps make it pay the kinds of multibillion-dollar legal settlements that began hitting the tobacco industry in the 1990s.

The campaign — led by some of the same climate activists who defied Beltway wisdom by killing the Keystone XL oil pipeline — has mushroomed into far more than a greens-versus-Exxon feud.

Just last week, a leaked subpoena from the attorney general in the U.S. Virgin Islands revealed a vast probe that demanded Exxon's communications with more than 100 free-market think tanks, conservative consulting firms and climate-skeptic scientists — proof, the company's supporters say, that environmentalists are using the legal system to launch a broad attack on their political opponents. The subpoena targets Exxon's dealings with parties including the Competitive Enterprise Institute, the U.S. Chamber of Commerce Foundation, the Hoover Institution, George Mason University and scientists at the Massachusetts Institute of Technology, the University of Alabama and the University of Delaware.

The first subpoena to Exxon came from New York Attorney General Eric Schneiderman, who used his state's powerful consumer fraud law to hit the company with legal papers just a day after the lobbyists' meeting on the Hill. AGs in California and Massachusetts have also launched investigations into the company.

Members of Congress have weighed in too, with Sen. Sheldon Whitehouse (D-R.I.) and presidential contender Sen. Bernie Sanders (I-Vt.) urging DOJ to consider bringing civil racketeering cases against oil companies.

"Obviously, we take it extremely seriously," Exxon spokesman Alan Jeffers told POLITICO, noting that the company is complying with the New York subpoena while it fights the racketeering summons from Virgin Islands Attorney General Claude Walker. The greens' campaign is built on "distorted reports that they have commissioned and a distorted history of climate research that we've done openly with government bodies," Jeffers added.

Both sides describe the political stakes of the campaign as huge.

"Exxon's been able to work its political will for a quarter of a century — they shouldn't be able to," said climate activist Bill McKibben, a leader of the fight against Keystone. "They should be a toxic political brand."

"Exxon is taking this real seriously, and that tells you something, doesn't it?" Matt Pawa, a Massachusetts lawyer who has repeatedly gone after Exxon in court, said in an interview. "Maybe they've got something to hide."

Even rival oil companies that disdain Exxon's support for a carbon tax are spooked about how far the greens' campaign has gotten, especially when the industry is already reeling from a huge slump in fuel prices.

"Industry doesn't look at this and say, 'Too bad for Exxon,'" one fossil-fuel lobbyist said. "We say it's very chilling, a horrible precedent, and no one wants to see themselves next."

Underscoring the industry's anxiety is the breadth and intensity of the counterattack it has mounted. Industry consultants are accusing the state AGs of colluding with environmentalists, and have questioned the role of foundations created by the Rockefeller family — petroleum heirs turned anti-oil activists — in helping bankroll some news organizations' Exxon investigations.

The industry is even exploring the idea of launching a counter-probe: A lobbyist for one of Exxon's industry rivals told POLITICO he has reached out to red-state attorneys general to gauge their interest in probing where environmental groups are getting their funding. No takers have emerged so far.

But industry backers' main argument is that the greens are assaulting the constitutional rights of anyone who dissents from mainstream climate science. Heritage Foundation fellow Hans von Spakovsky has denounced Schneiderman's probe as a "Soviet-Style investigation," while conservative columnist George Will called it an example of "gangster government."

"Instead of honoring legitimate academic and scientific inquiry, the far-left has gone to extremes to silence those who disagree," Oklahoma Republican Sen. Jim Inhofe, the chairman of the Environment and Public Works Committee, said Wednesday. He added, "This is nothing more than a misuse of power to score cheap political points."

Exxon itself has made similar arguments, fighting the Virgin Islands subpoenas in court as an infringement on the company's free-speech rights. But Walker, the territory's AG, dismissed that reasoning.

"The First Amendment is not a defense to fraud," Walker told POLITICO through a spokesman, and "the Constitution provides no right to mislead shareholders."

"The tobacco companies," he added, "raised exactly these arguments. ... That was soundly rejected by the courts."

***

The seeds of the Venus flytrap closing around Exxon were planted in June 2012 in the wealthy seaside town of La Jolla, Calif., where two dozen scientists, lawyers and academics huddled for a scholarly conference on an issue that had vexed the environmental movement for decades: How,

on a planet filled with 7 billion people, do you hold oil companies liable for their role in worsening climate change?

"This wasn't a strategy session," said Peter Frumhoff, a conference organizer and the director of science and policy at the Union of Concerned Scientists. "This was a kind of first cut at, for lack of a better word, an exercise in applied scholarship."

But attendees emerged with two strategies that would set the tone for today's anti-Exxon fight.

First, they underscored the importance of building a catalogue of peer-reviewed research making the case that individual corporations could be held responsible for their contributions to climate change, a step that could serve as Exhibit A in future legal action. That tactic took a page from Exxon itself, which funded research after its 1989 Valdez spill arguing that Alaska's Prince William Sound was already recovering from the damage.

Richard Heede, a climate researcher who helped organize the La Jolla conference, said the attendees realized the "value" of having credible peer-reviewed research.

Working with other academics like Naomi Oreskes, whose book "Merchants of Doubt" drew parallels between the climate and tobacco fights, Heede published articles in peer-reviewed journals that placed the responsibility for climate change at the feet of major fossil fuel companies. In a November 2013 study, for example, Heede estimated that 63 percent of worldwide emissions of industrial carbon dioxide and methane came from a group of 90 "carbon major" entities. (ExxonMobil was prominent in the list.) Environmental groups like Greenpeace immediately trumpeted the research.

"For a long time, fossil fuel companies have benefited from the idea that everyone is responsible for climate change — and if everyone is responsible, then nobody is responsible," said Carroll Muffett, the president of the Center for International Environmental Law. "Now the science is moving into a much finer resolution."

Second, the La Jolla attendees agreed that obtaining and publicizing internal corporate documents was the key to turning public opinion against the oil companies and eventually securing a legal victory.

"A key breakthrough in the public and legal case for tobacco control came when internal documents came to light showing the tobacco industry had knowingly misled the public," the 2012 conference organizers wrote in a memo on the meeting. "Similar documents may well exist in the vaults of the fossil fuel industry and their trade associations and front groups, and there are many possible approaches to unearthing them."

Exxon's opponents are likely to get hold of more internal records as the attorneys general proceed with their investigations. Schneiderman's aides are culling through tens of thousands of pages of documents from the company, according to a person familiar with the probe.

"I'd be amazed if there aren't several paper trails that will be found through subpoenas," said

veteran lawyer Richard Ayres, one of the Natural Resources Defense Council's co-founders and an attendee at the 2012 conference. "Once subpoenas are answered, the trails will begin to be more visible and people will find this idea of litigation a lot more appealing."

The source familiar with Schneiderman's probe said the wide leeway afforded by his state's financial fraud law, the Martin Act, aided his request for documents. Those include records of Exxon's internal research into climate change's causes, the role of climate information in business decisions, and marketing, advertising and company communications.

From the start, Exxon's critics drew heavily on the lengthy legal crusade against tobacco companies that culminated in a massive settlement in 1998 totaling hundreds of billions of dollars.

Tobacco critics made little headway in the 1950s, when few Americans knew of the dangers of smoking. But the anti-tobacco fight gained steam as studies directly linked cigarettes to cancer and other ailments, eventually allowing the states to collect huge windfalls from the tobacco companies as compensation for smoking's health costs.

For the people gathered in La Jolla, even getting to the lawsuit stage would be a victory. "No matter what the outcome, litigation can offer an opportunity to inform the public," anti-tobacco litigator Sharon Eubanks said at the meeting, according to the meeting notes.

At the heart of any legal strategy is proof of a conspiracy or fraud — in this case, an alleged effort by oil companies to conceal their internal knowledge of their product's contributions to climate change. The activists' big break came in September and October, when the nonprofit investigative website InsideClimate News and the Los Angeles Times published stories alleging that Exxon's scientists had known as far back as the 1970s that the company's fossil fuels would cook the planet, even as its executives hid that knowledge.

The stories, citing internal Exxon documents, didn't make an immediate splash in Washington. Lieu and Rep. Mark DeSaulnier (D-Calif.) didn't ask DOJ to launch an investigation until Oct. 15. Exxon addressed the controversy for the first time on Oct. 21, singling out InsideClimate as "an anti-oil and gas activist organization" — the first of many times that the industry would slam the news outlet for taking money from the anti-fossil-fuel Rockefeller Brothers Fund and Rockefeller Family Fund.

Then the activists scored a political coup on Oct. 29 by injecting the issue into the mainstream of the presidential race. Responding to a question at a New Hampshire town hall, Hillary Clinton told an activist from McKibben's climate group that the Justice Department should look into Exxon's activities, saying, "There's a lot of evidence they misled."

Days later, Exxon's lobbyists were taking the meeting in Lieu's office with Lieu, DeSaulnier and two other liberal House Democrats. They aimed to "show the source documents that we think are the complete opposite of what the media reports have showed," Exxon spokesman Jeffers said afterward.

Their message: Exxon "believes in climate change, they believe it's largely caused by the burning of fossil fuels and human activity, and they support a fee on carbon," Lieu recalled in an interview. "That is the company line."

But when Lieu asked if Exxon supported any current proposal to tax the carbon in its nearly 25 billion barrels in proved worldwide oil reserves, the lobbyists said no. Nor would the company admit to the greens' accusations of deceiving the public.

"The basic questions were not at all resolved or seriously addressed in the meeting," Rep. Peter Welch (D-Vt.) told POLITICO. DeSaulnier called Exxon's pitch an attempt at "damage control," rather than an effort to be "open and honest and corrective."

***

American oil companies are coping with the anti-Exxon campaign at a uniquely vulnerable time, with oil prices dropping to a 13-year low in February. Exxon lost its top-ranked credit rating last month thanks to a debt load that has more than tripled since 2012 and earnings that fell by 50 percent last year.

To be sure, Exxon's status as one of the world's most profitable companies remains unshaken. Its market value is nearly double that of Chevron, the nation's second-biggest oil and gas company.

But as the greens' campaign matures, Washington's conservative firmament is broadcasting its fury at what it sees as a fishing expedition aimed at ferreting out embarrassing information about the company.

Among those fighting back is CEI-affiliated conservative activist Chris Horner, who has used public records requests to uncover internal documents about coordination between activists and state attorneys general. Horner, who runs an anti-environmentalist research machine called E&E Legal, released emails last month that showed the attorneys general consulting with an anti-Exxon lawyer and an official at the Union of Concerned Scientists before holding a news conference in March with former Vice President Al Gore.

Two BakerHostetler litigators, David Rivkin and Andrew Grossman, have also founded a project called Free Speech in Science accusing the environmentalists of attacking climate skeptics' constitutional rights.

"You don't normally choose a target first, based on their speech, and say you're going to pursue all theories" available to attack that target, said Grossman, also an adjunct scholar at the conservative Cato Institute. "What's really going on here is intimidation."

Leaders of the Federalist Society, an alliance of conservative lawyers that counts Supreme Court Justices Clarence Thomas and Samuel Alito as members, have penned lengthy attacks on Schneiderman and other attorneys general investigating Exxon. National Review, Reason, Powerline and others followed suit in defending the oil giant, as have members of The Wall Street Journal's editorial board.

Exxon is "considering all of our options" for potential legal action against InsideClimate News, the Los Angeles Times or activist groups, spokesman Jeffers told POLITICO.

Aside from the company itself, the most vocal resistance to the greens has come from FTI Consulting, a firm filled with former Republican aides that has helped unify the GOP in defense of fossil fuels. Under the banner of Energy in Depth, a project it runs for the Independent Petroleum Association of America, FTI has peppered reporters with emails that suggest "collusion" between green activists and state AGs, and has raised questions over InsideClimate's Rockefeller grants.

The intensity of Energy in Depth's counter-assault reflects the degree of potential pain the entire industry faces from Exxon's troubles. IPAA senior vice president Jeff Eshelman said its efforts "haven't been to defend one company or interest, but rather to showcase [InsideClimate's] ongoing attacks on the American oil and gas industry that seem to be funded by multi-million-dollar activists."

InsideClimate News, which was named a Pulitzer Prize finalist last month for its Exxon stories, says it has received $25,000 from the Rockefeller Family Fund, or about 2 percent of the company's budget. The idea that the funding is influencing its news coverage is "an easy accusation, but it's completely baseless," founder and publisher David Sassoon told POLITICO. "Our funders have no access to our editorial and they never have."

As for Exxon, he said: "They have never asked us for a correction. They don't dispute the authenticity of the documents that our report is based on."

***

While nearly 200 nations hammered out a global climate agreement in Paris in December, many establishment environmentalists took a victory lap. But the anti-Exxon forces were girding for their next fight.

On the sidelines of the United Nations conference in Paris, Pawa — the Massachusetts lawyer — delivered a private talk to activists that McKibben described as his "opening argument in the case" against Exxon. Columbia Law School professor Michael Gerrard also spoke that day at Pawa's request about what he described as "some of the defenses that would be raised" by a corporation facing legal threats linked to its greenhouse gas emissions.

Pawa is a veteran Exxon antagonist, having won a $236 million judgment against Exxon in 2013 for polluting New Hampshire's groundwater. He helped an Alaskan Inuit village sue the company in 2008 over the rising seas that threatened the local economy.

And the previously unreported closed-door huddle in Paris wasn't the only place Pawa has touted his legal theory of Exxon's culpability.

He delivered a courtroom-style presentation titled "What Exxon Knew About Global Warming,

and What it Did Anyway" in March at an environmental law conference in Oregon. Later that month, he led a closed-door briefing with Democratic attorneys general and their staff, according to emails obtained by Horner's conservative think tank.

Pawa's central role in the escalating bombardment of Exxon has made him a target, as the company's allies liken him to a puppet master orchestrating the campaign behind the scenes. But he told POLITICO that he is not formally involved in any state investigations, even as he suggested that more AGs could jump into the fray.

"There will be a successful outcome some day, whether it's my or another generation of lawyers," Pawa said. He added: "I do think we will be successful. I hope it's in the short term."

Activists plan to make a public stand at Exxon's annual shareholder meeting May 25, where several resolutions intended to force the company into acknowledging the climate threat will come to a vote.

The calls for a DOJ racketeering investigation from Clinton, Sanders, Lieu and Whitehouse, a former state attorney general, are also paying off. The Justice Department told Lieu in March that it had referred the requests to the FBI, a move that doesn't preclude DOJ later filing a civil complaint.

Walker, the Virgin Islands' AG, predicted that his Exxon probe will take longer than the four months it took for his office to secure an $800 million settlement in a separate case against Hess Oil. But otherwise, he said, a thorough inquiry "takes time, and my job is to get it done right, not fast."

Oil companies may face yet another headache if Democrats regain the Senate in November: Lawmakers such as Whitehouse told POLITICO they will push to hold hearings like those in the 1990s where tobacco executives had to testify under oath.

The prospect of intensifying political trouble for Exxon and other major oil companies while a legal case drags on is an integral design feature of activists' campaign against the company. Whether the endgame is the type of multibillion-dollar settlement that crippled cigarette makers, or whether it's a Beltway surrender that forces the company to do more on climate change, no longer matters.

What matters, the company's critics say, is sending a message to the industry that its days of climate obstructionism are over.

In the meantime, Whitehouse is betting that the flood of internal Exxon documents emerging as a result of the investigations will uncover damaging information.

"It wouldn't surprise me if some of these organizations were busily scrubbing their files to get rid of culpatory materials," he said.

Meanwhile, the industry's seemingly united pro-Exxon front belies a paradox: Other American

oil companies are frustrated by the company's stated advocacy of a "revenue-neutral" carbon tax. No Democrat or environmentalist takes that stance seriously, but Exxon's willingness to even utter the phrase makes it an outlier among U.S. drillers and refiners, which fear that a levy on greenhouse gases could gain momentum if Clinton wins in November.

Many in the industry are also skeptical of Exxon's ties to the Democratic front-runner: The company's Washington office includes senior lobbyist Theresa Fariello, who bundles contributions for Clinton's campaign, and former Democratic aide Dan Easley, both of whom attended the Election Day meeting in Lieu's office.

"Exxon was one of the first companies out of the gate on a carbon tax, and they've made no secret they want to get along with the Clinton guys," said one fossil-fuel lobbyist unaffiliated with the company. "Their chickens are coming home to roost."

Zinke recommends shrinking Bears Ears monument Back

By Esther Whieldon | 06/12/2017 04:07 PM EDT

Interior Secretary Ryan Zinke proposed shrinking the Bears Ears National Monument on Monday, trimming back the controversial Utah monument created by former President Barack Obama during his final days in office.

A preliminary review of the 1.4 million-acre monument that Zinke sent to the White House over the weekend shows his "belief that the monument needs to be right-sized," Zinke said in a statement.

Any move by President Donald Trump to alter the monument designed to protect thousands of sensitive archaeological sites will set off a legal fight with tribes and conservation groups that have complained the Native American ruins there were being damaged and would be threatened by oil and gas development in the area.

Zinke's preliminary recommendations to Trump show he did not plan to go as far as revoking Obama's monument designation — a move that has been sought by the state's congressional delegation.

"Rescinding the monument was an option, but looking at it, there are some antiquities within the monument that I think deserve to be protected," he said in a press call.

Trump has ordered Zinke to review 22 of the national monuments that were established in the past two decades to determine if they should be altered or revoked. The secretary has until Aug. 24 to send his final recommendations to the White House, and Zinke has extended the comment

period on Bears Ears to July 10.

Zinke is also pressing Congress to look at the Bears Ears boundaries "to see whether the lands are more appropriately designated as national conservation areas or national recreation areas," he said. "There's certainly a high demand of recreation. There's certainly a demand for conservation in some parts, but we believe that those areas are better suited under congressionally mandated designations than they are a monument."

The secretary also asked Congress to grant tribes the ability to co-manage specific areas within Bears Ears, and for Congress to clarify how wilderness areas that overlap with monuments should be treated, an issue for Bears Ears and some other monuments under review.

A former congressman from Montana, Zinke cited his concern that the federal government restricts activities on the land it designates as protected, saying that designating a monument the size of Bears Ears where "multiple-use management is hindered or prohibited is not the best use of the land and is not in accordance with the intention of the Antiquities Act."

President Barack Obama created the monument in southeast Utah in December, angering Republicans who accused the administration of federal overreach by ignoring locals who opposed the move and using the Antiquities Act to cut off commercial activity such as mining and oil and gas drilling.

Prior legislative attempts by the Utah delegation to curb federal monuments in the state have failed. Utah Republicans Rob Bishop and Jason Chaffetz did manage last year to get their Utah Public Lands Initiative legislation through the Natural Resources Committee, which Bishop chairs, but it never received a floor vote.

If Trump ultimately decides to alter Bears Ears or the other monuments on the list, he is certain to face legal challenges from environmental groups. "An attack on one monument is an attack on all of them," said Jesse Prentice-Dunn, advocacy director at the Center for Western Priorities.

Past presidents have changed the size of monuments but none have revoked them entirely, and legal questions remain as to whether the law allows a president to fully undo their predecessor's actions.

Zinke last month traveled to the Bears Ears and Grand Staircase-Escalante monuments and this week he will head to New England to visit the Katahdin Woods and Waters National Monument in Maine, which is also under review.

Zinke has repeatedly talked about the need to balance conservation with commercial and recreational demands on public lands, and has already this year ended the moratorium on new coal leases and launched reviews on ways to open up more areas for oil and gas development.

U.S. biodiesel industry gets early win in trade case Back

By Eric Wolff | 08/22/2017 05:05 PM EDT

The Commerce Department will impose import duties on biodiesel shipments from Argentina and Indonesia as a result of a trade case brought by domestic producers, Commerce Secretary Wilbur Ross said Tuesday.

"The U.S. values its relationships with Argentina and Indonesia, but even friendly nations must play by the rules," Ross said in a statement announcing the rulings.

The department found the Argentine and Indonesian governments set up subsidies in violation of international trade laws, and penalties are needed to even out prices. "The subsidization of goods by foreign governments is something that the Trump administration takes very seriously, and we will continue to evaluate and verify the accuracy of this preliminary determination," Ross added.

Because the ruling is preliminary, companies in Argentina and Indonesia will have to pay a cash deposit on exports to the U.S. to cover potential future penalties. The cash deposit rates will range from 50.29 percent to 64.17 percent of the value of Argentine biodiesel, and from 41.06 percent to 68.28 percent for product from Indonesia.

Commerce also imposed a retroactive penalty so that the deposit rates will apply to biodiesel exports to the U.S. from those countries dating back to May, rather than starting Tuesday, as would normally be the case.

The National Biodiesel Board and 15 biodiesel producers brought the case in response to rapidly increasing imports of biodiesel from the two countries.

"The Commerce Department has recognized what this industry has known all along — that foreign biodiesel producers have benefited from massive subsidies that have severely injured U.S. biodiesel producers," Doug Whitehead, NBB's chief operating officer, said in a statement.

The National Association of Truck Stop Operators opposed the rulings, arguing they would raise fuel prices in the U.S. and ultimately lead to higher costs for consumer goods transported by truck in the U.S. "Any outcome that results in cutting off Americans' access to cleaner burning fuels, such as biodiesel, from foreign markets is a bad day for the United States," David Fialkov, NATSO's vice president of government relations, said in a statement.

Commerce will take comment on the preliminary rulings and then issue final decisions, which are likely to come next year.

Commerce is expected in October to issue a preliminary ruling in a separate case on whether Argentina and Indonesia deliberately dumped biodiesel in the U.S., undermining U.S. producers. NBB and the 15 biodiesel producers brought that action as well.

A memo Commerce released Tuesday on Argentine imports is here. The decision is here. A memo on Indonesian imports may be read here. The decision is here.

Trump rejects wealthy friends' pleas for help Back

By Alex Guillén and Eric Wolff | 08/22/2017 07:30 PM EDT

Coal magnate Robert Murray has just joined Wall Street billionaire Carl Icahn in an exclusive club — wealthy backers of President Donald Trump who tried and failed to get lucrative concessions from his administration.

Murray, CEO of Murray Energy, one of the nation's biggest and most politically active coal miners, complained in an Aug. 4 letter made public Tuesday that the Energy Department had dragged its feet on his request that it use its emergency powers to force some Rust Belt coal-fired power plants to stay open. Trump was so taken by the idea that he immediately turned to Energy Secretary Rick Perry and ordered him to do it, wrote Murray, who said he had witnessed the conversation.

But DOE said no.

Murray's failure to shift the policy, and Icahn's earlier inability to convince the Environmental Protection Agency to alter its ethanol rule, raises questions about the limits of bulldog business leaders to circumvent the government's bureaucracy, even in an administration run by a sympathetic billionaire.

"These are two people who really don't understand how government works talking to a president who came into office not understanding how government works," said Jeff Navin, a founder of Boundary Stone Partners and former acting chief of staff at the Department of Energy under President Barack Obama. "What they're asking for causes serious legal problems for the agencies they're asking to take these steps."

Some conservatives, meanwhile, praised Trump for sticking up for market principles by refusing to grant favors to individual supporters.

The Trump administration "is committed to making sound policy decisions based on market principles and the rule of law, not political favoritism," said Tom Pyle, president of the industry-funded American Energy Alliance and former head of the Trump transition team at the Energy Department. "This is welcome news for Main Street and a wake-up call for K Street."

Icahn was an early Trump supporter — the two men go back decades — and though Murray

started 2016 backing Texas Sen. Ted Cruz, he eventually boarded the Trump train, hosting a major fundraiser in West Virginia and offering to educate Trump on coal issues. Trump's victory in November meant both had a chance to advance pet policies, especially since it seems both men have regular access to the president.

Yet both met with defeat.

The Energy Department rejected Murray's request that it use a special authority meant to protect the electric grid during emergencies to order FirstEnergy Solutions, part of Ohio-based utility FirstEnergy Corp., to keep open its coal-fired plants supplied by Murray's mines, even if the utility enters bankruptcy proceedings and would otherwise shut them down. Murray said that if those power plants shut down, it would force his company into bankruptcy.

Trump seemed fully supportive in private meetings, Murray revealed in letters to the White House, which were first published by The Associated Press.

At one meeting with the president, Trump turned to Perry in front of Murray "and said three (3) times 'I want this done,'" the coal company owner wrote. During a subsequent meeting with Murray and FirstEnergy Corp. CEO Charles Jones, Trump told an aide to "'tell [National Economic Council Director Gary] Cohn to do whatever these two want him to do.'"

But despite Trump's reported enthusiasm about granting Murray's unusual request, and despite Murray's assurances that other coal producers would benefit as well, the administration this week rejected it. DOE said in a short statement that "the evidence does not warrant the use of this emergency authority."

A White House spokeswoman did not address whether Trump had made the promises to Murray but said the president had acted on behalf of coal miners by killing Obama-era rules.

"Whether through repealing the Clean Power Plan and the 'Waters of the U.S. Rule,' removing the U.S. from the Paris Climate Agreement, or signing legislation to overturn rules and policies designed to stop coal mining, President Trump continues to fight for miners every day," White House spokeswoman Kelly Love said in a statement.

Similarly, Icahn's push to change a federal biofuel program to help his oil refining company CVR Energy suffered defeat earlier in the month. The Wall Street investor for years had railed against the EPA's Renewable Fuel Standard, which requires gasoline refiners to blend ethanol into their fuel, and Icahn's role as an unofficial Trump adviser on regulations presented him the opening he had sought.

In the early weeks of the Trump administration, Icahn presented the White House with language for an executive order to overturn the rule, which was costing his company hundreds of millions of dollars. But Icahn's effort hit a wall of opposition from oil companies and biofuel makers, and by spring, the proposal was largely left for dead. Sources told POLITICO earlier this month that the president would not be changing the biofuel program, though EPA has yet to make the decision official.

Icahn "comes in hot, his guy wins, Trump places a crown on Icahn's head, and Icahn says 'OK, it's corporate raider time,'" said Tyson Slocum, energy director for the nonprofit consumer advocacy group Public Citizen. "He knows hardball tactics. What Carl Icahn doesn't know is D.C."

Last week, Icahn resigned his title, and in another sign that he was wrapping up his affairs in D.C., he settled a court challenge to an enforcement action brought by the Federal Railroad Administration against American Railcar Industries, another Icahn-controlled company. That final settlement largely resembles the inspection regime the agency originally imposed, an FRA spokeswoman said.

One critic said the lack of experience in the new administration appeared to open the door for both Icahn and Murray, even if neither managed to step through it.

"I think we've seen, in this administration, at least, reports of an under-attentiveness to those procedural and institutional safeguards. That creates risk for unsound decisions to be made," said Ali Zaidi, a former Obama White House energy adviser now at the law firm Morrison & Foerster.

Icahn and Murray aren't the only ones seeking special treatment.

Coal billionaire-turned-West Virginia Gov. Jim Justice has proposed a federal subsidy for Appalachian coal in a plan that could net his own mines millions of dollars.

Justice privately pitched Trump on a subsidy that would pay utilities $15 per ton of Appalachian coal burned, and he said in a recent interview the president was "really interested" in the plan, which would cost an estimated $4.5 billion a year and likely require congressional approval.

But Justice's proposal has not been received well by key circles. It's gone over "like a fart in church" with Western coal miners, according to Travis Deti, executive director of the Wyoming Mining Association. And Wyoming's congressional delegation — including Senate Environment and Public Works Chairman John Barrasso, a Republican — panned the idea in a letter to Trump. Democrats, environmentalists and budget-hawk Republicans are also opposed to any coal subsidy.

Justice might look to the results that Icahn and Murray got.

Icahn and Murray "both became completely consumed with their own narrow self-interest, and they completely lost sight that there are a lot of stakeholders — including corporate stakeholders — that may not like their proposals," said Public Citizen's Slocum.

White House eyes Afghanistan resources to defray costs Back

By Ben Lefebvre | 08/22/2017 03:01 PM EDT

President Donald Trump may press for a U.S. role in tapping Afghanistan's vast mineral reserves to defray the cost of military operations there, a senior adviser to Trump confirmed to POLITICO Tuesday.

Trump, who repeatedly called for the U.S. to take Iraqi oil to pay for its mission in that country, plans to increase troop levels in Afghanistan. But while he vowed in his policy speech on Monday that the U.S. would not engage in "nation-building again," he also said the U.S. would "participate in economic development to help defray the cost of the war to us."

Asked whether Trump was considering grabbing a stake in Afghanistan's vast mineral deposits — estimated at $1 trillion by one U.S. government report — a senior White House adviser said it was on the table.

"We're looking at all those types of options," the adviser said.

A White House spokeswoman said there were no new announcements at the moment.

The war-torn country has an estimated 60 million metric tons of copper and 2.2 billion metric tons of iron ore, plus deposits of magnesium, gold, silver, rubies and other valuable resources spread across the country, according to a U.S. Geological Survey study. It also holds up to 1.6 billion barrels of recoverable oil and 16 trillion cubic feet of natural gas, according to government data — a relative pittance compared to some of its Middle East neighbors, but enough that Exxon Mobil and other oil companies sniffed around the area briefly.

But extracting and processing tons of minerals in a war zone and transporting it out of the mountainous country with few modern roads or bridges is not something that can be done anytime soon, analysts said. Armed guerrilla groups and warlords currently mine the deposits to fund their own operations, according to a study by Global Witness, a nonprofit that campaigns for transparency in mining, oil and gas sectors.

Afghanistan's inherent infrastructure difficulties, both physical and political, blocked the building of a natural gas pipeline through the country in the late 1990s.

In 1997, Unocal, which was later bought by Chevron, joined a group of companies seeking to build a $2.5 billion pipeline transporting natural gas from across the country, but it abandoned the effort. A company executive told the House Foreign Relations Committee in 1998 the lack of a strong government in the country posed a serious challenge to getting any energy infrastructure built there.

Trump can look at China for an example of how things can go wrong on the mining front, said Tony Cordesman, Burke chair in strategy at the Center for Strategic International Studies.

In 2007, two Chinese mining companies obtained Afghan government permission to extract copper from the country's Aynak region. A decade later, the project has stalled amid security concerns, contract disputes and controversy over the Chinese consortium's handling of Buddhist relics at the site.

"Above all it's a security problem. Is there mineral wealth there? Yes. Are we in position to secure a mine? If you don't have security, it is extremely difficult," Cordesman said.

Dakota Access owner sues green groups Back

By Diamond Naga Siu | 08/22/2017 04:44 PM EDT

Dakota Access Pipeline owner Energy Transfer Partners filed a federal racketeering lawsuit today against Greenpeace International and Earth First!, contending the environmental groups worked together to spread false information about the company to raise money and damage Energy Transfer's business.

"The alleged Enterprise is comprised of rogue environmental groups and militant individuals who employ a pattern of criminal activity and a campaign of misinformation for purposes of increasing donations and advancing their political or business agendas," ETP and its parent company said in a statement. "The Complaint asserts that the attacks were calculated and thoroughly irresponsible, causing enormous harm to people and property along the pipeline's route."

The 187-page complaint additionally alleges that "smaller, more violent eco-terrorist organizations and radicalized individuals" are mishandling their funds and instead of using it to help the environment, they used the money for personal gain.

"Under the 'Greenpeace Model,' raising money and the network's profile is the primary objective, not saving the environment," their complaint wrote. "Greenpeace's most senior leaders have admitted that their goal is not to present accurate facts, but to 'emotionalize' issues and thereby 'pressure' (i.e. manipulate) their donor audiences into parting with their money."

Greenpeace USA General Counsel Tom Wetterer said this is the second "meritless" lawsuit filed against them by the law firm led by President Donald Trump's former personal attorney Marc Kasowitz.

"They are apparently trying to market themselves as corporate mercenaries willing to abuse the legal system to silence legitimate advocacy work," Wetterer said in a statement.

Subject: Grassley asks Trump to curb expensive travel by administration officials

By Eric Wolff

09/28/2017 04:07 PM EDT

Sen. Chuck Grassley (R-Iowa) wants to know how President Donald Trump will curb private air travel by top members of his administration, including EPA Administrator Scott Pruitt.

"Please detail what steps the administration has taken to ensure that cabinet secretaries use the most fiscally responsible travel in accordance with the public trust they hold and the spirit and letter of all laws, regulations, and policies that apply," Grassley wrote in a letter to President Donald Trump today.

Grassley criticized reports of travel by military aircraft or charter jet by Pruitt, Health and Human Services Secretary Tom Price, and Treasury Secretary Steve Mnuchin. EPA has spent $58,000 on Pruitt's travel this year, including a charter flight to visit to the Gold King Mine in Colorado.

Noting that HHS Secretary Price has said he will not use charter jets while his department's inspector general reviews his travel, Grassley writes, "This development should be copied government-wide."

Analysis

Air Pollution Control Guide

Federal

Stack Emissions Monitoring (Quality Assurance). Revised to provide a more in-depth discussion of the procedures approved by the Environmental Protection Agency for use when establishing quality assurance and quality control procedures for continuous monitoring systems.

State

Massachusetts (Fuel Controls and Mobile Sources). Updated to reflect two final rulemakings by the Massachusetts Department of Environmental Protection (MassDEP). The first rule requires the Massachusetts Department of Transportation (MassDOT) to quantify and report greenhouse gas emissions annually from the combustion of fuels in mobile equipment owned or leased by MassDOT and the Massachusetts Bay Transportation Authority. The rule is intended to allow MassDOT to demonstrate whether it has achieved specified emission limits for calendar years 2018, 2019, and 2020. The second rule sets limits on carbon dioxide emissions from passenger vehicles owned or leased by any of the state's executive offices. The rule establishes emission limits that decline each year from 2018 through 2025. Both rules took effect Aug. 11.

Massachusetts (Greenhouse Gas Standards). Updated to reflect two final rulemakings by MassDEP. The first rule amends existing regulations to include sulfur hexafluoride emission limits for gas-insulated switchgear owned by large utilities. The second rule imposes limits to reduce methane emissions from natural gas mains and services for individual natural gas distribution system operators. The rule requires gas operators to report annually the total miles of their main and service pipelines by material type. Both rules took effect Aug. 11.

Massachusetts (Power Plants). Updated to reflect a final rulemaking by MassDEP establishing two new regulations. The first regulation establishes an allowance trading program for carbon dioxide emissions from electricity generation. The regulation also sets an annually declining limit on aggregate carbon dioxide emissions from 21 power plants in Massachusetts. The second

regulation establishes a Clean Energy Standard, which sets a minimum percentage of electricity sales that utilities and competitive suppliers must procure from clean energy sources. The minimum percentage begins in 2018 at 16 percent and increases 2 percent each year, peaking at 80 percent in 2050. The regulations took effect Aug. 11.

Chemicals Management Guide

Federal

Reporting and Recordkeeping Requirements (The TSCA Inventory). Updated to include reference to the Toxic Substances Control Act Inventory notification (active-inactive) rule, which took effect Aug. 11, establishing one-time reporting requirements that the Environmental Protection Agency will use to distinguish between substances listed on the TSCA Inventory that are active in commerce and those that are inactive. The rule requires manufacturers to notify the EPA by Feb. 7, 2018, of Inventory substances that they manufactured or imported for commercial purposes, subject to further conditions detailed in the rule, during the 10-year lookback period from June 21, 2006, to June 21, 2016. Processors also may submit such notifications for substances they processed during the lookback period by Oct. 5, 2018. In addition, the rule sets up forward-looking reporting requirements under which manufacturers and processors must notify the agency of any substance listed on the Inventory as inactive that they plan to reintroduce into commerce for nonexempt commercial purposes. The EPA then will redesignate the substance as active.

Reporting and Recordkeeping Requirements (Chemical Data Reporting Requirements for Inventory Substances). New subsection added to discuss new one-time reporting requirements under the TSCA Inventory notification (active-inactive) rule. Anyone who manufactured or imported a "chemical substance subject to commercial activity designation" during the 10-year lookback period from June 21, 2006, to June 21, 2016, must notify the EPA via a Notice of Activity (NOA) Form A by Feb. 7, 2018, except under specified circumstances. The rule defines a chemical substance subject to commercial activity designation as a substance that was added to the Inventory before June 21, 2006; wasn't reported as having been manufactured in and of the calendar years from 2010 through 2015 (in which case it automatically will be designated as active); isn't a naturally occurring chemical substance as defined in the active-inactive rule; and hasn't yet been designated as either active or inactive. Processors also can submit an NOA Form A by Oct. 5, 2018, if they wish. If the EPA doesn't receive an NOA Form A for a substance subject to commercial activity designation by the appropriate deadline, it will designate the substance as inactive, effective 90 days after the agency identifies the substance for such designation. Anyone who intends to manufacture, import, or process a substance once it is designated as inactive must submit a Notice of Activity Form B, except under specified circumstances. The Inventory notification rule also covers areas such as content and submission information for the notification, recordkeeping requirements, and handling notification obligations when two or more persons are involved in manufacturing or processing a particular volume of a substance.

Reporting and Recordkeeping Requirements (

Water Pollution Control Guide

State

Louisiana (Permit Fees). Updated to reflect an increase in the minimum and maximum annual fees for Louisiana Pollutant Discharge Elimination System permits to $380 and $150,000, respectively, effective July 1.

Louisiana (Sludge Management Program). Updated with a $2,000 annual fee, effective May 20, imposed on permit holders for land application of sewage sludge

Louisiana (Wetlands Protection Applications and Fees). Updated to reflect revised processing fees for water quality certification. As of May 20, the fees are $385 for commercial activities and $37 for noncommercial activities.

Texas (Consumer Confidence Reports and Public Notification). Updated to reflect additional public notification requirements for Escherichia coli (E. coli) maximum contaminant level (MCL) violations. The public must be notified that the presence of E. coli indicates the water may be contaminated with human or animal wastes, suggesting the need for the facility to look for potential problems in water treatment or distribution.

Texas (Drinking Water Revolving Fund). Updated with revised application requirements. The Texas Water Development Board offers loans with terms of up to 20 years for the planning, acquisition, and design of an eligible project; 20 years for the construction of an eligible project; and 30 years for the construction of an eligible project by a disadvantaged community. The board may decide to recommend an environmental impact statement before approving a loan.

Texas (Environmental Management Standards Background). Updated to reflect provisions in both Texas law and Texas Commission on Environmental Quality regulations that provide incentives to encourage the wider adoption of environmental management systems to foster continuous voluntary improvement in environmental performance. Entities with a history of compliance with environmental requirements are given technical compliance assistance and flexibility in the regulatory process.

OCCUPATIONAL SAFETY AND HEALTH
Workers' Compensation/Employee Requests for Change of Physician
California OCCUPATIONAL SAFETY AND HEALTH

Notice announces the decision of the Division of Workers' Compensation to deny a petition submitted by an individual requesting an amendment to regulations under 8 CCR 9781 regarding workers' compensation medical provider networks and employee requests for change of physician. The petitioner requested that claims administrators for all self-insured and insured employers, including those that offer a medical provider network, comply with certain procedures and submit specified information once notified of a change in physician by an employee. The petition is denied because in the case of employees treated through an employer-selected medical provider network, communication is already established with the physician and/or contractual relationships already in place, and automatically requiring the claims administrator to provide the specified information is unnecessary. Contact: John Cortes; DWC, Legal Unit; 510-286-7100

AIR
NOx Emissions Reductions from Miscellaneous Sources
California Regions AIR

Final rule of the South Coast Air Quality Management District amends regulations under Rule 1147 regarding nitrogen oxide (NOx) emission reductions from miscellaneous sources. The rule removes the NOx emission limit requirement for low temperature ovens and other units with a

heat input rating of less than 325,000 British thermal units per hour and revises the limit for low temperature afterburners, burn-off ovens, incinerators, and related equipment from 30 parts per million (ppm) to 60 ppm. The rule also changes the compliance date for small in-use units to a schedule based on a 35-year lifetime or until the units are replaced, retrofitted, or relocated. In addition, the rule adds exemptions and compliance flexibility and clarifies exemptions for food ovens and for flare type systems. The rule will be submitted to the U.S. EPA as a revision to the state implementation plan. The rule is effective July 7, 2017. Contact: Tracy Goss; South Coast AQMD; 909-396-3106; TGoss@aqmd.gov

AIR
Refinery Fenceline and Community Air Monitoring
California Regions AIR

Notice of the South Coast Air Quality Management District announces a draft proposed rule to adopt regulations under Rule 1180 to require petroleum refineries to install and operate continuous, real-time fenceline and community air monitoring systems. The rule requires refinery operators to submit written plans for establishing and operating such systems, including specifying equipment to be used, the method for disseminating data to the public, and audit procedures. The rule also requires refinery operators to notify the district of downtime for planned maintenance and unplanned equipment failures that impact monitoring data. In addition, the rule requires refinery operators to maintain monitoring records for five years and exempts refinery operators that submit a community air monitoring fee or that comply with a cost-recoverable community air monitoring agreement. A comment due date is not specified. Contact: Dan Garcia; South Coast ACMD; 909-396-3304; dgarcia@aqmd.gov

HAZARDOUS WASTE MANAGEMENT
Hazardous Waste Management
Tennessee HAZARDOUS WASTE MANAGEMENT

Notice of the Department of Environment and Conservation, Division of Solid Waste Management, announces a 75-day stay of the effective date for a May 15, 2017, final rule that amends regulations under RRT 0400-12-01-.01 through -.09 (nonconsecutive) regarding hazardous waste management to incorporate revisions to federal standards, as of April 17, 2015. The rule adds and revises definitions related to solid waste and variances, deletes provisions

regarding the comparable fuels exclusion and gasification exclusion, and modifies and clarifies the procedure for verifying reclaimers and intermediate facilities managing hazardous secondary materials. The rule also includes in the list of regulated hazardous waste those wastes generated primarily from processes that support the combustion of coal or other fossil fuels that are co-disposed with excluded fly ash waste, bottom ash waste, slag waste and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels. In addition, the rule adds new exclusions for specified hazardous secondary materials that have been reclaimed and/or transferred, revises permitting procedures, and adds new container and tank management standards and emission standards. Finally, the rule adds emergency preparedness and response requirements. The rule now is effective Oct. 21, 2017. HAZARDOUS WASTE MANAGEMENT
Hazardous Waste Management
Tennessee HAZARDOUS WASTE MANAGEMENT

Notice of the Department of Environment and Conservation, Division of Solid Waste Management, announces a 75-day stay of the effective date for a May 15, 2017, final rule that amends regulations under RRT 0400-12-01-.02, -.05 and -.10 to add a common chemical name 1,1,1-trichloroethane to the U226 list of commercial chemical products. The rule also updates language regarding the exclusion of comparable fuel and syngas fuel to conform to federal standards. In addition, the rule replaces the CAS number 137-30-4 with "NA" under waste code K161 in the Treatment Standards for Hazardous Wastes table and corrects a typographical error to the process description to K107. The rule now is effective Oct. 21, 2017. Contact: Jackie Okoreeh-Baah; DEC, Division of Solid Waste Management; 615-532-0825; Jackie.Okoreeh-Baah@tn.gov

Subject: Morning Energy, presented by the U.S. Chamber's Global Energy Institute: Climate skeptics find new favorite talking point — Solar world fears gloomy 2018 amid potential tariffs — Cuomo's pipeline rejection raises eyebrows nationally

By Anthony Adragna | 09/25/2017 05:53 AM EDT

With help from Alex Guillén

NEW FUEL FOR THE CLIMATE SKEPTIC FIRES: The small group of climate change skeptics, led by the Heartland Institute, has seized upon a recent peer-reviewed study to vindicate their calls for a debate on the fundamentals of climate change, Pro's Emily Holden reports. The paper concluded the planet can tolerate more greenhouse gas emissions in the near future than previously thought, a finding its authors said does not undercut the basic consensus that human activity is causing temperatures to rise faster than normal. But Heartland Institute President Tim Huelskamp, whose group has submitted nominees for EPA Administrator Scott Pruitt's red team, blue team exercise and EPA's Science Advisory Board, says the report raises more questions. "This is exactly the type of debate discussion scientists need to be having," said Huelskamp, a former Republican congressman from Kansas. "If they were wrong 10 years ago, what makes their new modeling correct?"

Scientists bash mischaracterizations: Authors of the study said their work has been willfully misinterpreted for political purposes. While they expected their conclusions to be mischaracterized, they said they hadn't expected such an intense reaction. "We are not trained in PR.... Our job is to do solid science and communicate that. It's not really our job to guard against every possible critique, especially when they're not real critiques," said Damon Matthews, a study author and Concordia University Research Chair in Climate Science and Sustainability. "[T]here is no scientific result in our story that questions the basics of climate change and the imperatives for mitigation action."

What did the report find? The study found Earth has 20 years at the current rate of carbon dioxide emissions — 10 years more than the Intergovernmental Panel on Climate Change had estimated in its 2013 report — before average global temperatures grow 1.5 degrees Celsius. While previous research suggested countries had a "carbon budget" between 200 billion to 400 billion metric ton of carbon emissions before temperature increases exceeded 1.5 C, their paper pegged the figure above 700 billion metric tons. Some respected scientists have disagreed with the methodology the authors used to come to their conclusions.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and the Glover Park Group's Hayley Moller was first to identify Tip O'Neil as the famous politician appearing in a 1983 episode of *Cheers* (clip here). For today: Which senator made a brief cameo in *Wedding Crashers*? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

FEARS OF A SOLAR SUNSET IN 2018: Experts point to the last time the U.S. slapped steep

tariffs on imported goods as a cautionary tale for President Donald Trump as he ponders whether to erect harsh trade barriers sought by Suniva and SolarWorld USA on imported solar panels, Pro's Eric Wolff reports . Back in 2002, President George W. Bush put a 30 percent tariff on several types of steel imports, but the move led directly to a supply shortfall in the U.S., causing wild fluctuations in prices, according to Tom Werner, CEO of SunPower Corp and a tariff opponent. "There's a very good chance it could end up the same way," said Tori Whiting, a research associate at the Center for International Trade and Economics at the conservative Heritage Foundation. A reminder that we're at this point due to Friday's International Trade Commission ruling that opens the door for Trump to penalize cheap Chinese solar imports through tariffs.

Suniva and SolarWorld USA have both promised to restart production at shuttered factories if they get trade protections, and they reject the notion that tariffs would cost jobs. But getting factories back into operation will take years and attracting capital may prove difficult since tariffs are limited to four years under the law.

RAISING EYEBROWS, NOT PIPELINES, IN THE EMPIRE STATE: Amid speculation he's positioning himself for a possible 2020 presidential bid, New York Gov. Andrew Cuomo has blocked three pipelines in the last 16 months, drawing national attention as his environmental policy has grown decidedly more progressive, POLITICO New York's Marie J. French reports. Cuomo most recently denied a permit for Millennium Pipeline's 7.8 mile project — including a novel legal argument involving concerns about the greenhouse gas emissions from the power plant it would serve — after previously denying two other major pipelines permits over fears of how they'd affect water quality. "I think environmentalists have no choice but to pay some respect to Gov. Cuomo's moves — banning fracking was a big step, and he's followed it up with some other courageous decisions," 350.org co-founder Bill McKibben said. "We hope very much that he'll support the call for 100% renewable energy that's becoming the basic test for politicians going forward."

** **A message from the U.S. Chamber's Global Energy Institute:** American energy is changing our economy. And now, it is changing the world. The U.S. Chamber of Commerce's Global Energy Institute is at the forefront of the policy discussions in Washington and around the nation that will help fuel the global energy revolution. GUESSING GAMES: Trump's penchant for leaving himself wiggle room on contentious policy decisions like trade, taxes, immigration, health care and climate change is inducing whiplash in many of the political insiders, business leaders and even foreign governments with a stake in the outcomes, POLITICO's Emily Holden, Andrew Restuccia, Aaron Lorenzo and Ted Hesson report . On the international climate front, diplomats have been left in the dark about what precisely the United States wants since June, when Trump announced his intention to exit the Paris agreement but "begin negotiations" to either reenter the nearly 200-nation accord or join an entirely new deal.

White House spokeswoman Kelly Love said: "President Trump was put into office precisely because he isn't beholden to lobbyists and special interests. If they're upset that they can't stroll

into the White House and drive administration policy anymore, that's a badge of honor for a president who was elected to drain the swamp."

BONN BONN BONNNNN: Trump's decision to leave the Paris climate accord have raised the stakes for international climate negotiations in Bonn, Germany for nations around the world to reiterate their commitment to the accord, Pro's Eric Wolff reports , citing an interview with the top climate negotiator for Fiji who's leading the meeting. "Our aim was changed by President Trump's announcement," Ambassador Nazhat Khan said. "Now we must deliver a visionary [conference]. Every work item for COP 23 is measured for the enhancing and restating of the overall vision."

RELIEF FINALLY BEGINS TO FLOW IN PUERTO RICO: A ship carrying 1.6 million gallons of water, 23,000 cots, dozens of generators and food arrived Sunday in Puerto Rico — the first of many expected in the coming days — as millions of Americans brace themselves for potentially months without electricity and damaged drinking water infrastructure, the Associated Press reports. Rep. Nydia Velazquez plans to request a one-year waiver from the Jones Act, a federal law requiring domestic cargo shipments to move only on U.S. vessels. "We will use all our resources," Velazquez said. "We need to make Puerto Rico whole again. These are American citizens."

Dam worries linger: There were mixed reports on the status of the Guajataca Dam in Northwest Puerto Rico. Some suggested the structure remained in danger of collapse Sunday after authorities previously evacuated 70,000 residents in that area, while others quoted local officials saying the risks were overblown.

Congress plots relief efforts: Lawmakers are beginning to plot potential relief options for the island, which may include tax breaks and more Medicaid funding, POLITICO Financial Services' Colin Wilhelm reports. "This is a natural disaster in Puerto Rico like we haven't seen ever," said Carlos Mercader, executive director of the commonwealth's Federal Affairs Administration. "Think about Katrina but even worse because this is the whole island." In an interview with Colin on Sunday, Puerto Rico Gov. Ricardo Rossello called for Congress to treat Puerto Rico like a state in any comprehensive emergency aid package. Remember Puerto Rico was already dealing with a massive government debt crisis, crumbling infrastructure and a bankrupt electric utility before the storm.

Relief not fast enough for many: Cuomo, who visited Puerto Rico on Friday, jabbed Trump for his focus on the NFL instead of the emerging humanitarian crisis over the weekend: "Instead of arguing with football players, instead of obsessing about how to take health care from the poor, why don't we put the politics aside and focus on helping Americans in desperate need?" he said, according to the Albany Times-Union. Hillary Clinton tweeted : "President Trump, Sec. Mattis, and DOD should send the Navy, including the USNS Comfort, to Puerto Rico now. These are American citizens.

Toxic waste removed in Texas: Tucked away in a Friday press release was the disclosure EPA recovered 517 containers of "unidentified, potentially hazardous material" from Superfund sites in Texas affected by Hurricane Harvey but the agency isn't providing any additional information

about the waste, the Associated Press reports. EPA won't say what sites the material came from, whether they've been identified or if there's a human health threat.

QUID PRO QUO? EPA staff directed staff to take the first toward reversing the proposed veto of Alaska's Pebble Mine in July shortly after Pruitt met with Tom Collier, CEO of Pebble Limited Partnership, CNN reports , citing interviews and government emails. "This is a process issue," Collier told CNN in an interview. "[Pruitt] is not saying he's not going to veto this project. He's just saying that the rule of law says that you do an environmental impact statement first, right? That's Mr. Pruitt's position." Collier said Pebble plans to file mining permit applications in December. Pruitt's move allows the company to submit a permit application but does not guarantee it would be approved.

NATIONAL CLEAN ENERGY WEEK KICKS OFF: A veritable who's who and VIPs of the clean energy world are in town this week to tout the benefits of clean energy technologies and try to rally support in Congress and the administration for the sector's continued growth. Interior Secretary Ryan Zinke and Energy Secretary Rick Perry launch the festivities in earnest on Tuesday at 8 a.m. A full schedule is available here.

LET'S MAKE A DEAL?: California may go along with some changes the Trump administration and automakers would like to see to vehicle emissions rules in the near future, as long as the White House and industry agree to tougher rules that would kick in later. Mary Nichols, chair of the California Air Resources Board, told Bloomberg that she has spoken with White House energy adviser Mike Catanzaro about the administration's review of EPA emissions standards through model year 2025.

If EPA weakens those rules, California would still be able to enforce its own, more stringent standards, which 13 other states also have adopted. That would create a complex regulatory patchwork — or a protracted court fight over California's authority — that all parties would prefer to avoid, if possible. "The price of getting us to the table is talking about post-2025," Nichols told Bloomberg. California would be "willing to talk about specific areas if there were legitimate concerns the companies raised" as part of a larger discussion.

MAIL CALL! REMEMBER THAT TALK WE HAD? Six senators, led by Sheldon Whitehouse, sent a letter to FERC Chairman Neil Chatterjee on Friday requesting the commission move "as quickly as possible" to complete a rule on better integrating energy storage and small renewable energy installation, which Whitehouse and Sen. Ed Markey discussed with Chatterjee prior to his confirmation. At the time of meeting, Whitehouse said he received a commitment the rule would not be "unduly delayed."

CHINA MOVES TO CUT OFF OIL FOR NORTH KOREA: Moving to implement the latest round of U.N. sanctions, China announced Saturday it would ban exports of condensates and liquefied natural gas immediately, Reuters reports. The country also said it would limit exports of refined petroleum products from Oct. 1.

GREENS APPEAL HFC DECISION: ME readers previously learned it was coming, but the Natural Resources Defense Council on Friday formally asked a federal appeals court for an en

banc rehearing of last month's decision striking down an EPA rule limiting use of hydrofluorocarbons, potent greenhouse gases, Pro's Alex Guillén reports in Energy Regulation Watch. The group feels the D.C. Circuit erred in its 2-1 decision and are likely to be joined in their appeal by Honeywell, a U.S. manufacturer.

GREENS OPPOSE FOUR EPA NOMINEES: Ten environmental organizations, including the Sierra Club, League of Conservation Voters and Waterkeeper Alliance, sent a letter to senators Friday urging them to oppose the four nominees expected to shortly come before the Environment and Public Works Committee for confirmation hearings. "Each of these individuals have demonstrated a willingness to advance the agenda of polluters and industry before health protections and safeguards for clean air and clean water," they wrote of the nominations of Matthew Leopold to be general counsel, William Wehrum to run the air office, Michael Dourson to run the Office of Chemical Safety and Pollution Prevention and David Ross to run the water office

MORE CONCERN OVER CADIZ PROJECT: California Sen. Dianne Feinstein released a letter Friday from the Metropolitan Water District questioning of safety and viability of the controversial California water project. David Bernhardt, Interior's number two, previously did legal work on behalf of the Cadiz project while in the private sector and the issue came up repeatedly during his confirmation process. Feinstein, a vocal opponent of the project, accused the Trump administration of trying to "muscle the Cadiz water project through" back in April.

HAPPENING THIS WEEK

MONDAY

12:00 p.m. — "The National Flood Insurance Program, Zoning Regulations, and Hurricanes:

Lessons for Lawmakers," The Cato Institute, 122 Cannon

TUESDAY

7:30 a.m. — National Clean Energy Week symposium kicks off with remarks from Secretaries Zinke and Perry, Reserve Officers Association, 1 Constitution Avenue NE

9:30 a.m. — Institute for Policy Integrity green states conference, New York University School of Law, 40 Washington Square South, Vanderbilt Hall, New York, N.Y.

10:00 a.m. — "Powering America: Technology's Role in Empowering Consumers," House Energy and Commerce Energy Subcommittee, Rayburn 2123

10:00 a.m. — "Legislative Hearing on 4 Fishery Bills," House Natural Resources Water, Power and Oceans Subcommittee, Longworth 1334

10:00 a.m. — Senate Energy and Natural Resources holds hearing on DOE nominations, Dirksen 366

10:00 a.m. — "Building a 21st Century Infrastructure for America: Water Stakeholders' Perspectives," House Transportation and Infrastructure Water Resources and Environment Subcommittee, Rayburn 2167

12:00 p.m. — "Maryland's Offshore Wind and Energy Efficiency Policies," Women's Council on Energy and the Environment, Dentons, 1900 K Street NW

12:00 p.m. — "The Future of Nuclear Power: Technology, Security and Geopolitics," Global American Business Institute, 1001 Connecticut Avenue NW, Suite 230

12:00 p.m. — "Energy Transition and the Future of Hydrokinetic Energy in the United States," Environmental Law Institute, 1730 M Street, NW, Suite 700

12:30 p.m. — Natural Gas Roundtable hosts David Carroll, president of the International Gas Union, for monthly luncheon, University Club, 1135 16th Street NW

2:00 p.m. — House Natural Resources Indian, Insular, and Alaska Native Affairs Subcommittee hearing on various bills, Longworth 1334

2:00 p.m. — "Examining America's nuclear waste management and storage," House Oversight and Government Reform Interior-Environment Subcommittee, Rayburn 2154

WEDNESDAY

9:00 a.m. — "North America Energy Forum 2017," Wilson Center, 1300 Pennsylvania Ave. NW

10:00 a.m. — Senate Commerce Committee hearing on nominations, Russell 253

10:00 a.m. — "Forest Management to Mitigate Wildfires: Legislative Solutions," Senate Environment and Public Works Committee, Dirksen 406

2:00 p.m. — "Encouraging the Next Generation to Visit National Parks," Senate Energy and Natural Resources National Parks Subcommittee, Dirksen 366

3:00 p.m. — "Global Lessons from the Thawing Arctic," The Study of Environmental Arctic Change, 1200 New York Ave NW

THURSDAY

9:30 a.m. — "The Great American Eclipse: To Totality and Beyond," House Science Space and Research and Technology subcommittees, Rayburn 2318

4:00 p.m. — International Trade Administration holds a meeting by teleconference of the Renewable Energy and Energy Efficiency Advisory Committee, RSVP: Victoria.Gunderson@trade.gov

FRIDAY

9:00 a.m. — "Global Hotspots and Security Challenges: A Conversation with Senator Joni Ernst," Center for Strategic and International Studies, 1616 Rhode Island Avenue NW

THAT'S ALL FOR ME!

** **A message from the U.S. Chamber's Global Energy Institute:** Ten years ago, gasoline prices were at an all-time high, American dependence on foreign oil and natural gas was growing, and our energy future and security was at risk. The U.S. Chamber of Commerce and leaders in American business came together to form an institute to tackle these challenges head on. Now, 10 years later, we're excited to begin our second decade by transitioning to the U.S. Chamber's Global Energy Institute, reflecting America's new role as a global energy superpower. We'll still provide insight and analysis on the big energy issues of our day, along with our unique ability to bring together the entire energy industry and reach thousands in our local and state Chamber network. Learn more about our Institute and the last decade of progress in this video: http://bit.ly/2yeil2S **

Stories from POLITICO Pro

Energized by Trump, climate critics seize on new study Back

By Emily Holden | 09/25/2017 05:04 AM EDT

A small, vocal community of climate change skeptics is using the Trump administration's climate policy rollback and its doubts about humans' role in boosting temperature to dig into unsettled issues — including a new report that indicated countries may have more latitude in curbing emissions.

While the vast majority of the world's scientists agree that human activity like burning fossil fuels is raising temperatures at a pace far faster than would naturally occur, studies are still staking out the specifics about the levels of greenhouse gas the atmosphere can absorb before the Earth reaches dangerous temperature benchmarks and how climate change influences extreme weather events.

A new study published in the peer-reviewed journal Nature Geoscience last week suggests the planet can tolerate more greenhouse gas emissions than previously forecast before reaching a critical point of 1.5 degrees Celsius of warming. Earth's temperatures are already up about 1 degree C above pre-industrial levels. Some respected scientists have disagreed with the methodology the authors used to come to their conclusions, but the study drew wide attention.

The conservative Heartland Institute, one of the biggest voices for U.S. climate skeptics, has seized on the research as proof that scientific models used to forecast temperature changes are wrong and overestimate the rate of global warming.

But the authors behind the study say their work has been willfully misinterpreted for political purposes. Damon Matthews, a study author and Concordia University research chair in climate science and sustainability, said the group had been prepared for its research to mischaracterized, but hadn't expected the reaction to be so intense.

"We are not trained in PR. We don't have the resources to hire PR firms," Matthews said. "We're trying to balance teaching, research, media outreach. Our job is to do solid science and communicate that. It's not really our job to guard against every possible critique, especially when they're not real critiques."

Climate science of any kind is under increasing scrutiny, and EPA Administrator Scott Pruitt has called for public debates about whether humans are causing temperatures to rise. Trump administration officials gathered at the White House last week to hone their messaging on the issue.

Heartland Institute President Tim Huelskamp, a former Republican congressman from Kansas, told POLITICO the new study supports the need for Pruitt's debates.

"This is exactly the type of debate discussion scientists need to be having," he said. "This article proved that there can be a lot of debate about the fundamental issues."

Huelskamp said the study raises the question that "[i]f they were wrong 10 years ago, what makes their new modeling correct?"

Several scientists associated with the Heartland Institute have been nominated to EPA's Science Advisory Board that reviews environmental regulations, according to E&E News. Heartland has also suggested researchers to take part in Pruitt's red-team, blue-team exercise, but Huelskamp declined to release any of their names.

Huelskamp said he saw no scientific consensus supporting man-made climate change, and argued his side has "dozens, hundreds, perhaps thousands that say that is not the case." The mainstream research community has said the climate skeptics overstate their numbers and are amplifying their message through the White House.

Climate scientists fear critics at advocacy groups like Heartland cherry-pick details from research to try to fuel doubt that climate change is real and poses dire threats to the environment and human health.

"[T]here is no scientific result in our story that questions the basics of climate change and the imperatives for mitigation action," Matthews said.

Pierre Friedlingstein, another co-author of the study and chair of mathematical modeling of climate systems at University of Exeter, said the new research showed the Earth has 20 years at the current rate of carbon dioxide emissions before lifting global average temperatures 1.5 C. That's more than the 10 years the Intergovernmental Panel on Climate Change had estimated in its 2013 report, but "certainly not a reason to encourage inaction. The emission mitigation challenge in front of us is still herculean and unprecedented," he said.

Previous research had estimated that countries had a total "carbon budget" between 200 billion to 400 billion metric tons of carbon emissions before temperatures climbed 1.5 C. But the new paper put the figure above 700 billion metric tons. That carbon budget is often used by policymakers to determine what actions they should take to curb climate change, and that's why the authors decided to take a second look.

Stefan Rahmstorf, the head of Earth System Analysis at the Potsdam Institute for Climate Impact Research, who outlined some doubts about the paper's findings in a blog post on RealClimate.org, said the paper didn't alter the science showing action to reduce emissions needed to be taken.

"At this point, debating whether we have 0.2 [degrees] C more or less to go until we reach 1.5 [degrees] C is an academic discussion at best, a distraction at worst. The big issue is that we need to see falling emissions globally very, very soon if we even want to stay well below 2 [degrees] C," he said.

The 2015 Paris climate agreement states the goal of keeping greenhouse gas emissions below the level that would cause 2 degrees C of warming, and the nearly 200 countries that signed on backed a more ambitious goal of keeping a temperature increase at no more than 1.5 degrees C.

Many island nations say that any warming over that level would be catastrophic for them. Fiji will chair the next United Nations meeting on climate change in November in Bonn, Germany,

giving those countries a bigger spotlight.

Asked about the study last week, Fiji's' COP23 Chief Negotiator Ambassador Nazhat Khan said she wanted to wait for the IPCC report to "see exactly how we're doing."

"It would be great news," she said. "We are committed to 1.5 degree target, and it is the 1.5 degree target that is going to give hope. ... On the question of whether things are better, we don't know. We hear on a daily basis of more intense cyclones, and in the Pacific Rim itself we have disappearing shoreline."

Richard Millar, the lead author of the new study and a research fellow at the University of Oxford, said the team tried to be clear that the paper does not argue for fundamentally revising ranges of uncertainty about how strongly the environment responds to carbon dioxide. Instead, the paper reinterpreted data that IPCC used to re-evaluate the world's carbon budget.

"It's because we're so close that we're thinking about how best to use the modeling tools we have available ... to really answer the direct question that's required by policymakers," Millar said.

Rahmstorf's blog suggested the researchers found a bigger carbon budget because they had used a different baseline year when counting rising emissions, and incorporated recent temperature data that may not account fully for Arctic warming.

Millar explained that the research took into account a slowing growth in emissions by developing countries that have begun to back away from coal, and said he was disappointed that the paper's conclusions have been "willfully manipulated."

"We tried our hardest to conduct a press briefing and put out there a clearly written, nontechnical blog trying to explain our finding," he said. "There certainly seemed to be a sort of snowball effect."

A first set of news articles covered the study well, he said, but then opinion writers followed and "facts got lost along the journey."

Matthews said he expects that to continue.

"It's fairly obvious that having people in the Trump administration who are openly questioning the science of climate change is going to give fuel to the people who were already doing that more quietly," he said.

Eric Wolff contributed to this report.

Tariff threat could foreshadow grim 2018 for solar industry Back

By Eric Wolff | 09/25/2017 05:04 AM EDT

The U.S. solar industry could face a grim 2018 if President Donald Trump slaps stiff tariffs on imported solar panels, according to solar industry and trade experts.

The U.S. International Trade Commission ruling Friday that domestic manufacturing had suffered injury because of solar equipment imports will give Trump the opportunity to hit the Chinese companies that own the lion's share of the global production of photovoltaic cells and modules. Proponents of steep trade barriers sought by Suniva and SolarWorld USA argue the U.S. capacity to build panels will disappear under the wave of imports from Asian countries.

But others, including the solar industry lobby group, warn that instituting tariffs or a floor price as Suniva has recommended would cost 88,000 jobs, double the price of solar installations and set the industry's growth back by years. And the last time the U.S. used the same trade tactic — under former President George W. Bush — could serve as a warning to the Trump administration.

The U.S. installed 14.8 gigawatts of solar capacity last year, fed by imports of 12.8 gigawatts of solar panels in 2016, according to the Energy Information Administration. U.S. production capacity of solar modules is less than 3.0 GW, leaving a gap that will require solar installers to rely on imports to meet the demand, even if companies that may be considering building U.S. manufacturing plants decide to shift operations to the U.S.

"U.S. manufacturing is extremely unlikely to fill in the gap between supply and demand in 2018. A near-zero chance," said Tom Werner, CEO of solar manufacturer and project developer SunPower Corp., who opposes the tariffs.

If Trump institutes tariffs — as administration officials say he is likely to do — he would be the first president since 2002 to use the safeguard provisions of the Trade Act. That year, Bush put a 30 percent tariff on several types of steel imports, a move Werner said led directly to a supply shortfall in the U.S., causing wild fluctuations in prices. One paper showed prices for some steel products jumped 80 percent, and steel-consuming industries shed 200,000 jobs, causing a loss of $4 billion in wages.

"There's a very good chance it could end up the same way," said Tori Whiting, a research associate at the Center for International Trade and Economics at the conservative Heritage Foundation. "That's part of how the market works, and it's the same the case for solar when domestic production doesn't meet domestic demand."

The two petitioners in the case, Suniva and SolarWorld USA, are both in bankruptcy proceedings, but both have promised to restart production at shuttered factories if import measures are put in place. But revving up machinery, buying new equipment, or starting a factory from scratch takes months or even years, and getting investment may be difficult when tariffs are limited to four years under the law.

Recent reports indicate that some companies may consider shifting production to the U.S. if Trump puts trade barriers in place, though there are few firm plans. The most ambitious project underway now is the Tesla and Panasonic panel plant in Buffalo, N.Y., a project that has been delayed because of financial struggles of Tesla's SolarCity arm. It's slated to eventually employ 500 people and reach 1 GW of module and cell production capacity by 2019.

"The idea that Suniva's tariff is going cost jobs is simply not true," a Suniva spokesman said in a statement. "The only thing at question here is how much we're going to grow as an industry, something even our critics acknowledge."

Building new factories takes time. SunPower's Werner said it could take at least a year to get a factory up and running at full capacity, leaving even a diminished U.S. solar market searching for supply, and potentially willing to pay tariff-inflated prices from importers.

That has happened in the lumber industry after Trump imposed tariffs of up to 31 percent on Canadian softwood imports. Strong U.S. demand for construction materials, spurred on by devastation from hurricanes Harvey and Irma, has drawn a steady flow of Canadian lumber — and pushed up material costs for house builders in the U.S. by 20 percent, according to Jerry Howard, chief executive officer of the National Association of Home Builders. That has benefited the Canadian companies, which supply more than a quarter of the lumber to the U.S. market, more than their U.S. counterparts.

But the solar sector is much more price sensitive. Residential rooftop systems already have high upfront costs, and utility-scale projects, which make up the bulk of the U.S. market, can be killed by small changes in panel costs. Solar Energy Industries Association CEO Abigail Ross Hopper said a crash in demand caused by higher prices will diminish the appetite for new factories.

"We have 36,000 workers in the solar manufacturing," she told reporters on a conference call last week. "If prohibitive tariffs are put in place, that number will decrease, not increase."

In 2003, the Bush administration withdrew its steel tariff after the World Trade Organization found that the U.S had violated the international rules. But since then, the division of the WTO that adjudicates trade disputes has become understaffed, and petitioners now face a six-month backlog. If the Trump administration were to implement tariffs around the end of the year, it would likely be at least another year before WTO would weigh in.

"I would be surprised if the WTO made its decision before December 2018, more likely middle of 2019," said Gary Hufbauer, a senior fellow with the Peterson Institute for International Economics. "The other important point about these cases [is] no retroactive relief, so during the next year, at least, and maybe longer, whatever remedy Trump decides, there will be no restitution for the importer."

Trade panel puts solar tariff decision in Trump's hands Back

By Eric Wolff | 09/22/2017 11:18 AM EDT

A federal trade panel declared Friday that surging imports of solar panels have hurt U.S. manufacturers — a decision that will allow President Donald Trump to penalize Chinese companies but could also choke off the fast-growing green energy industry in the U.S.

The U.S. International Trade Commission voted to uphold a complaint brought by two domestic solar manufacturers that complained that the low-cost imports had damaged their businesses. The decision was opposed by the much larger U.S. solar installation industry, which has seen the influx of the cheap panels spark a boom in construction of giant solar farms and rooftop systems around the country.

The issue will give Trump the opportunity to erect trade barriers he has hailed as key to his strategy to revive domestic manufacturing, and at the same time hit the Chinese companies that have largely evaded previous U.S. import penalties to become the leading suppliers of solar cells and panels. Administration officials say the trade case hasn't been a central one for the president, but they are increasingly confident Trump will favor tariffs when the commission sends the White House its recommendations in the next couple of months.

In a statement, the White House said Trump would make a decision that "reflects the best interests of the United States," and it praised the solar-makers, saying the domestic "solar manufacturing sector contributes to our energy security and economic prosperity."

The case could also give Trump a platform to advance his "America First" agenda and tout his effort to revive the ailing coal sector. Coal companies have complained that the Obama administration waged a regulation-heavy "war on coal" while tilting federal tax incentives and loans to renewable energy sources in order to advance climate change policies.

"[Trump] could easily reward his buddies in the coal industry who would really like to see high-priced solar panels competing with coal for space on the grid," said Clark Packard, a policy analyst and trade lawyer with the conservative think tank R Street Institute, which opposes tariffs. He added: "He may just want to stick it to people — your coastal elites who never would have voted for him who are more likely to use solar panels. He's looking for any circumstance to impose tariffs, it doesn't seem he cares what they are."

Trump has not weighed in on the case so far, though his administration has re-opened the landmark NAFTA agreement with Mexico and China, and he has regularly blasted China and other countries for what he calls unfair trade with the U.S.

"He's a protectionist, there's no doubt about it, and he's not very sympathetic to the renewable energy," Gary Hufbauer, senior fellow for the Peterson Institute of International Economics. "As much as you can predict any president, I think his conclusion is foregone."

The complaint brought by Georgia-based Suniva and Oregon-based SolarWorld USA has brought sharp opposition from most of the U.S. solar industry, which has seen its growth skyrocket as costs for the technology fell to a fraction of what they were a decade ago. Aided by federal tax incentives and state-level programs, large solar power installations have sprung up across the country, driving down costs for those plants to levels that are now competitive with coal and natural gas power power stations. That's lifted employment in the sector to 260,000 even as the number of U.S. companies that make solar cells and panels sinks.

The solar industry has warned that high tariffs would eliminate 88,000 U.S. jobs by boosting costs and making many projects uneconomic just as the industry, which generates $29 billion in revenues, was starting to stand on its own.

"If companies are going to be injured, we're going to be bringing in employees who will lose their jobs, mayors and governors and senators and representatives," said Abigail Ross Hopper, head of the Solar Energy Industries Association. "We're going to be making sure folks understand the impact, and putting a human face to it."

The four members of the ITC will now begin to formulate a remedy to address the injury suffered by the U.S. manufacturers, and they will take recommendations from solar companies. Any remedies taken by the U.S. will not apply to imports from Canada.

Suniva brought the case under Section 201 of the Trade Act, a rarely used but powerful tool that gives the president the ultimate authority to take or discard the recommendations of the commission. Most trade complaints — including two solar cases acted upon by the Obama administration — are limited to imports from specific countries, but Section 201 allows the president to impose tariffs on all imports of a product. The authority was last used by President George W. Bush in 2002 to implemented a tariff on imported steel, but it was withdrawn 15 months later.

The commission will hold hearings on potential remedies on Oct. 3 and send its recommendations to the White House by Nov. 13.

Unlike trade complaints that allege foreign companies had unfair advantages because of subsidies in their home countries or that companies were "dumping" products at below-market prices to squeeze out competitors, a case brought under Section 201 needs only to show that imports were harming the domestic industry. That lower standard appears to have been met by data showing imports from Asian countries surging as some 30 companies in the U.S. shuttered their manufacturing plants.

While solar manufacturers in China ship about 20 percent of the equipment that is imported in the U.S., many Chinese companies have moved production to countries like Malaysia or Vietnam to avoid trade penalties imposed during the Obama administration.

Suniva, which lodged the original complaint and filed for bankruptcy protection earlier this year, has said that putting tariffs or setting a floor price for imported solar equipment would generate

new manufacturing jobs in the U.S.

"President Trump can remedy the industry's injury with relief that ensures U.S. energy dominance that includes a healthy U.S. solar ecosystem and prevents China and its proxies from owning the sun," Suniva, which is itself majority owned by a Chinese company, Shunfeng International, said ahead of Friday's decision.

The company has recommended a remedy that would set a price floor of 78 cents per watt, as well as a tariff that starts at 40 cents per watt and declines over four years — proposals that would more than double the current panel costs. Analysts have said that could erase five years of cost declines made by the industry.

"We are confident there is a way to strengthen and save U.S. solar manufacturing without harming the strong growth that has made America such a powerful market for solar products," said Timothy Brightbill, an attorney at Wiley Rein who is representing SolarWorld. That company is a unit of Germany's SolarWorld Industries GMBH, which has also filed for bankruptcy in its home country.

Several lawmakers and governors had urged the commission to reject the trade complaint, including in a letter sent Thursday by Govs. Brian Sandoval, of Nevada; John Hickenlooper, of Colorado; Charles Baker, of Massachusetts; and Roy Cooper, of North Carolina.

"At a time when our citizens are demanding more clean energy, the tariff could cause America to lose out on 47 gigawatts of solar installations, representing billions of dollars of infrastructure investment in our states," they wrote to ITC Chairman Rhonda Schmidtlein.

A bipartisan group of 16 senators sent a letter last month to the ITC asking it to "carefully consider the negative impact" of an injury finding. Those lawmakers included Georgia Sen. Johnny Isakson and Kansas Sen. Jerry Moran, both Republicans, along with coastal Democrats like Massachusetts Sen. Ed Markey.

Conservative groups that support free trade have also opposed erecting the trade barriers. Earlier this month, a group of six conservative organizations, including the R Street Institute, the American Legislative Exchange Council and the National Taxpayers Union, published an open letter arguing against tariffs. The conservative Heritage Foundation, which was not on the letter, also opposes a policy of tariffs and has been tracking the Suniva case closely.

"We believe that policies that pick winners and losers by imposing tariffs are bad, pretty much no matter what they are," said Tori Whiting, a research associate at the Center for International Trade and Economics at Heritage.

Suniva and SolarWorld are not without their own defenders: Sen. Ron Wyden (D-Ore.) and two members of the Washington House delegation sent a letter of their own in favor of the tariffs, and House members from Georgia and Michigan have both backed the petition. The groups have also been backed by steel manufacturers.

Businesses struggle with Trump's indecision Back

By Emily Holden, Andrew Restuccia, Aaron Lorenzo and Ted Hesson | 09/24/2017 05:04 PM EDT

President Donald Trump has threatened to pull out of NAFTA, the Paris climate agreement and the Iranian nuclear deal — unless he opts to stay. He decided to revoke legal protections for the DREAMers, then urged Congress hours later to enact new ones. And he has repeatedly demanded that lawmakers enact major legislation on health care, tax reform and a $1 trillion infrastructure plan — without making it clear what he wants the final product to look like.

Of all the factors that have made the president's first year so turbulent, one of the most important has been Trump himself: Combining quick mood shifts, a rancorous White House staff and his own fuzziness on the details, the self-proclaimed dealmaker has left his options way open on a range of contentious decisions — while inducing whiplash in many of the political insiders, business leaders and even foreign governments with a stake in the outcomes.

Some business groups are making long-range decisions based on their best guesses of where the administration will land, while others try to outflank the White House by talking to key lawmakers before Trump does.

"It's exhausting because there are so many places that you have to touch, so many different bases, because you never know who he's listening to," said Brian Wild, a Republican adviser to businesses on energy, tax, labor, transportation and health care at the law firm Brownstein Hyatt Farber Schreck. "You never know who's going to get the final 'yes.'"

One longtime GOP lobbyist added: "You would've never seen a situation with Bush or Obama when a position in the administration got flipped overnight. Sometimes you win, sometimes you lose, sometimes you get half a loaf, but rarely do you ever just change sides."

"I think he thinks of everything as a trial balloon," the lobbyist said of Trump.

The flux is especially vexing for conservatives who were invigorated after Trump won but now worry that their years of pushing to lower tax rates and repeal former President Barack Obama's health care law might have been in vain.

"Nobody is happy," said another Republican lobbyist. "It's very likely that at the end of the year, we'll be left with Obamacare and the same tax code."

White House spokespeople rejected the idea that the president has waffled on policy issues, saying he's been "abundantly clear" that he'll leave the Paris agreement if he doesn't get a better

deal and has been "very clear" he wants Congress to act on immigration.

"President Trump was put into office precisely because he isn't beholden to lobbyists and special interests," White House spokeswoman Kelly Love said. "If they're upset that they can't stroll into the White House and drive administration policy anymore, that's a badge of honor for a president who was elected to drain the swamp. This president makes his decisions based on what's best for Main Street, not K Street."

But the frustration has repercussions far beyond the Beltway. As tax talks between the White House and lawmakers stall, more than half of CEOs surveyed by Business Roundtable said they would have to shelve plans to hire and invest more if an already long-delayed overhaul doesn't move through Congress.

The outcome of the tax debate will determine whether Guy Chemical Co. in Somerset, Pa., can buy extra equipment, hire 10 new employees and give raises to existing staff, company President Guy Berkebile said. But Berkebile, who was recently in Washington to urge lawmakers to lower business tax rates, said he's not getting his hopes up.

"I am already thinking what I will do with the extra money at Guy Chemical if business taxes are lowered," he said. "If tax reform does not get done, I will continue to grind away with the same typical investment I have put back into my company over the past 10 years."

The details of what Trump wants in a tax overhaul are still in flux, complicating his sales pitch to conservative Republicans. The uncertainty includes whether the White House will insist on his oft-stated desire to cut the corporate tax rate to 15 percent, down from 35 percent.

On health care, Trump has spent the entire year pushing Congress to repeal Obamacare but has offered vague, often contradictory clues about what he wants to see take its place. At times he's promised "insurance for everybody," supported a House Republican bill that guaranteed nothing of the sort, or mused about letting Obama's system "explode" on its own or moving on to other issues like taxes.

Trump's tough talk on trade has also left industries he's vowed to support hanging.

The United Steelworkers Union complains that foreign steel imports have "skyrocketed" since April, when the White House suggested the U.S. might limit them for national security reasons. Data from the American Iron and Steel Institute show that steel imports jumped more than 21 percent in the three months following the announcement versus the first three months of the year.

The Commerce Department was supposed to issue recommendations at the beginning of June but has delayed them indefinitely.

Vagueness and wishy-washiness might seem unlikely problems for Trump, who's shown no reluctance to speak his mind and often expresses his thoughts in the most caustic terms — including using the epithet "Rocket Man" last week for North Korean leader Kim Jong Un. He's spent years espousing certain consistently held policy beliefs, such as his charge that "stupid"

trade deals are letting other countries rip off the U.S.

But that doesn't make it any easier to predict the details of what Trump will decide as president, especially on the myriad issues where he's offered no well-formed opinion. And he's changed his mind on a host of issues — such as endorsing an influx of new U.S. troops to Afghanistan after previously calling for a pullout. Or holding a Rose Garden celebration in May after the House passed a bill to repeal Obamacare, only to describe the same bill as "mean" a month later in a meeting with Republican senators. Or deciding in early September to end the Obama-era program that prevented deportations for thousands of young undocumented immigrants who were brought to the United States as children — only to say hours later that he has "love for these people" and wants Congress to "help them."

"Does anybody really want to throw out good, educated and accomplished young people who have jobs, some serving in the military?" he tweeted about the so-called DREAMers a week later. "Really!"

Despite those kind words, 29-year-old Dallas systems engineer Erik Burgos said Trump's decision threatens to turn his world upside-down.

"A lot of uncertainty and fear starts to creep in," said Burgos, who was brought to the U.S. from Mexico at age 2 and later enrolled for protection under the Obama program. After Trump's announcement, Burgos postponed his plans to purchase a house and wonders if Congress will find a fix before his permit expires.

Still, he said, Trump's unpredictability gives him "a glimmer of hope" that his ability to work legally will continue.

Trump is different from most politicians, said Wild, who previously served as an adviser to top Republicans such as then-House Majority Whip Kevin McCarthy and former Speaker John Boehner.

"Typically, all these candidates build out a pretty profound policy notebook throughout the campaign, and then when they get elected they're implementing that," Wild said. But with Trump and his aides, "they're kind of building this policy notebook in real time."

The second Republican lobbyist also blamed congressional leaders for the uncertainty on many policy fronts, noting that House Speaker Paul Ryan and Senate Majority Leader Mitch McConnell have had trouble controlling their divided Republican caucuses on issues like health care.

White House aides insist that the lack of policy detail is sometimes strategic — though they acknowledge that Trump sees himself as a dealmaker, not an ideologue, and is apt to change his mind. A detailed set of legislative principles on issues like tax reform and infrastructure could draw attacks not just from Democrats but from conservatives who are essential to the passage of any bill. And having learned from the earlier collapse of Obamacare repeal efforts, the White House is eager to let Congress take the lead so Trump won't have the sole blame if a bill fails.

Wiggle room exists even in some of Trump's most starkly ideological decisions, on issues he alone controls.

In June, for example, he announced that the U.S. would withdraw from the 2015 Paris climate agreement, a decision championed by his most staunchly nationalist advisers. But he also said his administration would "begin negotiations" to either re-enter the nearly 200-nation accord or join an entirely new deal.

"So we're getting out," Trump said at the time. "But we will start to negotiate, and we will see if we can make a deal that's fair. And if we can, that's great. And if we can't, that's fine."

Since then, international diplomats have been left in the dark about what precisely the United States wants. (Some have even groused privately that Trump should just pull the trigger and leave.) Many people missed the nuance in June about possibly remaining in the deal, until that detail provoked a welter of confusing news headlines last weekend following an international meeting of energy ministers in Montreal.

Despite all the back-and-forth, high-ranking officials only this week had a meeting on aligning their messaging on climate change.

Similar ambiguity reigns about Obama's 2015 nuclear deal with Iran, which Trump denounced at the United Nations this week as "one of the worst and most one-sided transactions the United States has ever entered into." He later said he had decided whether to exit the agreement — but refused to tell anybody, including British Prime Minister Theresa May, what his verdict was.

Trump has also threatened to withdraw from NAFTA unless Mexico and Canada agree to new terms and has raised the idea of a "sunset" provision, in which the agreement would terminate after five years unless the countries agreed to renew the terms.

Such a withdrawal "could endanger literally hundreds of thousands of jobs" and damage security cooperation among the countries, argued John Murphy, senior vice president for international policy at the U.S. Chamber of Commerce. Republican leaders in Congress have expressed alarm about the idea too. But a month after formal talks among the three nations began, it's unclear where the discussions are headed.

"In our trading relationships, we need certainty and security about what the terms of trade are going to be going forward, over multiple years," Murphy said. "Investments are made on the basis of that kind of certainty, and economic growth and job creation flow from it."

U.S. Trade Representative Robert Lighthizer said the countries were "moving at warp speed" to try to strike a deal by the end of the year, but he couldn't guarantee it would happen.

"We don't know whether we're going to get to a conclusion," Lighthizer said. "That's the problem. We're running very quickly somewhere."

In one key domestic policy, Trump has repeatedly pledged a big-ticket plan to rebuild the nation's roads and bridges — and demanded last month that Republican leaders "get back to work" and put "a great Infrastructure Bill on my desk for signing." But his administration hasn't offered much detail on what such a package would entail, aside from a six-page outline it issued last spring. Nor has it been clear how Trump would dole out his proposed $200 billion in new federal infrastructure spending, although Transportation Secretary Elaine Chao said in May that some of the money would go projects meant to "lift the American spirit."

Marcia Hale, the president of the advocacy group Building America's Future, said the administration has done more behind the scenes on infrastructure than may be apparent — though she acknowledged that it has "been a little more, shall we say, hectic than even some of the most recent administrations, and a little less predictable."

"You always know with this administration that things could change quickly, or policies could change quickly, or allegiances could change quickly," Hale said. "So you just go with the flow."

Despite the confusion, some people trying to persuade the administration have found at least one common theme they can use for making their arguments.

"We're telling our clients that ... any argument that has a jobs impact has to be framed as a jobs argument," said Stewart Verdery, CEO of the Republican lobbying firm Monument Policy Group, who has represented tech companies including Amazon and Microsoft. "An intellectual argument, a fairness argument, even a federal spending argument is not nearly as powerful as a jobs argument."

Megan Cassella, Tanya Snyder and Doug Palmer contributed to this report.

Fiji ambassador: Trump's Paris move raises stakes for Bonn conference Back

By Eric Wolff | 09/22/2017 02:06 PM EDT

The U.S. plan to withdraw from the Paris climate pact has raised the stakes for the upcoming international climate negotiations in Bonn, Germany, to reaffirm the international commitment to the agreement, according to the top climate negotiator for Fiji, which is leading the upcoming meeting.

"Our aim was changed by President Trump's announcement," said Ambassador Nazhat Khan told POLITICO. "Now we must deliver a visionary [conference]. Every work item for COP 23 is measured for the enhancing and restating of the overall vision."

The meeting, like the one in Marrakech, Morocco, last year, was intended to focus on

implementing the 2015 Paris agreement. Most observers had expected next year's meeting in Katowice, Poland, to hold more drama as final decisions are made on funding and transparency around the international agreement.

But, according to Khan, the U.S. intention to withdraw from the agreement changed that.

"After the announcement of President Trump, what states were looking for ... is a very clear direction," she said. "We must act to maintain the direction of Paris together, and we aren't going to have other countries that express reservations. It's very important that we maintain this overall vision. ... The U.S. role has really shaped the way Fiji is approaching COP."

Khan said the U.S. had made clear its at previous international meetings it would remain engaged in the Paris process, despite its intention to leave. She said U.S. willingness to engage is "very encouraging."

WHAT'S NEXT: Fiji will host COP23 in Bonn, Germany, from Nov. 6 through Nov. 17.

Aid begins to flow to hurricane-hit Puerto Rico Back

By Associated Press | 09/23/2017 11:01 PM EDT

Large amounts of federal aid began moving into Puerto Rico on Saturday, welcomed by local officials who praised the Trump administration's response but called for the emergency loosening of rules long blamed for condemning the U.S. territory to second-class status.

In northwest Puerto Rico, people began returning to their homes after a spillway eased pressure on a dam that cracked after more than a foot of rain fell in the wake of the hurricane.

The opening of the island's main port in the capital allowed 11 ships to bring in 1.6 million gallons of water, 23,000 cots, dozens of generators and food. Dozens more shipments are expected in upcoming days.

The federal aid effort is racing to stem a growing humanitarian crisis in towns left without fresh water, fuel, electricity or phone service. Officials with the Federal Emergency Management Agency, which is in charge of the relief effort, said they would take satellite phones to all of Puerto Rico's towns and cities, more than half of which were cut off following Maria's devastating crossing of Puerto Rico on Wednesday.

The island's infrastructure was in sorry shape long before Maria struck. A $73 billion debt crisis has left agencies like the state power company broke. As a result the power company abandoned most basic maintenance in recent years, leaving the island subject to regular blackouts.

A federal control board overseeing Puerto Rico's finances authorized up to $1 billion in local funds to be used for hurricane response, but Gov. Ricardo Rossello said he would ask for more.

"We're going to request waivers and other mechanisms so Puerto Rico can respond to this crisis," he said. "Puerto Rico will practically collect no taxes in the next month."

U.S. Rep. Nydia Velazquez of New York said she will request a one-year waiver from the Jones Act, a federal law blamed for driving up prices on Puerto Rico by requiring cargo shipments there to move only on U.S. vessels as a means of supporting the U.S. maritime industry.

"We will use all our resources," Velazquez said. "We need to make Puerto Rico whole again. These are American citizens."

A group of anxious mayors arrived in the capital to meet with Rossello to present a long list of items they urgently need. The north coastal town of Manati had run out of fuel and fresh water, Mayor Jose Sanchez Gonzalez said.

"Hysteria is starting to spread. The hospital is about to collapse. It's at capacity," he said, crying. "We need someone to help us immediately."

The death toll from Maria in Puerto Rico was at least 10, including two police officers who drowned in floodwaters in the western town of Aguada. That number was expected to climb as officials from remote towns continued to check in with officials in San Juan.

Authorities in the town of Vega Alta on the north coast said they had been unable to reach an entire neighborhood called Fatima, and were particularly worried about residents of a nursing home.

"I need to get there today," Mayor Oscar Santiago told The Associated Press. "Not tomorrow, today."

Rossello said Maria would clearly cost more than the last major storm to wallop the island, Hurricane George in September 1998. "This is without a doubt the biggest catastrophe in modern history for Puerto Rico," he said.

Rossello and other officials praised the federal government for planning its response in detail before the storm hit, a contrast with what Puerto Rico has long seen as the neglect of 3.4 million Americans living in a territory without a vote in Congress or the electoral college.

"This is the first time we get this type of federal coordination," said Resident Commission Jenniffer Gonzalez, Puerto Rico's non-voting representative in Washington.

A dam upstream of the towns of Quebradillas and Isabela in northwest Puerto Rico was cracked but had not burst by Saturday night as water continued to pour out of rain-swollen Lake Guajataca. Federal officials said Friday that 70,000 people, the number who live in the

surrounding area, would have to be evacuated. But Javier Jimenez, mayor of the nearby town of San Sebastian, said he believed the number was far smaller.

Secretary of Public Affairs Ramon Rosario said about 300 families were in harm's way.

The governor said there is "significant damage" to the dam and authorities believe it could give way at any moment. "We don't know how long it's going to hold. The integrity of the structure has been compromised in a significant way," Rossello said.

Some residents nonetheless returned to their homes Saturday as the water levels in the reservoir began to sink.

"There were a lot of people worried and crying, but that's natural, because the reservoir was about to break through," said Maria Nieves, 43. "They couldn't open the spillway until later in the night."

The 345-yard dam, which was built around 1928, holds back a man-made lake covering about 2 square miles. More than 15 inches of rain from Maria fell on the surrounding mountains.

Officials said 1,360 of the island's 1,600 cellphone towers were downed, and 85 percent of above-ground and underground phone and internet cables were knocked out. With roads blocked and phones dead, officials said, the situation may worsen.

At least 31 lives in all have been lost around the Caribbean due to Maria, including at least 15 on hard-hit Dominica. Haiti reported three deaths; Guadeloupe, two; and the Dominican Republic, one.

Across Puerto Rico, more than 15,000 people are in shelters, including some 2,000 rescued from the north coastal town of Toa Baja. Many Puerto Ricans planned to head to the mainland to temporarily escape the devastation.

Storm-battered Puerto Rico looks to Washington for help Back

By Colin Wilhelm | 09/22/2017 01:52 PM EDT

As Puerto Rico reels from the devastation of Hurricane Maria, the Trump administration and Congress are pledging to provide more aid to the commonwealth, which is already suffering from a historic debt crisis.

Tax breaks and more Medicaid funding could be a part of a recovery package, and activists would like to see debt relief for the U.S. Virgin Islands attached as well. Though damage

assessments have only begun, the post-Katrina and Sandy relief bills likely will serve as guideposts for Congress.

"This is a natural disaster in Puerto Rico like we haven't seen ever," said Carlos Mercader, executive director of the commonwealth's Federal Affairs Administration. "Think about Katrina but even worse because this is the whole island."

President Donald Trump vowed Thursday to visit Puerto Rico, which lost 100 percent of its electrical power in the Category 4 storm, and House Speaker Paul Ryan promised a second recovery bill in Congress after the House and Senate passed a disaster relief package after Hurricane Harvey.

Maria's crippling impact will also force Puerto Rico and the federal board that Congress created last year to oversee its finances to reassess how to bring the territory out of its debt crunch and decade-long recession.

Hurricanes Maria and Irma greatly complicate the tangled debt web that has ensnared Puerto Rico and the Virgin Islands. The storms come just months after Puerto Rico entered a court-supervised restructuring process for its $70 billion debt — in what amounted to the largest municipal bankruptcy in U.S. history. And with a population of 100,000, the U.S. Virgin Islands owes even more money per resident on the $6.5 billion held by creditors than does Puerto Rico.

Before Maria hit, Puerto Rico Gov. Ricardo Rosselló and the federal oversight board were locked in a battle over furloughs and pension cuts that the board said were necessary to balance the budget. The seven-member, bipartisan board had also approved a fiscal plan submitted by Rosselló that could face significant revisions after the storms.

"There's no way they'll make budget. There's just no way," said Luis Fortuño, who was governor of Puerto Rico from 2009 to 2013, and now a partner at the law firm Steptoe & Johnson. "Both the government and the oversight board had certain assumptions that are out the window now."

That fiscal plan affects every decision made by Puerto Rico's government and charts a course for the commonwealth for the next 10 years. The oversight board has final say over revenue and spending decisions, so it must approve any changes.

Late Thursday, the board essentially gave Rosselló a pass on that budget, allowing him to re-allocate up to $1 billion at his discretion for emergency response efforts. The board also said it would help lobby federal agencies for further assistance.

"Furthermore, if the Government determines increases to the Territory Budget are needed to respond to Hurricane Maria, we stand ready to expeditiously approve such requests, in anticipation of much needed federal funding," the board wrote to Rosselló. "To that end, we will join the Government of Puerto Rico in actively seeking FEMA and any other potential sources of federal funds for the recovery and reconstruction of Puerto Rico."

This month's storms may also temporarily align groups of creditors that have fought the board,

the commonwealth government and each other for years over the billions owed to them by Puerto Rico. Though lobbyists for creditors contacted by POLITICO had not yet made specific plans, they may be willing to cooperate because Puerto Rico will be able to pay its debts quicker if there's a robust recovery.

Ryan also offered words of sympathy and support.

"To our fellow citizens in Puerto Rico, they are front and center in our thoughts and we want them to know the federal response will be there," the House speaker said during a visit to sections of Florida damaged by Hurricane Irma.

Rep. José E. Serrano (D-N.Y.), a member of the House Appropriations Committee, which is likely to write the aid package, said he would reach out to its chair and ranking member over the weekend to urge funding to the territories affected by the storms. He also wants to see a panel set up for Puerto Rico similar to the one established for New York after Superstorm Sandy to guide reconstruction.

"I'm asking President Trump to do the same thing for Puerto Rico [as after Sandy], that looks at the needs they have now and the needs they have in the future," Serrano said.

Trump said yesterday that the U.S. is starting the process of helping Puerto Rico and will work with Rosselló. Mercader, the point person for Puerto Rico with the federal government, said the level of commitment and response from the Trump administration pleasantly surprised him.

"It's been more than what I expected," he said. The commonwealth and federal responders also hoped to bring online a joint operations center in San Juan's convention center by the end of the day Friday.

So far the government has confirmed six storm-related deaths, though the tally could climb much higher. Mercader's office in Washington was deputized to field emergency calls from Puerto Rico as most of the commonwealth's communications went offline.

Entire sections of the island have yet to be heard from, and even local government agencies were having a hard time reaching one another to coordinate, creating a "cloud of uncertainty," Mercader said. Mudslides and flooding continued in areas, and FEMA will send helicopters to try to reach towns that have become inaccessible by road.

In the longer term, the fallout from the recent hurricanes could also bring more attention to the debt crisis in the Virgin Islands.

Eric LeCompte, executive director of Jubilee USA, a religious-affiliated organization that lobbied on behalf of debt restructuring for Puerto Rico last year, said his group would push for the Virgin Islands to be treated as Puerto Rico was in disaster relief legislation.

"Congress is going to have to step in in some new ways," said LeCompte. "At this point, no one's going to get paid anyways."

Jubilee, which has ties to about 650 faith-based groups and organizations, would also push for the U.S. to lead the charge on a temporary debt moratorium on money owed to the International Monetary Fund by non-U.S. Caribbean islands affected by the storms. The U.S. holds more votes than any other country in the IMF.

"We're just looking at delaying payments for six months to a year," during the disaster recovery, LeCompte said.

Puerto Rico's government praised Trump and the Department of Homeland Security for their response efforts. But the territories, used to receiving less attention than states despite their own U.S. citizenship, remain concerned that Congress and the White House will forget them after floodwaters recede and the winds die down.

"There ought not to be a difference" between the response to Harvey's flooding of Texas and Irma and Maria's buffeting of the U.S. Caribbean, Fortuno said.

Puerto Rico's governor calls for greater federal response to Maria Back

By Colin Wilhelm | 09/24/2017 10:44 PM EDT

Puerto Rico Gov. Ricardo Rossello called on the Pentagon to provide more search-and-rescue help and humanitarian resources to help the beleaguered island recover from "complete devastation" from Hurricane Maria.

"We need more resources from the Department of Defense so we can get helicopters and resources," Rossello told POLITICO in a phone interview Sunday night.

"We know that there are capabilities in the surrounding areas, helicopters, planes and so forth," he said. "And our petition is for us to be able to use them."

A Defense Department spokesperson said in an e-mail that six Navy helicopters and three Marine Osprey planes capable of vertical takeoff and landing had begun search-and-rescue operations and damage assessments.

Days after the category 4 hurricane battered the island, only a handful of municipalities have been able to make contact with San Juan or the outside world. That has prompted the commonwealth government to dispatch runners to make contact, since roads throughout much of Puerto Rico have been made impassable.

Rossello said that in addition to more military resources, he would petition the Trump

administration to lower the threshold for disaster expenditures that the island would need to refund.

He did not criticize President Donald Trump personally and praised promises of help the president made before the hurricane, as well as the response of the Federal Emergency Management Agency. Still, the island awaits a federal disaster declaration for 24 out of its 78 municipalities.

Rossello also called on Congress to treat Puerto Rico like a state in any comprehensive emergency aid package.

"Whatever relief package we have, whatever impact we have, we are U.S. citizens," Rossello said. "We shouldn't be the lesser for it."

He called on the federal government to recognize Puerto Rico's dire fiscal situation and consider the possibility that residents could leave in droves if the commonwealth doesn't recover quickly, compounding the island's troubles.

If Congress doesn't step up, he said, "my fear is we're going to have some side effects that are devastating both for Puerto Rico and the United States. Mainly massive migration that would deteriorate our [economic] base here in Puerto Rico and would provoke significant demographic shifting in other areas of the United States."

Cantwell slams DOI nominee for water lobbying ties, nondisclosure agreement Back

By Annie Snider | 05/18/2017 01:09 PM EDT

President Donald Trump's nominee for the No. 2 spot at the Interior Department on Thursday argued that the administration may be able to withhold information related to the transition from Congress, including about a Trump administration policy reversal that removed a major roadblock for a controversial water project he had a vested interest in.

During a hearing on David Bernhardt's nomination for deputy Interior secretary, Maria Cantwell, the top Democrat on the Senate Energy and Natural Resources Committee, asked whether nondisclosure agreements signed by members of Trump's transition team could allow administration officials to withhold information from Congress, or whether the federal Whistleblower Protection Act would apply. Bernhardt, a lobbyist for Brownstein Hyatt Farber Schreck, led the Trump transition team for the Interior Department for a period of time.

"I hate to give you a lawyer's answer to a legal question in a hearing, but I think the first question would be whether or not the Whistleblower Act would even apply to the transition because it's

my understanding that Trump for America is a nonprofit entity, so I'm not sure that the legal rubric that falls for government would even apply for that," Bernhardt said.

Cantwell particularly focused on Bernhardt's activities related to Cadiz Inc., a company seeking to build a 43-mile pipeline to pump water from the Mojave Desert to southern California communities. Cadiz has paid $2.75 million in fees to Brownstein Hyatt since 2010, and one of the lobby firm's shareholders is chief executive of the company.

Bernhardt did legal work for the project, and his firm receives part of its compensation in stock shares. So far it has received 200,000 shares in Cadiz and is in line for another 200,000 if the project is built, according to filings with the Securities and Exchange Commission.

The Cadiz project is fiercely opposed by environmentalists and California Democratic Sen. Dianne Feinstein, who say it would deplete a fragile aquifer feeding protected federal land.

The Trump administration last month reversed two Obama administration legal guidances that prevented the Cadiz project from skirting federal environmental review by building the pipeline in a railroad right-of-way. Bernhardt said he had "no involvement" with the issue during the Trump transition, and that neither he nor his firm had benefited financially from the policy shift as far as he knew.

Bernhardt, who has also lobbied for Westlands Water District, a group of powerful Central Valley agricultural growers, has said he will recuse himself from issues related to former clients for one year.

But Cantwell argued that isn't long enough, and that he should recuse himself for the entirety of his tenure.

"I personally think that Westlands and Cadiz represent such large public policy issues with financial interests that it would be better if you recused yourself for the entire time that you were at the department, not just one or two years," she said.

Berhardt said he would clear any issues related to his former lobbying interests with Interior's ethics office.

"If I get a whiff of something coming my way that involves a client or former client or my firm, I'm going to make that item run straight to the ethics office," he testified Thursday.

Feinstein says Trump trying to push through controversial water project Back

By Annie Snider | 04/04/2017 05:31 PM EDT

Opponents of a controversial California water project are accusing the Trump administration of reopening a loophole to allow infrastructure projects crossing federal land to avoid environmental review.

Last Wednesday, the Bureau of Land Management rescinded a pair of Obama administration memos laying out how any infrastructure project that uses a railroad right-of-way must be related to the railroad itself. These guidelines largely blocked proponents of oil, gas and water pipelines like the contentious Cadiz groundwater pipeline proposed in California's Mojave Desert from avoiding federal environmental review by building their projects along the many existing railroad rights-of-way.

In a statement today, Sen. Dianne Feinstein (D-Calif.) called the Trump administration's move "a blatant attempt to muscle the Cadiz water project through."

"This is clearly just an effort to circumvent an environmental review that any project of this magnitude on federal land would normally undergo," she said.

The proposed Cadiz pipeline would pump groundwater from a fragile desert aquifer across 43 miles of land, much of it federally owned. Project opponents have argued it would draw more water from the aquifer than can be recharged naturally, potentially drying up springs that are critical to wildlife at nearby nature preserve and a newly created national monument.

The project stalled after the BLM told Cadiz in October 2015 it could not use an existing railroad right-of-way and would need to apply for its own. The project has appeared on several recent lists of infrastructure projects being touted to the Trump administration.

WHAT'S NEXT: Cadiz could try again to use the existing railroad right-of-way for its project. However, an Interior Department legal interpretation saying that railroad rights-of-way must be used for purposes related to the railroad remains on the books. The Trump administration could decide to write its own implementing guidelines.

AIR
Particulate Emissions from Soils with Toxic Air Contaminants
California Regions AIR

Notice announces the intention of the South Coast Air Quality Management District to amend regulations under Rule 1466 regarding control of particulate matter emissions from soils with toxic air contaminants resulting from earth-moving activities at cleanup sites. The rule expands the list of applicable toxic air contaminants to include pesticides, herbicides, other metals, persistent biocumulative toxics, and semivolatile organic compounds. The rule also expands applicability of the control requirements to other government-designated sites. A workshop is scheduled for Sept. 19, 2017, in Diamond Bar. Comments are due Oct. 3, 2017. Contact: Uyen-Uyen Vo; South Coast AQMD, Planning, Rule Development and Area Sources; 909-396-2238; uvo@aqmd.gov

WATER
Mercury and PCBs Wastewater Discharges/San Francisco Bay
California Regions WATER

Notice of the San Francisco Bay Regional Water Quality Control Board announces two tentative orders regarding wastewater discharges to San Francisco Bay and its tributaries. The first order establishes a draft National Pollutant Discharge Elimination System permit (No. CA0038849) for nearly all treated sewage and industrial wastewater dischargers to implement the mercury and polychlorinated biphenyls (PCBs) total maximum daily load wasteload allocations. The second order revises nearly all individual discharge permits to consolidate stormwater provisions and monitoring and reporting requirements into one attachment; to remove biosolids land application management, monitoring, and reporting requirements; and to add a new monitoring category for bypasses relating to essential maintenance. The second order also clarifies reporting of duplicate sample results, updates dioxin toxicity equivalent factors to those established by the World

Health Organization in 2005, and addresses existing modifications set forth in certain individual monitoring and reporting programs. A hearing is scheduled for Nov. 8, 2017, in Oakland. Comments are due Oct. 13, 2017. Contact: James Parrish; San Francisco Bay RWQCB; 510-622-2381; jparrish@waterboards.ca.gov

Colorado

AIR

Motor Vehicle Emissions Inspection Program

Colorado AIR

Final rule of the Department of Public Health and Environment, Air Quality Control Commission, amends regulations under 5 CCR 1001-13, Regulation 11, regarding the motor vehicle emissions inspection program. The rule removes the requirement that the IM 240 test be the sole data used to develop a clean screen low-emitting vehicle index and allows the on-board diagnostic (OBD) test data collected from newer vehicles also to be used to develop the low-emitting vehicle index. The rule also addresses readiness requirements for Envirotest public lanes and self-inspecting vehicle fleets and removes readiness language from OBD inspection passing criteria to clarify that readiness is a determinant of whether or not a vehicle will undergo an OBD inspection. In addition, the rule clarifies that the IM 240 test conducted on 5 percent of OBD-tested vehicles is the pass/fail determinant for those vehicles and addresses OBD test procedures where tampering is detected. The rule is effective Sept. 30, 2017. Contact: Doug Decker; DPHE; Air Quality Control Commission; 303-692-3126; doug.decker@state.co.us

Regulatory Update

WATER

Classifications and Numeric Standards/Gunnison and Dolores River Basins
Colorado WATER

Final rule of the Department of Public Health and Environment, Water Quality Control Commission, amends regulations under 5 CCR 1002-35 to revise water quality classifications, standards, and designations for multiple segments in the Gunnison and Dolores river basins. The rule revises water body segmentation and aquatic life, recreation, water supply, and agricultural use classifications. The rule also revises molybdenum, cadmium, nickel, and lead standards; updates antidegradation designations and ambient quality-based standards; and revises temporary modifications. In addition, the rule addresses temperature standards, adds nutrient standards for chlorophyll and total phosphorus, adds a direct use water supply subclassification, addresses site-specific revisions, and corrects the duration of the nitrate standard from chronic to acute on all segments. The rule is effective Dec. 31, 2017. Contact: Blake Beyea; DPHE; 303-692-3656; blake.beyea@state.co.us

WATER
Water Pollution Control Revolving Fund, Drinking Water Revolving Fund
Colorado WATER

Notice of the Department of Public Health and Environment, Water Quality Control Commission, announces a hearing on proposed fiscal year 2018 intended use plans for the water pollution control revolving fund and the drinking water revolving fund. The plans include an increase to the 2018 direct loan limit, the Green Project Reserve loan limit, and the design/engineering grant amount to $3 million each. The plans also include a new proportionality statement, a modified priority scoring model, and updated application of additional subsidization ranges. In addition, the plans clarify that loan terms are for the lesser of 30 years or the projected useful life, or as limited by statute. A hearing is scheduled for Oct. 10, 2017, in Denver. Comments are due Sept. 27, 2017. Contact: Bradley Monson; DPHE; 303-692-2286; bradley.monson@state.co.us

Subject: BREAKING NEWS: McConnell spokesman: Senate to vote next week on Graham-Cassidy

The Senate will vote next week on the latest bill to repeal Obamacare, a spokeswoman for Senate Majority Leader Mitch McConnell (R-Ky.) said Wednesday. "It is the Leader's intention to consider Graham/Cassidy on the floor next week," the spokesperson said. The latest proposal, written by Sens. Lindsey Graham (R-S.C.) and Bill Cassidy (R-La.), would turn federal health insurance funding into block grants for states. The bill does not yet have the public support of 50 senators, but GOP insiders are growing more confident it will pass.

Summaries

AIR
Colorado SIP/Stationary Source Permitting and Air Pollutant Emission Notice Requirements
AIR

Proposed rule of the EPA would approve a portion of revisions to the Colorado SIP regarding permitting of emissions of fine particulate matter (PM-2.5), air pollution emission notices (APENs), and public notice requirements. The revisions remove the significant impact levels for PM-2.5 and significant monitoring concentration provisions. The revisions also clarify that for filing a revised APEN, the thresholds determining changes are based on the emission unit's actual emissions on a pollutant-by-pollutant basis, not total facilitywide emissions. In addition, the revisions address requirements for public notices to be published in either a newspaper of general distribution in the area or through the division website. The agency is not taking action on greenhouse gas and carbon dioxide equivalent revisions, which will be addressed in a separate action. Comments are due Sept. 18, 2017. Contact: Kevin Leone; EPA Region 8, Air Program; 303-312-6227; leone.kevin@epa.gov. Citations: 40 CFR 52

AIR
Connecticut/Clean Air Act Consent Decree
AIR

Notice of the Justice Department announces a proposed consent decree in United States v. City of Waterbury, Conn. (Civil Action No. 2:17-cv-01377), lodged Aug. 14, 2017, with the U.S. District Court for the District of Connecticut. The consent decree would resolve claims regarding alleged Clean Air Act violations in connection with the defendants' sewage sludge incineration unit at the Waterbury Wastewater Treatment Plant. The proposed consent decree requires the defendants to pay a civil penalty of $104,000 and to bring the unit into compliance with federal requirements for such units constructed before Oct. 14, 2010. Comments are due Sept. 18, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701. Citations: 40 CFR 62, Subpart LLL

GENERAL ENVIRONMENT AND SAFETY
California/Sites Reservoir Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the Bureau of Reclamation announces the availability of a draft environmental impact report/environmental impact statement and draft feasibility report for the Sites Reservoir Project in Colusa and Glenn counties in California. The project would consist of a new offstream surface storage reservoir with two main dams, up to nine saddle dams, and up to three recreation areas. The reservoir would be filled via two Sacramento River diversions/canals and a new inlet/outlet structure and pipeline to allow for diversion of excess river flows. The project also would include modifications to an existing diversion facility at the Red Bluff Pumping Plant in Tehama County. Meetings are scheduled for Sept. 26 and 28, 2017, in Maxwell and Sacramento, Calif.,

respectively. Comments are due Nov. 13, 2017. Contact: Michael Dietl; Bureau of Reclamation; 916-978-5070; mdietl@usbr.gov

Water Management Programs to Reduce Legionella Growth and Transmission

WATER

Notice of the CDC requests information regarding effective methods for achieving implementation of water management programs (WMPs) intended to reduce Legionella growth and transmission in buildings at increased risk. WMPs are used to identify hazardous conditions and take steps to minimize the growth and spread of Legionella and other waterborne pathogens in building water systems. The CDC requests comments regarding prevention strategies, stakeholder engagement, costs and feasibility of WMP implementation, and the availability of effective communication strategies. The CDC also requests comments regarding the influence of local regulations, the reasons why a WMP was not adopted, and the possible impact of proposed solutions. The information collected will inform the CDC's efforts to prevent Legionnaires' disease and other diseases due to opportunistic waterborne pathogens. Comments are due Oct. 17, 2017. WATER
NPDES General Permit/Limited Threat Discharges to Surface Water
California Regions WATER

Notice announces the intention of the Central Valley Regional Water Quality Control Board to amend an Oct. 14, 2016, final order (R5-2016-0076) that revised the National Pollutant Discharge

Elimination System (NPDES) general permit and waste discharge requirements for limited threat discharges to surface water. The final order addressed discharges of treated or untreated groundwater from cleanup sites, wastewater from superchlorination projects, and other limited threat wastewaters to surface waters and revises permit eligibility requirements to allow usage by low-threat dischargers and hard rock mines. The order also establishes new discharge tiers and specifies effluent limitations and monitoring and reporting requirements for permittees. The amendments would authorize the executive director to waive the salinity evaluation and minimization plan requirement in the notice of applicability under limited circumstances and add effluent and receiving water temperature limitations. The amendments also would clarify that screening levels for iron and manganese are evaluated as dissolved metals and that reasonable potential analyses may be conducted based on the annual average effluent concentration. In addition, the amendments would remove the requirement to submit acute whole effluent toxicity data with notice of intent applications for Tier 2 discharges. A hearing is scheduled for Dec. 7-8, 2017, in Rancho Cordova. Comments are due Oct. 27, 2017. Contact: Jim Marshall; Central Valley RWQCB; 916-464-4772; jdmarshall@waterboards.ca.gov

Subject: BREAKING NEWS: Trump nominates White House aide Nielsen to be Homeland Security secretary

President Donald Trump on Wednesday said he would nominate White House deputy chief of staff Kirstjen Nielsen to be the next secretary of Homeland Security.

Nielsen will replace John Kelly, who left the Department of Homeland Security this summer to be Trump's chief of staff. Nielsen was Kelly's top aide at the department, and she is a cybersecurity expert and an attorney.

Subject: FERC chief calls for review of agency enforcement work

By Darius Dixon

10/17/2017 03:29 PM EDT

FERC Chairman Neil Chatterjee told energy lawyers today the time is ripe for FERC to revisit its policies on enforcement following a string of court rulings that rejected the agency's penalties.

FERC's work to police the energy markets is a critical part of the agency's mission, Chatterjee told the Energy Bar Association, but it had "not come without some controversy."

When companies refuse to pay a fine sought by the agency, FERC takes them to court and to ask judges to approve or deny lengthy orders — without considering much additional evidence. The courts have not decided the merits of those cases, but the string of procedural losses has suggested that FERC leadership reconsider how they craft their penalty decisions before heading to court.

"The courts have rejected FERC's interpretation of de novo review five times under the Federal Power Act," Chatterjee said. "The courts have spoken, and I, for one, am listening."

He added that "the proper scope of de novo review is a matter my colleagues and I need to examine so we can chart a new course that is fair and legally defensible."

Chatterjee also repeated his hope that FERC would revisit its position on the Public Utility Regulatory Policies Act.

PURPA, he said, "often feels like it's out of sync" with today's energy landscape, which is "fundamentally different" from when it was conceived.

ENVIRONMENTAL LEADERS PRAISE BILL WEHRUM EPA NOMINATION

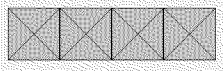
Wehrum Nominated to Head Air and Radiation Office

WASHINGTON (September 7, 2017) Today, President Donald J. Trump announced his intention to nominate Bill Wehrum to serve as EPA Assistant Administrator for the Office of Air and Radiation (OAR). Mr. Wehrum has a long history of public service, and previously served as EPA's acting assistant administrator for Air and Radiation from 2005 to 2007 and as EPA's principal deputy assistant administrator and counsel to the assistant administrator for Air and Radiation. He is currently partner and head of the Administrative Law Group at Hunton & Williams LLP where his practice focuses on air quality issues. Mr. Wehrum's career includes over 31 years working in the environmental field through engineering, legal practice, and administrative duties.

His nomination is receiving high accolades from environmental leaders across the country:

Sean Alteri, director, Kentucky Division for Air Quality and 2017 president of the Association of Air Pollution Control Agencies*:* "Considering his education and experience as a chemical engineer and an environmental attorney, Mr. Wehrum will be well-positioned to provide clear, concise direction to address the many diverse, complex air quality issues. As a student of the Clean Air Act, Mr. Wehrum's knowledge and experience will greatly benefit EPA, state, and local air pollution control agencies. We look forward to working with Mr. Wehrum and EPA's senior leadership to improve air quality in Kentucky and throughout our nation. The Kentucky Division for Air Quality supports Mr. Wehrum's nomination to serve as the assistant administrator of EPA's Office of Air and Radiation."

John Cruden, president-elect of the American College of Environmental Lawyers and assistant attorney general, Environment and Natural Resources Division, U.S. Department of Justice (12/2014-1/2017)*:* "I have worked with Bill Wehrum while he was a senior official at EPA during the Bush Administration, and have followed his impressive career in private practice. I believe he is committed to achieving clean air for all citizens and carefully following sound and current science."



Jeff Holmstead, assistant administrator, Office of Air and Radiation, EPA (2001 –2005): "Bill is committed to the goals of the Clean Air Act and to the rule of law. He is also a person of the highest integrity. I am confident that, within the framework established by Congress, he will work to protect public health and the environment while at the same time pursuing regulatory reforms that will reduce unnecessary regulatory burdens. Truly, there is no better person to serve as the assistant administrator of EPA's Office of Air and Radiation."

Marcus Peacock, EPA deputy administrator (08/2005 – 01/2009): "Bill Wehrum's understanding of the Clean Air Act may be second to none. His desire to pull up his sleeves and actually make the Clean Air Act work as a practical matter is second to none."

Clint Woods, executive director, Association of Air Pollution Control Agencies: "Through his

comprehensive knowledge of the law and experience in the federal government, Bill possesses the background to manage challenging Clean Air Act issues at U.S. EPA and help continue the tremendous air quality progress that has been achieved in our country over the last several decades. Under his leadership, the Office of Air and Radiation will be well-situated to pursue a back-to-basics agenda grounded in cooperative federalism."

Reuters

The White House's smart opening play on China

Derek Scissors | AEIdeas

The Trump administration announced yesterday an investigation into Chinese actions to coerce the transfer of intellectual property from American companies and individuals, as well as steal it outright. There is a long way to go on this issue, and many mistakes can still be made. But the president's order is a good initial response to predatory Chinese economic policies — and one that is entirely consistent with conservative principles of free trade.

Twenty20

3 crucial questions about tax reform for the middle class

Aparna Mathur | Forbes

As the debate in Congress shifts to tax reform, and in particular to reducing the corporate tax rate, it is worth taking a step back to review what we know and don't know about US corporate income taxes and their impact on American workers. Three important questions: Is America a high-tax or a low-tax country; who actually pays the corporate income tax; and can we really fix the corporate income tax code? It's time we let facts get in the way of opinion.

Subject: Today on Climate Beat

August 30, 2017

Today on Climate Beat . . .

. . . we went to the Gulf Coast, where oil and gas companies are opposing a petition from a Louisiana flood agency asking the Supreme Court to overturn a ruling by the U.S. Court of Appeals for the 5th Circuit rejecting its claims that the industry's activities have damaged coastal ecosystems.

Further North, industry attorneys are sounding alarms over legislation pending in the New York legislature that would amend the state constitution to expand residents' "environmental rights," raising concerns about a potential flood of citizen suits against companies in addition to litigation against the state.

And our daily news roundup noted that as Houston begins its long recovery from Hurricane Harvey's massive rainfall, some are wondering whether the storm will change the politics surrounding climate change and federal spending.

Subject: EPA: Van der Vaart will remain on advisory board

By Alex Guillén

11/29/2017 03:48 PM EDT

Donald van der Vaart will remain a member of EPA's Science Advisory Board after resigning from the North Carolina Department of Environmental Quality, an agency spokesperson said.

"Members of EPA's [Clean Air Scientific Advisory Committee] and SAB are hired as scientists and experts in their fields, not as representatives of their employers," the spokesman said.

His resignation from the NCDEQ "will have no impact on Dr. Van der Vaart's status with the SAB," the spokesperson added.

Van der Vaart was added to SAB last month. He resigned from the NCDEQ this week after alleging the agency was trying to stifle his work.

AIR
Acid Rain Program/Excess Emissions Penalty Adjustment
AIR

Notice of the EPA announces the availability of the annual adjustment factors for excess emissions penalties for failure to comply with certain requirements of the Acid Rain Program. The program limits annual sulfur dioxide and nitrogen oxide emissions of fossil fuel-fired utility units. The excess penalty provisions require units that exceed those limits to pay a penalty based on the number of excess tons emitted times $2,000, as adjusted by an annual adjustment factor. The annual adjustment factors for compliance years 2017 and 2018 are 1.9330 and 1.9705, respectively. Contact: Robert Miller; EPA, Clean Air Markets Division; 202-343-9077; miller.robertl@epa.gov. GENERAL ENVIRONMENT AND SAFETY
Oregon/Prospect No. 3 Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC, Office of Energy Projects, announces the availability of a draft environmental assessment for the new license application by PacifiCorp Energy, of Medford, Ore., for the Prospect No. 3 Hydroelectric Project on the South Fork Rogue River in Jackson County, Ore. The existing project, which occupies federal land in the Rogue River-Siskiyou National Forest, includes a concrete diversion dam and spillway, a reservoir, a powerhouse, a transmission line, and a fish passage ladder that produces an average of 35.05 gigawatt-hours annually. The proposed revisions would upgrade certain facilities, increase the project's minimum flow releases and ramping rate limits, and extend the project boundary. The EA concludes that relicensing the project, with appropriate measures, would not constitute a major federal action significantly affecting the quality of the human environment. Comments are due Dec. 1, 2017. Contact: Dianne Rodman; FERC; 202-502-6077

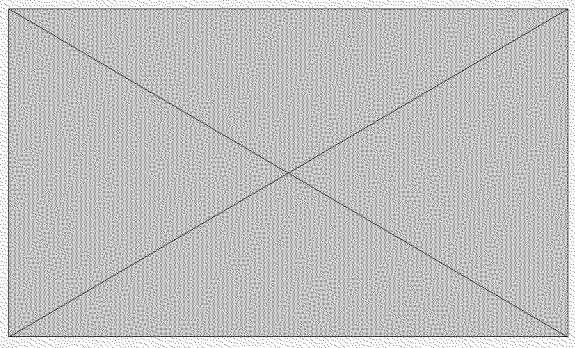
Republican House leaders have promised to unveil legislation today to remake America's individual and corporate tax codes.

AEI's daily publication of independent research, insightful analysis, and scholarly debate

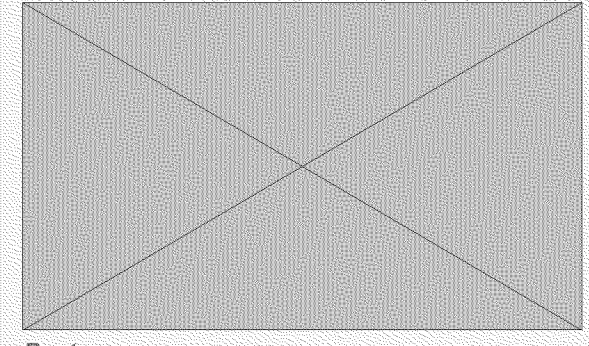


Reuters

Cut taxes — and help the poor all at once

Michael R. Strain | The Washington Post

Republican House leaders have promised to unveil legislation today to remake America's individual and corporate tax codes. Writing in 2015, Michael Strain argues it's past time to toss some popular credits that really just help rich people. "We should move the tax code away from spending money on high-income Americans," writes Strain. "The best way to do this would be to examine the list of tax expenditures, item by item."

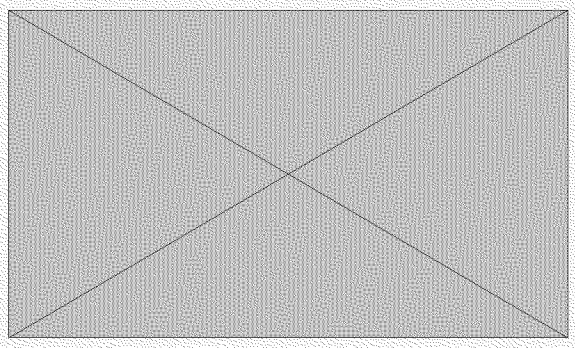


Reuters

Colleges, protect speech or lose funds

Frederick M. Hess and Grant Addison | The Wall Street Journal

Almost every week brings a new campus controversy: a college speech code that goes too far, an invited speaker shouted down by students, a professor investigated for wrongthink. So here's a straightforward idea that would be easy to put into practice: Require schools to assure free speech and inquiry as a condition of accepting federal research funding.



Reuters

President Trump can pardon Manafort. He

shouldn't.

John Yoo | The New York Times

The indictments of former Trump campaign officials Paul Manafort and Robert Gates have some conservatives openly considering desperate measures. The most radical comes from two Republican lawyers, who urged the president to issue a blanket pardon to anyone involved with Russian efforts to influence the 2016 election. Such a move would not violate the Constitution, but it would provoke a political disaster.

Reuters

Report: Tehran stands atop the Syria-Iran alliance

Danielle Pletka | Atlantic Council

The state once known as Syria ceases to exist. The nominal central government of Bashar al-Assad controls only sections of the country, with other portions in the hands of the Islamic State, al Qaeda, and others. That which is in Assad's hands remains so thanks only to the combined intervention of Iranian conventional and Islamic Revolutionary Guard Corps forces, Hezbollah fighters, and the military support of Russia.

Subject: BREAKING NEWS: Trump hints Arpaio pardon coming, won't do it at rally

President Donald Trump said he would not pardon former Sheriff Joe Arpaio on Tuesday night because he didn't want to cause "controversy."

But Trump, speaking at a rally in Phoenix, hinted that a pardon would be coming for the former sheriff, who was convicted of federal contempt of court charges. "He'll be just fine," Trump said.

Earlier Tuesday, White House press secretary Sarah Huckabee Sanders said Trump would not be pardoning the sheriff that day, a staunch anti-immigration figure and Trump backer.

AIR
California SIP/Photochemical Assessment Monitoring System Network
AIR

Proposed rule of the EPA would approve a revision to the California SIP. The revision concerns the establishment of a photochemical assessment monitoring system (PAMS) network in six ozone nonattainment areas within the state. The revision specifies that the South Coast Air Quality Management District (AQMD), the Sacramento Metro AQMD, the San Diego County Air Pollution Control District (APCD), the San Joaquin Valley Unified APCD, and the Ventura County APCD have implemented required PAMS networks and each district has included a provision on meeting quality assurance requirements. Additionally, the revision provides that the air districts have included a provision to assure that PAMS monitors will meet monitoring methodology requirements. Finally, the revision specifies that the air districts have provided assurance that their respective PAMS networks will be phased in over a period of not more than five years. Comments are due Sept. 1, 2017. Contact: Doris Lo; EPA Region 9; 415-972-3959; lo.doris@epa.gov. Citations: 40 CFR 52, 40 CFR 58

AIR
North Carolina/Clean Air Act Operating Permit Petitions
AIR

Notice of the EPA announces a final order granting two petitions submitted by the Sierra Club objecting to proposed and current Clean Air Act Title V operating permits issued to Duke Energy LLC of Charlotte, N.C. The petitioner objects to the proposed permit issued by the Western North Carolina Regional Air Quality Agency to the Asheville Steam Electric Plant in Buncombe County, N.C., and to the permit issued by the North Carolina Department of Environmental Quality to the Roxboro Steam Electric Plant in Person County, N.C. The petitioner claims that each permit must contain stricter modeling-based numerical emission limits for sulfur dioxide (SO2) to prevent

exceedances of the 2010 SO2 NAAQS. The petitioner also claims that the permits must contain a compliance schedule because each facility has violated its current permit. The EPA administrator issued orders June 30, 2017, granting the petitions. Petitions for review are due Oct. 2, 2017. Human Drug Compounding Outsourcing Facility Fees
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the fiscal year 2018 establishment and reinspection fees for registered outsourcing facilities that compound human drugs. The small business establishment fee is $5,364, the nonsmall business establishment fee is $17,364, and the reinspection fee for outsourcing facilities is $16,093. The notice provides information on how the FY 2018 fees were determined and specifies the payment procedures for outsourcing facilities. The fees are effective Oct. 1, 2017, and expire Sept. 30, 2018. Contact: Monica Vega; FDA, Office of Financial Management; 301-796-2127

Over-the-Counter Monograph Drugs User-Fee Program Meeting
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a meeting to provide an update on discussions regarding a nonprescription (over-the-counter) monograph drug user-fee program that began in July 2016 and an overview of proposed performance goals and procedures related to the potential program. The program would provide funding to supplement congressional nonuser-fee appropriations and would support FDA review of the efficacy and safety of ingredients included in or proposed for inclusion in a monograph. The meeting is scheduled for Aug. 23, 2017, via webcast. Contact: Mary Vienna; FDA, Center for Drug Evaluation and Research; 301-796-4150; OTCMonographUserFeeProgram@fda.hhs.gov

Uranium and Thorium Mill Tailing Standards

RADIATION

Notice of the EPA announces the reopening of the comment period for a Jan. 19, 2017, proposed rule (82 FR 7400) concerning health and environmental protection standards for uranium and thorium mill tailings. The rule would establish standards for byproduct materials produced by uranium in-situ recovery for implementation by the Nuclear Regulatory Commission and NRC agreement states, including both surface and subsurface standards for groundwater protection, monitoring, restoration, and stability. A corrective action approach would be provided to meet constituent concentration standards, specific criteria and procedures for approving termination of long-term stability monitoring would be added, and the NRC and agreement states would determine on a site-specific basis the constituents for which concentration based standards are set. The requirement that the NRC obtain EPA concurrence prior to making site-specific alternate concentration limit determinations would be removed. The proposal supersedes a Jan. 26, 2015, proposed rule (80 FR 4155). Comments now are due Oct. 16, 2017. Contact: Ingrid Rosencrantz;

Subject: BREAKING NEWS: Trump's travel ban to be replaced with new set of restrictions

President Donald Trump's controversial travel ban will morph into a new set of restrictions on travelers from a larger set of countries, U.S. officials announced Sunday night.

The current policy, which denies visas to citizens of six majority Muslim countries, will be replaced by a new set of travel limits on eight countries, including all but one of those on the previous list. The nations facing travel restrictions under the new policy are Chad, Iran, Libya, North Korea, Somalia, Syria, Venezuela and Yemen, officials said Sunday. Existing visa-holders are exempt, and waivers will remain available for travelers with U.S. ties.

One country on the current list, Sudan, was dropped from the new restrictions, which will take effect Oct. 18.

Subject: Playbook Power Briefing, presented by UC Davis: TRUMP says he made up his mind on the Iran deal -- THE BIG SIX set to announce tax reform framework WEDNESDAY -- GRAHAM says health care bill will get vote next week -- BUZZ: Big changes at NFIB

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by UC Davis

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

WE HEAR... -- THE BIG SIX is set to to announce its tax reform framework next Wednesday, according to sources involved in the planning. Of course, the timing could change. But Wednesday is the plan as of now -- and our sources say they are likely to stick to it.

FIRST IN PLAYBOOK -- DOWNTOWN BUZZ... BIG CHANGES AT NFIB -- Nearly 20 staffers -- including many senior level employees in the communications and lobbying operation -- have exited the National Federation of Independent Businesses since Juanita Duggan took the helm in late 2015. Veteran NFIBers like Amanda Austin, vice president of government relations and media, Mark Garzone, senior vice president of marketing, and Steve Woods, senior vice president of state affairs, are among those who have departed.

NFIB spokesman Jack Mozloom said the changes are part of a "reorganization" Duggan began in 2016. "There have been some departures, but no more than is typical for any large organization that undergoes significant changes," Mozloom emailed. "Considering the organizational changes and a political environment that has changed dramatically since Mr. Danner's retirement, it's natural for talented employees to seek other opportunities, and it's just as natural for organizations and firms throughout Washington find top-level professionals at NFIB whom they can recruit." Duggan has also brought on several hires, including Catherine Michael, who heads a new public affairs department, David Addington, general counsel, and new top lobbyist John Kurrle.

NEW -- BLOOMBERG'S STEVE DENNIS and **SAHIL KAPUR: "GOP Health Bill Would End Guarantee That Sick People Won't Pay More":** "Under the latest Republican bill, states could get a waiver allowing insurers to charge people more if they or a dependent have a pre-existing condition, or if they get sick and want to keep their insurance. The key provision in the bill has vague language requiring a state to first show how it 'intends to maintain access to adequate and affordable health insurance coverage for individuals with pre-existing conditions.'" https://bloom.bg/2faTpAO

BUSINESS INSIDER: "The new healthcare bill includes an 'Alaska Purchase' to woo a key senator" http://read.bi/2fj4MKD

THE MARCH TOWARD GRAHAM-CASSIDY -- SEN. LINDSEY GRAHAM (R-S.C.) said his health care bill would get a vote on the Senate floor next week. No confirmation yet from Senate Majority Leader Mitch McConnell (R-Ky.). **IF THIS BILL COMES TO A VOTE,** it's going to happen next week.

EARLIER THIS MORNING ... -- BURGESS EVERETT (@burgessev): "Things are getting testy. Graham and McCaskill had a driveby spat in the Senate, then Graham got chippy (a rarity) with reporters" ... ."@kasie asks about pre-existing. Graham: 'Where are you getting this garbage? Where are you getting this garbage? That's complete garbage'" ... **WAPO'S MIKE DEBONIS** (@mikedebonis): "Graham, Cassidy, Santorum leave McConnell ofc after 40 min meeting. 'We're inside the 5 yard line,' Graham says." ***By the way, they were within the five-yard line last time. Not saying they won't do it this time, just pointing that out.***

-- "Kimmel, not Cassidy, is right on health care, analysts say," by Dan Diamond http://politi.co/2wyiYH5

A POLITICO IN HAND -- @seungminkim: ".@senorrinhatch is a @politico reader" http://bit.ly/2w6zr12

TRUMP AT THE U.N. -- The president said that he has made up his mind on whether or not to exit the Iran Deal, per our own Annie Karni, today's pooler. Trump told reporters "I'll let you know what the decision is." Trump also met with Palestinian Authority President Mahmoud Abbas. Trump said that "I think we have a pretty good shot, maybe the best shot ever," at Middle East peace and that he "will do everything within my heart and within my soul to get that deal made."

-- @maggieNYT : "this was a favored tactic in the campaign to build suspense and it really never fails to get a headline"

THE LATEST ON RUSSIA -- "Russians Appear to Use Facebook to Push Trump Rallies in 17 U.S. Cities," by The Daily Beast's Ben Collins, Gideon Resnick, Kevin Poulsen and Spencer Ackerman: "Suspected Russia propagandists on Facebook tried to organize more than a dozen pro-Trump rallies in Florida during last year's election, The Daily Beast has learned. The demonstrations -- at least one of which was promoted online by local pro-Trump activists -- brought dozens of supporters together in real life. They appear to be the first case of Russian provocateurs successfully mobilizing Americans over Facebook in direct support of Donald Trump.

"The Aug. 20, 2016, events were collectively called 'Florida Goes Trump!' and they were billed as a 'patriotic state-wide flash mob,' unfolding simultaneously in 17 different cities and towns in the battleground state. It's difficult to determine how many of those locations actually witnessed any turnout, in part because Facebook's recent deletion of

hundreds of Russian accounts hid much of the evidence. But videos and photos from two of the locations -- Fort Lauderdale and Coral Springs -- were reposted to a Facebook page run by the local Trump campaign chair, where they remain to this day." http://thebea.st/2wz0Kp2

****** **A message from UC Davis:** At UC Davis, unusual collaborations in veterinary medicine, human health and engineering lead to groundbreaking treatments for beloved pets and other animals, from furry to feathered. Those breakthroughs lead to translatable human medicine. It's a One Health approach that benefits the health of all. Learn more at 21stcentury.ucdavis.edu. ******

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 6:14 a.m.: "Big meetings today at the United Nations. So many interesting leaders. America First will MAKE AMERICA GREAT AGAIN!" ... **at 6:40 a.m.:** "After allowing North Korea to research and build Nukes while Secretary of State (Bill C also), Crooked Hillary now criticizes." ... **at 7:00 a.m.:** "Thank you @foxandfriends - great show!" ...

... **at 8:09 a.m.:** "Rand Paul is a friend of mine but he is such a negative force when it comes to fixing healthcare. Graham-Cassidy Bill is GREAT! Ends Ocare!" ... **at 8:16 a.m.:** "I hope Republican Senators will vote for Graham-Cassidy and fulfill their promise to Repeal & Replace ObamaCare. Money direct to States!" ... **at 8:29 a.m.:** "Looking forward to Friday night in the Great State of Alabama. I am supporting 'Big' Luther Strange because he was so loyal & helpful to me!" ***The president also thanked and retweeted several supporters, including evangelical leader Franklin Graham***

-- FORTUNE: "Here's What Ivanka and Melania Trump Are Doing at the United Nations" http://for.tn/2fzRA0K

IN THE COURTS -- "California sues to block Trump's border wall," by Josh Gerstein: "The State of California is suing to block President Donald Trump's plan to construct a wall along the U.S. border with Mexico, the top lawyer for the state told reporters Tuesday. The lawsuit set to be filed in federal court in San Diego will argue that the effort violates federal law and the Constitution by intruding on state authority, California Attorney General Xavier Becerra said.

"'They're violating the Tenth Amendment and infringing on a lot of state laws, not just federal laws, that affect our state. At the same time, they're trying to do something that only Congress can do,' Becerra told journalists in Washington in advance of an official announcement he plans to make in San Diego Wednesday." http://politi.co/2ypAXwT

SAVE THIS TAPE -- ASHLEY PARKER interviews **NIKKI HALEY** in **GLAMOUR --** Haley on speculation that she could be the next secretary of state: "I don't take it seriously. Secretary Tillerson is not going anywhere. I can vouch for that. He is where he is, he continues to be strong in how he handles foreign policy, and I continue to work well with him." http://bit.ly/2xRN8p2

CYBER WAR -- New group of Iranian hackers linked to destructive malware," by WIRED's Andy Greenberg: "For more than five years, Iran has maintained a reputation as one of the most aggressive nations in the global arena of state-sponsored hacking, stealing data from corporate and government networks around the world, bombarding U.S. banks with cyberattacks, and most brazen of all, unleashing multiple waves of computer-crippling malware that hit tens of thousands of PCs across the Middle East. But amidst that noisy mayhem, one Iranian group has managed to quietly penetrate a broad series of targets around the world, until now evading the public eye. And while that group seems to have stuck to traditional spying so far, it may also be laying the groundwork for the next round of destructive attacks.

"Security firm FireEye has released new research into a group it calls Advanced Persistent Threat 33, attributing a prolific series of breaches of companies in the aerospace, defense, and petrochemical industries in countries as wide-ranging as Saudi Arabia, South Korea, and the US. While FireEye has closely tracked APT33 since May of last year, the security firm believes the group has been active since at least 2013, with firm evidence that it works on behalf of Iran's government. And though FireEye describes APT33's activities as largely focused on stealthy spying, they've also found links between it and a mysterious piece of data-destroying malware that security analysts have puzzled over since earlier this year." http://bit.ly/2ypBe2C

THE ADMINISTRATION -- "At EPA, guarding the chief pulls agents from pursuing environmental crimes," by WaPo's Juliet Eilperin and Brady Dennis: "Scott Pruitt's round-the-clock personal security detail, which demands triple the manpower of his predecessors at the Environmental Protection Agency, has prompted officials to rotate in special agents from around the country who otherwise would be investigating environmental crimes. The EPA's Office of Enforcement and Compliance Assurance has summoned agents from various cities to serve two-week stints helping guard Pruitt in recent months. And while hiring in many departments is frozen, the agency has sought an exception to hire additional full-time staff to protect Pruitt." http://wapo.st/2xvF50g

TRUMP'S MAN IN THE VALLEY -- "Is Trump mulling Peter Thiel for a top intelligence advisory post?" by Adam Ciralsky in Vanity Fair: "According to two [White House sources], Thiel has been in discussions to become the chair of the lofty P.I.A.B.--the President's Intelligence Advisory Board. This high-level intelligence post (previously held by Establishment figures such as Brent Scowcroft, Les Aspin, and Warren Rudman) independently monitors America's spy agencies and was established in 1956 to counsel the president. These two sources recounted that Thiel and the administration had been in the process of firming up the details of his role and staffing; then, in August, one of them texted me to say the offer to Thiel was now in limbo. Another White House source, however, told me in September that Thiel remains the president's choice to lead the P.I.A.B." http://bit.ly/2wyGaFp

THE WALL -- "Trump Is Using Targeted Facebook Ads To Reassure Supporters He Will Build The Border Wall," by BuzzFeed's Craig Silverman: "President Donald

Trump is using targeted Facebook ads to reassure supporters that he still plans to build the border wall after his recent public comments caused many to question whether he would keep his promise. ... A White House spokesman told BuzzFeed News the ads are being run by the Trump campaign, and referred all questions to it. The Trump campaign did not respond to emails or phone messages about the ads. The ads are not visible on the timelines of the Trump or Pence Facebook pages. They are therefore so-called 'dark post ads' because they can only be seen by people the campaign chose to target with the message." http://bzfd.it/2ypGOlR

KFILE SPECIALS -- "Trump judicial nominee said transgender children are part of 'Satan's plan', defended 'conversion therapy,'" by CNN's Chris Massie and Andrew Kaczynski: "In a pair of 2015 speeches, President Donald Trump's nominee for a federal judgeship in Texas described transgender children as evidence of 'Satan's plan,' lamented that states were banning conversion therapy and argued that sanctioning same-sex marriage would lead to polygamy and bestiality. Jeff Mateer, the current first assistant attorney general of Texas, was serving at the time as general counsel of the First Liberty Institute, a religious liberty advocacy group known before 2016 as the Liberty Institute." http://cnn.it/2yqQv3x

-- "Roy Moore's foundation shared a video in 2015 calling Obama a Muslim," by Kaczynski and Massie http://cnn.it/2yqRyjZ

"60 MINUTES" THIS SUNDAY -- LESLIE STAHL talks to Sen. John McCain (R-Ariz.) ... **SCOTT PELLEY** is in Houston, reporting on the damage from the hurricane.

COMING ATTRACTIONS -- The National Press Club's 5th annual Spelling Bee is on Sept. 26 from 7-11 p.m. at the National Press Club. Spelling for Congress is Reps. Virginia Foxx (R-N.C.), Don Beyer (D-Va.), Scott Peters (D-Calif..), Suzanne Bonamici (D-Ore.). Jamie Raskin (D-Md.) and Ted Deutch (D-Fla.). The press team is WaPo's Alexandra Petri, POLITICO's Seung Min Kim, Gallup's Art Swift (the reigning champ) and The Atlantic's Molly Ball. ESPN's Clinton Yates and WaPo's Kelsey Snell are MCing, with this year's Scripps National Spelling Bee winner Ananya Vinay as a guest judge. ***Tickets $25, all proceeds benefit NPC's Journalism Institute*** http://bit.ly/2yqfSIW

CLICKER -- "An Immigrant's Path to Congress: Ruben Kihuen's First Year in Photos," by Roll Call's Bill Clark http://bit.ly/2wycR5G

TODAY'S BEYOND THE BELTWAY -- Hurricane Maria pounds Puerto Rico -- Handicapping Chicago's odds at landing Amazon's new HQ http://politi.co/2ypD2c2

--"Republican Andy Ogles' bid for Bob Corker's U.S. Senate seat to get $4 million assist from Lee Beaman," by The Tennessean's Joel Ebert: http://tnne.ws/2w6MteP

BIG SALES -- "Clinton book has sold more than 300,000 copies," by the AP's Hillel Italie: "Clinton's book about her stunning loss in 2016 to Donald Trump sold more than

300,000 copies in the combined formats of hardcover, e-book and audio, Simon & Schuster told The Associated Press on Wednesday. The book's hardcover sales of 168,000 was the highest opening for any nonfiction release in five years, according to NPD BookScan, which tracks around 85 percent of retail print sales." http://bit.ly/2yrzarc

BIRTHDAY -- Former Rep. Walt Minnick (D-Iowa) (h/t Former Rep. John Barrow (D-Ga.)).

WELCOME TO THE WORLD -- Elizabeth Crow, government relations director at the Nature Conservancy, and **Peter Crow,** a new product commercialization manager at 3M, recently welcomed Lee Howard Crow. ***Pic*** http://bit.ly/2wG3MTL

NEW ON THE TWITTERS - CARLOS GUTIERREZ finally joined Twitter (@carlosgutierrez) on Tuesday, getting a little help from Madeleine Albright. http://bit.ly/2xejmKv

****** **A message from UC Davis:** Ranked first in the world for veterinary medicine, UC Davis believes collaborating across disciplines in animal, human and environmental health is the best way to advance the health of all creatures great and small. Using this "One Health" approach to problem solving, our research - much of which is federally funded - is resulting in cost-saving, translatable treatments for cancer, breakthroughs in stem cell therapy, increased awareness and management of emerging zoonotic diseases, better protection for endangered species, and comprehensive responses to environmental crises like oil spills and floods. Learn more about UC Davis health innovation at 21stcentury.ucdavis.edu. ******

Summaries

AIR
Delaware SIP/Ozone NAAQS Interstate Transport
AIR

Direct final rule of the EPA approves a portion of a revision to the Delaware SIP concerning the good neighbor interstate transport requirements for the 2008 ozone NAAQS. The revision addresses the demonstration that sources or emissions activity within the state will not contribute significantly to nonattainment or interference with maintenance of the standards in other states. The rule is effective Dec. 26, 2017, unless adverse comments are received by Oct. 27, 2017. Contact: Ellen Schmitt; EPA Region 3; 215-814-5787; schmitt.ellen@epa.gov. Citations: 40 CFR 52.420

ENDANGERED SPECIES
Southwest Pacific/Marine Mammals Incidental Take
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces a request from Lamont-Doherty Earth Observatory (L-DEO), of Palisades, N.Y., for an incidental harassment authorization to take marine mammals incidental to three marine geophysical surveys in the southwest Pacific Ocean within the exclusive economic zone and territorial sea of New Zealand. L-DEO requests authorization to take a small number of 38 species of marine mammals by Level A and B harassment for a period not to exceed one year. The agency proposes to issue a one-year authorization, provided specified mitigation, monitoring, and reporting requirements are incorporated. The agency is preparing an environmental assessment for the requested authorization. Comments are due Oct. 27, 2017. Contact: Jordan Carduner; NMFS, Office of Protected Resources; 301-427-8401

Clean Power Plan's Legal Fight Continues Amid Repeal Efforts

Posted October 11, 2017, 12:13 P.M. ET

By Abby Smith

The EPA's proposal to ax the Obama administration's plan to cut carbon emissions from the power sector hasn't silenced the legal back-and-forth over the regulation's merits.

The litigation over the Clean Power Plan has been on ice for months, but supporters and foes of the climate rule are disputing how the U.S. Court of Appeals for the District of Columbia Circuit should proceed with the case. The full court heard oral arguments in the case in September 2016.

The Environmental Protection Agency, in an Oct. 10 status report required by the court, cited its newly signed proposal to repeal the Clean Power Plan, arguing the court should continue to keep the case on hold until the agency's repeal of the regulation is final. The report also noted the EPA is considering "the scope of any potential replacement rule" to cover carbon emissions from existing power plants.

Conservative foes of the Obama regulation say they expect the EPA will ask the court to dismiss the case after it finalizes the repeal.

"I think it would be a futile gesture for the court to adjudicate the regulation that's both stayed [by the Supreme Court] and slated to be repealed," Sam Kazman, general counsel for the Competitive Enterprise Institute, told Bloomberg BNA. "I don't see what that gets anyone except billable hours."

But environmental groups and other supporters of the Clean Power Plan say now, more than ever, is the time for the D.C. Circuit to weigh in on the legality of the regulation.

"As of now, the Clean Power Plan is still on the books," Andres Restrepo, an attorney with the Sierra Club, told Bloomberg BNA.

He said many of the issues litigated in this case will come up in the forthcoming legal fight over the repeal and any potential replacement that the agency offers. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P., the global business, financial information and news leader. Bloomberg BNA is an affiliate of Bloomberg L.P.

"It makes sense for the court to go forward with a decision on the merits of the Clean Power Plan," he said. "It will save resources in the long run, clarify" the legal bounds of the EPA's authority under the air act, and "form the basis of the EPA's current action."

Wind and Solar's Future Depends on Taxes, Not Clean Power Plan

Posted October 11, 2017, 8:30 A.M. ET

By Joe Ryan, Brian Eckhouse and Ari Natter

The Trump administration's decision to end the Clean Power Plan may be deeply symbolic, but the battle that matters most for renewable energy will be over taxes.

Wind and solar have been the fastest growing sources of electricity in the U.S. since 2014 as utilities closed a record number of aging coal-fired generators. That's largely because it's become cheaper to build renewable plants than keep coal plants open.

Clean-energy's fiscal advantage stems in part from two tax credits that Congress extended in 2015. Both measures are scheduled to be phased out in the 2020s, but Environmental Protection Agency administrator Scott Pruitt on Monday called for them to be eliminated. That could upend wind and solar's edge.

"Without tax credits, those economics no longer work," said Amy Grace, an analyst at Bloomberg New Energy Finance.

Unlike the Clean Power Plan, tax credits cannot be unilaterally scuttled by the White House. But with Republican Congressional leaders pushing to rewrite the tax code, opponents of the wind and solar tax credits, including those in the Trump Administration, are jockeying to torpedo the measures.

"I would do away with these incentives," Pruitt said, responding to a question about the effectiveness of renewable energy at an event in the heart of Kentucky coal country. "I'd let them stand on their own and compete against coal and natural gas and other sources."

Not Easy

It won't be easy to kill the measures, know formally as the Production Tax Credit and Investment Tax Credit. They have broad support from both Democrats and Republicans from rural districts where wind and solar have become a key source of jobs. Plus, the overall prospects for reforming the tax code remain murky amidst congressional gridlock and Republican infighting.

After Pruitt called for ending the credits for wind and solar, Iowa Republican Senator Chuck Grassley said on Twitter that he would "remind" the EPA chief that the credit for wind farms "will stay on books until 2020, like Congress planned."

Carlos Curbelo, a Republican Congressman from Florida, went further, invoking Jeopardy! game show Alex Trebek as he opined on the odds of a successful repeal of the tax credits.

"Alex, I'll take 'things that are not happening for $800,"' Curbelo wrote on Twitter.

Cheap Enough

Trump's move to kill the Clean Power Plan has not dimmed investor enthusiasm for clean energy. Since the president signed the order to roll back the emissions-curbing rule, almost $30 billion has been spent on solar and wind projects.

In the third quarter alone, clean energy spending in the U.S. hit the highest level in two years, totaling $14.8 billion, data compiled by Bloomberg New Energy Finance show. Renewables are now cheap enough to thrive without subsidies in some parts of the world, including Brazil and Mexico. The difference is demand for electricity is growing in those regions while it has stagnated in much of the U.S.

Killing Obama's Power Plan Hasn't Stopped the Renewable Boom Yet

Posted October 11, 2017, 8:17 A.M. ET

By Mark Chediak

For a look at what the death of the Clean Power Plan means for renewable energy, consider this: Since President Donald Trump signed the order to roll back the emissions-curbing rule, almost $30 billion has been spent on solar and wind projects.

In the third quarter alone, clean energy spending in the U.S. hit the highest level in two years, totaling $14.8 billion, data compiled by Bloomberg New Energy Finance show.

The investments in solar and wind are a testament to the seemingly unstoppable boom in renewables that has been driven more by economics and state environmental policies than federal regulations. So far this year, U.S. utility giants including Warren Buffett's Berkshire Hathaway Inc., American Electric Power Co. and Xcel Energy Inc. have laid out plans to collectively spend billions on wind farms that'll replace aging coal-plants.

"The Clean Power Plan doesn't make a jot of difference," said Amy Grace, an analyst at Bloomberg New Energy Finance. "Utilities are installing wind and solar because it is cheaper than running existing plants, and corporations are procuring wind and solar because it's economic to do so."

To be sure, energy companies are investing in clean power while they still can. Tax credits make building wind and solar farms cheaper than running existing coal and natural gas-fired power plants, Grace said. Some of these breaks, extended through bipartisan legislation in 2015, start rolling off this year, Grace said.

Smoke Alarm Efficiency Exemption Clears House

Posted October 11, 2017, 04:19 P.M. ET

By Dean Scott

Smoke alarms, security systems, and other safety devices would remain exempt from energy efficiency standards as part of a bill headed to President Donald Trump's desk after sailing through the House easily today.

The House unanimously approved the Power and Security Systems (PASS) Act (S. 190), which passed the Senate Aug. 1. The bill would extend to July 1, 2023, an exemption from Energy Department energy conservation standards for smoke alarms, carbon monoxide detectors, and home and office security systems.

The House passed the measure under a fast-track suspension procedure, with Democrats widely backing a Senate bill introduced by Sen. Cory Gardner (R-Colo.) and cosponsored by Sen. Maria Cantwell (D-Wash.).

The bill also would authorize the Energy Department to determine whether subsequent updates of the energy efficiency exemption for those devices is necessary.

A coalition of industry groups including the Security Industry Association, National Electrical Manufacturers Association, and Electronic Security Association had urged Congress to pass the bill. Members of the National Electrical Manufacturers Association include Nest Labs Inc. and BRK Brands Inc., which markets alarms under the First Alert brand name.

The measure "will provide much-needed regulatory relief to our members who employ 400,000 Americans in the security industry," the groups told lawmakers in a June letter. "It also ultimately benefits the millions of American consumers that depend on security and life safety systems."

BNP Paribas to Halt Shale, Oil Sands Financing

Posted October 11, 2017, 03:58 P.M. ET

By Fabio Benedetti-Valentini and Russell Ward

BNP Paribas SA pledged to stop financing shale and oil sands projects, expanding earlier commitments in support of global efforts to tackle climate change.

France's largest bank will no longer do business with companies whose main activity stems from oil and natural gas obtained from shale or oil sands, it said in a statement on Oct. 11. The policy covers companies involved in activities ranging from exploration to marketing and trading. The bank added that it won't fund oil or gas projects in the Arctic region.

BNP Paribas said it's committed to bringing its financing and investment activities in line with international efforts to keep global warming below 2 degrees Celsius (3.6 degrees Fahrenheit) by the end of the century. Achieving that goal relies on reducing the world's dependence on fossil fuels, starting with energy from shale and oil sands, the bank said.

The bank said the extraction of fuel from these sources emits high levels of greenhouse gases and harms the environment in other ways. BNP Paribas may be the first large bank to blacklist shale oil, which has enabled the United States to curb oil imports and pushed down energy prices.

Once a global leader in oil financing, BNP has withdrawn from funding coal mines and coal-fired power plants in recent years, along with other big European banks including Societe Generale SA, HSBC Holdings Plc and Credit Agricole SA. Energy excluding electricity represented 4 percent of BNP's total lending commitments, down from 6 percent in mid-2015, according to its filings.

"Our role is to help drive the energy transition," Chief Executive Officer Jean-Laurent Bonnafe said in the statement. "We're a long-standing partner to the energy sector and we're determined to support the transition to a more sustainable world."

Shale Surge

U.S. oil and gas output has surged over the past six years as drillers unlocked oil trapped in shale formations, partly by injecting water, sand and chemicals under high pressure to crack open reservoirs. Banned in France, the process known as hydraulic fracturing, or fracking, has been at the center of controversies about contaminating water sources and causing earthquakes.

Meanwhile, investor sentiment toward oil sands—a heavy crude that is capital intensive to extract—has soured as prices halved from above $100 a barrel over the past three years, with Royal Dutch Shell Plc selling out of its oil sands assets in Canada.

Last year, BNP decided to halt further development of its reserve-based lending business, the key avenue for financing shale companies. In 2012 the bank sold its reserve-based lending activities in the U.S. and Canada to Wells Fargo & Co., including $9.5 billion of loans.

BNP also repeated its target for 15 billion euros ($17.7 billion) in financing for renewable energy projects by 2020 and 100 million euros of investment in startups in areas such as power storage and efficiency.

Rail Safety Targeted in Fuel Transport Study on Shale Boom

Posted October 11, 2017, 02:54 P.M. ET

By Meenal Vamburkar

Routes used to ship crude oil, natural gas, and ethanol by rail need better and more frequent inspections, according to a report by a national science group that also urged added training for local first responders.

From 2005 to 2015, there were 58 rail incidents involving ethanol shipments and 21 involving crude, according to the study by the National Academies of Sciences, Engineering and Medicine, a Washington-based nonprofit research organization. A July 2016 derailment in Oregon spilled about 40,000 gallons of oil, which ignited and led to the evacuation of about 100 people, the report said. The cause appeared to be track failure.

Pipelines and marine shipping remain the safest form of transportation, according to the study, which was initiated in 2015 and released Oct. 11. It was designed to assess whether the U.S. energy boom was putting strain on the transportation industry and sacrificing safety.

Barges have an "exemplary safety record," even as the total volume of oil they handle has risen, according to the report. That's the result of a federal revamping of industry safety rules following a series of spills nearly 30 years ago, the group wrote. Now, regulators should determine if improved incident- and traffic-reporting systems can help train safety.

"Preventing derailments of this traffic is imperative," the report said, particularly since some of the tank cars in use are designed to older specifications. At the same time, emergency preparedness remains a challenge in rural communities, the report said, where local responders may not have sufficient training to deal with accidents.

DTE, Enbridge Gas Line, Energy Transfer Project OK'd by FERC

Posted October 11, 2017, 11:24 A.M. ET

By Catherine Traywick

DTE Energy and Enbridge gained approval from federal regulators to start construction of the $2 billion Nexus natural gas line in the Midwest, with certain exceptions, according to a filing posted today.

However, the Federal Energy Regulatory Commission order bars construction at two locations and at proposed horizontal directional drilling sites pending submission of additional environmental information.

The 257-mile pipeline would be able to transport 1.5 billion cubic feet per day of Appalachian gas to Ohio, Michigan, Illinois, and Ontario.

In a separate order, the energy regulator also cleared Energy Transfer Partners L.P. to resume horizontal directional drilling at four sites along Rover natural gas line.

The approval is a major step forward for a project that's been mired in protests and investigations since Energy Transfer razed a historic house in Ohio and disclosed massive spills of drilling fluids associated with laying the pipeline. The setbacks have delayed the project's startup by months, with Energy Transfer saying earlier in August that it won't bring the system fully into service until January.

The Energy Transfer authorization has no bearing on the agency's investigation into the spills in Ohio, order says.

The agency previously allowed the company to move forward with its drilling at other sites including Captina Creek.

Stops on New England Gas Orders Made Prices Rise, Group Says

Posted October 11, 2017, 01:21 P.M. ET

By Ryan Collins (Bloomberg News) and Adrianne Appel (Bloomberg BNA)

Power companies' approach to booking space on U.S. natural gas pipelines is becoming the latest flash point in the debate over whether to build more of the links in the historically constrained Northeast.

The Environmental Defense fund said in an Oct. 11 report that New England utility companies Eversource Energy and Avangrid Inc. have repeatedly reserved pipeline capacity for large gas deliveries, only to cancel their orders for the power-plant fuel at the last minute. It's a move that, the group said, amplified the run-up in electricity prices during cold snaps and cost customers $3.6 billion over three years.

The practice is permitted by regulations meant to ensure reliable gas supply, and Eversource says it didn't profit from it.

New England, where electricity prices are among the highest in the nation, has been embroiled in a debate over whether to allow companies to build new pipelines to carry more gas into the region. Many power plants use natural gas to generate electricity, and homeowners also use it for heating.

The Environmental Defense Fund said it is not anti-pipeline, but the findings are likely to be used by other environmental groups to argue that more pipelines are not needed.

Capacity Cancellations

The Environmental Defense Fund said in its report that the eleventh-hour capacity cancellations show the gas supply bottlenecks used to justify new pipelines may be less severe than they appear. Eversource pulled out of a $3 billion New England pipeline proposal last year after a court ruling effectively blocked funding for the conduit.

"There were in some instances plenty of available capacity on the pipelines serving the populated areas of the Northeast that bore the brunt of the price increase," N. Jonathan Peress, senior director of energy market policy at the Environmental Defense Fund, said in a phone interview.

Pipelines may not be needed and may not be the most cost-effective solution to energy needs, but as markets operate now, lack of clear price data makes it impossible to tell, Jon Coifman, a spokesman for the environmental group, said.

Caroline Pretyman, a spokeswoman for Eversource, called the group's report misleading. A spokesman for Avangrid didn't respond to a request for comment.

"It is well documented that New England pipeline demand greatly exceeds the supply on cold days," Pretyman said. "Our gas distribution business is carefully regulated and the gas supply we purchase for our customers is a strict pass-through cost—meaning we don't benefit from higher prices derived from withholding."

Gas Reliance

Avangrid and Eversource, like many utilities, lock in the rights to purchase space on gas pipelines for the long term. In 2008, the U.S. Federal Energy Regulatory Commission amended rules to allow such companies to sell extra capacity not needed for customers to a secondary market, where power plants buy the fuel, according to the report. Because utilities are part of a regulated monopoly, most profits from the secondary market have to be given back to the ratepayers in the

form of dividends.

But when utilities cancel scheduled pipeline capacity in the last hours of the trading day—too late for it to be resold—higher electricity bills can result, according to the Environmental Defense Fund report. It's a phenomenon that may become more pronounced as the nation becomes more reliant on gas-fired generation, Peress said.

"New England is probably the leading example in the country of what the implications of increased gas use and increased reliance on gas fired generators" are for consumers, he said.

Pipeline Construction Fight

"The allegations raised in the report are concerning," a spokeswoman for Attorney General Maura Healey (D) told Bloomberg BNA Oct. 10 in an email.

Healey's anti-pipeline stance is well known in Massachusetts: In November 2015, her office issued a report concluding that any additional energy needs of the next 15 years could be met through energy efficiency and demand response.

The fight over natural gas pipeline construction in New England came to a head in Massachusetts in August 2016, when the Supreme Judicial Court ruled that an Eversource and industry pipeline plan backed by Gov. Charlie Baker (R) could not go forward.

The Access Northeast Pipeline was proposed by Eversource, Spectra Energy and National Grid to bring more natural gas from New York starting in 2022. Massachusetts uses 42 percent of the natural gas in New England, according to Eversource, and most of it fuels electricity plants.

Eversource Energy executive vice president Lee Oliver told investors in February the company was pursuing legislation in Massachusetts to give it permission to build the pipeline that was blocked by a Supreme Judicial Court ruling. Massachusetts lawmakers, however, say they have moved on from even considering a bill and instead are debating scores of bills this year that would strengthen the state's renewable energy portfolio.

"I hope [the study] puts a nail in the coffin of the idea that we have a problem with natural gas capacity and need another pipeline to solve it," David Ismay, an attorney with the Conservation Law Foundation, an environmental organization, told Bloomberg BNA Oct. 10.

NAFTA Negotiators to Tackle Energy Issues During Friday Meeting

Posted October 11, 2017, 02:44 P.M. ET

By Catherine Traywick and Eric Martin

NAFTA negotiators are gathering in Washington for their fourth round of talks to update the trade deal, and energy is on the agenda -- if only for two hours.

U.S., Mexican and Canadian representatives will hold just one energy session late Friday during seven days of talks ranging from gender to the environment. Details haven't been released, but oil and gas companies are pushing for a rule on diluents, a light crude product typically sourced from

the U.S. and added to heavy Canadian oil to help it flow through pipelines. Oil companies want a rule that allows up to 40 percent of diluent in cross-border oil shipments, according to a paper by the American Petroleum Institute, the Asociacion Mexicana de Empresas de Hidrocarburos and Canada's Oil and Natural Gas Producers.

The trade groups want to loosen NAFTA rules so that producers can more easily transport oil, gas and infrastructure across both borders. That includes simplifying the process for certifying hydrocarbons' country of origin and allowing companies to move drilling rigs, vessels and personnel across borders.

Merkel Faces Coal Insurrection Over Phaseout Date of Fossil Fuel

Posted October 11, 2017, 8:00 A.M. ET

By Brian Parkin

Germany's power, mining and chemical workers warned Chancellor Angela Merkel against embracing a phaseout date for coal under a new government.

The 640,000 member IGBCE union is preparing to respond if Merkel is persuaded by a "hysterical campaign against coal," according to Chairman Michael Vassiliadis Oct. 11. Exploratory talks to form a new government are being held between Merkel, the Free Democrats and Green Party, which has called for a firm end to coal power.

Workers are concerned "they will have to pay" for the costs of a new government said Vassiliadis in a speech to union delegates in Hanover. "Let me tell you this: whoever plans a wedding on the backs of others won't enjoy a honeymoon."

The union's threat is a response to the Greens' election campaign pledge to phase-out coal power in Germany by 2030 and immediately shutter the 20 most-polluting plants. Their suspicions were fueled by Merkel's campaign promises that Germany would meet its 2020 carbon dioxide reduction targets.

Coal plants push emit about a third of Germany's total greenhouse gases. The nation risks missing its pledge to cut the output by 40 percent by 2020 compared with 1990 levels and may only accomplish a 31 percent cut. Merkel has vowed to close the gap without saying how.

Her plans may become clearer Oct. 12 when she meets Vassiliadis in Hanover and later holds a speech. Prospective allies from the Greens and the Free Democrats will be in tow for a panel discussion. The Free Democrats campaigned on clamping down on the soaring costs of Germany's transition to renewable energy and rejected setting a date to phase out coal power.

Some companies and industries say they're also concerned that weak cost control over wind and solar power could erode competitiveness. Their demands—which include a tapering of clean power subsidies and rejection on enforced closures of coal plants—fall short of revamped U.S. policies that would provide aid for the fossil fuel.

The Trump administration yesterday began the process of repealing former President Barack Obama's plan to cut greenhouse gas emissions from power plants, opening a small window for a

revival of coal while prolonging uncertainty over the U.S. electricity mix. The Obama administration "pushed the bounds of their authority" by forcing states to change their power mix, Environmental Protection Agency Administrator Scott Pruitt said.

With union backing, German utilities EON SE, RWE AG, Uniper SE and STEAG GmbH are counting on Merkel to avoid imposing a strict coal phaseout. Europe's biggest power market is dependent on some 140 hard coal and lignite plants, which together supplied about 40 percent of the nation's power last year.

Merkel's decision to wind down nuclear power by 2022 will underscore that dependency, say the power companies and labor unions. Germany's transportation shift to low- and zero-emission vehicles will mean the economy needs even more cheap power, Vassiliadis said.

U.K. Floats Nuclear Safeguards Bill for Post-Brexit Period

Posted October 11, 2017, 12:46 P.M. ET

By Alex Morales

The U.K. published draft legislation to create a domestic nuclear safeguards system that will replace provisions under the European Union's Euratom treaty once Britain has left the bloc.

The law aims to give certainty to the nuclear industry and sectors such as health care that Britain will maintain a stringent system of checks over radioactive materials after Brexit. The legislation became necessary after government deemed it impossible to withdraw from the EU without also leaving Euratom, putting in doubt everything from the transport of nuclear fuels to cancer treatments.

"We are bringing forward the U.K.'s first new nuclear power plants in a generation, and it is in our mutual benefit to maintain the successful working relationship we have now with Europe and the rest of the world on nuclear matters," Energy Minister Richard Harrington said in a statement. "This is what we will be looking to secure in negotiations with our partners."

Electricite de France SA has already begun work on a new nuclear plant at Hinkley Point in southwest England. Japanese utilities Hitachi Ltd. and Toshiba Corp. also plan new reactors in Britain.

No time line has yet been set for the passage of the law through Parliament, but it needs to be enacted before Britain's scheduled departure from both the EU and Euratom in March 2019. Euratom's main function is to account for nuclear material so it remains in peaceful uses.

Mexico Energy Skeptical Presidential Candidate Will Undo Reforms

Posted October 11, 2017, 8:53 A.M. ET

By Vanessa Dezem and Adam Williams

Mexico's power suppliers are convinced that Andres Manuel Lopez Obrador, the left-wing presidential candidate who's pledged to roll back the nation's energy reforms, won't be able to deliver on his promises.

The 63-year-old former Mexico City mayor—and current leader in polling for July's election—says the 2013 reforms have failed to lower power and fuel prices for consumers and wants to hand the issue to voters with a national referendum. The shift was driven by current President Enrique Pena Nieto, who opened the country's power, natural gas and oil markets to new competition in an effort to drive down costs and spur investment in areas long dominated by state-owned enterprises.

In the power sector, electricity prices have declined since the reforms were enacted, with record low prices for renewables in the last auction. A more efficient power system is expected to drive a 14 percent decrease in industrial electricity prices to 2040, according to a report from the International Energy Agency. More than half of the nation's power generation is now owned by private investors, including Invenergy LLC and Actis LLP, according to the Mexican Wind Energy Association.

"Mexico has quickly became one of the most important power markets not only in Latin America, but globally," said Paul Abitante, Mexico country manager at Invenergy, a Chicago-based renewable-energy company. "We are confident that Mexico's government and people will recognize the reforms' value and we don't see a scenario where a candidate or a politician takes steps to unwind the reforms."

Others aren't so sure, pointing to the fact that Lopez Obrador could slow the process even if he can't win the two-thirds majority in congress needed to officially undo the reforms.

'Stop Implementing'

"There is no need to change the law," said Miriam Grunstein, chief energy counsel at Brilliant Energy Consulting and nonresident scholar at Rice University's Baker Institute Mexico Center. "They can simply say 'we will stop implementing the energy reform.' There is no obligation to implement it."

Developers are sticking to their investment strategies, confident that Lopez Obrador will be reluctant to reverse changes that are now bearing fruit.

"Companies keep investing in Mexico," said Leopoldo Rodriguez, president of the Mexican Wind Energy Association. "Companies are interested in participating in the market. There is the idea that it's not possible to easily change things."

Mexico's energy mix is shifting, with 24 percent now coming from renewable sources like wind and hydro. Deregulating the electricity market and a series of auctions for new capacity helped the country post record levels of clean-energy investment this year.

Line in the Sand

"Mexico's energy reform was a line in the sand, " said Hector Olea, chief executive officer of Mexico City-based Gauss Energia, which owns solar farms in the country, and president of Mexico's solar energy association. Energy demand in Mexico is expected to increase about 20 percent up until 2040, according to the International Energy Agency. That's attracted billions in new investments.

Polls show that Lopez Obrador would win in all nine of the most likely combinations of candidates in the July 1 election, with at least 24.9 percent of votes, according to data from Mexico City-based

Consulta Mitofsky.

The most likely scenario for a Lopez Obrador presidency would be a partial review of the reform, predicts Luiza Demoro, an analyst at Bloomberg New Energy Finance in Sao Paulo.

"If he wins, Lopez Obrador wouldn't be able to change everything, but he would be able to change energy-auction rules or renewable-energy targets, creating barriers for private companies," Demoro said. "The next power auction in November will be interesting as its prices will show how the market is perceiving these political risks."

Mexico's oil industry is also concerned about what a Lopez Obrador presidency might mean for the blossoming sector. The candidate has said he would review oil contracts awarded to producers including Chevron Corp., Exxon Mobil Corp. and Royal Dutch Shell Plc since the opening of the Mexican industry to private competition in 2014.

A spike in gasoline prices in January 2017 may be one of the reasons Lopez Obrador is criticizing the energy reforms. When the government announced that gasoline prices would increase as much as 20 percent, protesters took the streets across the country to decry the failed promises of the energy overhaul.

Power producers say the long-term benefits will outweigh the short-term issues. Reforms have "prompted foreign and long-term investments and reduced power costs," Gauss Energia's Olea said. "It would be contradictory to reverse something that's working. It would be counterproductive, even politically."

10,000 Electric Cars Highlight Steep Path to India's Ambitions

Posted October 11, 2017, 8:42 A.M. ET

By P R Sanjai and Rajesh Kumar Singh

Prime Minister Narendra Modi has kicked off India's race to turn all new passenger car sales electric by 2030. The largest order has gone to a company that hasn't commercially started producing the vehicles.

Tata Motors Ltd. hasn't sold a single electric car yet, though Chief Executive Officer Guenter Butschek says its late-mover status is an advantage at a time when technology advances are leading to a fall in costs. Tata along with Mahindra and Mahindra Ltd.—India's sole electric carmaker that plans to boost its vehicle manufacturing capacity to 5,000 units a month—underscore the distance to be covered when compared to China and the U.S.

Ramping up production of electric vehicles in a country where carmakers sell 2.5 million fossil fuel powered units annually is just one part of the problem, finding uninterrupted power supply is another. In addition, non-existent charging infrastructure further widens the gap between India and China, the current global leader. It had 336,000 new registrations in 2016, more than double of 160,000 in the U.S., while India had just 450 cars hitting the roads, according to the International Energy Agency.

"The government needs to set up charging infrastructure to make this electric business model

sustainable," said Ram Kidambi, partner at consultancy firm A.T. Kearney. "Indian automotive companies may be able to supply electric vehicles meeting the deadline. But the problem is what do the car owners do without the charging infrastructure?"

Falling Prices

The pursuit for all electric new car sales in less than a decade-and-a-half is part of Modi's plan to champion the cause of combating climate change. Bloomberg New Energy Finance predicts the target will be "incredibly difficult" in the absence of a clearly defined policy and without subsidies. Chinese firms have benefited from generous funding offered by various regional governments.

India currently has about 350 charging points while China had about 215,000 installed at the end of 2016, according to the BNEF report. It will take about 15 years in India for total cost of ownership for electric vehicles to reach parity with conventional vehicles, around the time the south Asian nation plans to end sale of fossil fueled cars.

India's EV target appears a little too ambitious, said Pawan Goenka, managing director at automaker Mahindra & Mahindra. "It would be little more moderate, though lot more aggressive growth path than what we have seen in other countries, but more moderate than being 100 percent electric vehicles by 2030."

Modi's administration is hoping to fast-track change by leading from the front. The government-backed Energy Efficiency Services Ltd. (EESL), which is tasked with helping the nation reduce emissions and curb fuel imports, is buying 10,000 battery-powered cars from Tata Motors and Mahindra & Mahindra to replace petrol and diesel cars used by the federal government in about four years.

Revenue Source

Electric vehicles open up a new source of revenue for India's money-losing power retailers and could attract their enthusiasm in building the charging infrastructure, according to Shantanu Jaiswal, head of India research at Bloomberg New Energy Finance in New Delhi.

"In areas where the traffic volumes are high, it makes good business sense for distribution utilities," Jaiswal said. "In rural areas though, where concentration of electric cars may not be very high, getting investments may still be a challenge, as we have seen in household electrification."

Automobile ownership in India remains low, with only 18 cars per 1,000 citizens compared to nearly 69 in China and 786 for the U.S., a study by Niti Aayog, a policy planning body, and Colorado-based Rocky Mountain Institute. The scarcity of privately owned four-wheel vehicles and a large number of two-wheelers will enable Indians to leap frog into electric cars space as higher demand could lead to lower prices.

That's what Tata and Mahindra are betting on. Tata is running trials of its electric buses after developing the plug-in versions of its Bolt and Tiago hatchback models. Mahindra has plans to expand its capacity to make electric vehicles almost 10-fold to 5,000 units a month in two to three years.

Tata Motors has a two part strategy—one which includes selling cars to the government—and then rolling out electric buses and trucks to cater to the mass transportation segment. Plans for both are ready, Tata's Butschek said in an interview.

"We have invested a lot in electric vehicle business although we may not be outspoken about the same," he said.

Subject: Morning Energy: High-stake solar trade fight gets public spotlight — Trump to sign environmental permitting EO today — Court tells PHMSA to revisit Exxon fine

By Anthony Adragna | 08/15/2017 05:42 AM EDT

With help from Darius Dixon and Annie Snider

SOLAR FLARE UPS? Witnesses step before the International Trade Commission this morning for a public hearing to offer their perspectives on whether President Donald Trump should slap tariffs on solar imports in a case with massive implications for the thriving U.S. industry. Two troubled solar manufacturers — Suniva Inc. and SolarWorld Americas — want the commission to declare imports of cheap foreign parts from Asia have caused "serious injury" to their domestic business. The companies want the U.S. to impose duties on imported equipment in order to revive domestic manufacturing facilities — moves they claim would create thousands of jobs across the industry. "Despite herculean efforts to compete against this onslaught, the imports, which are directly competitive with domestic product, have ground the domestic industry down to a mere shell of its former self," Suniva argued in its pre-hearing brief. And Matt Card, an executive vice president for commercial operations with the company, plans to say the U.S. will "have no control of its own destiny when it comes to power generation from the sun" without tariffs put in place.

Opponents of the petitions argue the two companies' woes stem from bad business calls and that increasing the price of imports would be bad for the industry as a whole, a move that risks destroying jobs at companies that install solar panels on rooftops or develop utility-scale projects, for example. "This is not a case in which the facts support the findings necessary to justify imposition of any relief," the Solar Energy Industry Association and SunPower Corp. wrote in their own brief. Other opponents of the petitions include utilities, union officials, bipartisan groups of senators and House members, venture capital groups and conservative organizations like ALEC and the Heritage Foundation, among others. State elected officials from Minnesota, North Carolina, Georgia, Maryland and Virginia, as well as trade officials from South Carolina, Indonesia, the European Union, Brazil Mexico, Canada and Taiwan are all expected to testify as well.

If you go: The public hearing kicks off today at 9:30 a.m. at the ITC's main hearing room at 500 E Street SW. A full list of scheduled witnesses is available here.

What happens afterward? If the four-member commission ties or votes in favor of the petition, it will hold another public hearing on what to do about the injury to U.S. companies. The final call about what to do would then be left to Trump where it's not clear how the ever-unpredictable White House might handle the matter given the administration's highly-publicized efforts to protect U.S. manufacturing jobs. A vote against the petition by the ITC would kill the effort.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and DOE's Diane Meck was first up to identify "The Mousetrap" as the play with the longest initial run. (It's awesome, too,

says this Agatha Christie fan.) For today: What entire country did rapper Snoop Dogg try to rent out in 2010 to film a music video? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ANOTHER EXECUTIVE ORDER COMING: Trump will sign an executive order today at 3 p.m. at Trump Tower "establishing discipline and accountability in the environmental review and permitting process for infrastructure projects," according to the White House, which did not respond to a request for further details. The president has repeatedly bemoaned what he describes as lengthy delays to new projects due to various federal regulatory requirements and signed an executive order expediting environmental reviews back in January. That one directed the Council on Environmental Quality chairman to identify high priority identify high-priority infrastructure projects and work with other agencies to expedite their approvals. Back in June, Trump announced a new office within CEQ that he said would "root out inefficiency, clarify lines of authority and streamline federal and state [and] local procedures so that communities can modernize their aging infrastructure without fear of outdated federal rules getting in their way." Despite those earlier announcements, Trump has still not yet nominated anyone to lead CEQ.

COURT SAYS PHMSA WAS TOO TOUGH ON EXXON: The Obama administration over-penalized Exxon Mobil for its 2013 pipeline spill in Mayflower, Ark., a federal court ruled Monday. The U.S. Court of Appeals for the Fifth Circuit threw out a number of safety violations against Exxon, saying the company met its legal obligations to consider all risk factors associated with the Pegasus Pipeline. The Pipeline and Hazardous Materials Safety Administration's interpretation of its pipeline integrity regulations would leave entities unable to escape legal liability whenever a pipeline spill occurred, the court ruled. "The unfortunate fact of the matter is that, despite adherence to safety guidelines and regulations, oil spills still do occur," Judge Jennifer Walker Elrod, a George W. Bush appointee, wrote for the court. The decision gives the Trump administration (which lacks a permanent PHMSA chief or nominee to fill that slot) an opportunity to lower the $2.6 million fine levied against Exxon.

EYES AND EARS ON GEORGIA: So long as the Vogtle nuclear project remains on the financial and political rocks, regulators on the Georgia Public Service Commission are going to be getting a lot of attention. Commissioners are scheduled to meet this morning for what was probably going to be a routine "administrative session" where they may take up a motion related to the troubled two-reactor project. Last week, Georgia PSC Chairman Stan Wise introduced a 14-point motion he's hoping will be seen as something of a "test vote" on whether the agency is even open to continuing the project — a fairly low, but important, bar at the moment since Southern Co. hasn't given its latest cost estimates for completing (or partially completing) the project. Southern is expected to deliver a recommendation on the future of Vogtle later this month. The PSC meeting starts at 10 a.m. in Atlanta.

ZINKE HIT ON THE HOMEFRONT: The Western Values Project is out this morning with a $500,000 ad buy in Montana hitting Zinke for his ongoing review of several dozen national monuments and calling for him to protect public lands. It's part of a broader $2 million effort from conservation and sportsman groups to hit the former Montana congressman as he prepares to issue his recommendations on the national monuments to Trump. "Secretary Zinke went to

Washington, D.C., and left his Montana values at the door," Chris Saeger, executive director of the Western Values Project, said in a statement.

Side note: Can anyone remember a Cabinet official facing an ad campaign in their home state for their ongoing administration-specific work?

LAST CALL! Just 10 days are left before Zinke's much-anticipated monument recommendations are due to Trump, but today is the last opportunity for the public to comment on a separate — but related — examination of the status of 11 marine national monuments and sanctuaries. The Commerce Department has until late October to issue its own report on everything from the potential for offshore drilling in those areas, to the costs of managing the monuments and sanctuaries and the extent to which state, tribes and other agencies were consulted before those designations were made.

COLORADO RIVER PROGNOSIS COMING TODAY: The Bureau of Reclamation is due this morning to release a key study that will determine whether a water shortage will be declared in the lower basin next year. A year ago, water levels at Lake Mead, the massive reservoir supplying Nevada, southern California and Arizona, looked more likely than not to dip low enough to trigger the first round of mandatory water delivery cuts in 2018. But a wet winter and major water conservation efforts appear to have spared the basin this time. Still, the eyes of the West will be on just how much wiggle room is left above that trigger point, and how likely Reclamation thinks it is that a shortage declaration could come in 2019.

U.S.-Mexico deal moving forward: Meanwhile, a water-sharing agreement between the U.S. and its southern neighbor is making progress, with a number of state water agencies and major users preparing to give their formal sign-off to the deal in the coming weeks. The agreement, an amendment to the treaty governing cross-border water sharing, would replace a deal set to expire at the end of 2017 governing how shortages are shared between the two countries.

SETTLEMENT OFFERED IN DAKOTA ACCESS CASE: Energy Transfer Partners, the company behind the Dakota Access pipeline, would pay $15,000 to settle claims it failed to notify regulators about Native American cultural artifacts discovered the construction process under a settlement proposed Monday by the North Dakota Public Service Commission, the Bismarck Tribune reports. The company now has 10 days to consider the offer.

PENCE 'ABSOLUTELY DETERMINED' ON VENEZUELA: Vice President Mike Pence reiterated during a stop in Cartagena, Colombia, the U.S. was not seriously considering military action against Venezuela but said the "failed state" threatened regional stability. "We are absolutely determined to bring the full measure of American economic and diplomatic power to bear until we see democracy restored," he said, without further elaboration.

COMPLAINT FILED OVER DOE LEAK CRACKDOWN: The Project On Government Oversight has filed a complaint with the Office of Special Counsel over posters at DOE targeting leaks. The groups says those posters do not include legally required language to ensure that employees are aware of their legally protected right to report wrongdoing. "DOE's management communications are likely to erroneously create the impression that government employees and

contractors at DOE, and other agencies, have no legal avenue to blow the whistle on government waste, fraud, and abuse," Danielle Brian, the group's executive director, wrote. "This needs to be remedied, fast." Among the recommendations is a call for senior management at DOE to state whistleblowers disclosing non-classified material would be protected and the immediate removal of the posters in question.

FARMER'S WETLAND CASE HEADS TO PENALTY PHASE: John Duarte, the California nursery owner whose wetlands lawsuit has been held up by agricultural and property rights advocates as a prime example of government overreach, heads back to court this morning for the penalty phase of his case after being found guilty of violating the Clean Water Act by a federal judge in Sacramento. Duarte faces potentially millions of dollars in fines, but has asked the court to assess only a symbolic $1 fee.

At issue is Duarte's use of a plowing method, which the Army Corps of Engineers argues was "deep ripping" that can be damaging to a rare, ecologically important type of wetland called vernal pools. While the Clean Water Act exempts normal farming practices, including plowing, from permitting requirements, it does not exempt deep ripping. A motion to dismiss the case is also pending, with Duarte's legal team arguing that the Army Corps didn't have the authority to bring the lawsuit — only the EPA, which has ultimate authority over Clean Water Act wetlands issues.

PREVIEW OF FALL ACTION: Rep. John Shimkus, Energy and Commerce Environment Subcommittee chairman, told a local Illinois newspaper Monday nuclear waste and drinking water legislation that cleared the full committee could be part of a still-theoretical infrastructure package this fall. "They can be passed on their own, or they could be included in a bigger infrastructure package along with other transportation, energy and water infrastructure programs," he told the River Bender.

DISMISSED: A federal judge ruled Monday an EPA enforcement action against Putnam County Commissioner Ron Foster and two of his companies was not motivated because he made a political donation to Rep. David McKinley, the Charleston Gazette-Mail reports . "Plaintiffs have been unable to demonstrate any other retaliatory conduct by the EPA that is causally linked to the political research document or any other evidence related to political animus on the part of the EPA," U.S. District Judge John T. Copenhaver Jr. wrote in an 83-page opinion.

LIGHTER SIDE OF PRUITT: An Iowa television interview offered a glimpse at the softer side of EPA Administrator Scott Pruitt through a series of rapid-fire questions. The politician he admires most? Former Oklahoma Sen. Don Nickles. How he passes long hours traveling? "We always have a good time as far as good food and fellowship." How baseball can get even better? "I think we need to do more to export the product internationally." A bold prediction? The Chicago Cubs will win the World Series again within five years, noting the Ricketts family that owns the team "are good friends of mine."

THAT'S SOME 24K MAGIC: Singer Bruno Mars will donate $1 million from a concert in Auburn Hills, Mich. to benefit those affected by the Flint water crisis, the Associated Press reports. Mars and tour promoter Live Nation will give the money to the Community Foundation

of Greater Flint. "Ongoing challenges remain years later for Flint residents, and it's important that we don't forget our brothers and sisters affected by this disaster," the singer said in a statement.

LATEST NEWS

Barrasso Backs Rule Fix To End Democrats' Holds On Trump's EPA Picks

Senate environment committee chairman John Barrasso (R-WY) is publicly supporting GOP efforts to limit debate on executive branch nominees in an effort to end continuing Democratic delays on a suite of Trump administration nominees for EPA and other top environmental policy slots.

Key Trump Picks At Odds Over EPA's Power To Weigh Costs In Air Standards

Key Trump administration environment nominees are at odds over whether EPA has sufficient legal authority to consider compliance costs when setting national ambient air quality standards (NAAQS), even though a unanimous Supreme Court opinion found that the agency lacks such power under the Clean Air Act (CAA).

Regulatory Update

Louisiana

ENDANGERED SPECIES
Saltwater Sport and Commercial Fishery/Female Blue Crabs
Louisiana ENDANGERED SPECIES

Proposed rule of the Department of Wildlife and Fisheries, Wildlife and Fisheries Commission, amends regulations under 76 LAC VII.346 regarding the harvest of female blue crabs. The rule prohibits the commercial harvest of female blue crabs during March and April of 2018 and 2019. The rule also allows a legally licensed commercial crab fisherman to harvest female blue crabs during the prohibited time frame as long as the blue crabs do not exceed 2 percent of the fisherman's total number of crabs harvested. Comments are due Nov. 30, 2017. Contact: Peyton Cagle; DWF, Office of Fisheries; 225-491-2587; peyton.cagle@la.gov

—Louisiana Register (10/20/2017)

Regulatory Update

ENDANGERED SPECIES
Saltwater Sport and Commercial Fishery/Removal of Abandoned Crab Traps
Louisiana ENDANGERED SPECIES

Proposed rule of the Department of Wildlife and Fisheries, Wildlife and Fisheries Commission, amends regulations under 76 LAC VII.367 regarding the removal of abandoned crab traps. The rule temporarily closes a portion of state inside waters to the use the crab traps in order to facilitate the removal of abandoned crab traps. Comments are due Nov. 30, 2017. Contact: Peyton Cagle; DWF, Office of Fisheries; 225-491-2587; peyton.cagle@la.gov

Regulatory Update

Nevada

AIR

Pollution Control, Inspection of Motor Vehicles

Nevada AIR

Notice of the Department of Motor Vehicles announces an additional workshop and rescheduling of the hearing on a Sept. 18, 2017, proposed rule to amend regulations under NAC 445B.579, .580, .585, .598, .590, and .850 and rescind regulations under NAC 445B.859 through .873 concerning motor vehicle emissions inspection requirements. The rule requires reinspection of certain motor vehicles that have failed an inspection for an improper gas or fuel cap. The rule also removes provisions concerning a program for awarding grants from the Pollution Control Account for projects related to the improvement of air quality. The workshop is scheduled for Nov. 6, 2017, in Carson City and via teleconference in Las Vegas. The hearing now is scheduled for Dec. 4, 2017, in Carson City and via teleconference in Las Vegas. Comments now are due Nov. 3, 2017. Contact: DMV; 775-684-4549

Regulatory Update

PESTICIDES

Industrial Hemp Pesticide Application

Nevada PESTICIDES

Notice of the Department of Agriculture announces a hearing on a Sept. 18, 2017, proposed rule to adopt regulations under NAC 557 concerning the use of certain pesticides on industrial hemp. The rule provides for creation and publication of a list of pesticides allowed for use on industrial hemp. The rule also establishes a process for requests for evaluation of a pesticide for industrial help application and sets fees for such evaluations. The hearing is scheduled for Nov. 29, 2017, in Sparks and via videoconference in Elko and Las Vegas. Comments are due Nov. 23, 2017. Contact: Megan Zich; Department of Agriculture; 775-353-3670 Mzich@agri.nv.gov

—Nevada Register (10/19/2017)

Regulatory Update

New York

AIR

Fuel Composition and Use/Waste Oils

New York AIR

Notice of the Department of Environmental Conservation announces the expiration of an Aug. 3, 2016, proposed rule that would have amended regulations under 6 NYCRR 200 and repealed and readopted regulations under 6 NYCRR 225-2 regarding the burning of waste oils in combustion, incineration, and process sources. The rule would have established applicability criteria, composition limits, and permitting requirements for waste oils; set monitoring, recordkeeping, and reporting requirements for facilities eligible to burn waste oil; and allowed waste oil to be burned in space heaters at automotive maintenance/service facilities. The rule also would have

defined "residual oil" and updated the definition for "waste oil." The expiration is dated Sept. 30, 2017. Contact: Michael Jennings; DEC, Division of Air Resources; 518-402-8403

—New York State Register (10/18/2017)

Regulatory Update

WATER
Lead Testing in School Drinking Water
New York WATER

Emergency rule of the Department of Health adopts regulations under 10 NYCRR 67-4.1 through .9 regarding lead testing in school drinking water. The rule requires schools to test each potable water outlet for lead, specifies an action level of 15 micrograms per liter for lead in drinking water of school buildings, and establishes initial and future monitoring requirements. The rule also requires schools to develop remedial action plans if the action level is exceeded at any potable water outlet, to notify the school community of results, and to report results to the department. The rule extends a June 21, 2017, emergency rule. The rule is effective Sept. 28, 2017, and expires Nov. 26, 2017. Tennessee

HAZARDOUS WASTE MANAGEMENT
Underground Storage Tank Program
Tennessee HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Environment and Conservation, Division of Underground Storage Tanks, repeals and readopts regulations under RRT 0400-18-01-.01 through -.16 concerning the underground storage tank program. The rule addresses monthly walkthrough inspections and updates requirements for periodic testing of spill and overfill equipment for calibration and tightness and airport hydrant systems to conform to federal standards. The rule also requires owners or operators of tanks in temporary closure for greater than one year to determine if a petroleum release has occurred and to conduct a tightness test before such tanks are returned to service. In addition, the rule clarifies the definition of "other responsible party" as it relates to responsibility for releases. A hearing is scheduled for Dec. 14, 2017, in Nashville and via videoconference at various locations. Comments are due Dec. 29, 2017. Contact: Rhonda Key; DEC, Division of Underground Storage Tanks; 615-532-0989; Rhonda.Key@tn.gov

Subject: Ex-Trump adviser Icahn subpoenaed by U.S. attorney over biofuels

By Eric Wolff

11/08/2017 02:46 PM EDT

The U.S. Attorney for the Southern District of New York has subpoenaed former White House adviser Carl Icahn for information about his push to change the federal biofuels program, according to a SEC filing issued by his company.

Icahn Enterprises L.P. says in the Nov. 3 10-Q filing that the U.S. attorney recently contacted it "seeking production of information pertaining to our and Mr. Icahn's activities relating to the Renewable Fuels Standard and Mr. Icahn's role as an advisor to the President."

President Donald Trump named his longtime billionaire friend as an unpaid "Special Advisor to the president for Regulatory Reform" in December, though Icahn resigned that position in August after drawing criticism that his efforts to change the RFS would benefit CVR Energy, an oil refining company he owns.

"We are cooperating with the request and are providing information in response to the subpoena," the filing says. "The U.S. Attorney's office has not made any claims or allegations against us or Mr. Icahn."

Reports of Icahn's lobbying to alter the biofuels blending program — and the EPA's subsequent rejection of those changes — are believed to have driven fluctuations in the prices of biofuel credits that refiners must buy to show they are complying with the federal program.

Ethanol producers and some ethics experts complained that Icahn's push to change the federal program was a clear conflict of interest, and Senate Democrats sent letter to the SEC and CFTC demanding investigations.

Subject: EPA releases guidance for state coal ash programs

By Annie Snider

08/10/2017 10:35 AM EDT

EPA has released guidance for states looking to establish their own permit programs governing management of coal ash, a controversial new program authorized by Congress last year.

The interim final guidance instructs states on how to apply to EPA to take over the federal program managing waste from coal plants, including what bars must be met to prove that a state's program is as protective as federal requirements.

"As part of EPA's ongoing commitment to cooperative federalism, we continue to consult with our state partners to find the best management strategy for the safe disposal of coal ash in each of their states," EPA Administrator Scott Pruitt said in a statement.

The Obama administration finalized a rule in 2015 governing management and disposal of coal ash following several high-profile disasters, including major spills in Kingston, Tenn., and North Carolina's Dan River. The rule did not let states take over the coal ash permitting program, as EPA allows for many other types of permits — disappointing industry groups and congressional Republicans.

Last year Congress changed that as part of a major water resources law, allowing states to take over permitting so long as their programs are as stringent as federal standards. The new guidance instructs states in how they can do this.

But environmental groups, who had opposed state delegation, have argued that it should be implemented via a formal rulemaking rather than through guidance to ensure that state programs are sufficiently protective and allow for public input.

WHAT'S NEXT: EPA will accept public comment on the interim final guidance for 60 days after it runs in the Federal Register and says it may update the document.

Subject: Morning Media: The Atlantic turns 160 -- Fox News staffers 'embarrassed' -- Heilemann 'shocked' -- Top NPR editor takes leave -- Palm Beach papers for sale

By Michael Calderone | 11/01/2017 05:36 AM EDT

IF EMERSON, LONGFELLOW AND STOWE returned to present-day America, they probably wouldn't "believe we're still talking about Robert E. Lee," Jeffrey Goldberg, editor-in-chief of The Atlantic, told me. "To abolitionists, this was a settled question" as the Civil War began in 1861.

- The three eminent abolitionist founders of The Atlantic launched the magazine 160 years ago today, just four years before the North and South would collide over slavery - a fact that suddenly seems unsettled in 2017. White House chief of staff John Kelly said Monday night on Fox News that Confederate General Lee was "an honorable man," and claimed that it was failure to "compromise" that led to the Civil War, an inaccurate view some historians consider "strange" and even "dangerous." Press secretary Sarah Huckabee Sanders defended Kelly's remarks at Tuesday's briefing, with White House reporter April Ryan left asking whether the Trump administration believes slavery is wrong.

- "It's an interesting moment to be at The Atlantic," Goldberg said. "It seems as if many of the issues we thought have been settled in our national discourse are actually quite unsettled and they go to the core of what The Atlantic has been about."

- One of The Atlantic's most read stories Tuesday was Adam Serwer's "The Myth of the Kindly General Lee," a piece originally published in June in response to the debate over removing Confederate statues. "Even if one conceded Lee's military prowess, he would still be responsible for the deaths of hundreds of thousands of Americans in defense of the South's authority to own millions of human beings as property because they are black," Serwer wrote. "Lee's elevation is a key part of a 150-year-old propaganda campaign designed to erase slavery as the cause of the war and whitewash the Confederate cause as a noble one."

- Even assuming The Atlantic's founders would be mystified that Lee and the cause of the Civil War were up for debate 152 years after it ended, Goldberg said he thought they'd consider Serwer's piece in keeping with The Atlantic's DNA: "to be a magazine of the American idea, to stand for certain things in American life and world affairs, but ultimately to be a place to argue the meaning of America and what its role in the world should be."

Good morning and welcome to Morning Media. Please send tips to mcalderone@politico.com and @mlcalderone. Jason Schwartz (@JasonSchwartz) and Daniel Lippman (@dlippman) contributed to the newsletter. Archives. Subscribe.

FOX NEWS STAFFERS 'EMBARRASSED' BY MUELLER COVERAGE: CNN's Oliver Darcy reports that some employees were "embarrassed and humiliated" by how the network framed Trump campaign officials being indicted in the ongoing Russia investigation led by

former FBI chief Robert Mueller. "I'm watching now and screaming," one Fox News personality texted Darcy. "I want to quit."

- **"It is another blow to journalists at Fox** who come in every day wanting to cover the news in a fair and objective way," one senior Fox News employee told CNN. The person added, "Fox feels like an extension of the Trump White House."

RELATED: "A week of Fox News transcripts shows how they began questioning Mueller's credibility," by Vox's Alvin Chang.

FOX NEMESIS TESTIFIED OVER MURDOCH'S U.K. DEAL: CNN's Hadas Gold reports: Media Matters president Angelo "Carusone told CNN that he hammered 21st Century Fox on several fronts during the hearing. He cited examples of Fox News publishing inaccurate information as a problem. He also said he told the regulators it's troubling that Fox has commentators who have a direct interest in the matter they speak about, but do not acknowledge the conflict of interest, and said he brought up what he says are Fox's blurred lines between what is news and what is commentary on air."

HEILEMANN 'FLABBERGASTED' BY HALPERIN ALLEGATIONS: John Heilemann, who has worked very closely with Mark Halperin over the past decade, including co-writing two books, starting a politics site and hosting a daily TV show, says he was "shocked" that more than a dozen women have leveled sexual harassment accusations against his longtime collaborator.

- **"I had never heard of, been exposed to** or had any inkling of the notion that he had engaged in any behavior that could be described in even the broadest sense of being sexual harassment or sexual assault," Heilemann told the New York Times.

- **The partnership is over,** but it unclear what happens to the unpublished work. The pair already conducted nearly 300 interviews for the next "Game Change" book, which was canceled last week by Penguin Press (along with HBO killing the film version). "We've done reporting that touches on important things both for history and for the current national dialogue," Heilemann said.

NPR'S TOP EDITOR ACCUSED OF SEXUAL HARASSMENT: The Washington Post's Paul Farhi reports that two women have accused Michael Oreskes, NPR's senior vice president for news and editorial director, of making "unwanted physical contact" when employed two decades ago at The New York Times. NPR said Oreskes has been put on indefinite leave.

- **The quick decision** follows accusations, made in the aftermath of the Harvey Weinstein scandal, against several prominent media figures, including Halperin, Leon Wieseltier and Hamilton Fish.

HOW '"SUPERSTAR" HARASSERS' GOT AWAY FOR SO LONG: The Times' Noam Scheiber writes: "The pattern is so well established that an Equal Employment Opportunity Commission task force, in a report on sexual harassment last year, gave those who benefit from it a name: 'superstar' harassers. 'When the superstar misbehaves, employers may perceive

themselves in a quandary,' the report said. 'They may be tempted to ignore the misconduct because, the thinking goes, losing the superstar would be too costly.'"

SOUND BITES

"Many factors contributed to the Civil War. One caused it: slavery." [Ken Burns]

"Notion that Civil War resulted from a lack of compromise is belied by all the compromises made on enslavement from America's founding." [Ta-Nehisi Coates]

"Personally I'm ok with the lack of compromise on slavery" [Shani Hilton]

"So the WH stance is a 'compromise' could have avoided the Civil War but the compromise of kneeling vs sitting at an NFL game is unacceptable" [James Poniewozik]

"This next civil war will be fought over the origins of the previous Civil War." [Dan Zak]

FACEBOOK, TWITTER TESTIFY ON RUSSIA: POLITICO's Nancy Scola and Ashley Gold report that "top lawyers from Facebook and Twitter said Tuesday that Russian-linked posts and advertisements placed on the social networks after Election Day sought to sow doubt about President Donald Trump's victory."

- Meanwhile, POLITICO's Jason Schwartz writes that 19 major civil rights groups signed a letter knocking Facebook for being all talk and not enough action when it came to combating hateful content on the platform. "We were alarmed to see your platform being abused to promote bigotry, and especially disappointed that it has taken media exposure and congressional oversight to give a degree of transparency into your practices," said the letter, signed by groups like the League of United Latin American Citizens, Muslim Advocates and the NAACP.

TODAY: FLASH BRIEFING on Facebook, Google Hearings: POLITICO and The Information are partnering to offer an insider flash briefing for real-time analysis, key takeaways and the impact that congressional testimony about Russian involvement in the 2016 Election by representatives of Facebook, Google and Twitter will have. Jessica Lessin will moderate a discussion and Q&A featuring POLITICO's Nancy Scola and The Information's Cory Weinberg on the hearings and their impact on legislation, the latest intel about possible connections to the Trump and Clinton campaigns, and insight into how these tech giants are responding to Russian propaganda arms like RT. Sign up for today's Flash Briefing here ($1 trial offer for The Information), and sign up for POLITICO's Morning Tech for all latest tech news in your inbox each morning here.

THE MAR-A-LAGO BEAT: Cox Media Group is selling the Palm Beach Post and Palm Beach Daily News, two small newspapers with outsize influence in the Trump era given their journalists' experience covering the goings-on at the president's winter compound. In March, BuzzFeed noted the Palm Beach papers' influence these days, while Washingtonian looked the following month at the "must-read" Daily News. Veterans of The Post, like columnist Frank Cerabino, know chapter and verse about Trump's dealings in the area, as he detailed in a 2015

POLITICO magazine story.

- The president hasn't always been a fan of the local paper while in Mar-a-Lago. "One of the country's dumbest newspapers - The Palm Beach Post - should be put to sleep," he tweeted in 2013. "It's dying."

- The Austin American-Statesman, another Cox paper, and an especially influential one in Texas, is also up for sale. The American-Statesman employs more than 200 people, according its report on the paper's going on the market.

TODAY: POLITICO's Susan Glasser interviews Senator Ben Cardin and experts on how disinformation is used to destabilize democracies. The event is at 8:30 a.m at the Newseum and will stream live here.

TUNE IN: Hillary Clinton will be on "The Daily Show" tonight.

HONORING WAYNE BARRETT: Applications are now being accepted for The Wayne Barrett Investigative Fund, which honors the legendary investigative journalist, who was one of the first to report deeply and aggressively on Donald Trump. "This fund will support ambitious reporting projects focused on Wayne's major areas of interest: politics and corruption in both New York City and on the national stage," the announcement read.

REVOLVING DOOR

- Sam Scarrow has been hired as associate communications director at Media Matters for America. He most recently was an account executive at BerlinRosen Public Affairs, where he worked since June 2015.

EXTRAS:

- Forbes is shutting down its opinion section.

- The Daily Beast's Lloyd Grove looks at the "Brooklyn bloggers who brought down Paul Manafort."

- The Atlantic's Megan Garber assesses a new Netflix documentary on Joan Didion.

- In New Jersey, news organizations are trying to connect with their readers over potlucks.

- The founder of Wikipedia is launching a news service.

- The Houston Press reports that former wrestler Brother Love has a hit podcast.

Subject: BREAKING NEWS: Trump returns to familiar territory in Phoenix rally

President Donald Trump was back in his natural element on Tuesday night, revving up a stadium of supporters, riffing on his campaign themes and bragging about crowd sizes the day after a scripted, sober address about an increased American military presence in Afghanistan.

Trump seemed to be reveling in the crowd's love from the moment he entered, clapping his hands as he made his way slowly to the podium.

"Wow, what a crowd, what a crowd," were Trump's first words when he stepped to the microphone.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 2, 2017

Latest News

Utility Asks High Court To Limit EPA's Use Of Projected Emissions For NSR

Michigan utility DTE Energy is asking the Supreme Court to review a divided appeals court ruling that backed EPA's ability to use projected emissions data to pursue a Clean Air Act new source review (NSR) enforcement case against the company, arguing that allowing the ruling to stand violates the air law and EPA's regulations.

Facing Wide-Ranging Calls, EPA Said To Plan Narrow CPP Replacement Rule

EPA is said to be crafting a narrow replacement for the Obama-era Clean Power Plan (CPP) governing greenhouse gases (GHGs) from power plants after a wide range of labor and industry groups urged officials to replace the rule rather than simply repeal it as they may have been planning.

Senators Signal Bipartisan Support To Renew Superfund Cost Assessment

Democratic and Republican senators at an Environment & Public Works Committee panel hearing Aug. 1 signaled their support for asking EPA to renew a long-abandoned effort to estimate costs for remaining Superfund cleanups, which could help inform the panel's work as it probes whether the Superfund program needs fixes.

Top EPA Official Departs, Citing Concerns Over Trump's Deregulatory Agenda

Dr. Betsy Southerland, who has served in top positions in EPA's water and Superfund offices, has left the agency after decades, citing concerns with the Trump administration's deregulatory agenda and its proposed budget cuts, as well as “fake” claims from Administrator Scott Pruitt and other top officials that the agency's rules are responsible for economic and other hardships.

Trump DOJ Maintains Obama-Era Push For Appellate Review Of CWA Rule

The Trump administration in an ongoing Supreme Court case is backing an Obama-era position that suits over EPA's 2015 Clean Water Act (CWA) jurisdiction rule and expected litigation over a pending replacement rule should be heard in appellate courts, at odds with agency Administrator Scott Pruitt's past support for hearing such

suits in district courts.

House FY18 'Report' Backing EPA Programs Poses Agency Discretion Test

Language in the House committee report accompanying the chamber's pending fiscal year 2018 EPA funding bill -- urging preservation of voluntary greenhouse gas-reduction and other initiatives the Trump administration proposes to scrap -- is posing a test for EPA on whether to adhere to or ignore the non-binding language.

Daily Feed

Senate panel schedules vote on DOJ's ENRD nominee

The Senate Judiciary Committee is slated to vote Aug. 3 on whether to confirm Jeffrey Clark, a top environment official in the Bush Justice Department, to head DOJ's environment division in the Trump administration.

Environmentalists doubt settlement in stormwater permit suit

Two local groups say EPA's bid to settle litigation over its novel stormwater permit for Massachusetts is unlikely to succeed since their arguments are “irreconcilable” with industry and municipalities.

States challenge EPA delay of ozone NAAQS designations

The 16 states join environmentalists who are also suing EPA over its decision to delay determinations on whether areas are attaining the agency's 2015 ozone air standard.

Ewire: EPA said to plan 'inside the fence' CPP replacement

In today's Ewire: EPA is said to be planning a scaled-down version of the Clean Power Plan focused only on power plant efficiency improvements. Plus: The agency might 'lack oxygen' to scrap its landmark GHG risk finding.

Rep. Dingell floats bill to prohibit closure of EPA offices

Rep. Debbie Dingell's (D-MI) bill would block any potential effort by the Trump administration to close, consolidate or eliminate EPA's program offices and 10 regional offices.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

September 13, 2017

Latest News

Massive Hurricanes Spur Climate Debate But Fail To Advance Policies

Two massive hurricanes that have caused devastating flooding damage in the Southeast during the past month have renewed a public debate about how climate change is intensifying extreme weather events, though it remains uncertain whether such discussion will spur additional federal climate mitigation or adaptation policies.

EPA Seeks Industries' Views On Costs, 'Certainty' To Inform CWA Policy

EPA plans to ask representatives from major industrial sectors about key issues that will inform the agency's upcoming Clean Water Act (CWA) jurisdiction rule that is expected to significantly narrow the Obama-era CWA policy, including compliance costs and whether there is a lack of regulatory “clarity” on the law's reach.

CWA Rule Challengers Warn Of 'Chaos' If High Court Backs Appellate Suits

Environmentalists, several states and groups representing major industries are warning of litigation “chaos” if the Supreme Court backs the government's push for appellate review of EPA's 2015 Clean Water Act (CWA) jurisdiction rule, saying it would create permanent confusion over the correct venue for suits over CWA policies.

EPA, States Hold Talks To Improve Enforcement With Enhanced Collaboration

JACKSON HOLE, WY -- EPA and state officials have started discussions on how to improve state and federal cooperation on enforcement, seeking to better align priorities and allocate resources, while addressing their differing perceptions on what aspects of enforcement are currently working or need improvement.

DOD Eyes FY19 To Better Address PFAS Contamination, Cleanup Budgets

As the Defense Department (DOD) faces growing local pressure to remediate per- and polyfluoroalkyl substances (PFASs), a top official says fiscal year 2019 will be the earliest it can comprehensively budget for the cleanups even though DOD began initial testing and cleanup soon after EPA finalized health advisories for two PFASs in

2016.

Plaintiffs Threaten Suit To Force ATSDR, EPA To Pursue National PFAS Study

An attorney representing clients exposed to perfluorinated chemicals in their drinking water and through the workplace is urging the Agency for Toxic Substances and Disease Registry (ATSDR) to work with EPA on a national health study of the human health impacts of exposure to the chemicals, or face a lawsuit to force the study.

OTC Shifts Focus Of Ozone Cuts To Trucks, Natural Gas & Cement Plants

The Ozone Transport Commission (OTC) of 12 Northeast and Mid-Atlantic states is shifting its focus on plans for ozone reductions from its traditional targeting of power plant emissions to other ozone sources including natural gas infrastructure, cement manufacturing plants and truck idling in order to meet EPA's stricter ozone limit.

Daily Feed

Industry seeks to intervene to defend EPA's TSCA rules

Businesses “could lose millions of dollars and years of research invested in a chemical, if an EPA risk evaluation ultimately results in restrictions,” the industry groups said.

OIRA urges agencies to curb regulatory costs in FY18

But an attorney representing environmentalists says that “seeking to lower regulatory compliance costs without regard to the benefits provided by government regulations is just plain crazy.”

Parfitt, ECOS' new president, acknowledges prospects for EPA Region 8

The Wyoming environment director did not rule out taking a position at EPA if it were offered to him, opening the door to his departure from ECOS shortly after his selection to lead the group.

D.C. Circuit sets argument in suit testing CSAPR as haze control

The case set for argument Sept. 17 tests whether utilities' participation in an EPA emissions trading program satisfies certain haze program requirements.

Ewire: Trump's meeting with Pruitt

Is the high-level meeting intended to address the long-delayed Commerce Department report calling for an overhaul of EPA's NSR rules?

Environmentalists defend timeliness of 'hot spot' air guidance suit

Environmentalists say the Clean Air Act's 60-day window to sue does not prevent their suit over an EPA air quality guidance despite filing it months after EPA released the guide.

Subject: BREAKING NEWS: Obama: DACA decision goes against 'common sense'

Former President Barack Obama issued a statement Tuesday calling President Donald Trump's decision to rescind DACA "contrary to our spirit, and to common sense."

"We all want safe, secure borders and a dynamic economy, and people of goodwill can have legitimate disagreements about how to fix our immigration system so that everybody plays by the rules," Obama wrote. "But that's not what the action that the White House took today is about."

Obama signed the executive order creating the program in June 2012 and sees it as a major achievement. He promised after the election that any move to get rid of it would prompt him to speak out against his successor.

Subject: POLITICO's Morning Energy, presented by Chevron: Energy dominance meets market realities — Multiple congressional probes of Whitefish contract — RFS concessions fuel GOP war of words

By Anthony Adragna | 10/27/2017 10:00 AM EDT

With help from Alex Guillén and Eric Wolff

MY HEART DRILL GO ON? Interior Secretary Ryan Zinke has made opening up more areas for oil and gas drilling a key part of delivering on President Donald Trump's pledge to unleash "energy dominance" but there may not actually be that many takers, Pro's Ben Lefebvre reports. Interior plans to offer 10 million onshore acres in the National Petroleum Reserve in northern Alaska in December and 77 million offshore acres across the entire Gulf of Mexico in March, but the combination of low oil prices and ample private land available for fracking may keep some away. "It's almost like having a fire sale of all the acreage," said Ken Medlock, director of the Baker Institute's Center for Energy Studies at Rice University in Houston. "Wouldn't surprise me at all if there's a lot of acreage that doesn't sell."

Short-term cash infusion: The federal government is likely to make money from the bids themselves, but many companies are likely to sit on the acreage and wait for oil prices to rise before they start drilling. Both the Gulf and Alaska have high production costs given the remoteness of both locations, making new projects in those locations a tough sell to companies. The most likely outcome of the Gulf lease sale is that a modest number of companies may buy acreage next to drilling rigs already in operation. "They're still showing up [to the lease sales], just not buying a lot," Justin Devery, a principal energy researcher at IHS Markit, told Ben.

That irks advocates: When companies leave lands idling the public gets hit twice since the lands cannot be used and they aren't generating income for taxpayers, according to Nada Culver, senior counsel and director at The Wilderness Society's BLM Action Center. "We will lose the ability to use those lands, and at the same time we're not necessarily going to see a return."

Relatedly, the Senate Energy and Natural Resources will hold a Nov. 2 hearing on the potential for oil and gas exploration in ANWR as the committee seeks to meet reconciliation instructions from the budget to raise $1 billion in revenue over the next decade.

AND FOR YOUR RADAR TODAY: Trump huddles with Zinke in the Oval Office today 11:30 a.m. No topic specified, though ME bets Zinke's recommendations on national monument designations will pop up.

TGIF EVERYONE! I'm your host Anthony Adragna, and QEP Resources' Shane Schulz was first to identify Hawaii, Idaho, New Hampshire, Rhode Island and Maine as the five states with two House seats. For today: Which four states have the most congressional seats? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

LET THOSE WHITEFISH LETTERS FLY: Lawmakers penned three separate letters Thursday seeking information related to the $300 million contract awarded to the tiny Whitefish Energy based in Zinke's hometown, Pro's Ben and your ME host report.

-A bipartisan group of House Energy and Commerce lawmakers wants a briefing from Whitefish Energy. "In light of the questions that have been raised about your company's involvement in recovery efforts ... it is important to develop a clear understanding of the facts," they wrote in a Thursday letter to Whitefish Energy CEO Andrew Techmanski.

-House Natural Resources Chairman Rob Bishop and Oversight Subcommittee Chairman Bruce Westerman asked the Puerto Rico Electric Power Authority for all documents related to its decision to ink the Whitefish contract. They also asked more broadly for information on how PREPA enters into third-party contracts and what procedures it must follow if it departs from the normal process. Link.

-Senate Energy ranking member Maria Cantwell and Ron Wyden asked GAO to investigate the contract in a separate letter.

Bipartisan resiliency push for rebuilding: A powerful bloc of senators, including the top Republican and Democrat on the Senate Energy and Natural Resources Committee and the Finance Committee chairman, are pressing the Senate leadership for weather-resilient distributed energy to rebuild the power grids of Puerto Rico and the Virgin Islands, Pro's Emily Holden reports. "Decentralized energy resources operating in microgrids are more likely to remain functioning during and after storms," says the letter , spearheaded by Sen. Al Franken and signed by Sens. Lisa Murkowski, Orrin Hatch, Rob Portman and Cantwell.

Remember that Superfund drinking water story? Sens. Tammy Duckworth and Elizabeth Warren led five of their Democratic colleagues in questioning whether residents on the smaller Puerto Rican island of Vieques had adequate communication infrastructure to heed EPA warnings not to drink water from Superfund sites. "We are unable to guarantee residents there will heed EPA's guidance and avoid the potential adverse health effects associated with drinking contaminated water unless there is sufficient Federal Government presence on the island to provide access to clean drinking water," they wrote in a letter . "We urge you to make monitoring and securing the Vieques site a priority for the duration of recovery."

Another CODEL leaves: A bipartisan group of lawmakers, helmed by House Majority Leader Kevin McCarthy and Minority Whip Steny Hoyer, are visiting the U.S. Virgin Islands, Puerto Rico and the Florida Keys today and Saturday to examine ongoing recovery efforts from the string of recent hurricanes. Also traveling: Bishop, Jeff Denham, Norma Torres and Anthony Brown. Their visit comes as the Rhodium Group released a report Thursday concluding Hurricane Maria caused the "largest blackout in American history." Trump signed into law Thursday legislation H.R. 2266 (115) that provides $36.5 billion to help FEMA with recovery efforts, relieve about half of the National Flood Insurance Program's debt and to keep Puerto Rico's government operational.

Hearing scheduled: The Energy and Commerce Energy Subcommittee announced it would hold a hearing next Thursday to examine the state and federal responses to the storms, as well as ongoing recovery efforts.

Cornyn: Don't force disaster offsets: Count Senate Majority Whip John Cornyn as opposed to OMB Director Mick Mulvaney's plan to seek offsets for the next batch of disaster relief. "I'm as concerned about the deficits and debt as anybody, but this is emergency spending and we need to get help to the people who need the help," he told reporters.

INHOFE: GRASSLEY'S RFS POSTURING 'QUESTIONABLE': Sen. Jim Inhofe isn't a fan of fellow Republicans Chuck Grassley and Joni Ernst holding up EPA nominees last week to extract concessions on the Renewable Fuel Standard. "I think it's questionable in terms of being appropriate," he told ME. "I think [Grassley] used a lot of pressure there that was very effective, I'll say, but that I didn't agree with."

And Ernst bashes new hold: After a delay in the confirmation vote on EPA air nominee Bill Wehrum (who passed out of committee on Wednesday), Sens. Ted Cruz and Mike Lee retaliated by slapping a hold on Bill Northey's selection to become undersecretary for Farming Development and Conservation at USDA. But that move drew swift condemnation from Ernst. "That has nothing to do with Bill Northey, they need to get that right," Ernst told ME, referring to the USDA hold. "I don't see the connection. Bill Northey, he'll be in charge of conservation programs, it will have nothing to do with the RFS. So why are they blocking him because of the RFS? Just because Big Oil doesn't like it."

So is this officially a fight? Senior Republicans downplayed the likelihood their conference would continue to hold up Trump nominees over biofuels. "This happens every day, just happens to be the topic du jour, but we'll work it out," Cornyn told reporters. And EPW Chairman John Barrasso suggested the move might have just been the senators doing what's in the best interest of their states: "Every senator gets to speak for themselves and do whatever they need to do," he told ME.

** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat-buckwheat. Watch the video: http://politi.co/2gyQXsp **

DUCKWORTH: JUST WAIT! She's been urging her GOP colleagues to let EPA's final biofuels volumes come out on Nov. 30 before considering Wehrum's nomination on the Senate floor, because Duckworth questions the legality of the reassurances Pruitt sent to corn-state senators last week. "I don't know that it doesn't open the administration to lawsuits from the very same oil interests Mr. Wherum used to represent," she told ME. "I've been pressuring them to not accept just the word of Mr. Pruitt ... It's simple - just wait, let the rulemaking be done. Just wait!"

MAIL CALL! GOTTA SHOW YOUR WORK! A group of 19 members of the Senate Democratic caucus requested all the documents related to EPA's cost-benefit analysis that they argue relied on "mathematical sleights of hand to over-state the costs of industry compliance" but formed an important part of the proposed repeal of the Clean Power Plan. "Denying the science

and fabricating the math may satisfy the agency's paperwork requirements, but doing so will not satisfy the requirements of the law," the letter, led by EPW ranking member Tom Carper , said.

Senators: This won't be popular: Eleven Democratic senators are wagging their fingers at Zinke's decision to dramatically increase entrance fees to many of the country's most popular national parks, such as Grand Canyon, Yellowstone and Yosemite. "We believe that it is especially problematic for your Department to propose fee increases at the same time that the Trump Administration is recommending slashing National Park Service funding levels and holding virtual fire-sales on our public resources at below market value," the letter , led by Cantwell, said. The timing of the increase is especially curious as Zinke proudly boasted of record numbers of visitors just a few months ago.

Wildfire funding must come next: A bipartisan group of eight senators asked Trump in a letter to prioritize federal funding for wildfires in the next round of disaster relief funding. "We urge you to make it a priority that all Americans who need emergency assistance get what they need, whether affected by a hurricane, wildfire, or other disaster," the letter, led by Sen. Kamala Harris, wrote.

LAWSUIT ROUNDUP! 'SUE AND SETTLE' ORDER GETS FIRST TEST: The state of North Dakota says EPA Administrator Scott Pruitt's recent "sue and settle" directive bolsters its own argument to nullify a court order requiring the agency to review oil and gas wastewater rules. Environmental groups complained that EPA had not updated its oil and gas wastewater disposal rules since 1988, despite major changes related to the fracking boom and a statutory requirement that EPA reconsider the rules every three years. In December, they struck a deal that requires EPA to decide whether or not to update those rules by March 2019.

North Dakota says Pruitt's order backs up their request that the D.C. Circuit overturn the consent decree. Pruitt's "sue and settle" order "aligns with North Dakota's argument that the settlement in this case imposed obligations on U.S. EPA that go beyond" the law's requirements, the state wrote in a short letter to the court on Thursday. Environmental groups have pointed out that, in the event EPA does decide to take action, the agency will go through the normal notice-and-comment rulemaking process. Oral arguments are slated for Nov. 7.

Not waiting any longer: Environmental Defense Fund sued EPA Thursday over a series of unfilled FOIA requests concerning Pruitt's ethics conflicts, schedule and plans for agency science, Pro's Emily Holden reports. The agency has faced a flood of public records requests during the Trump era with the Office of Public Affairs warning some may take more than a year - well over statutory limits - to fulfill.

Not a pleasant diversion? A handful of green groups filed a lawsuit in federal district court challenging federal approval of a project that would divert water from the Colorado River to customers in the Front Range area of Colorado, Pro's Esther Whieldon reports. The Windy Gap Firming Project would divert tens of thousands of acre feet of water from the Colorado River each year to help fill a new reservoir on the Front Range area of Colorado.

ANALYSES OF PERRY GRID PROPOSAL RELEASED: Implementing Energy Secretary

Rick Perry's grid resiliency proposal could cost consumers up to $10.6 billion per year, according to new research from the Energy Innovation and the Climate Policy Initiative. Ninety percent of the benefits to the nuclear sector would go to just five companies - Exelon, Entergy, PSEG, NextEra and FirstEnergy - while 80 percent of the benefits to the coal industry would also go to just five companies - NRG, Dynegy, FirstEnergy, American Electric Power and Talen Energy. Former FERC Commissioner Colette Honorable co-authored initial perspectives on the grid proposal comments for Reed Smith here.

THEY'RE GOING TO MIAMI: A large group of Transportation Committee members - Chairman Bill Shuster, Garret Graves, Grace Napolitano, Brian J. Mast, Daniel Webster, Frederica Wilson, Lois Frankel, Mario Diaz-Balart, Carlos Curbelo and Eddie Bernice Johnson - gather this morning at 9:30 a.m. at Port Miami to discuss concepts for the next Water Resources Development Act. Webcast here.

STANDING STRONG: There may be a new political dynamic in Germany, but all the parties involved in talks to form a government agreed Thursday to uphold previously set climate goals for 2020, 2030 and 2050, POLITICO Europe's Emily Schultheis and Cynthia Kroet report. The parties - the center-right CDU/CSU alliance, the liberal Free Democratic Party (FDP) and the Greens - did not, however, discuss all the specific means by which these goals would be reached.

MOVER, SHAKER: Mary Martin is the new chief counsel for both the House Energy and Commerce Energy and Environment subcommittees. She's previously been deputy chief counsel for both subpanels and before that was policy counsel and committee executive to the environment, technology & regulatory affairs division at the U.S. Chamber of Commerce.

Puerto Rico Recovery Delays Making Congress Impatient

Puerto Rico's hurricane recovery efforts are being hampered by logistical problems and bureaucratic infighting six weeks after Maria made landfall, frustrating lawmakers.

Energy

U.S. to Exit Global Anti-Corruption Effort Aimed at Oil Cash

The Trump administration said it will exit a global anti-corruption effort that compels oil, gas and mining companies to disclose the payments they give governments worldwide.

Lead Paint

$1.3M Jury Award Upheld in Baltimore Lead Paint Case

A Maryland landlord will remain on the hook for a $1.3 million jury award to a man exposed to lead paint in a Baltimore rental property as a child, a Maryland appeals court ruled.

Motor Vehicles

Audi Recalls Flagship A8 Sedans in Europe Over Emissions Woes

Audi is recalling its top-of-the-line A8 sedan in Europe after detecting suspicious software, as the luxury-car brand struggles to get to grips with emissions issues more than two years after the diesel-cheating scandal erupted.

Motor Vehicles

Tax Credit for Tesla, Other Electric Cars Axed in GOP Bill

The push by Tesla Inc., General Motors Co. and other carmakers to boost sales of electric vehicles was dealt a blow by House Republicans Nov. 2 when they proposed eliminating a $7,500 per vehicle tax credit that has helped stoke early demand.

Motor Vehicles

Tesla, GM Electric Cars May Start Losing Their Tax Credits

Electric vehicles have caught the eye of many American consumers. But it's not only the cars' green cred that seals the deal. Another big lure: a federal tax credit of up to $7,500 per vehicle. Now that lucrative incentive may be fading away for two reasons. First, buyers of vehicles from leading EV makers such as Tesla Inc. and General Motors Co. could soon use up the maximum value of tax credits for their brands. (They're capped for each manufacturer.) But worse for the ...

Motor Vehicles

Too Few Charging Stations May Slow California Electric Car Goals

In 2012, Gov. Jerry Brown (D) set a goal of putting 1.5 million electric vehicles on California roads by 2025. As of September, the state had 334,393 EVs. To get to 1.5 million, it needs to give drivers a lot more places to charge up. The state, however, wants utilities to play a big role in the buildout of charging stations. The power companies are eager to invest, seeing a growth opportunity, but before that can happen, officials need to sort out who will pay for it.

New Jersey

Ruling Nixes Exxon's Bid for Early Exit in MTBE Cases

ExxonMobil Corp. and ExxonMobil Oil Corp. must face a trial on claims brought by New Jersey over natural resource damages at five gas stations, a federal court in New Jersey ruled Nov. 1.

EPA Farmworker Rule in Limbo, Debate on Pesticide Info Lives On

A delay in implementing new farmworker safety standards is reviving debate on a sensitive provision in the EPA rule: Who gets access to information on pesticides when a farm laborer becomes ill from exposure?

Renewable Energy

Renewables Are Starting to Crush Aging U.S. Nukes, Coal Plants

Building solar and wind farms has started to become a cheaper proposition than running aging coal and nuclear generators in parts of the U.S., according to financial adviser Lazard Ltd.

Renewable Energy

Wind Tax Credit Trimmed in House Bill; Nuclear Breaks Extended

Tax credits cherished by the wind and solar industry would remain in place under a rewrite of the tax code revealed by House Republicans Nov. 2, but the measure would trim the wind energy's production tax credit by more than a third.

Solid Waste

Brazil Threatens Fines for Lagging Industrial Recyclers

Brazil is threatening to fine companies that haven't set up mandatory recycling systems seven years after being required to do so by a solid waste management law.

Toxic Substances

EPA Studying New Lead Cleanup Standards For Cities

The EPA's cautious steps toward a new guideline for cleaning up lead-contaminated soil in American cities could open up disputes between the agency and companies that would foot the cleanup bills.

Water Infrastructure

Financing Costs for Water Utilities May Rise Under GOP Tax Plan

Financing costs of public water and wastewater infrastructure projects could escalate for the private sector under the new Republican plan to ax the tax-exempt status of bonds used for the projects.

Clean Power Plan's Legal Fight Continues Amid Repeal Efforts

Posted October 11, 2017, 12:13 P.M. ET

By Abby Smith

The EPA's proposal to ax the Obama administration's plan to cut carbon emissions from the power sector hasn't silenced the legal back-and-forth over the regulation's merits.

The litigation over the Clean Power Plan has been on ice for months, but supporters and foes of the climate rule are disputing how the U.S. Court of Appeals for the District of Columbia Circuit should proceed with the case. The full court heard oral arguments in the case in September 2016.

The Environmental Protection Agency, in an Oct. 10 status report required by the court, cited its newly signed proposal to repeal the Clean Power Plan, arguing the court should continue to keep the case on hold until the agency's repeal of the regulation is final. The report also noted the EPA is considering "the scope of any potential replacement rule" to cover carbon emissions from existing power plants.

Conservative foes of the Obama regulation say they expect the EPA will ask the court to dismiss the case after it finalizes the repeal.

"I think it would be a futile gesture for the court to adjudicate the regulation that's both stayed [by the Supreme Court] and slated to be repealed," Sam Kazman, general counsel for the Competitive Enterprise Institute, told Bloomberg BNA. "I don't see what that gets anyone except billable hours."

But environmental groups and other supporters of the Clean Power Plan say now, more than ever, is the time for the D.C. Circuit to weigh in on the legality of the regulation.

"As of now, the Clean Power Plan is still on the books," Andres Restrepo, an attorney with the Sierra Club, told Bloomberg BNA.

He said many of the issues litigated in this case will come up in the forthcoming legal fight over the

repeal and any potential replacement that the agency offers. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P., the global business, financial information and news leader. Bloomberg BNA is an affiliate of Bloomberg L.P.

"It makes sense for the court to go forward with a decision on the merits of the Clean Power Plan," he said. "It will save resources in the long run, clarify" the legal bounds of the EPA's authority under the air act, and "form the basis of the EPA's current action."

Wind and Solar's Future Depends on Taxes, Not Clean Power Plan

Posted October 11, 2017, 8:30 A.M. ET

By Joe Ryan, Brian Eckhouse and Ari Natter

The Trump administration's decision to end the Clean Power Plan may be deeply symbolic, but the battle that matters most for renewable energy will be over taxes.

Wind and solar have been the fastest growing sources of electricity in the U.S. since 2014 as utilities closed a record number of aging coal-fired generators. That's largely because it's become cheaper to build renewable plants than keep coal plants open.

Clean-energy's fiscal advantage stems in part from two tax credits that Congress extended in 2015. Both measures are scheduled to be phased out in the 2020s, but Environmental Protection Agency administrator Scott Pruitt on Monday called for them to be eliminated. That could upend wind and solar's edge.

"Without tax credits, those economics no longer work," said Amy Grace, an analyst at Bloomberg New Energy Finance.

Unlike the Clean Power Plan, tax credits cannot be unilaterally scuttled by the White House. But with Republican Congressional leaders pushing to rewrite the tax code, opponents of the wind and solar tax credits, including those in the Trump Administration, are jockeying to torpedo the measures.

"I would do away with these incentives," Pruitt said, responding to a question about the effectiveness of renewable energy at an event in the heart of Kentucky coal country. "I'd let them stand on their own and compete against coal and natural gas and other sources."

Not Easy

It won't be easy to kill the measures, know formally as the Production Tax Credit and Investment Tax Credit. They have broad support from both Democrats and Republicans from rural districts where wind and solar have become a key source of jobs. Plus, the overall prospects for reforming the tax code remain murky amidst congressional gridlock and Republican infighting.

After Pruitt called for ending the credits for wind and solar, Iowa Republican Senator Chuck Grassley said on Twitter that he would "remind" the EPA chief that the credit for wind farms "will stay on books until 2020, like Congress planned."

Carlos Curbelo, a Republican Congressman from Florida, went further, invoking Jeopardy! game

show Alex Trebek as he opined on the odds of a successful repeal of the tax credits.

"Alex, I'll take 'things that are not happening for $800,"' Curbelo wrote on Twitter.

Cheap Enough

Trump's move to kill the Clean Power Plan has not dimmed investor enthusiasm for clean energy. Since the president signed the order to roll back the emissions-curbing rule, almost $30 billion has been spent on solar and wind projects.

In the third quarter alone, clean energy spending in the U.S. hit the highest level in two years, totaling $14.8 billion, data compiled by Bloomberg New Energy Finance show. Renewables are now cheap enough to thrive without subsidies in some parts of the world, including Brazil and Mexico. The difference is demand for electricity is growing in those regions while it has stagnated in much of the U.S.

Killing Obama's Power Plan Hasn't Stopped the Renewable Boom Yet

Posted October 11, 2017, 8:17 A.M. ET

By Mark Chediak

For a look at what the death of the Clean Power Plan means for renewable energy, consider this: Since President Donald Trump signed the order to roll back the emissions-curbing rule, almost $30 billion has been spent on solar and wind projects.

In the third quarter alone, clean energy spending in the U.S. hit the highest level in two years, totaling $14.8 billion, data compiled by Bloomberg New Energy Finance show.

The investments in solar and wind are a testament to the seemingly unstoppable boom in renewables that has been driven more by economics and state environmental policies than federal regulations. So far this year, U.S. utility giants including Warren Buffett's Berkshire Hathaway Inc., American Electric Power Co. and Xcel Energy Inc. have laid out plans to collectively spend billions on wind farms that'll replace aging coal-plants.

"The Clean Power Plan doesn't make a jot of difference," said Amy Grace, an analyst at Bloomberg New Energy Finance. "Utilities are installing wind and solar because it is cheaper than running existing plants, and corporations are procuring wind and solar because it's economic to do so."

To be sure, energy companies are investing in clean power while they still can. Tax credits make building wind and solar farms cheaper than running existing coal and natural gas-fired power plants, Grace said. Some of these breaks, extended through bipartisan legislation in 2015, start rolling off this year, Grace said.

High Court Mulls Right Place for Water Rule Review

Posted October 11, 2017, 12:03 P.M. ET

By Amena H. Saiyid

U.S. Supreme Court justices pressed the government on why it insists that a federal appeals court should hear challenges to a regulation that defines what waters receive federal protection.

The issue piqued the conservative and liberal members of the court, who sought to understand the government's position and congressional intent behind the Clean Water Act. The water law limits federal appeals court reviews to specific Environmental Protection Agency actions, such as standards for industrial wastewater discharges.

"Why did they bother?" Justice Stephen Breyer asked Rachel Kovner, assistant to the U.S. Solicitor General, who argued the case.

Kovner told the justices that since the law requires federal appeals courts to review EPA-mandated water pollution permits, those same courts should have jurisdiction over the underlying regulation—the 2015 waters of the U.S. rule—that defines which waters receive those protections.

The Obama-era water jurisdiction rule is in the process of being rescinded and perhaps replaced by the Trump administration. The Supreme Court's decision could determine where challenges to the expected replacement regulation are heard. The federal government wants litigation over the water jurisdiction rule argued in the appeals court, in part to save money, time, and effort. However, most industry groups and some environmental groups prefer the district courts, where they have more time to file challenges and can introduce localized arguments.

EPA Seeks 'Single Best Way' to Work With States

Posted October 11, 2017, 9:02 A.M. ET

By Abby Smith

The EPA will review its oversight responsibilities to find the "single best way" to monitor state actions, part of Administrator Scott Pruitt's promise to "rebalance" the agency's relationship with the states.

The way the Environmental Protection Agency interacts with states "has not been re-evaluated in some time," Henry Darwin, the EPA's chief of operations, told Bloomberg BNA in an interview about the agency's draft four-year strategic plan.

States have "become more sophisticated in the execution of EPA's delegated responsibilities," Darwin said.

The agency will be looking for places to streamline implementation of environmental programs that could involve shifting enforcement and other responsibilities more fully to the states, he said.

Environmental Groups Concerned

Agency and state officials hope such a dialogue could lead to quicker approval of such things as state-crafted implementation plans and environmental permits.

But environmental groups have expressed concern that the agency is looking to pull back on enforcement, suggesting states do not have adequate resources to assume such duties without significant help from the agency.

"If they're going to be handing over some of these authorities to states, if they're not handing over money too, how are the states going to run these programs?" Albert Huang, an attorney with the Natural Resources Defense Council, said.

He also said there are some areas that make more sense to be controlled at the federal level, such as cross-state air pollution or civil rights issues, which is Huang's specialty area.

"When you leave regulations to states, it really depends on that state's view of regulation," he told Bloomberg BNA. "We're going to continue to see states that are behind the ball not get better."

But Darwin said the EPA's review is not to suggest the agency would be "derelict in carrying out our oversight duties. We simply haven't taken a close look" at the EPA-state relationship "in a long time."

Seeking Better Coordination

For regulated companies, the EPA's push could lead to better coordination of requirements and more efficient use of resources, Megan Berge, an attorney with Baker Botts LLP, which represents several utilities, told Bloomberg BNA.

"We've seen in the past instances, where states work hard and engage with industry to develop program plans, only to have them not succeed at the federal level," she said. State regulators often work closely with companies to develop plans to implement federal air quality standards, for example.

If the EPA rejects that plan and instead issues a federal plan for a state, "given the amount of resources and effort that goes into those plans, that can be a tremendous waste," Berge said.

States 'Primary Implementers'

"States are the primary implementers of the majority of environmental programs," Todd Parfitt, Wyoming's top environment official and the president of the Environmental Council of the States, told Bloomberg BNA.

He said oversight by the EPA should focus on "non-discretionary" areas, where the agency is designated by statute as the primary enforcer. And for those areas that are discretionary, the EPA should provide "that flexibility to the states to be the lead agency and make the decisions on how best to implement in their particular state."

Cooperative federalism is one of the three key tenets of the EPA's draft fiscal year 2018-2022 strategic plan, a document produced by the agency every four years that outlines its overarching priorities. Darwin, who served as Arizona's top environment official from 2011-2015, said the EPA hopes to retool its relationship with the states in collaboration with groups like the Environmental Council of States.

He said discussions already have begun among political and career staff at the agency, particularly with the regional offices, to get a better idea of how oversight responsibilities are performed "in an effort to kind of find the single best way to oversee" state actions.

Deeper Conversations

Alexandra Dunn, Environmental Council of States executive director and general counsel, told Bloomberg BNA it is too early in the process to know the states' role in the EPA's review. But she said there will be an opportunity with the new administration "to have conversations go a bit more deeply into oversight of delegated programs and workload sharing."

States made progress during the Obama administration to improve collaboration between the EPA and states in such processes as management of solid waste, Dunn said. But the federal and state agencies still could more effectively divide the workload in other areas, she said.

One step the EPA can take is to allow the states to take the lead on implementation of air quality standards and other environmental protections, Clinton Woods, director of the Association of Air Pollution Control Agencies, told Bloomberg BNA. That means the agency would impose fewer federal implementation plans on states and enable more "timely approvals" of state-crafted plans.

Woods and Dunn also said the EPA's various offices need to deal with state agencies in a more consistent manner. For example, Dunn said some regions have quarterly meetings with their states to review permitting portfolios that allow for "early troubleshooting" on complex permits.

"That is an example of a habit in one region that works well, and perhaps could become intentional across the country," Dunn said.

There also needs to be more robust interaction among state agencies and the EPA's policy, enforcement, research, and other headquarters-based offices, Woods said.

Getting States Involved

David St. Pierre, executive director of the Metropolitan Water Reclamation District of Greater Chicago, told Bloomberg BNA that while he has never had problems working with the EPA, he suggested the EPA could improve integrated planning efforts and provide states greater flexibility when implementing environmental regulations.

But St. Pierre said some flexibility exists already. "It's like any organization. They have tradition. But I've really found that even in those situations, if you come up with an idea that's a better idea, they'll let you try that out."

Woods suggested Pruitt could increase the number of state experts on the EPA's advisory boards. He said his group has supported several such experts who have been nominated to serve on the EPA's Science Advisory Board and its Clean Air Scientific Advisory Committee. Pruitt is in the position to fill several open slots on both advisory panels, and Woods cited comments his group submitted to the agency late last month supporting state experts for those roles.

He said choosing state experts "could be a key element of the overall strategic plan."

More broadly, Dunn and Woods said their groups plan to review the EPA's strategic plan more

closely and provide input to the agency.

The EPA is accepting comments until the end of the month, and Darwin said the agency aims to release numeric targets for each of the plan's measures in February.

NAFTA Negotiators to Tackle Energy Issues During Friday Meeting

Posted October 11, 2017, 02:44 P.M. ET

By Catherine Traywick and Eric Martin

NAFTA negotiators are gathering in Washington for their fourth round of talks to update the trade deal, and energy is on the agenda -- if only for two hours.

U.S., Mexican and Canadian representatives will hold just one energy session late Friday during seven days of talks ranging from gender to the environment. Details haven't been released, but oil and gas companies are pushing for a rule on diluents, a light crude product typically sourced from the U.S. and added to heavy Canadian oil to help it flow through pipelines. Oil companies want a rule that allows up to 40 percent of diluent in cross-border oil shipments, according to a paper by the American Petroleum Institute, the Asociacion Mexicana de Empresas de Hidrocarburos and Canada's Oil and Natural Gas Producers.

The trade groups want to loosen NAFTA rules so that producers can more easily transport oil, gas and infrastructure across both borders. That includes simplifying the process for certifying hydrocarbons' country of origin and allowing companies to move drilling rigs, vessels and personnel across borders.

Rail Safety Targeted in Fuel Transport Study on Shale Boom

Posted October 11, 2017, 02:54 P.M. ET

By Meenal Vamburkar

Routes used to ship crude oil, natural gas, and ethanol by rail need better and more frequent inspections, according to a report by a national science group that also urged added training for local first responders.

From 2005 to 2015, there were 58 rail incidents involving ethanol shipments and 21 involving crude, according to the study by the National Academies of Sciences, Engineering and Medicine, a Washington-based nonprofit research organization. A July 2016 derailment in Oregon spilled about 40,000 gallons of oil, which ignited and led to the evacuation of about 100 people, the report said. The cause appeared to be track failure.

Pipelines and marine shipping remain the safest form of transportation, according to the study, which was initiated in 2015 and released Oct. 11. It was designed to assess whether the U.S. energy boom was putting strain on the transportation industry and sacrificing safety.

Barges have an "exemplary safety record," even as the total volume of oil they handle has risen, according to the report. That's the result of a federal revamping of industry safety rules following a series of spills nearly 30 years ago, the group wrote. Now, regulators should determine if improved incident- and traffic-reporting systems can help train safety.

"Preventing derailments of this traffic is imperative," the report said, particularly since some of the tank cars in use are designed to older specifications. At the same time, emergency preparedness remains a challenge in rural communities, the report said, where local responders may not have sufficient training to deal with accidents.

DTE, Enbridge Gas Line, Energy Transfer Project OK'd by FERC

Posted October 11, 2017, 11:24 A.M. ET

By Catherine Traywick

DTE Energy and Enbridge gained approval from federal regulators to start construction of the $2 billion Nexus natural gas line in the Midwest, with certain exceptions, according to a filing posted today.

However, the Federal Energy Regulatory Commission order bars construction at two locations and at proposed horizontal directional drilling sites pending submission of additional environmental information.

The 257-mile pipeline would be able to transport 1.5 billion cubic feet per day of Appalachian gas to Ohio, Michigan, Illinois, and Ontario.

In a separate order, the energy regulator also cleared Energy Transfer Partners L.P. to resume horizontal directional drilling at four sites along Rover natural gas line.

The approval is a major step forward for a project that's been mired in protests and investigations since Energy Transfer razed a historic house in Ohio and disclosed massive spills of drilling fluids associated with laying the pipeline. The setbacks have delayed the project's startup by months, with Energy Transfer saying earlier in August that it won't bring the system fully into service until January.

The Energy Transfer authorization has no bearing on the agency's investigation into the spills in Ohio, order says.

The agency previously allowed the company to move forward with its drilling at other sites including Captina Creek.

Clean China Skies Rely on More Ore Mined from Amazon Rainforest

Posted October 11, 2017, 9:16 A.M. ET

By R.T. Watson

A bid by China to clean up pollution in its biggest cities and industrial towns is fueling a push to mine resource riches on the other side of the globe in the Amazon rainforest—one of the most environmentally sensitive areas on Earth.

Smog-laden skies across the world's most-populated country prompted the government to impose curbs on a domestic steel industry that uses coal-fired blast furnaces to melt iron ore. That's led to increased demand for higher-grade ore from overseas that can produce more steel with fewer emissions, and profit margins on those shipments have surged.

Exports by Brazil, one of the biggest suppliers, are headed for a fourth straight record in 2017. Top producer Vale SA is shifting production from low-grade reserves in the southeast that have been mined for a century to develop more high-grade deposits in the isolated northern regions of the Amazon, where environmentalists fear further damage to the world's largest rainforest.

"It's a contradiction," said Frederico Martins, an official at the Brazilian government's Chico Mendes Institute for Biodiversity Conservation who monitored Vale's operations in the Amazon when he was managing the Carajas national forest for a decade. "China wants to clean up 20 years of pollution over there, yet impacting things more here."

The incentive for Brazil to produce more is growing, especially for Vale, which is seeking to reduce $22 billion of debt it ran up during a three-year price slump that ended in 2016.

"Brazilian iron-ore shipments will grow significantly over the next four years," as demand increases for higher-grade supplies, said Paul Robinson, director of non-ferrous metals at CRU Group, a mining-industry consultant based in London.

Brazil currently accounts for about 22 percent of global iron-ore trade, and most of the country's shipments come from Vale, according to Fitch.

Retaining Talent

China is the world's largest metals consumer and by far the biggest importer of iron ore. Only the country's coal-fired electricity generators pollute more than its steel makers, according to Greenpeace. The government is closing the dirtiest plants and increasing commitments to expanded use of solar power and electric vehicles.

Aside from reducing costs associated with pollution, China also wants cleaner cities to retain the talents of its expanding middle class, which is better educated and more mobile, according to Matthew Kahn, a professor of economics at the University of Southern California in Los Angeles. He led a study examining the careers of politicians and mayors in 100 Chinese cities over eight years.

"China's original growth model was to have its own heavy factories in steel and other industries, and this created output and pollution," Kahn said. "But now that China is transitioning to a human capital economy, smart, talented people want to live in cities with blue skies that look like San Francisco."

The risk for Brazil is that it loses more of its rain forest, which Greenpeace estimates has shrunk by about a fifth in the past four decades as farmers moved in to plant soybeans or sugar and miners began digging up minerals.

In the Carajas national forest, where S11D is being developed, Vale says it protects about 8,200

square kilometers of natural habitat, or about five times the total area where it operates. The company has developed technologies and management systems to minimize the impact on the environment, its press department said by email.

Still, satellite images of the region show a dramatic amount of deforestation around locations where mining began in the 1980s. More than 40,000 people worked on developing S11D since 2010, and the company now employs about 2,700 workers full time, plus at least 10,000 indirect jobs.

"Mining attracts a migratory flow," said Martins at the Chico Mendes Institute for Biodiversity Conservation, adding that the impact on rural areas is significant. "When the flow settles in the region, it does so in an irregular way, and that puts pressure on the forest as land is converted into rural and urban areas."

Merkel Faces Coal Insurrection Over Phaseout Date of Fossil Fuel

Posted October 11, 2017, 8:00 A.M. ET

By Brian Parkin

Germany's power, mining and chemical workers warned Chancellor Angela Merkel against embracing a phaseout date for coal under a new government.

The 640,000 member IGBCE union is preparing to respond if Merkel is persuaded by a "hysterical campaign against coal," according to Chairman Michael Vassiliadis Oct. 11. Exploratory talks to form a new government are being held between Merkel, the Free Democrats and Green Party, which has called for a firm end to coal power.

Workers are concerned "they will have to pay" for the costs of a new government said Vassiliadis in a speech to union delegates in Hanover. "Let me tell you this: whoever plans a wedding on the backs of others won't enjoy a honeymoon."

The union's threat is a response to the Greens' election campaign pledge to phase-out coal power in Germany by 2030 and immediately shutter the 20 most-polluting plants. Their suspicions were fueled by Merkel's campaign promises that Germany would meet its 2020 carbon dioxide reduction targets.

Coal plants push emit about a third of Germany's total greenhouse gases. The nation risks missing its pledge to cut the output by 40 percent by 2020 compared with 1990 levels and may only accomplish a 31 percent cut. Merkel has vowed to close the gap without saying how.

Her plans may become clearer Oct. 12 when she meets Vassiliadis in Hanover and later holds a speech. Prospective allies from the Greens and the Free Democrats will be in tow for a panel discussion. The Free Democrats campaigned on clamping down on the soaring costs of Germany's transition to renewable energy and rejected setting a date to phase out coal power.

Some companies and industries say they're also concerned that weak cost control over wind and solar power could erode competitiveness. Their demands—which include a tapering of clean power

subsidies and rejection on enforced closures of coal plants—fall short of revamped U.S. policies that would provide aid for the fossil fuel.

The Trump administration yesterday began the process of repealing former President Barack Obama's plan to cut greenhouse gas emissions from power plants, opening a small window for a revival of coal while prolonging uncertainty over the U.S. electricity mix. The Obama administration "pushed the bounds of their authority" by forcing states to change their power mix, Environmental Protection Agency Administrator Scott Pruitt said.

With union backing, German utilities EON SE, RWE AG, Uniper SE and STEAG GmbH are counting on Merkel to avoid imposing a strict coal phaseout. Europe's biggest power market is dependent on some 140 hard coal and lignite plants, which together supplied about 40 percent of the nation's power last year.

Merkel's decision to wind down nuclear power by 2022 will underscore that dependency, say the power companies and labor unions. Germany's transportation shift to low- and zero-emission vehicles will mean the economy needs even more cheap power, Vassiliadis said.

U.K. to Boost Low-Pollution Energy Supplies as It Limits Bills

Posted October 11, 2017, 02:51 P.M. ET

By Jessica Shankleman

The U.K. government on Oct. 12 will move to boost energy supplies while ratcheting back pollution and limiting upward pressure on customer bills.

The moves will benefit developers of offshore wind farms led by Dong Energy A/S and companies like Tesla Inc., which is seeking to spread cutting-edge technologies from electric cars to home battery systems. It's also aimed at capping the charges that the Big Six utilities including Centrica Plc can charge on some consumers. And it may give a lift to fringe projects like spreading hydrogen as a transport fuel.

Britain's effort is in line with goals set out by the European Union and almost 200 countries agreed to under the Paris Agreement on limiting fossil-fuel emissions causing global warming. It contrasts the measures President Donald Trump's administration took this week to dismantle regulations in the U.S. meant to restrain coal and other polluting fuels. For Prime Minister Theresa May's government, boosting clean-energy is necessary to replace aging power plants due to finish their life in service.

"We've shown beyond doubt that renewable energy projects are an effective way to cut our emissions while creating thousands of good jobs and attracting billions of pounds worth of investment," Energy Minister Richard Harrington said Wednesday.

The Department for Business, Energy and Industrial Strategy will release details of its program in two separate statements. It will issue a clean power plan in the morning setting out policies for reducing emissions in the next decade. That will be followed by draft legislation outlining measures to protect utility customers with a cap on prices.

Government Goals

The government already has committed to slashing greenhouse gases by 80 percent by 2050, compared to 1990 levels. Following are some of the winners and loser from the government's work:

The Big Six utilities—Centrica Plc, SSE Plc, Innogy SE, EON SE,Iberdrola SA and Electricite de France—have the most to lose with the government seeking to impose a price cap on bills they charge to some customers.

Carbon capture and sequestration technologies are seen as vital to reducing emissions as they allow pollution power plants and factories to scrub emissions from their chimneys and bury them deep underground. Yet CCS is still too expensive and complex to be rolled out on a commercial scale globally.

Carbon capture and storage technology may get a boost. It has been stuck without funding since the Treasury scrapped a 1 billion-pound ($1.3 billion funding competition in 2015. Claire Perry, the government's climate minister, said last week CCS systems are "vital" to tackling the issue.

Offshore wind developers such as Dong will be at the forefront of a government auction for power-purchase contracts aimed at stimulating emerging renewables technologies. The government on Wednesday set aside 557 million pounds for the contests, which will happen in 2019.

Nuclear power will get support. After approving the first new atomic plant in more than a generation, the government wants more plants to flourish and replace the ones that are aging out of the system and is seeking to build one of the world's first small modular reactors in the 2020s. Electricite de France SA is working on the Hinkley Point plant in western England, and the government wants more nuclear to ensure steady supplies of electricity in the decades ahead.

Tidal power research projects, like the one in Swansea Bay, may have more certainty about their future. The government is working on a response to an independent review that suggested projects like the one sponsored by Tidal Lagoon Plc would create jobs and ensure power supplies. Perry said last week promoters would have to "be patient" for news on the projects, suggesting a decision may not be in Thursday's plan.

Heat and efficiency projects are likely to benefit. The government wants to stimulate use of electric cars and encourage owners of drafty buildings to invest in insulation.

Clean transport developers such as electric car makers and those promoting hydrogen as a road fuel, like Royal Dutch Shell Plc, may also find incentives in the government's program. After tilting the market toward diesel, the government now is anxious to reduce particulate pollution that caused health problems.

Green Groups: Plan Will Fall Short

Green groups such as WWF already expect the long-overdue plan to fall short of what is needed to put Britain on track to meet its greenhouse gas targets. Without new policies, the U.K. will spew about 30 percent more carbon dioxide than it has budgeted, the group says.

ClientEarth, a group of environmental lawyers, is consider taking the government to court if the latest plan fails to put the U.K. on track to meet its targets.

"The government needs to produce policies of real substance,'' said Jonathan Church, a lawyer at

ClientEarth.

Mexico Energy Skeptical Presidential Candidate Will Undo Reforms

Posted October 11, 2017, 8:53 A.M. ET

By Vanessa Dezem and Adam Williams

Mexico's power suppliers are convinced that Andres Manuel Lopez Obrador, the left-wing presidential candidate who's pledged to roll back the nation's energy reforms, won't be able to deliver on his promises.

The 63-year-old former Mexico City mayor—and current leader in polling for July's election—says the 2013 reforms have failed to lower power and fuel prices for consumers and wants to hand the issue to voters with a national referendum. The shift was driven by current President Enrique Pena Nieto, who opened the country's power, natural gas and oil markets to new competition in an effort to drive down costs and spur investment in areas long dominated by state-owned enterprises.

In the power sector, electricity prices have declined since the reforms were enacted, with record low prices for renewables in the last auction. A more efficient power system is expected to drive a 14 percent decrease in industrial electricity prices to 2040, according to a report from the International Energy Agency. More than half of the nation's power generation is now owned by private investors, including Invenergy LLC and Actis LLP, according to the Mexican Wind Energy Association.

"Mexico has quickly became one of the most important power markets not only in Latin America, but globally," said Paul Abitante, Mexico country manager at Invenergy, a Chicago-based renewable-energy company. "We are confident that Mexico's government and people will recognize the reforms' value and we don't see a scenario where a candidate or a politician takes steps to unwind the reforms."

Others aren't so sure, pointing to the fact that Lopez Obrador could slow the process even if he can't win the two-thirds majority in congress needed to officially undo the reforms.

'Stop Implementing'

"There is no need to change the law," said Miriam Grunstein, chief energy counsel at Brilliant Energy Consulting and nonresident scholar at Rice University's Baker Institute Mexico Center. "They can simply say 'we will stop implementing the energy reform.' There is no obligation to implement it."

Developers are sticking to their investment strategies, confident that Lopez Obrador will be reluctant to reverse changes that are now bearing fruit.

"Companies keep investing in Mexico," said Leopoldo Rodriguez, president of the Mexican Wind Energy Association. "Companies are interested in participating in the market. There is the idea that it's not possible to easily change things."

Mexico's energy mix is shifting, with 24 percent now coming from renewable sources like wind and hydro. Deregulating the electricity market and a series of auctions for new capacity helped the

country post record levels of clean-energy investment this year.

Line in the Sand

"Mexico's energy reform was a line in the sand, " said Hector Olea, chief executive officer of Mexico City-based Gauss Energia, which owns solar farms in the country, and president of Mexico's solar energy association. Energy demand in Mexico is expected to increase about 20 percent up until 2040, according to the International Energy Agency. That's attracted billions in new investments.

Polls show that Lopez Obrador would win in all nine of the most likely combinations of candidates in the July 1 election, with at least 24.9 percent of votes, according to data from Mexico City-based Consulta Mitofsky.

The most likely scenario for a Lopez Obrador presidency would be a partial review of the reform, predicts Luiza Demoro, an analyst at Bloomberg New Energy Finance in Sao Paulo.

"If he wins, Lopez Obrador wouldn't be able to change everything, but he would be able to change energy-auction rules or renewable-energy targets, creating barriers for private companies," Demoro said. "The next power auction in November will be interesting as its prices will show how the market is perceiving these political risks."

Mexico's oil industry is also concerned about what a Lopez Obrador presidency might mean for the blossoming sector. The candidate has said he would review oil contracts awarded to producers including Chevron Corp., Exxon Mobil Corp. and Royal Dutch Shell Plc since the opening of the Mexican industry to private competition in 2014.

A spike in gasoline prices in January 2017 may be one of the reasons Lopez Obrador is criticizing the energy reforms. When the government announced that gasoline prices would increase as much as 20 percent, protesters took the streets across the country to decry the failed promises of the energy overhaul.

Power producers say the long-term benefits will outweigh the short-term issues. Reforms have "prompted foreign and long-term investments and reduced power costs," Gauss Energia's Olea said. "It would be contradictory to reverse something that's working. It would be counterproductive, even politically."

BNP Paribas to Halt Shale, Oil Sands Financing

Posted October 11, 2017, 03:58 P.M. ET

By Fabio Benedetti-Valentini and Russell Ward

BNP Paribas SA pledged to stop financing shale and oil sands projects, expanding earlier commitments in support of global efforts to tackle climate change.

France's largest bank will no longer do business with companies whose main activity stems from oil and natural gas obtained from shale or oil sands, it said in a statement on Oct. 11. The policy covers companies involved in activities ranging from exploration to marketing and trading. The bank added that it won't fund oil or gas projects in the Arctic region.

BNP Paribas said it's committed to bringing its financing and investment activities in line with international efforts to keep global warming below 2 degrees Celsius (3.6 degrees Fahrenheit) by the end of the century. Achieving that goal relies on reducing the world's dependence on fossil fuels, starting with energy from shale and oil sands, the bank said.

The bank said the extraction of fuel from these sources emits high levels of greenhouse gases and harms the environment in other ways. BNP Paribas may be the first large bank to blacklist shale oil, which has enabled the United States to curb oil imports and pushed down energy prices.

Once a global leader in oil financing, BNP has withdrawn from funding coal mines and coal-fired power plants in recent years, along with other big European banks including Societe Generale SA, HSBC Holdings Plc and Credit Agricole SA. Energy excluding electricity represented 4 percent of BNP's total lending commitments, down from 6 percent in mid-2015, according to its filings.

"Our role is to help drive the energy transition," Chief Executive Officer Jean-Laurent Bonnafe said in the statement. "We're a long-standing partner to the energy sector and we're determined to support the transition to a more sustainable world."

Shale Surge

U.S. oil and gas output has surged over the past six years as drillers unlocked oil trapped in shale formations, partly by injecting water, sand and chemicals under high pressure to crack open reservoirs. Banned in France, the process known as hydraulic fracturing, or fracking, has been at the center of controversies about contaminating water sources and causing earthquakes.

Meanwhile, investor sentiment toward oil sands—a heavy crude that is capital intensive to extract—has soured as prices halved from above $100 a barrel over the past three years, with Royal Dutch Shell Plc selling out of its oil sands assets in Canada.

Last year, BNP decided to halt further development of its reserve-based lending business, the key avenue for financing shale companies. In 2012 the bank sold its reserve-based lending activities in the U.S. and Canada to Wells Fargo & Co., including $9.5 billion of loans.

BNP also repeated its target for 15 billion euros ($17.7 billion) in financing for renewable energy projects by 2020 and 100 million euros of investment in startups in areas such as power storage and efficiency.

U.K. Floats Nuclear Safeguards Bill for Post-Brexit Period

Posted October 11, 2017, 12:46 P.M. ET

By Alex Morales

The U.K. published draft legislation to create a domestic nuclear safeguards system that will replace provisions under the European Union's Euratom treaty once Britain has left the bloc.

The law aims to give certainty to the nuclear industry and sectors such as health care that Britain will maintain a stringent system of checks over radioactive materials after Brexit. The legislation became necessary after government deemed it impossible to withdraw from the EU without also leaving Euratom, putting in doubt everything from the transport of nuclear fuels to cancer treatments.

"We are bringing forward the U.K.'s first new nuclear power plants in a generation, and it is in our mutual benefit to maintain the successful working relationship we have now with Europe and the rest of the world on nuclear matters," Energy Minister Richard Harrington said in a statement. "This is what we will be looking to secure in negotiations with our partners."

Electricite de France SA has already begun work on a new nuclear plant at Hinkley Point in southwest England. Japanese utilities Hitachi Ltd. and Toshiba Corp. also plan new reactors in Britain.

No time line has yet been set for the passage of the law through Parliament, but it needs to be enacted before Britain's scheduled departure from both the EU and Euratom in March 2019. Euratom's main function is to account for nuclear material so it remains in peaceful uses.

Stops on New England Gas Orders Made Prices Rise, Group Says

Posted October 11, 2017, 01:21 P.M. ET

By Ryan Collins (Bloomberg News) and Adrianne Appel (Bloomberg BNA)

Power companies' approach to booking space on U.S. natural gas pipelines is becoming the latest flash point in the debate over whether to build more of the links in the historically constrained Northeast.

The Environmental Defense fund said in an Oct. 11 report that New England utility companies Eversource Energy and Avangrid Inc. have repeatedly reserved pipeline capacity for large gas deliveries, only to cancel their orders for the power-plant fuel at the last minute. It's a move that, the group said, amplified the run-up in electricity prices during cold snaps and cost customers $3.6 billion over three years.

The practice is permitted by regulations meant to ensure reliable gas supply, and Eversource says it didn't profit from it.

New England, where electricity prices are among the highest in the nation, has been embroiled in a debate over whether to allow companies to build new pipelines to carry more gas into the region. Many power plants use natural gas to generate electricity, and homeowners also use it for heating.

The Environmental Defense Fund said it is not anti-pipeline, but the findings are likely to be used by other environmental groups to argue that more pipelines are not needed.

Capacity Cancellations

The Environmental Defense Fund said in its report that the eleventh-hour capacity cancellations show the gas supply bottlenecks used to justify new pipelines may be less severe than they appear.

Eversource pulled out of a $3 billion New England pipeline proposal last year after a court ruling effectively blocked funding for the conduit.

"There were in some instances plenty of available capacity on the pipelines serving the populated areas of the Northeast that bore the brunt of the price increase," N. Jonathan Peress, senior director of energy market policy at the Environmental Defense Fund, said in a phone interview.

Pipelines may not be needed and may not be the most cost-effective solution to energy needs, but as markets operate now, lack of clear price data makes it impossible to tell, Jon Coifman, a spokesman for the environmental group, said.

Caroline Pretyman, a spokeswoman for Eversource, called the group's report misleading. A spokesman for Avangrid didn't respond to a request for comment.

"It is well documented that New England pipeline demand greatly exceeds the supply on cold days," Pretyman said. "Our gas distribution business is carefully regulated and the gas supply we purchase for our customers is a strict pass-through cost—meaning we don't benefit from higher prices derived from withholding."

Gas Reliance

Avangrid and Eversource, like many utilities, lock in the rights to purchase space on gas pipelines for the long term. In 2008, the U.S. Federal Energy Regulatory Commission amended rules to allow such companies to sell extra capacity not needed for customers to a secondary market, where power plants buy the fuel, according to the report. Because utilities are part of a regulated monopoly, most profits from the secondary market have to be given back to the ratepayers in the form of dividends.

But when utilities cancel scheduled pipeline capacity in the last hours of the trading day—too late for it to be resold—higher electricity bills can result, according to the Environmental Defense Fund report. It's a phenomenon that may become more pronounced as the nation becomes more reliant on gas-fired generation, Peress said.

"New England is probably the leading example in the country of what the implications of increased gas use and increased reliance on gas fired generators" are for consumers, he said.

Pipeline Construction Fight

"The allegations raised in the report are concerning," a spokeswoman for Attorney General Maura Healey (D) told Bloomberg BNA Oct. 10 in an email.

Healey's anti-pipeline stance is well known in Massachusetts: In November 2015, her office issued a report concluding that any additional energy needs of the next 15 years could be met through energy efficiency and demand response.

The fight over natural gas pipeline construction in New England came to a head in Massachusetts in August 2016, when the Supreme Judicial Court ruled that an Eversource and industry pipeline plan backed by Gov. Charlie Baker (R) could not go forward.

The Access Northeast Pipeline was proposed by Eversource, Spectra Energy and National Grid to bring more natural gas from New York starting in 2022. Massachusetts uses 42 percent of the

natural gas in New England, according to Eversource, and most of it fuels electricity plants.

Eversource Energy executive vice president Lee Oliver told investors in February the company was pursuing legislation in Massachusetts to give it permission to build the pipeline that was blocked by a Supreme Judicial Court ruling. Massachusetts lawmakers, however, say they have moved on from even considering a bill and instead are debating scores of bills this year that would strengthen the state's renewable energy portfolio.

"I hope [the study] puts a nail in the coffin of the idea that we have a problem with natural gas capacity and need another pipeline to solve it," David Ismay, an attorney with the Conservation Law Foundation, an environmental organization, told Bloomberg BNA Oct. 10.

10,000 Electric Cars Highlight Steep Path to India's Ambitions

Posted October 11, 2017, 8:42 A.M. ET

By P R Sanjai and Rajesh Kumar Singh

Prime Minister Narendra Modi has kicked off India's race to turn all new passenger car sales electric by 2030. The largest order has gone to a company that hasn't commercially started producing the vehicles.

Tata Motors Ltd. hasn't sold a single electric car yet, though Chief Executive Officer Guenter Butschek says its late-mover status is an advantage at a time when technology advances are leading to a fall in costs. Tata along with Mahindra and Mahindra Ltd.—India's sole electric carmaker that plans to boost its vehicle manufacturing capacity to 5,000 units a month—underscore the distance to be covered when compared to China and the U.S.

Ramping up production of electric vehicles in a country where carmakers sell 2.5 million fossil fuel powered units annually is just one part of the problem, finding uninterrupted power supply is another. In addition, non-existent charging infrastructure further widens the gap between India and China, the current global leader. It had 336,000 new registrations in 2016, more than double of 160,000 in the U.S., while India had just 450 cars hitting the roads, according to the International Energy Agency.

"The government needs to set up charging infrastructure to make this electric business model sustainable," said Ram Kidambi, partner at consultancy firm A.T. Kearney. "Indian automotive companies may be able to supply electric vehicles meeting the deadline. But the problem is what do the car owners do without the charging infrastructure?"

Falling Prices

The pursuit for all electric new car sales in less than a decade-and-a-half is part of Modi's plan to champion the cause of combating climate change. Bloomberg New Energy Finance predicts the target will be "incredibly difficult" in the absence of a clearly defined policy and without subsidies. Chinese firms have benefited from generous funding offered by various regional governments.

India currently has about 350 charging points while China had about 215,000 installed at the end of 2016, according to the BNEF report. It will take about 15 years in India for total cost of ownership for electric vehicles to reach parity with conventional vehicles, around the time the south Asian nation

plans to end sale of fossil fueled cars.

India's EV target appears a little too ambitious, said Pawan Goenka, managing director at automaker Mahindra & Mahindra. "It would be little more moderate, though lot more aggressive growth path than what we have seen in other countries, but more moderate than being 100 percent electric vehicles by 2030."

Modi's administration is hoping to fast-track change by leading from the front. The government-backed Energy Efficiency Services Ltd. (EESL), which is tasked with helping the nation reduce emissions and curb fuel imports, is buying 10,000 battery-powered cars from Tata Motors and Mahindra & Mahindra to replace petrol and diesel cars used by the federal government in about four years.

Revenue Source

Electric vehicles open up a new source of revenue for India's money-losing power retailers and could attract their enthusiasm in building the charging infrastructure, according to Shantanu Jaiswal, head of India research at Bloomberg New Energy Finance in New Delhi.

"In areas where the traffic volumes are high, it makes good business sense for distribution utilities," Jaiswal said. "In rural areas though, where concentration of electric cars may not be very high, getting investments may still be a challenge, as we have seen in household electrification."

Automobile ownership in India remains low, with only 18 cars per 1,000 citizens compared to nearly 69 in China and 786 for the U.S., a study by Niti Aayog, a policy planning body, and Colorado-based Rocky Mountain Institute. The scarcity of privately owned four-wheel vehicles and a large number of two-wheelers will enable Indians to leap frog into electric cars space as higher demand could lead to lower prices.

That's what Tata and Mahindra are betting on. Tata is running trials of its electric buses after developing the plug-in versions of its Bolt and Tiago hatchback models. Mahindra has plans to expand its capacity to make electric vehicles almost 10-fold to 5,000 units a month in two to three years.

Tata Motors has a two part strategy—one which includes selling cars to the government—and then rolling out electric buses and trucks to cater to the mass transportation segment. Plans for both are ready, Tata's Butschek said in an interview.

"We have invested a lot in electric vehicle business although we may not be outspoken about the same," he said.

Subject: BREAKING NEWS: Judge blocks Trump's latest travel ban order

A federal judge in Hawaii on Tuesday blocked the latest version of President Donald Trump's travel ban.

U.S. District Court Judge Derrick Watson granted a temporary restraining order, concluding that Trump appeared to run afoul of federal immigration law when he issued a proclamation last month restricting travel to the U.S. by citizens of eight countries.

Six of the eight nations are majority Muslim, but the judge's ruling does not focus on that issue.

The restraining order, sought by the state of Hawaii, a local Muslim cleric and others, came hours before the restrictions in the new directive were set to kick in at midnight.

Subject: BREAKING NEWS: Court rejects Trump administration attempt to include extended family in travel ban

An appeals court on Thursday rejected the Trump administration's attempt to deny grandparents, aunts, uncles and cousins of Americans an exemption from President Donald Trump's travel ban executive order.

A three-judge panel of the 9th U.S. Circuit Court of Appeals unanimously declined to overturn a district court judge's ruling that the administration was taking too narrow a view of an exception the Supreme Court carved out from the travel ban in June.

The appeals court panel also cleared the way for a greater flow of refugees, declining to disturb a lower court order that those already assigned to resettlement agencies can enter the U.S. despite Trump's order.

The revised travel ban Trump issued in March suspends issuance of U.S. visas to residents of six majority-Muslim countries and halts admission of refugees from across the globe. The Supreme Court has set arguments on the ban's legality for October 10.

Subject: Court rejects bid to lift EPA delay of chemical safety rule

By Alex Guillén

08/30/2017 04:28 PM EDT

The U.S. Court of Appeals for the D.C. Circuit today declined a request from environmental groups and United Steelworkers to immediately reinstate a chemical safety rule that was put on hold by EPA Administrator Scott Pruitt.

Pruitt delayed the rule, known as the Risk Management Plan update or the Chemical Disaster Rule, through 2019, saying he needed time to review and potentially revise or repeal it.

In a short order today, a three-judge panel said only that the environmentalists and labor group "have not satisfied the stringent standards for a stay pending court review." However, the judges did put the case on a fast track and gave the parties until Sept. 13 to suggest an expedited briefing schedule.

The order was issued by Judges Brett Kavanaugh, a George W. Bush appointee, and Cornelia Pillard and Robert Wilkins, both Barack Obama appointees.

The rule, written in the wake of several high-profile deadly explosions at chemical and fertilizer facilities, set tighter requirements for safety and reporting.

WHAT'S NEXT: Although the case was placed on a fast track, the suit may not see oral arguments until late this year or 2018.

Subject: POLITICO's Morning Energy: Trump launches new salvo to speed project permitting — Another twist in Sumner nuclear saga — LCV campaign targets monument review

By Anthony Adragna | 08/16/2017 10:00 AM EDT

With help from Alex Guillén, Darius Dixon, Doug Palmer and Emily Holden

ANOTHER ENVIRONMENTAL REVIEW PUSH THUDS: Before he veered off-message by arguing there were "very fine" people among the neo-Nazis and KKK members in Charlottesville, President Donald Trump actually signed an executive order Tuesday that aims to hit a two-year goal for completing federal environmental permitting for infrastructure projects by designating a lead federal agency for each major project. "It's going to be a very streamlined process," he said at a Trump Tower press conference. "And, by the way, if it doesn't meet environmental safeguards, we're not going to approve it." The order tasks the White House Council on Environmental Quality (still without a nominee to lead it) with developing a government-wide action plan to speed environmental permitting reviews and with sorting out any disputes between agencies.

Most controversial among the order's provisions was the revocation of an Obama-era flood standard requiring new federally funded projects be built to withstand the stronger storms likely fueled by climate change - a move that earned broad condemnation. R.J. Lehmann, a senior fellow with the conservative R St. Institute, called the revocation "shortsighted and ill-considered." Republican Rep. Carlos Curbelo , whose South Florida district sees frequent flooding, called Trump's decision "irresponsible and it will lead to taxpayer dollars being wasted on projects that may not be built to endure the flooding we are already seeing and know is only going to get worse." And Sierra Club Executive Director Michael Brune said axing the standard was "actively wasting taxpayer dollars, endangering schools and hospitals, and threatening the lives of people around the country for no other reason than his apparent contempt for the public."

Supporters of Trump's reversal of the Obama-era initiative were limited mainly to home builders and some Republicans in Congress. "President Trump made the correct decision to repeal this onerous regulation that was written to make a political statement on climate change rather than for practicality," Louisiana Rep. Ralph Abraham , whose state has been ravaged by more frequent flooding, said in a statement. And National Association of Home Builders Chairman Granger MacDonald praised Trump's action to kill the standard that would "needlessly hurt housing affordability" and said it would "provide much-needed regulatory relief for the housing community and help American home buyers."

What about infrastructure? Trump attempted to call attention to his $1 trillion initiative to rebuild the nation's roads, tunnels and bridges - but provided hardly any detail about what that forthcoming proposal may actually contain, Pro Transportation's Lauren Gardner reports. National Economic Council Chairman Gary Cohn said the White House continued to hope action on infrastructure would come this year but told reporters it would "come on the heels of taxes," another complex issue without a firm proposal ready for congressional consideration.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the American Chemistry Council's Andrew Fasoli was first to name Liechtenstein as the country Snoop Dogg tried to rent out. For today: What iconic rock n' roller died 40 years ago today? (No Googling, as always; h/t reader Craig Meyers.) Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @A nthonyAdragna, @Morning_Energy and @POLITICOPro.

SCANA PULLS ABANDONMENT APP FOR SUMMER (FOR THE MOMENT): After markets closed on Tuesday, SCANA announced that it is yanking the paperwork it filed with regulators to abandon the V.C. Summer nuclear project. Nuclear supporters shouldn't get too excited just yet. Since it decided to pull out of the project two weeks ago, the company brass have met with state lawmakers concerned about the political and financial fallout of Summer's undoing-and the billions of dollars SCANA intends to pass onto its customers. "The purpose of these ongoing meetings is to discuss their concerns and to explain the path that led us to the abandonment decision," SCANA CEO Kevin Marsh said in a statement. Terminating the project, he reiterated, was their "least desired option" but still "the prudent decision."

South Carolina's 2007 Base Load Review Act established a six-month clock for regulators to review the abandonment plan, while the state's governor and legislators are scrambling for options to minimize the impact on consumers or rescue the project. Marsh is holding a conference call with analysts at 8:30 a.m. today.

ME FIRST - GREENS LAUNCH 'FINAL PUSH' AGAINST MONUMENT REVIEW: The League of Conservation Voters is launching a final $100,000 push today across multiple platforms against the Trump administration's review of nearly two dozen previously-designated national monuments. The campaign will urge people to urge Interior Secretary Ryan Zinke against making changes to the designations and promote videos highlighting support of public lands. LCV also plans to use Facebook and Instagram to push Reps. Paul Gosar, Steve Pearce, Doug LaMalfa and Doug Lamborn to stop their support of the review.

BRING ON THE LOBBYING MUSCLE: Five European natural gas companies hoping to build a controversial pipeline to deliver Russian gas to Germany hired a U.S. lobbying firm this month, Pro's Ben Lefebvre reports, citing disclosure forms. The five European companies - Shell International, Engie, Uniper SE, OMV Aktiengesellschaft and Wintershall Nederland - will be represented by McLarty Inbound lobbyists including Richard Burt, a former ambassador to Germany. Edward Chow, a senior fellow at the Center for Strategic and International Studies' Energy and National Security Program, said the companies could be reacting to the combination of a more aggressive U.S. energy policy under Trump and Congress' tougher line on Russia.

COAL VERSUS THE WORLD: The coal lobby has taken some offense to an initial draft of the Department of Energy's upcoming grid study. The American Coalition for Clean Coal Electricity wants the report to pin losses in coal and nuclear generation on natural gas and Obama-era regulations on fossil fuels, not renewable power. The group wants DOE to look at how increasing reliance on natural gas might cause grid reliability problems when gas is not available, according to a new paper . ACCCE also counters the draft study's findings that EPA

regulations played only a minor role in coal retirements and that coal has been one of "the largest energy subsidy beneficiaries."

COURT STOPS MONTANA COAL MINE EXPANSION: A U.S. District Court judge in Montana this week tossed out the Interior Department's 2015 approval of a coal mine's expansion in the state, ruling that the agency failed to study the climate change-related effects of transporting and burning that coal. Environmental groups argued that Interior had calculated the economic benefits of expanding Signal Peak Energy's Bull Mountain mine (including local employment and state tax revenue) without also considering the costs of burning that coal. Judge Donald W. Molloy ag reed, and was especially critical of Interior for concluding that the effect of the expansion's emissions would be "too uncertain to predict" while also concluding that the expansion would have no effect "because other coal would be burned in its stead."

"This conclusion is illogical, and places the Enforcement Office's thumb on the scale by inflating the benefits of the action while minimizing its impacts," he wrote in his Monday ruling. Molloy, a Clinton appointee, vacated Interior's previous environmental assessment, ordered a halt to any mining in that area. Interior must revisit these issues and likely conduct a full environmental impact statement if mining is to resume. Environmentalists quickly cheered the ruling. "The company and a government agency tried to cut corners once again. Thankfully the court didn't let that happen," said Anne Hedges of the Montana Environmental Information Center.

ITC HEARS SOLAR TRADE TESTIMONY: Industry groups led by the Solar Energy Industries Association, state government officials and representatives of foreign governments all urged the International Trade Commission at a hearing Tuesday not to grant petitions from U.S. solar manufacturers Suniva and SolarWorld Americas for steep tariffs on imported solar cells and modules, Pro Trade's Luis Sanchez reports . Some like Sibylle Zitko, a representative for the European Commission, argued "'inefficiencies" and "bad investments" were more to blame for the U.S. manufacturers' struggles rather than cheap solar imports. ITC has until Sept. 22 to make an injury determination and if the commission sides with Suniva and SolarWorld then Trump would have until Jan. 12, 2018, to make a decision on a remedy and present his plan to Congress.

WHAT A CRAZY STORY: Did you know EPA has a fugitive website? ME neither, but it now boasts a new member thanks to a case involving radioactive waste and a prison escape. James Kenneth Ward illegally dumped radioactive waste at several spots throughout North Dakota but then escaped while on prison transport in Wyoming. He's considered violent and dangerous. More here.

OIL SECTOR: ISDS MUST STAY IN NAFTA: The American Petroleum Institute is insisting that access to investor-state dispute settlements remain a part of NAFTA, which is the subject of trade talks happening this week. "ISDS is a neutral, international arbitration procedure," the group said in a new brief on its website. "ISDS is necessary to ensure that, when US oil and natural companies invest abroad, they can seek protection for their investments if they do not have access to developed and independent court systems."

On the other side, Sen. Sherrod Brown came out hard against the provision, writing in an op-ed that the new NAFTA must "do away with special courts that allow multinational corporations to

undermine U.S. laws and take advantage of American workers. These corporate courts are called investor-state dispute settlement and they've got to go."

NEW EFFORT TO BOOST CORPORATE SUSTAINABILITY: The Harvard Business Review, along with top corporate leaders, is today launching a new effort called the Future Economy Project to help companies lay out blueprints for improving their sustainability efforts. Partners in the effort include: Virgin's Richard Branson; Instagram COO Marne Levine; Dow Chemical's Andrew Liveris; PepsiCo's Indra Nooyi; former Treasury Secretary Hank Paulson; Unilever's Paul Polman and Alphabet's Eric Schmidt. The effort will result in a list of principles.

PENCE CONFIDENT ABOUT VENEZUELA SOLUTION: Vice President Mike Pence expressed confidence economic and diplomatic pressure would resolve Venezuela's ongoing woes during a Tuesday speech in Buenos Aires, Argentina. "We will continue to act until the Maduro regime restores democracy, holds free and fair elections, releases all of its political prisoners, and ends the repression of the Venezuelan people," he said.

REPORT: HFC DECISION COULD BOOST POLLUTION: A new research note from Energy Innovation concludes a federal appeals court ruling striking down an effort from EPA to ban hydrofluorocarbons could lead to the equivalent of between 3.6 billion and 9.5 billion metric tons of carbon dioxide in the atmosphere in 2050, compared to emissions that would have been avoided with the rule in place. It also warns the court's decision, which is likely to be appealed, could hamper U.S. options for upholding its international commitments made last year to reduce HFC emissions.

ANOTHER AD HITS VIRGINIA PIPELINE: The Natural Resources Defense Council released an ad Tuesday opposing construction of Dominion Energy's Atlantic Coast natural gas pipeline and urging Virginia to conduct a far more thorough environmental review of the proposed project. The ad argues that the company has a history of water pollution violations associated with their pipelines and asks "how can we trust them to build an unnecessary 600-mile pipeline?" It's backed with a six-figure ad buy and encourages Virginians to weigh in during the public comment period.

NEW CLIMATE TOOL FOR CITIES UNVEILED: Quantified Ventures and Neighborly, backed with financial support from the Rockefeller Foundation, are unveiling a challenge today to have two U.S. cities issue the first publicly marketed environmental impact bonds. Proceeds from the bonds will go toward green infrastructure projects like stormwater management or other resilience efforts aimed at protecting vulnerable or low-income communities.

MOVER, SHAKER: Connecticut's John Betkoski III has assumed the role of president of the National Association of Regulatory Utility Commissioners; he replaces Robert Powelson, who recently became a FERC commissioner.

TWEETED: Former New Jersey GOP Gov. and EPA Administrator Christine Todd Whitman on Tuesday in response to a retweet of a train running over someone with a CNN logo for a head. "Have you no shame @realDonaldTrump? Retweeting a Trump train running over a reporter isn't even acting like an adult, much less a president."

Subject: Steelers team boycotts anthem

Every player on the Pittsburgh Steelers except one stayed in the locker room during the National Anthem for Sunday afternoon's game against the Chicago Bears, an apparent pushback against President Donald Trump's statements over the weekend attacking the NFL. That player stood near the entrance to the field.

The action by the Steelers came as an increasing number of players throughout the league - including members of the two NFL teams playing in London - were kneeling or otherwise making gestures in the spirit of former 49ers quarterback Colin Kaepernick, who remains without an NFL contract.

Driving the Day

Good Wednesday morning. SPOTTED: Jared and Ivanka at Masseria last night... **SEN. TIM SCOTT (R-S.C.)** having dinner with J.D. Vance, Sean Parker and Steve Case at Fiola Mare last night.

WHAT D.C. WILL BE TALKING ABOUT TODAY ...

-- SPEAKER PAUL RYAN is meeting with **HOUSE MINORITY LEADER NANCY PELOSI** at 5 p.m. to discuss legislative options to protect Dreamers, Heather Caygle scoops. http://politi.co/2w7Tf8s To say this is an early-stage conversation would be an understatement. They're just touching gloves. (**CHEAT SHEET,** courtesy Steve Shepard and the good folks at Morning Consult -- "Poll: Majority wants Congress to establish path to citizenship for DACA recipients" http://politi.co/2h0Bpx2)

-- PRESIDENT TRUMP is meeting with a bipartisan group of moderate House lawmakers, including the Problem Solvers Caucus. http://politi.co/2joKaBV **REMEMBER, MR. PRESIDENT:** Often times, conservatives have enough clout to outweigh anything moderates want to do.

-- SEN. TIM SCOTT will be at the White House this afternoon to meet with the president.

THE BIG PICTURE -- THE UNTOUCHABLE PRESIDENT - "Teflon Donald Trump: Democrats have attacked the president every which way, but polling and focus groups show none of it's working," by Isaac Dovere: "Democrats tried attacking Donald Trump as unfit for the presidency. They've made the case that he's ineffective, pointing to his failure to sign a single major piece of legislation into law after eight months in the job.

They've argued that Trump is using the presidency to enrich himself, and that his campaign was in cahoots with Russia. None of it is working. Data from a range of focus groups and internal polls in swing states paint a grim picture for the Democratic Party heading into the 2018 midterms and 2020 presidential election.

"It suggests that Democrats are naive if they believe Trump's historically low approval numbers mean a landslide is coming. The party is defending 10 Senate seats in states that Trump won and needs to flip 17 House seats to take control of that chamber. The research, conducted by private firms and for Democratic campaign arms, is rarely made public but was described to POLITICO in interviews with a dozen top operatives who've been analyzing the results coming in." ***With cameos by Bill Burton, Matt Canter, Steve Israel, Guy Cecil, Peter Hart, Anson Kaye, Ali Lapp, and Celinda Lake***
http://politi.co/2y4WNWa

JOSH DAWSEY SCOOPS -- FLYNN BACK ON THE HOT SEAT: "Flynn backed for-profit nuclear scheme inside Trump transition": "As a top official in President Donald Trump's transition team, Lt. Gen. Michael Flynn actively promoted a private-sector scheme to build dozens of nuclear reactors across the Middle East known informally in the transition as the 'Marshall Plan.' But he did not publicly disclose that backers of the plan had paid him at least $25,000. Flynn communicated during the transition with the backers of the for-profit plan, billed as a way of strengthening ties between the U.S. and Arab allies looking to develop nuclear power capability.

"Meanwhile, the Trump adviser expressed his support for the plan with people inside the transition-and discussed its merits with others beyond Trump Tower, according to sources within and close to the Trump team at that time. Flynn's consulting work for the company has been previously reported, but not the extent of his involvement during the Trump transition, nor the full amount he was paid for it. ... Robert Kelner, a Flynn lawyer, declined to comment.

"Flynn has not been accused of wrongdoing in the matter, and it is unclear if he faces any legal liability. But the new details underscore the way Flynn seemed to commingle his private consulting work prior to Trump's election and his semi-official duties afterward-something that has drawn legal scrutiny and created political headaches for a Trump White House that granted him access to the government's deepest secrets."
http://politi.co/2xYtDHy

THE TAX REFORM PUSH -- The White House is pushing outside groups to ramp up its messaging machine to launch a full on sales pitch for a tax overhaul. **NANCY COOK** emails us: "[O]n Tuesday, a member of the White House press shop blasted out an email to outside stakeholder groups titled 'Trump Tax Cut Blitz!' with suggested articles to push out and tweet about the administration's efforts. The email also listed five different events that the president, senior administration officials, and Cabinet secretaries including Treasury Secretary Mnuchin and SBA Administrator Linda McMahon were participating in to boost a potential tax overhaul, according to the note obtained by POLITICO."

HOUSE WAYS AND MEANS CHAIRMAN KEVIN BRADY -- along with GOP leadership -- is holding a Republican conference meeting today on tax reform. **COLIN WILHELM** notes to us that "No new details expected, just early effort to engage members more and avoid the feeling of a top down effort."

-- WAPO'S DAMIAN PALETTA, SEAN SULLIVAN and **KELSEY SNELL: "Trump's push for tax cuts is coming up against a familiar challenge: Divided GOP":** "Trump advisers and top congressional leaders, hoping to assuage conservatives hungry for details, are working urgently to assemble a framework that they hope to release next week, according to White House aides and lawmakers. But after months of negotiations, the thorniest disagreement remains in view: how to pay for the giant tax cuts Trump has promised.

"Negotiators agree with the goal of slashing the corporate income tax rate and also cutting individual income taxes. But they have yet to agree about which tax breaks should be cut to pay for it all. In private talks, Trump advisers are pressing to eliminate or reduce several popular tax deductions, including the interest companies pay on debt, state and local income taxes paid by families and individuals, and the hugely popular mortgage interest deduction." http://wapo.st/2woPkPA

-- NANCY COOK and **RACHAEL BADE: "Republicans suspicious of 'Democrats' Cohn and Mnuchin as tax plans take shape:** Conservatives are wondering if Gary Cohn and Steven Mnuchin will work to keep the GOP's right flank happy on tax reform rather than appeal for Democratic votes to get a package passed" http://politi.co/2xjVi8y

BREAKTHROUGH -- "Senate Finance leaders announce 5-year CHIP deal," by Rachana Pradhan: "The Senate Finance Committee has agreed to a five-year funding extension for the Children's Health Insurance Program, the tax-writing panel's top Republican and Democrat announced Tuesday evening. The announcement from Chairman Orrin Hatch (R-Utah) and ranking member Ron Wyden (D-Ore.) came with Congress careening toward an end-of-the-month deadline to extend federal funding for a program that covers roughly 9 million low-income children. ... The proposed legislation would maintain Obamacare's 23 percent increase in the federal matching rate to states for 2018 and 2019 and begin to ratchet it down in 2020, according to GOP and Democratic aides. The bump is set at 11.5 percent in 2020 and would be totally eliminated starting in 2021." http://politi.co/2wZRs3K

****** **A message from CTIA and America's wireless industry:** The global race to deploy 5G wireless is on-and America needs to win. Government action on spectrum and infrastructure policy will allow U.S. wireless companies to invest $275 billion, create more than 3 million jobs, and add $500 billion to the economy, according to Accenture. Learn more at CTIA.org. ******

FOR YOUR RADAR -- "White House Weighs Lowering Refugee Quota to Below 50,000," by NYT's Julie Hirschfeld Davis and Miriam Jordan: "The Trump administration

is considering reducing the number of refugees admitted to the country over the next year to below 50,000, according to current and former government officials familiar with the discussions, the lowest number since at least 1980. ... In his first days in office he took steps to radically reduce the program that resettles refugees in American cities and towns, capping the number admitted at 50,000 as part of his executive order banning travel from seven predominantly Muslim countries. ... But in recent weeks, as the deadline approached for Mr. Trump to issue the annual determination for refugee admissions required by the Refugee Act of 1980, some inside the White House - led by Stephen Miller, Mr. Trump's senior adviser for policy - have pressed to set the ceiling even lower." http://nyti.ms/2f5pWfj

--WAPO: "Supreme Court agrees with Trump administration, says some refugees can be barred for now": http://wapo.st/2f4iDV1

-- "Top White House Official to Discuss Climate Change at U.N.," by NYT's Lisa Friedman: "Gary D. Cohn, the chief White House economic adviser, is convening senior climate and energy ministers from about a dozen nations in advance of next week's United Nations General Assembly meeting, the White House confirmed Tuesday. The breakfast in New York next Monday will be held against a backdrop of devastation in the United States and the Caribbean from two monster hurricanes that scientists say may have been made more ferocious by warming trends." http://nyti.ms/2vT3ZDa

AMAZON'S TOP SELLING BOOKS -- 1. Hillary Clinton: "What Happened." ... 3. Katy Tur: "Unbelievable: My Front-Row Seat to the Craziest Campaign in American History".

THE LATEST ON NORTH KOREA ...

-- "North Korea defiant over U.N. sanctions as Trump says tougher steps needed," by Reuters' Jack Kim in Seoul and Roberta Rampton in Washington: "The North's Foreign Ministry said the resolutions were an infringement on its legitimate right to self-defence and aimed at 'completely suffocating its state and people through full-scale economic blockade.' 'The DPRK will redouble the efforts to increase its strength to safeguard the country's sovereignty and right to existence and to preserve peace and security of the region by establishing the practical equilibrium with the U.S.,' it said in a statement carried by the official KCNA news agency." http://reut.rs/2y4pbaR

-- "Amid NKorea crisis, Mattis focuses on U.S. doomsday arsenal," by AP's Robert Burns: "As North Korea flaunts its new nuclear muscle, Defense Secretary Jim Mattis is spotlighting the overwhelming numerical superiority of America's doomsday arsenal. On Wednesday he is dropping in on ground zero of American nuclear firepower: Minot Air Force base in North Dakota, home to more than 100 land-based nuclear missiles as well as nuclear bomb-toting aircraft. He also will receive briefings at Strategic Command, whose top officer would command nuclear forces in war." http://politi.co/2xYiQNr

WHAT FOGGY BOTTOM IS READING -- "U.S. Is Said to Test Support for

Extending Iran Nuclear Limits," by Bloomberg's Nick Wadhams: "Secretary of State Rex Tillerson is turning to U.S. allies in Europe as he seeks a way to salvage the 2015 nuclear accord with Iran a month before President Donald Trump faces a deadline to decide whether to walk away from what he's called 'the worst deal ever.' U.S. diplomats have approached European officials to see if they would join in demanding an extension to limits on Iran's uranium enrichment that are set to expire in 2025." https://bloom.bg/2joQdX9

PUTIN WATCH -- "Russia Sought A Broad Reset With Trump, Secret Document Shows," by BuzzFeed's John Hudson: "In the third month of Donald Trump's presidency, Vladimir Putin dispatched one of his diplomats to the State Department to deliver a bold proposition: the full normalization of relations between the United States and Russia across all major branches of government. The proposal, spelled out in a detailed document obtained by BuzzFeed News, called for the wholesale restoration of diplomatic, military, and intelligence channels severed between the two countries after Russia's military interventions in Ukraine and Syria. The broad scope of the Kremlin's reset plan came with an ambitious launch date: immediately." http://bzfd.it/2f3wdrO

TRUMP INC. -- "How India Became the World Leader in Trump Projects," by Blake Schmidt in Bloomberg: "In western India, a pair of shiny black Trump buildings with gold insignia tower over the city of Pune. In nearby Mumbai, a 75-story Trump skyscraper will be one of the tallest in the megacity. In a swanky suburb of Delhi, two Trump partners have big plans. And in Kolkata, a new Trump tower is under way. ... India has become the only major developing country where his business is roaring. It has the most construction projects with Trump licensing deals of any country outside of the U.S. ... Asked about potential conflicts in India, the Trump Organization said it's 'very proud of the success we have achieved in that market with five active properties under various stages of development.'" https://bloom.bg/2xYHrS7

FROM LONDON PLAYBOOK -- WOODY SPEAKS: "The new U.S. ambassador in London Woody Johnson made his inaugural speech last night and he had words to cheer the hearts of Brexiteers. 'As far as the president is concerned, the United Kingdom, our most enduring ally, is always at the head of the line,' Johnson said. 'The United States is committed to standing with the U.K. through Brexit.' He also sought to reassure Brits that he is a long-standing friend of President Trump, and that 'when you get to know him, you'll like him.'" ***Prepared remarks*** http://bit.ly/2wUYec2 ... ***Subscribe to London Playbook*** http://politi.co/2xfDPuK

-- SECRETARY OF STATE REX TILLERSON is in London today.

THE JUICE ...

-- THE SENATE LEADERSHIP FUND, the outside group aligned with GOP leadership, continues to pound Roy Moore in the Alabama Senate race. The group dropped $714,075 in TV and radio ads this week, according to an FEC filing.

-- NANCY GIBBS is stepping down as editor-in-chief of Time after 32 years with the company and 4 years leading the magazine. Rich Battista and Alan Murray have not yet named her replacement. ***Gibbs' staff memo*** http://politi.co/2wZO5sl ... ***Battista and Murray email*** http://politi.co/2h05ey4

-- SPEAKER PAUL RYAN in August "transferred $2 million to the NRCC, bringing his total haul for House Republicans' campaign arm to nearly $30 million in 2017," Elena Schneider reports. "Ryan's fundraising accounted for more than half of what the NRCC raised in August, just before a round of GOP retirements put more battleground districts at risk ahead of a potentially difficult -- and expensive -- 2018 election for House Republicans." http://politi.co/2w7f1Jn

POLITICO celebrated the launch of its London Playbook last night at the Institute for Government in London. POLITICO European Editor Matt Kaminski and POLITICO CEO Patrick Steel kicked off the soiree. London Mayor Sadiq Khan sent kind words. The fete brought together Anna, EU Playbooker Ryan Heath and London Playbooker Jack Blanchard for the first time. ***Pics*** http://politi.co/2wWBzfv

JOE POMPEO in Vanity Fair -- **"Maggie Haberman and Glenn Thrush Take the Next Step with Trump":** "The announcement that New York Times White House correspondents Maggie Haberman and Glenn Thrush have agreed to do a Trump book for Random House, as I first reported Tuesday, was both bombshell journalism news and something of a foregone conclusion. ...

"But the duo's ambition for the as-yet-untitled book ... is to do something that goes beyond the palace intrigue (though there'll be plenty of that as well) to tell a larger story about who Trump is, why the country chose him, and what it all says about America and where we're headed. They've told people that they want the book to be 'durable,' and that, 'We want this to mean something.' ...

"The Haberman-Thrush collaboration enters an already-crowded field of Trump books.Joshua Green's recently published account of the Donald Trump-Steve Bannon partnership reached No. 1 on the New York Times list. Mark Halperin and John Heilemann are working on a third installment in their Game Change series; Politico Playbook columnists Anna Palmer and Jake Sherman have inked a deal for a book on the backroom dramas of Capitol Hill; Amy Chozick and Katy Tur landed campaign memoirs; and Rosie Gray has a biography of Breitbart News in the making." http://bit.ly/2eVUfBw

--NYT: "Twelve, an imprint of Grand Central Publishing, will release the book by Michael Isikoff and David Corn in March. According to the publisher, the book, tentatively titled 'The Russian Connection,' will go behind the scenes of Russia's attempts to influence the election, and will also analyze Trump's decades-long dealings with Russia as well as the historical relationship between the two countries." http://nyti.ms/2y4i0zB

PHOTO DU JOUR: Jean Chatelier walks through a street flooded by Hurricane Irma to retrieve his uniform from his house to return to work today at a supermarket in Fort Myers, Fla., on Sept. 12. | David Goldman/AP Photo

JUST POSTED - JIM RUTENBERG in the upcoming Times Magazine, **"RT, Sputnik and Russia's New Theory of War:** How the Kremlin built one of the most powerful information weapons of the 21st century - and why it may be impossible to stop." http://nyti.ms/2fhCOM6

DATAPOINT -- "Sanders will introduce universal health care, backed by 15 Democrats," by WaPo's Dave Weigel: "'This is where the country has got to go,' Sanders said in an interview at his Senate office. 'Right now, if we want to move away from a dysfunctional, wasteful, bureaucratic system into a rational health-care system that guarantees coverage to everyone in a cost-effective way, the only way to do it is Medicare for All.' Sanders's bill, the Medicare for All Act of 2017, has no chance of passage in a Republican-run Congress. But the bill is already backed by most of the senators seen as likely 2020 Democratic candidates -- if not by most senators facing tough reelection battles in 2018." http://wapo.st/2x0AG4V

JON MEACHAM in the NYT, **"'What Happened'? They Lost. With Her Memoir, Hillary Clinton Joins a Haunted Club":** "She had packed for victory. There had been a white suit for election night at the Javits Center beneath a glass ceiling; white was the color of the suffragists who, a century earlier, had at last won the franchise for women. But now, in the morning hours after Donald J. Trump's White House upset, Hillary Clinton donned gray and purple for her concession to the country. ... For there had been a different plan.

"The gray and purple, she writes, was the 'one I had intended to wear on my first trip to Washington as President Elect.' And so Clinton's starkly titled 'What Happened' now joins what we might call the Kempton Collection, after the New York columnist Murray Kempton, who always believed that the real story was to be found not amid the sprays of Champagne among winners but in the tragic bleakness of the losers' locker rooms." http://nyti.ms/2eUxNbR

BEN SMITH in BuzzFeed, **"There's Blood In The Water In Silicon Valley: The bad new politics of big tech":** "The blinding rise of Donald Trump over the past year has masked another major trend in American politics: the palpable, and perhaps permanent, turn against the tech industry. The new corporate leviathans that used to be seen as bright new avatars of American innovation are increasingly portrayed as sinister new centers of unaccountable power, a transformation likely to have major consequences for the industry and for American politics. That turn has accelerated in recent days: Steve Bannon and Bernie Sanders both want big tech treated as, in Bannon's words in Hong

Kong this week, 'public utilities.'

"Tucker Carlson and Franklin Foer have found common ground. Even the group No Labels, an exquisitely poll-tested effort to create a safe new center, is on board. Rupert Murdoch, never shy to use his media power to advance his commercial interests, is hard at work. 'Anti-trust is back, baby,' Yelp's policy chief, Luther Lowe, DM'd me after Fox News gave him several minutes to make the antitrust case against Yelp's giant rival Google to its audience of millions." http://bzfd.it/2wYGQRf

****** **A message from CTIA and America's wireless industry:** Tomorrow's 5G networks will create 3 million jobs, add $500 billion to the economy, and fuel innovation and entrepreneurialism across every sector. If policymakers move quickly to release more spectrum and modernize infrastructure rules, the wireless industry stands ready to invest $275 billion to build these next-gen networks, according to Accenture. This will drive breakthrough advancements in remote health care, connected vehicles, energy, education and beyond-making our lives better and safer. But the race to deploy 5G wireless networks is underway-and we're at a critical moment. The EU, China, Japan, South Korea and others are doing everything they can to win. If policymakers act now, the U.S. can continue our global leadership in wireless. Learn how at CTIA.org. ******

SCOTUS WATCH -- "Supreme Court blocks ruling against Texas redistricting," by Josh Gerstein: "A sharply divided Supreme Court has blocked a lower court ruling that a congressional district map Texas adopted in 2013 violates the Constitution and is the product of intentional racial discrimination. The high court announced Tuesday night that the justices voted, 5-4, along partisan lines to block a three-judge panel's ruling that Texas needed to redraw the maps or face having them redrawn by the court. The stay will remain in place until the Supreme Court receives and acts on an appeal expected to be filed by the State of Texas." http://politi.co/2xwTBFY

FUN READ -- "Trump ambassador qualifications: Wrote a cookbook, sang in a church choir," by Yahoo's Olivier Knox: "Following in his predecessors' footsteps, President Trump has tapped generous political supporters to join the ranks of America's ambassadors. Among their official, administration-vetted qualifications: church choir singer, cookbook writer, and Fox News punditry. ... [T]he 'Certificates of Competency' that the Trump administration is required to produce for the Senate Foreign Relations Committee can make for interesting reading." https://yhoo.it/2fhbhur

****** **A message from CTIA and America's wireless industry:** We need new rules for new 5G networks. New policies that will allow the U.S. to win the race to 5G and enable breakthrough advancements in healthcare, transportation, energy and more. First, a pipeline of low-, mid-, and high-band spectrum will help meet today's mobile needs and enable the 5G networks of tomorrow. Second, every level of government must modernize their rules for the building of small cell wireless infrastructure. Third, permanent and common sense federal regulations for interstate services like mobile broadband will preserve an open internet and protect consumer privacy while promoting innovation and investment. Finally, America's tax structure must be updated to spur billions of dollars in new 5G investment. Learn more about how wireless is working to invest in America's future at CTIA.org. ******

Subject: Federal Insider: Induction of union-busting Reagan into Labor's Hall of Honor shocks union

Induction of union-busting Reagan into Labor's Hall of Honor shocks union

By Joe Davidson

Before serving as president of the United States, actor Ronald Reagan was president of the Screen Actors Guild. (AP)

Isn't it weird that someone who could contend for the title of America's Greatest Union Buster will be inducted into the Labor Department's Hall of Honor?

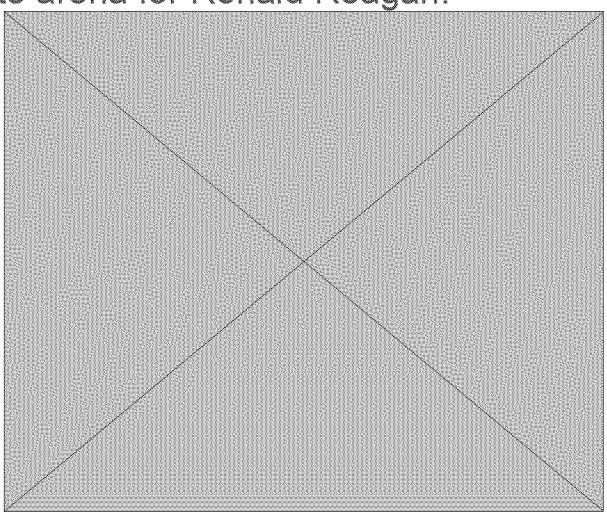
More than strange, the union representing Labor Department employees says honoring former president Ronald Reagan is shocking.

But Labor Secretary Alexander Acosta thinks inducting Reagan is a fine idea. So does the Sergeants Benevolent Association of New York City, a union that nominated him. No date for the induction has been announced.

"Well before he led this nation, Ronald Reagan led the Screen Actors Guild during its first three strikes," Acosta said when he announced the planned induction during remarks at the Ronald Reagan Presidential Library in Simi Valley, Calif., last month. "As President of the Screen Actors Guild, President Reagan negotiated never-before-seen concessions for SAG members, which included residual payments and health and pension benefits. As President of this nation, Ronald Reagan continued to recognize the contributions of unions to a free society. His support for Solidarity in Poland prompted a flourishing of freedom that ultimately led to the collapse of Communism."

Curiously — or not — Acosta's statement didn't mention Reagan's role in busting the Professional Air Traffic Controllers Organization (PATCO). In 1981, he fired more than 11,300 air traffic controllers when they did not end an illegal strike. PATCO then was decertified by the Federal Labor Relations Authority. When it comes to labor organizations, Reagan's presidential actions overshadow his tenure with the Screen Actors Guild, which has its

own controversy.



ADVERTISEMENT

[Magazine: Recalling the 1981 air traffic controllers strike]

Oddly, officials of PATCO's successor, the National Air Traffic Controllers Association, had no comment on the induction. But Alex Bastani, president of the American Federation of Government Employees Local 12 at the Labor Department, expressed his union's "shock and disappointment" in a letter to Acosta, urging him to reconsider. Bastani called Reagan's PATCO firings a "cruel act of industrial violence."

In a bit of hyperbole, however, Bastani didn't help his argument by claiming the firings "created the enormous division of rich and poor at third world levels, which is the root cause of the racism, sexism, homophobia and xenophobia that paralyzes our nation to this very day."

Those -isms and phobias were around long before Reagan, but Bastani made a good point when he said the "temple honoring the work of men and women who sacrificed themselves to create an American middle class and who championed the causes of America's the working poor, is not the appropriate arena for Ronald Reagan."

Speaking of communism, Bastani also noted Reagan's connection, as a union president, to one of the shameful episodes in recent American political history: the Red Scare.

"It is a historical fact that he surrendered the names of dues paying members to the House Committee on Un-American Activities — a Joseph McCarthy

Does being a veteran guarantee someone a federal job? No, but it

orchestrated witch hunt," Bastani wrote. "We recognize Mr. Reagan had the right to pursue his own personal political agenda. However, he did not have the right to take these actions while representing union members who were being harassed and bullied by the federal government simply for exercising their first amendment rights."

The Washington Post obituary of Reagan, by Lou Cannon, a former Post reporter and Reagan biographer, does not confirm that Reagan supplied names. But, Cannon wrote: "As president of the Screen Actors Guild, which he led in a successful strike against the movie producers, he helped implement the blacklist that prevented suspected communists from working in movies. At the same time, Reagan opposed what he viewed as an indiscriminate effort by the House Un-American Activities Committee to smear liberals who had unwittingly joined leftist organizations."

Reagan, ironically and apparently unwittingly, also was on the board of a communist front. In a July 4, 1960, letter to Playboy mogul Hugh Hefner, Reagan explained: "Following World War II my interest in liberalism and my fear of 'neo-fascism' led to my serving on the board of directors of an organization later exposed as a 'Communist Front,' namely the 'Hollywood Independent Citizens Comm. of the Arts, Sciences & Professions'."

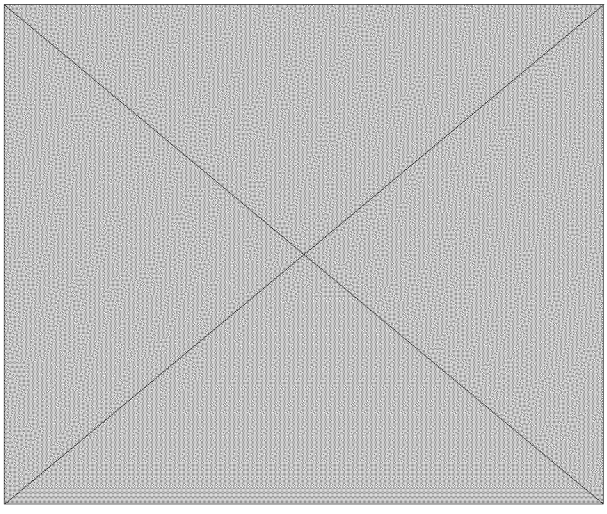
union members and was able to achieve landmark progress that benefits every member of the Screen Actors Guild to this day," said John Houbusch, executive director of the Ronald Reagan Presidential Foundation and Institute. "His Foundation welcomes the Department of Labor's highest honor and believes Secretary Acosta's award is more than well deserved."

Despite Reagan's attack on a labor organization, the Sergeants Benevolent Association (SBA) nominated him for the Hall of Honor because "he was a turning point for this country," said SBA President Ed Mullins, noting Reagan's status as the only U.S. president who led a major union. Mullins also said Reagan's economic policies helped working people.

Mullins said he understands the objections because of the PATCO episode, but added "Reagan had a big impact on the nation."

That's true, but impact can be good or bad. Reagan was terrible for organized labor, which makes the SBA backing peculiar.

Q&A for federal workers: Veterans preference in hiring



When Reagan is inducted, he will join others whose positive contributions to working people are beyond question. “The Labor Hall of Honor celebrates the bravery of strong, dedicated labor pioneers like Mother Jones, Cesar Chavez and A. Philip Randolph,” Bastani said in his letter. Bayard Rustin, Dolores Huerta, the pioneers of the farmworker movement and the workers of the Memphis sanitation strike also are the list of labor heroes and heroines.

As a labor leader, Reagan was not in their league.

certainly helps.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 18, 2017

Latest News

CWA Suit May Be Vehicle For High Court To Limit Deference On EPA Rules

Appellate judges say a suit they are overseeing centering on a decades-old EPA and Army Corps of Engineers rule excluding some wetlands from the Clean Water Act (CWA) could, if ultimately appealed to the Supreme Court, be a vehicle for the justices to try limiting courts' deference to regulators' interpretations of the wetlands rule.

10th Circuit's Small Refiner Ruling Signals Circuit Split On EPA Deference

The U.S. Court of Appeals for the 10th Circuits' recent 2-1 ruling scrapping EPA's decision to deny a small refiner a renewable fuel standard (RFS) exemption relies in part on a 1944 Supreme Court test for when courts should defer to agencies' decisions, signaling a split with other circuits that use the high court's 1984 *Chevron* deference test.

EPA Plans To Reconsider Heavy Truck GHG Rules For Trailers, Glider Kits

EPA says it will reconsider the trailer and glider kit portions of its heavy- and medium-duty vehicle greenhouse gas rules, though it is not yet clear if the agency intends to simultaneously stay implementation of those provisions ahead of looming compliance deadlines.

Landmark Precedent On U.S. Superfund Liability Spreads To Another Circuit

A federal district court judge in Arizona is relying heavily on a recent landmark ruling from a neighboring appellate circuit to find that the United States is an “owner” under Superfund law, and therefore potentially liable for remediating uranium mining contamination on Navajo Nation land, though liability has yet to be allocated in either case.

Automakers' Hurdle Easing Vehicle Rules: Diffusing Trump-California Fight

Automakers are welcoming the Trump administration's review of Obama-era greenhouse gas and fuel economy standards for light-duty vehicles but if they are to

win new regulations easing the standards as soon as model year 2021 they will have to mediate between the administration and California officials who strongly oppose any roll back.

Subject: POLITICO's Morning Score: Roy Moore, Senate GOP embrace each other — NRCC adds 31 candidates to Young Guns list — Heiler forms exploratory committee

By Daniel Strauss | 10/27/2017 10:00 AM EDT

With Zach Montellaro

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

DAILY ROLL TIDE - "Moore, Senate GOP embrace each other" by Campaign Pro's Daniel Strauss: "Roy Moore wasn't Washington Republicans' first choice in the Alabama Senate race. But he was Alabama Republicans' choice, and now Washington is getting on board. ... Moore still appears to have the strongest relationships with other anti-establishment Republicans. Paul and Lee are among the hosts listed for a high-profile fundraiser in Washington next week, along with former Sen. Jim DeMint, Senate Conservatives President Ken Cuccinelli, and Faith and Freedom Coalition founder Ralph Reed. ... Moore is also set for a big boost from the White House, which also backed Strange in the primary. President Donald Trump, who threw his support behind Moore when he won the nomination, has said publicly that he expects to sit down with Moore soon. And [Moore campaign chairman Bill] Armistead said Trump and Vice President Mike Pence have committed to come down to Alabama in support of Moore." **Full story.**

- "Jones TV spending nears $1.4M in Alabama" by Campaign Pro's Daniel Strauss: "Democrat Doug Jones booked at least $525,000 worth of TV ads covering next week in Alabama's special Senate election, according to the ad tracker Advertising Analytics, on top of over $855,000 already aired or booked in October. Jones' ad spending, which is nearing $1.4 million since the general election between him and Republican Roy Moore began, is an indication that donations have continued to flow into the Democrat's campaign. Jones finished September with just over $1 million in his campaign account." **Full story.**

- "Why Roy Moore's Law-School Professor Nicknamed Him Fruit Salad" by The New Yorker's Charles Bethea: "George Thomas Wilson, a retired magazine-marketing and P.R. professional now living in New York City, has never forgotten his first criminal-law class, at the University of Alabama School of Law, in 1974. It was taught by Clint McGee, who graduated from the law school himself, in 1940. Early in the class, McGee called on one of Wilson's classmates, a United States Military Academy graduate named Roy Moore. 'And, for the entire hour, McGee kept him standing and talking, standing and talking,' Wilson told me recently. 'Finally, at the end of the hour, McGee said to him, 'Mr. Moore, I have been teaching in this school for thirty years, and in all of that time you're the most mixed-up person I've ever taught. I'm going to call you Fruit Salad.'" **Full story**.

NEW YOUNG GUNS - "NRCC gives 31 candidates 'On the Radar' designation" by Campaign Pro's Elena Schneider: "The NRCC announced its first round of competitive GOP challengers today, adding 31 candidates to its Young Guns 'On the Radar' program. The candidates - representing a range of districts, from battleground to Democratic-leaning seats - reached committee-set goals 'to ensure their campaigns remain competitive, well-funded and communicative within their districts,' according to an NRCC statement. In several districts, two or more GOP candidates made the list, including the two candidates jockeying to take on Florida Rep. Stephanie Murphy and the three Republicans vying to run against Illinois Rep. Brad Schneider." **Full story.**

COASTAL DIVIDE - "Northeastern Republicans vote against House budget, Californians vote yes" by Campaign Pro's Elena Schneider: "Twenty Republican House members, including battleground incumbents from high-tax states, voted against the Senate GOP's budget, a key hurdle before Congress can tackle tax reform. Eleven GOP members from the New Jersey and New York delegations voted against the budget, many of whom had voiced concern over the plan to curb state and local tax deduction. ... The full list of New Jersey and New York incumbents who voted against the budget: Reps. Dan Donovan (NY-11), John Faso (NY-19), John Katko (NY-24), Pete King (NY-02), Leonard Lance (NJ-07), Frank LoBiondo (NJ-02), Tom MacArthur (NJ-03), Chris Smith (NJ-04), Elise Stefanik (NY-21), Claudia Tenney (NY-22), Lee Zeldin (NY-01)." **Full story.**

VIRGINIA GUBERNATORIAL RACE - "IMGE Virginia poll: Northam 48, Gillespie 44" by Campaign Pro's Kevin Robillard: "A Republican firm's new poll of the Virginia governor's race shows Democratic Lt. Gov. Ralph Northam with a slim lead over former RNC Chair Ed Gillespie and finds voters being turned off by President Donald Trump's endorsement of Gillespie. The poll, conducted by GOP firm IMGE Insights and paid for by Pfizer, had Northam at 48 percent and Gillespie at 44 percent in the governor's race, with Libertarian nominee Cliff Hyra earning 5 percent of the vote and 4 percent of voters undecided. A late September poll from the same firm gave Northam a 45 percent to 41 percent lead over Gillespie, with Hyra earning 4 percent. ... The poll's results fit in with many of the recent surveys on the race. A Fox News poll released last week showed Northam leading 48 percent to 41 percent, a Christopher Newport University poll gave the Democrat a 4-point edge and a Roanoke College poll showed him leading 50 percent to 44 percent." **Full story.**

Days until the 2017 election: 11.

Days until the 2018 election: 375.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

MEANWHILE IN ARIZONA - Jay Heiler, a member of the Arizona Board of Regents, is

forming an exploratory committee for a Senate run, according to The Arizona Republic. Former Arizona Gov. Jan Brewer is chairing the committee. Other members listed in the press release: "Treasurer - [former] Gov. Fife Symington; Foster Friess; Mike Ingram; Karrin Taylor Robson; Bob Mulhern, Managing Director, Colliers; Rich Wilson, CEO Trademark Construction; Maria Baier, Phoenix Suns; Tom Foley; [state] Representative Don Shooter; [state] Representative Maria Syms."

- American Bridge increases Arizona research: Democratic opposition research firm American Bridge is stepping up its effort to find dirt on potential GOP candidates in Arizona. It's looking at former state Sen. Kelli Ward, state Treasurer Jeff DeWit, former Arizona GOP chair Robert Graham, former Maricopa County Sheriff Joe Arpaio, and current and former Reps. Martha McSally, Matt Salmon, Trent Franks and David Schweikert. They're also filing 20 FOIA requests on the eight candidates rumored to be considering a bid, and already have over 200 hours of footage on the candidates.

DROP IT LIKE ... - "FEC drops case on foreign donations in 2016 Senate race" by Campaign Pro's Maggie Severns: "The Federal Election Commission voted recently to drop a complaint alleging foreign spending in a 2016 Senate race, newly released documents show. The complaint - one of the first foreign spending cases to come before the commission after the 2016 elections - charged that a real estate developer named Nicholas Mastroianni arranged for foreign nationals to funnel $75,000 to a super PAC backing former Rep. Patrick Murphy using LLCs to conceal the donations. ... The four Republican and Independent commissioners voted to close the case on Sept. 20, while Democrat Ellen Weintraub dissented." **Full story.**

FLORIDA SENATE NUMBERS - A new Mason-Dixon poll has Democratic Sen. Bill Nelson and GOP Gov. Rick Scott tied in a theoretical 2018 Senate race, each with 44 percent. The poll was conducted from Oct. 17-19, and 625 registered voters were interviewed. The margin of error is plus or minus four percentage points.

SHOT - @realDonaldTrump at 10:11 a.m. Thursday: "Ed Gillespie will be a great Governor of Virginia. His opponent doesn't even show up to meetings/work, and will be VERY weak on crime!"

CHASER - Gillespie to The Washington Post's Paul Schwartzman in early October, the first time he tweeted his endorsement: "I don't recall having asked anyone for their endorsement. ... I guess I'm just confused why this is newsworthy. ... Just to be clear, I didn't ask him not to endorse."

CHANGING OF THE GUARD - Lucien Smith has been named chairman of the Mississippi Republican Party. Per a press release: "Today, the Mississippi Republican Party's State Executive Committee elected Lucien Smith to serve as the Party's new State Chairman. Smith ran unopposed after being nominated by Governor Phil Bryant who was present for today's election. ... Lucien currently serves as the 12th Chairman of the Mississippi Republican Party following his unanimous election by the State Executive Committee. He previously served as Chief of Staff to Governor Phil Bryant and Counsel to Governor Haley Barbour. ... A Jackson native with deep roots in Oktibbeha and Clay Counties, Lucien and his wife Bethany have one

son, Liam, and are expecting a daughter in February 2018."

CODA - QUOTE OF THE DAY: "The Republicans went through their tea party phase," former NRCC chair Tom Davis told The Wall Street Journal. "Now, Democrats are going through their herbal tea party phase."

Good Monday afternoon. THE NEW WASHINGTON -- THE DAILY MAIL posts near daily photos of Ivanka and Jared leaving their Kalorama house. http://dailym.ai/2tX4MpJ

WHAT TRUMP IS SAYING ABOUT HIS NEW CHIEF OF STAFF -- At a Cabinet meeting: "This is our first Cabinet meeting with General Kelly. He will be chief of staff, as you know. We all know him, we respect him, admire what he's done. And at Homeland, what he has done has been nothing short of miraculous. As you know, the border was a tremendous problem and they're close to 80 percent stoppage. And even the President of Mexico called me -- they said their southern border, very few people are coming because they know they're not going to get through our border, which is the ultimate compliment. ...

"But, overall, I think we're doing incredibly well. The economy is doing incredibly well, and many other things. So we're starting from a really good base. I predict that General Kelly will go down, in terms of the position of chief of staff, one of the great ever. And we're going to have a good time, but, much more importantly, we're going to work hard and we're going to make America great again.

ON NORTH KOREA: "We'll handle North Korea. We're going to be able to handle them. It will be handled. We handle everything. Thank you very much."

-- TRUMP also held a cabinet meeting today, Kelly's first as chief of staff. **ATTORNEY GENERAL JEFF SESSIONS** sat across the table from Trump. Trump did not mention him in his remarks before the pool. ***Pic from Jennifer Jacobs*** http://bit.ly/2ucAPxv

-- EARLIER, at Kelly's swearing in, the president said "we have a tremendous base" and "the country is optimistic. And I think the general will just add to it."

TOP ED -- "Take it from this former colleague: John Kelly will bring order to the White House chaos," by Blain Rethmeier (one of Kelly's confirmation sherpas) in the Washington Examiner: "For newly-minted staff or those thinking about a position (not to mention currently entrenched factions) my advice is to fall in line, at least for now, and put your faith in the new chief of staff. His steady authority, quiet courage, and straightforward style make you want to follow his lead." http://washex.am/2ucrkyb

FROM THE WHITE HOUSE -- @realDonaldTrump at 8:16 a.m. : "If ObamaCare is hurting people, & it is, why shouldn't it hurt the insurance companies & why should Congress not be paying what public pays?" ... **at 8:28 a.m.:** "Highest Stock Market EVER, best economic numbers in years, unemployment lowest in 17 years, wages raising, border secure, S.C.: No WH chaos!"

SILENCE -- @MaxBoot : "Not one word re Russia's expulsion of US Embassy personnel. Trump replies to ALL other slights, no matter how minor."

HAPPENING THIS AFTERNOON -- @CNN: "Trump awards his first Medal of Honor today. Here's who's getting it." cnn.it/2uO8jWj

VICE PRESIDENT MIKE PENCE touched down in Tbilisi, Georgia at around 6:10 p.m. local time. He was greeted by Georgian Prime Minister Giorgi Kvirikashvili and his wife and U.S. ambassador to Georgia Ian Kelly and his wife, per pooler Ashley Parker of the Washington Post. The Pences and the Kvirikashvilis are dining at Funicular Restaurant.

WHAT BURGESS EVERETT IS READING -- "LePage rallies his supporters against Susan Collins," by Bangor Daily News's Michael Shepherd: "Gov. Paul LePage looks to be leading a Republican civil war against U.S. Sen. Susan Collins' 2018 gubernatorial bid - before anyone's sure she'll declare one and as she sits at the center of the national health care debate.

The governor railed against the moderate Republican senator at a Saturday pig roast put on by the Somerset County Republican Committee in Canaan, where an attendee said LePage repeatedly mentioned working to defeat Collins if she runs for governor next year....

"[C]ollins is also considering a Blaine House run in 2018 and has said she'd make a decision on running by the fall. Few in Maine politics are certain she'll declare one besides LePage, who said in a Thursday radio interview that he thinks she's planning on it. "If the Republican base -- which is the 290,000 people that voted for me (in his 2014 re-election) -- tell her, 'We don't want you; you're not winning the primary,' she'll back down," he said in a video provided by the attendee at the Canaan event under conditions of anonymity." http://bit.ly/2tRCLvl

SAVE THOSE EMAILS -- "RNC Tells Staff To Preserve All Documents Related To 2016 Campaign," by BuzzFeed's' Henry Gomez: RNC "employees have been asked to preserve all documents related to last year's presidential campaign - a step RNC lawyers describe as precautionary, but necessary, as investigations continue into

Russia's meddling in the election. 'Given the important role that the RNC plays in national elections and the potentially expansive scope of the inquiries and investigations, it is possible that we will be contacted with requests for information,' reads a July 28 memo to staff from the RNC counsel's office. 'Therefore, we must preserve all documents potentially relevant to these matters until they are resolved or until we are informed by all necessary parties that preservation is no longer necessary.'" http://bzfd.it/2ucQE77

CAMPAIGN WATCH -- "Dem campaign chief vows no litmus test on abortion," by The Hill's Ben Kamisar and Reid Wilson: "Democrats will not withhold financial support for candidates who oppose abortion rights, the chairman of the party's campaign arm in the House said in an interview with The Hill. Rep. Ben Ray Lujan (D-N.M.) said there will be no litmus tests for candidates as Democrats seek to find a winning roster to win back the House majority in 2018." http://bit.ly/2uch4FZ

-- MANY DEMOCRATS TELL US that if they ever want to get back into power, they'll have to embrace a big-tent strategy. They did it in 2006, and ended up with the majority.

-- @gdebenedetti: "Long expected news in MT: State Auditor @MattRosendale formally says he'll challenge @jontester, becoming the biggest GOP name to jump in."

FUN READ -- "How Anthony Scaramucci Made It Into 'Wall Street 2' -- And Donald Trump Got Cut," by The Daily Beast's Marlow Stern: "In both of the scenes, presented in split-screen, Scaramucci is talking to clients by phone, and in the later one, at around the film's 40-minute mark, he even appears to channel his new boss, using one of Trump's favorite made-up words. 'Churchill Schwartz has a yuge position in this thing and I want to get you in that stock,' he says. The Mooch's brief cameos, which amount to less than fifteen total seconds of screen time, didn't come cheap. According to sources close to the production, in exchange for the cameos-and the SkyBridge Capital logo being displayed prominently during a charity gala sequence in the film -- Scaramucci ponied up around $100,000. Former president George W. Bush didn't nickname him 'Gucci Scaramucci' for nothing. That, of course, is more screen time than Donald Trump received. ... According to [Oliver] Stone, Trump was 'good' but came with 'two pages of prerequisites' for his scene. ... Furthermore, the New York Daily News reported that those involved with Trump's barbershop scene had to sign a contract stating that they would not touch his cotton candy hair." http://thebea.st/2vdyAOj

BUSINESS BURST -- "Executives Are More Worried About Amazon Than President Trump," by Bloomberg's Julie Verhage: "What keeps corporate leaders up at night? It isn't the chaos in Washington or rising worker pay. It's what Amazon.com Inc. is, or could be, doing to their business models. ... Looking at the last 90 days of earnings calls and other corporate events such as investor days, a trend emerges. Amazon comes up a lot. It was mentioned a staggering 635 times over that time frame, while President Trump came up just 162 times and wages were discussed 111, according to data compiled by Bloomberg. It's become even more pronounced over the past 30 days, with Amazon garnering 165 mentions compared with 32 for Trump and 22

for wages." https://bloom.bg/2ucUMUy

Subject: Two EPW Republicans wary of Wehrum support for biofuels

By Anthony Adragna

10/17/2017 02:51 PM EDT

Two Republicans on the Senate Environment and Public Works Committee wouldn't commit today to backing Bill Wehrum's nomination to run EPA's air office, citing concerns about his support for biofuels policy — and raising the prospect that their meeting this afternoon with EPA Administrator Scott Pruitt could determine his fate.

"Sen. [Joni] Ernst does not believe she received straightforward answers from Mr. Wehrum during the hearing, and she would like more clarity from him and Administrator Pruitt on how they will enforce the Clean Air Act — specifically the RFS," a spokeswoman for Ernst told POLITICO, referring to the Renewable Fuel Standard.

Asked whether she would support the nomination, Deb Fischer told POLITICO: "I think I'll know more about that after I meet with the administrator."

Republicans hold an 11-10 majority over Democrats on the committee, so just one GOP defection would sink the Wehrum nomination. The panel is slated to vote on four EPA nominations Wednesday morning.

Another EPW Republican from a major corn state, South Dakota Sen. Mike Rounds, told reporters he would back Wehrum. He plans to attend the meeting with Pruitt this afternoon.

WHAT'S NEXT: A group of corn-state senators is scheduled to meet with Pruitt this afternoon. Wehrum's nomination is scheduled for a vote in EPW Wednesday morning.

Energy Regulator Nominees Back Technology-Neutral Stance

Posted September 07, 2017, 02:24 P.M. ET

By Rebecca Kern

Republican and Democratic nominees for the Federal Energy Regulatory Commission agreed that the agency should be technology neutral when it comes to regulating electric power generation, differing from a pro-coal stance of the current FERC chairman.

"FERC is not an entity whose role includes choosing fuels for the generation of electricity," Kevin McIntyre, who was nominated for a Republican commissioner seat, said at a Sept. 7 Senate Energy and Natural Resources Committee confirmation hearing. McIntyre, who was also nominated to serve as chairman of the commission, is currently an attorney in the Washington offices of the Jones Day law firm.

Richard Glick, who has been nominated to fill a Democratic commissioner seat, also said "FERC doesn't have authority to prop up technologies." Glick is currently a Democratic general counsel for the committee.

The comments contrast with commentary from those made by Neil Chatterjee, the agency's temporary chairman, in an Aug. 14 FERC podcast. Chatterjee, the former energy aide for Senate Majority Leader Mitch McConnell, said that coal-fired power plants are a crucial part of America's energy mix that needed to be "properly compensated to recognize the value they provide."

Committee Chairman Sen. Lisa Murkowski (R-Alaska) told reporters after the hearing that she wants to hold a vote on the nominees by late next week. If the two nominees are confirmed by the Senate, it will bring FERC back to a full panel of five commissioners.

"It is my intention to urge my colleagues to get their questions in and to ask you to be rapid with your responses so that you can be moved through and so that you can get to work," Murkowski said during the hearing.

Democrats' Last-Ditch Effort to Aid Climate Fund Falls Short

Posted September 07, 2017, 01:37 P.M. ET

By Dean Scott

A last-ditch Democratic effort to restore U.S. spending for a United Nations climate fund was narrowly repelled by Republican Senate appropriators Sept. 7 in a major step for President Donald Trump's campaign to zero out international aid to address climate change.

The Senate Appropriations Committee voted, 14-15, to reject a proposal by ranking Democrat Sen. Patrick Leahy (Vt.), that would have provided $750 million in fiscal 2018 for the Green Climate Fund fund that helps developing nations adapt to climate change impacts and pursue low-carbon development.

Leahy proposed to amend the $51.2 billion fiscal 2018 spending bill covering the State Department and foreign operations. The bill advanced by the Senate Appropriations Subcommittee on State, Foreign Operations, and Related Programs didn't included funds for the climate program.

The Obama administration, over objections of the Republican-led Congress, sent a total of $1 billion to the climate fund, which was created by developed nations to encourage poorer, developing nations to sign on to a global climate change accord reached in Paris in 2015.

Trump's Trade Barrier Push Threatens U.S. Energy Profits, Critics Say

Posted September 07, 2017, 11:35 A.M. ET

By Brian Dabbs

Trade expansion poses the biggest potential boon to U.S. energy companies, yet the Trump administration's rhetoric threatens that prospect, said several speakers at an event to discuss NAFTA renegotiations.

President Donald Trump has so far chosen to prop up the U.S. oil and gas industry by rolling back environmental regulations, but that rollback will only save energy behemoths like ExxonMobil Corp., Chevron Corp., "pennies on the dollar," David Goldwyn, chairman of the Atlantic Council's Energy Advisory Group, said at the Sept. 7 event.

Trump's attacks on Mexico, typified by a call to build a border wall on Mexico's tab, may derail cross-border pipeline projects already underway, Jeff Schott, a trade specialist at the Peterson Institute for International Economics, said. In fact, the administration's pledge to crack down on free trade, typically regarded as duty-free trade, with Mexico and other countries, jeopardizes huge opportunities for U.S. companies, experts said.

"If there is any concern about some destabilization in the bilateral relationship, investors will pull back, slow down, or even reverse investments," Schott, who also advises the U.S. Trade Representative, said.

Renegotiating NAFTA

The U.S., Canada, and Mexico concluded Sept. 5 the second round of North American Free Trade Agreement renegotiations in Mexico City. Top trade officials from the three countries are now scheduled to meet for a third round in Ottawa at the end of this month.

At the outset of negotiations in mid-August, Robert Lighthizer, the U.S. trade representative, said the

U.S. aims to improve trilateral energy relations, but didn't elaborate on ways to achieve that.

Mexico was virtually excluded from energy negotiations in NAFTA, which entered into effect in 1994. Mexico's Constitution prevented foreign development of domestic resources, but sweeping constitutional changes in 2013 ended the state-owned Mexican fossil fuel company Petróleos Mexicanos' (Pemex) 75-year monopoly in the energy sector.

And in early December 2016, Mexico awarded deepwater development rights to Chevron, Exxon Mobil, Total SA, and China-owned CNOOC Ltd. in its competitive oil auction.

The preservation of that access is a top priority for U.S. companies, Rep. Michael McCaul (R-Texas) told Bloomberg BNA after speaking at the event, sponsored by the Atlantic Council, a Washington-based think tank that focuses on international affairs. McCaul led a congressional delegation to Mexico in June.

EU Firm on Climate Pledges Despite U.S. Withdrawal From Pact

Posted September 07, 2017, 02:11 P.M. ET

By Stephen Gardner

Full implementation of the 2015 Paris climate accord should be advocated by the European Union at the forthcoming UN climate summit despite U.S. President Donald Trump's decision to pull out of the agreement, the European Parliament's environment committee decided Sept. 7.

The committee voted 54-0, with six abstentions, for a nonbinding resolution that sets out EU priorities for the Nov. 6-17 meeting in Bonn, Germany. Among its main goals, the EU should push for more climate funding to aid poorer countries and prepare for 2018 when a "facilitative dialogue" on countries' emissions reductions commitments will start, the resolution says.

At the 2018 dialogue, the parties to the Paris agreement will assess their progress in reducing greenhouse gas emissions and plan their next steps after 2020. The resolution says the EU should set an example by "revisiting its own mid- and long-term goals and policy instruments" as early as possible. The EU pledged in the Paris agreement to reduce its emissions 40 percent from 1990 levels by 2030.

Ulriikka Aarnio, international climate policy coordinator with the group Climate Action Network Europe, told Bloomberg BNA Sept. 7 the Bonn summit primarily would focus on technical preparations for the 2018 assessments, which would be a "first stocktake" of the success countries have had in reducing emissions to meet their goal of keeping global warming to within 2 degrees Celsius compared to pre-industrial levels.

A draft of the resolution ahead of the environment committee vote emphasized keeping the implementation of the Paris agreement on track and did not mention the U.S. decision to exit the agreement. However, an amendment to the resolution approved by lawmakers said that the U.S. decision was a "step backwards."

The U.S. withdrawal from the Paris Agreement does not take effect until 2020, and the country has the right to participate as a party at the Bonn summit, Aarnio said. Negotiators from the rest of the world wanted to press ahead with implementation of their climate commitments, she said, and "no-one is really keen to discuss Trump and the U.S. situation any more."

The European Parliament will vote to make the resolution on the Bonn summit final during a plenary session Oct. 2-5.

China Eyes 707 Megawatts of Pilot Wind Farms Free of Subsidies

Posted September 07, 2017, 8:07 A.M. ET

By Bloomberg News

China, the world's biggest clean-energy investor, selected 707 megawatts of wind power pilot projects that will receive the same subsidy-free payment for electricity as coal plants.

The projects are in the Chinese regions of Hebei, Heilongjiang, Gansu, Ningxia and Xinjiang, according to a Wednesday statement on the National Energy Administration's website.

Project developers won't receive renewable energy certificates for the electricity they generate, which will only be consumed in places where it's produced.

The move is part of the nation's efforts to push wind power's costs down to parity with coal. China currently subsidizes the portion that renewable power prices exceed that of coal.

Brazil's Rattled Wind Power Supply Chain Looks Ahead

Posted September 07, 2017, 01:35 P.M. ET

By Michael Kepp

Suppliers in Brazil are hoping the upcoming energy auctions will kick-start a jittery wind-power sector that's trying to deal with the country's worst recession in decades, officials from several companies told Bloomberg BNA.

Brazil is home to six major foreign and local turbines makers in addition to hundreds of equipment component suppliers. Most had set up shop after the government began holding energy auctions in late 2009, signaling the push for wind power in Brazil.

During the past two years, however, a prolonged national recession has haunted Brazil, the world's ninth largest wind market in installed capacity. This in turn has caused ripple effects for those in the supply chain that produce and distribute the parts and pieces for wind power equipment.

"WEG's component suppliers, dependent on a constant flow of orders, have maintained investments to supply us and we've guaranteed them a minimum of orders to keep them afloat," said Joao Paulo Gualberto da Silva, wind power director for WEG Energy S.A., a local equipment maker. "But we've also told them to tighten their seat belts for the next two years."

Gaulberto da Silva cited other supply-chain hurdles, including transportation bottlenecks and the need for Brazil's Development Bank "to fine-tune" the eligibility conditions for wind farm developers wanting low-cost government financing.

"Specialized trailers for hauling wind turbine blades have a 5-meter lateral width which, in Brazil, means that, besides hiring a private escort, they also need a federal police escort," Gualberto da Silva told Bloomberg BNA. "And from mid-July to mid-August this year, the federal police ran out of money to pay for such escorts, which caused delays in delivering our wind equipment orders."

Eager for Auctions

The country has not held an auction for future wind power since December 2015 and has scheduled two end-year energy auctions, both of which will sell wind power. One auction will be held Dec. 18 and the other Dec. 20. Supply chain companies like German equipment supplier Wobben welcomed the auction news since it means wind farm developers that win future supply contracts likely will place equipment orders.

"I'm fairly optimistic about the next future wind auctions because the wind sector has experienced repressed demand for the last three or four years," said Julio Cesar Pinheiro Goes, purchasing director in Brazil for Nordex SE, a German wind turbine maker. "This recession is temporary because the market runs in cycles. We'll survive this moment."

But Rogerio Zampronha, president of the Brazilian arm of Denmark's Vestas Wind Systems A/S, the world's biggest wind turbine maker, said, "A lack of economic predictability in Brazil makes life difficult for wind equipment suppliers here. We need some [government] guarantee that there will be wind auctions each year."

Rosana Santos, product and strategy marketing director in Brazil for General Electric, one of the country's biggest wind turbine makers, had a more optimistic outlook on the supply chain. "Brazil needs to auction between 2,000 and 2,500 megawatts of wind power a year to maintain a healthy supply chain. And because of repressed demand, I'm hoping that at the two December auctions developers sell from 1,500 megawatts to 2,000 megawatts of future wind power," she told Bloomberg BNA.

South Korea Pours Millions Into Building Solar Panels on Landfills

Posted September 07, 2017, 9:36 A.M. ET

By Elaine Ramirez

Landfills are not just for garbage anymore. At least not in South Korea where the government and a landfill operator are coordinating to place solar power facilities at four disposal sites.

South Korea plans to install enough solar power generation facilities to supply 80,000 households by 2021 with a 390.3 billion won ($344.2 million) infrastructure project as the new Moon Jae-in government aims to transform the power matrix into 20 percent renewable energy by 2030.

"The metropolitan area is playing a leading role in realizing a resource recycling society through the expansion of energy facilities," Kim Dong-jin, director of resource circulation at the Ministry of Environment, said in the statement. "We plan to develop the landfill as a new renewable energy mecca and as a success model for responding to the new climate era."

The three-phase project to construct 250 megawatts of solar power generation facilities over four landfills in Incheon, west of capital Seoul, is expected to become a "win-win model" of mutual profit between metropolitan landfill management, local governments, power generation companies, foreign investors, and local residents, the ministry said in a Sept. 4 statement.

The initial stage of the project, to produce a 10-megawatt capacity facility, which was approved last month, is being produced by a consortium of Thai investor Pea Encom, Hong Kong investor NWS Group, Landfill Site Management Corp., Korea Western Power, Korea Southern Power, LG Serveone, Seoul Energy Corporation, Incheon U-City, and some local residents, Park Sang-cheol, deputy director of the ministry's waste-to-energy division resource circulation bureau, told Bloomberg BNA on Sept. 6.

The plan, he said, "is finalized in the sense that 250 megawatts will be achieved by 2021, but specific investors and details are yet to be decided."

The solar power produced will be mainly used for commercial sale and facility operations, Park said.

New Energy Paradigm

President Moon Jae-in, who entered office in May, has maintained South Korea's commitments to the Paris climate accord of lowering emissions by 37 percent of business-as-usual levels by 2030. He has also vowed to phase out nuclear and coal plants, and replace them with clean energy to create a renewable energy supply of 20 percent of total power, up from 6.6 percent as of 2015, according to Korea Energy Agency data. Solar power contributes about 10.7 percent of the country's renewable energy, according to 2015 data.

South Korea plans to expand the supply of renewable energy such as biogas, landfill gas, and solar power by turning waste and idle sites in the metropolitan area into renewable energy hubs, the environment ministry said.

Suk Chan-woo, sales manager for local wind and solar device producer Eco Power, said demand for solar power facilities this year is similar to last year's but is expected to increase.

"Of course the policy will work positively for the industry," he told Bloomberg BNA on Sept. 6. "We are planning on increasing production, but not just yet as nothing is finalized [with contracts]."

Seok Sang-Il, energy and chemical engineering professor at South Korea's Ulsan National Institute of Science and Technology, said as long as solar energy was not to much more expensive than power generated by state-run Korea Electric Power Corp. and didn't cause a public inconvenience, it's a good way to boost the country's renewable energy matrix.

Hydro power faces constraints in water storage and dam construction, while the wind in the country does not blow in the right direction for efficient power generation, he noted.

"Once you exclude all of these, solar energy is the alternative in the end," he said.

"There is a lot of unused land [at landfills] so the proportion of renewable energy used can increase greatly" with the solar facility installations, he added.

But Seok said this project alone wouldn't be enough to help South Korea reach its 20 percent renewable energy goal, since the amount of waste is fixed along with the amount of energy that can be taken from it.

"The government is trying to increase the solar and wind power so that will play a major role in reaching the rate" of the 20 percent renewable energy goal, he said.

Biofuels
FS Bioenergia's Brazil Corn Ethanol Plant Seen as First of Many
Brazil's first ethanol plant to exclusively use corn, in a country that makes nearly all of its ethanol from sugar cane, has begun industrial-scale operations and is expected to lead to as many 10 other such nearby plants during the next decade.

Coal Mining
U.S. Faulted for Not Weighing Climate in Signal Peak Coal Permit
The U.S. Office of Surface Mining didn't adequately examine the impact of coal combustion on greenhouse gas emissions for an underground project in the Bull Mountains of central Montana, a federal judge ruled.

Dumping
Preliminary Decision in Argentine Biodiesel Case Delayed
Commerce Department officials will wait a little longer in deciding whether producers/exporters from Argentina and Indonesia are dumping biodiesel in the U.S. market, according to a Commerce notice.

Energy
Energy Department Sued Over Grid Reliability Study Records
The Sierra Club launched an early challenge to a highly anticipated grid reliability study, filing a lawsuit over the Energy Department's alleged failure to provide records of any communication between department officials and the power sector.

Energy
Lapsed Tax Credits Leave Renewables Twisting in the Wind
The Bergey Windpower Co. factory south of Oklahoma City can produce 1,500 small-scale turbines annually. But current output is only a fraction of that capacity.

Energy
Perry's Hanford Tour Highlights Tricky Role for Energy Department
Energy Secretary Rick Perry's first visit to the Hanford Nuclear Site Aug. 15 comes as state and local officials wait to hear how the Trump administration will manage the complex, decades-long cleanup of the former nuclear weapons production facility.

Energy
Top Energy Regulator Vows to Keep Coal in U.S. Power Mix
The newly minted head of the Federal Energy Regulatory Commission wants to preserve

coal's share of America's power mix.

Energy
Whatever Happened to Indonesia's Mighty Oil and Gas Industry?
Once a cornerstone of the economy, Indonesia's oil and gas sector is in a slump, even as the country's appetite for energy soars.

Natural Gas
Fast, Dirty Natural Gas Plants Get Boost from Electric Cars
Britain's goodbye to fossil-fuel cars by 2040 could boost the need for dirtier natural gas-powered stations.

Oil & Gas
Can Some Nebraska Farmers Kill the Keystone XL Pipeline?
"When I first started this, it was about my house," said Shannon Graves, who owns a hardware store in Polk, Neb.—population roughly 300—and lives less than 100 yards from the proposed route of the Keystone XL pipeline. "I just wanted to protect my home."

Proxy Voting
Vanguard Gets More Aggressive on Corporate Climate Risk
Vanguard Group says it's raised risks from climate change in talks with more companies over the past year than ever before.

Renewable Energy
Australian State Scores Second Energy Hit With SolarReserve Plant
South Australia committed to a 20-year contract to buy power from what is slated to be the world's largest solar thermal power plant incorporating storage a month after the state was named as the location for the world's biggest lithium-ion battery.

Renewable Energy
First Solar to Profit If Trump Slaps Tariffs on Panel Imports
First Solar Inc. is standing on the sidelines of a trade dispute that could give its products a significant leg up.

CORRECTION
The Aug. 14 story "Utilities Face More Emissions Cuts in Massachusetts" mischaracterized Eversource's support for the state's tighter greenhouse gas limits. The story has been corrected.

Subject: EPA issues waiver for higher ethanol blends to fight Harvey shortages

By Eric Wolff

08/30/2017 04:13 PM EDT

EPA issued a waiver today to allow the sale of gasoline with 15 percent ethanol in 12 states and the District of Columbia, effectively ending the summer restriction on sales of the fuel because of Hurricane Harvey.

EPA Administrator Scott Pruitt says in the waiver letter the refinery closures and the disruption of the Colonial Pipeline have created fuel shortfalls, and the waiver will help ease that pressure. Retailers in some states can't sell fuel blends above E10 in the summer to avoid violating the Clean Air Act, but the law gives the administrator authority to waive those requirements in emergencies. In practical terms, the waiver allows retailers in these states to sell winter formulated gasoline early, as well as higher blends of ethanol.

"These shortages can be reduced by waiving the requirement to sell low-volatility summer [conventional gasoline]," Pruitt said in the waiver letter.

About 20 percent of the country's refining capacity is offline after Harvey battered the Gulf Coast region. Gasoline prices at the pump were up six cents a gallon today from a week ago, according to AAA.

The Renewable Fuels Association asked EPA on Monday to allow the waiver.

"Consumers facing likely gasoline supply issues as a result of Hurricane Harvey are one important step closer today to a high octane, lost cost alternative," RFA CEO Bob Dinneen said in a statement.

The waiver applies to Alabama, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Texas, Virginia and the District of Columbia.

EHS Federal Regulatory Alert

August 11, 2017 - Number 154

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

Summaries

ENDANGERED SPECIES
California/Morro Shoulderband Snail
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the receipt of an application from two individuals for a 10-year incidental take permit authorizing take of the endangered Morro shoulderband snail incidental to the construction and maintenance of a single-family residence on an existing legal parcel and associated infrastructure in Los Osos, Calif. The application package also includes a draft low-effect habitat conservation plan, a draft low-effect screening, and an environmental action statement. The notice also announces the agency's preliminary determination that the proposal will have a minor or negligible effect on the species and that approval of the habitat conservation plan and issuance of the permit qualify for categorical exclusion under the National Environmental Policy Act. Comments are due Sept. 11, 2017. Contact: Julie Vanderwier; USFWS, Ventura Fish and Wildlife Office; 805-677-3400

82 FR 37602 (08/11/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Canine Lymphoma Vaccine Field Test
GENERAL ENVIRONMENT AND SAFETY

Notice of the Animal and Plant Health Inspection Service announces the availability of an environmental assessment for a field test of an unlicensed canine lymphoma vaccine, live listeria vector, in 15 states. The EA also addresses the issuance of a veterinary biological product license for the vaccine following satisfactory completion of the field test. The agency intends to issue a finding of no significant impact for the field test and product licensing. Comments are due Sept. 11, 2017. Contact: Donna Malloy; APHIS, Center for Veterinary Biologics, Policy, Evaluation, and Licensing; 301-851-3426

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Florida/Pelagic Longline Exempted Fishing Permit
GENERAL ENVIRONMENT AND SAFETY

Notice of the National Marine Fisheries Service announces the availability of a final environmental assessment regarding an exempted fishing permit for evaluation of pelagic longline (PLL) catch and bycatch rates from within two different sub-areas in the northern portion of the East Florida Coast PLL closed area. The applicant seeks to compare those rates to rates obtained from outside the area over a 12-month period. The agency is authorizing 720 longline sets, each consisting of 600 16/0 or larger circle hooks, per year to occur between six vessels and to be distributed between two sub-areas of the closed area. Scientific staff or agency observers will monitor 40 percent of sets occurring in both sub-areas. Contact: Craig Cockrell; NMFS; 301-427-8503

GENERAL ENVIRONMENT AND SAFETY
Maryland/FDA Headquarters Proposed Master Plan
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the General Services Administration to prepare an environmental impact statement for the proposed master plan for the consolidation of the FDA headquarters at the Federal Research Center at White Oak, in Silver Spring, Md. The EIS will consider the effects of increasing the campus population by up to 18,000 employees over 15 years and will consider a range of alternatives, including taking no action, for the proposed master plan. A meeting is scheduled for Sept. 12, 2017, in Silver Spring. Comments are due Sept. 25, 2017. Contact: Paul Gyamfi; GSA, National Capital Region; 202-440-3405; paul.gyamfi@gsa.gov

82 FR 37591 (08/11/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY

Public Utilities Open Access Same-Time Information System

GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of FERC to seek OMB approval for a revised information collection request regarding the open access same-time information system (OASIS) and standards for business practices and communication protocols. The collection addresses responses from public utilities that own, control, or operate facilities for transmitting energy in interstate commerce that are required to provide certain information on transmission operations on OASIS. The collection also addresses requirements that utilities personnel engaged in transmission system operations function independently from those engaged in marketing functions. The revisions update the collection's respondent count and hours burden for responses based on efficiency gains and changes in business practice standards. Comments are due Oct. 10, 2017. Contact: Ellen Brown; FERC; 202-502-8663; DataClearance@FERC.gov

82 FR 37580 (08/11/2017)

Regulatory Update

RADIATION

List of Approved Spent Fuel Storage Casks

RADIATION

Notice of the NRC confirms the effective date of a June 6, 2017, direct final rule (82 FR 25931) to revise the NAC International Passive MAGNASTOR® Transfer Cask System listing within the list of approved spent fuel storage casks. The rule adds Amendment No. 7 to the certificate of compliance (No. 1031) to incorporate revised seismic requirements to appendices of the technical specifications. The rule is effective Aug. 21, 2017. Contact: Keith McDaniel; NRC, Office of Nuclear Material Safety and Safeguards; 301-415-5252; Keith.McDaniel@nrc.gov. Citations: 10 CFR 72.214

82 FR 37511 (08/11/2017)

Regulatory Update

RADIATION

Occupational Radiation Protection at DOE Facilities

RADIATION

Final rule of the Energy Department updates values regarding occupational exposure to radioactive material dispersed in the air as the result of DOE activities. The rule updates the air immersion derived air concentration value for any single radionuclide with a decay mode other than alpha emission or spontaneous fission and with radioactive half-life less than two hours, adjusted for an eight-hour workday, or 1E-06 microcuries per milliliter. The rule also updates activity information values for the radionuclides Rh-102 to 6.4E+05 microcuries and for Rh-102m to 3.0E+05 microcuries. The rule is effective Sept. 11, 2017. Contact: James Dillard; DOE, Office of Environment, Health, Safety and Security; 301-903-1165; james.dillard@hq.doe.gov. Citations: 10 CFR Part 835, Appendices C and E

Regulatory Update

TOXIC SUBSTANCES
TSCA Inventory Notification/Commercial Activity
TOXIC SUBSTANCES

Final rule of the EPA establishes TSCA chemical substance inventory notification procedures as required under the 2016 amendments to TSCA. The rule establishes a retrospective electronic notification of chemical substances on the TSCA inventory manufactured for nonexempt commercial purposes during the 10-year time period ending on June 21, 2016. Notifications will be used to distinguish active substances from inactive substances, and active and inactive designations will be included on the TSCA inventory. The rule also establishes procedures for forward-looking electronic notification for chemical substances designated as inactive and specifies that the agency will change the designation to active upon receipt of a valid notice. In addition, the rule establishes procedures for submission of retrospective and forward-looking activity notifications, provides details of the notification requirements, and specifies exemptions from such requirements and procedures for handling claims of confidentiality. The rule is effective Aug. 11, 2017. Contact: Myrta Christian; EPA, Office of Pollution Prevention and Toxics; 202-564-8498; christian.myrta@epa.gov. Citations: 40 CFR 710.1, 710.3, 710.23 through 710.39

82 FR 37520 (08/11/2017)

Regulatory Update

WATER
Idaho/State NPDES Program Submission
WATER

Notice of the EPA announces the submission of a National Pollutant Discharge Elimination System (NPDES) program application by the state of Idaho for approval to administer its state pollutant discharge elimination system program. The application includes an implementation plan to transfer to the Idaho Department of Environmental Quality the administration of specific program components in four phases over a four-year period, beginning July 1, 2018, or upon program approval. The EPA would retain permitting authority for facilities on tribal reservations or discharging to tribal waters. Hearings are scheduled for Sept. 11, 12, 13, 14, and 15, 2017, in Idaho Falls, Twin Falls, Boise, Lewiston, and Coeur d'Alene, Idaho, respectively. Comments are due Oct. 10, 2017. Contact: Karen Burgess; EPA Region 10, NPDES Permits Unit; 206-553-1644; burgess.karen@epa.gov. Citations: 40 CFR 123

Subject: First Move: Regulatory Bills Revived in House • Toxic Substance Law's Questions

What you need to know to start your day.

Regulatory Bills Revived in House • Toxic Substance Law's Questions

By Chuck McCutcheon

Two regulatory bills that passed the House but stalled in the Senate last year resurface this week on Capitol Hill, as Republicans hope a Donald Trump presidency can give the measures the extra push to become law.

One of the bills would abolish "sue-and-settle" rulemaking by federal agencies. Interest groups often sue when an agency misses a legal deadline to take action or review its existing standards; rather than go through a long court battle, those agencies choose to settle to try to save time and money.

EPA leader Scott Pruitt recently announced that his agency would no longer settle court cases brought by environmental groups seeking to force it to take overdue actions.

House Democrats say environmental groups need the sue-and-settle tool to prod agencies to act when they're dragging their feet. But Democrats don't have the numbers in the House to stop the bill: Their only hope to save the practice will be in the Senate.

The other bill the House will take up would bar some federal agencies from entering into settlements that steer funds to third-party groups. Republicans disliked the way the Justice Department under President Obama required a donation to an outside group when the agency settled a lawsuit with a corporation or individual as a term o those agreements.

As Amena H. Saiyid recently reported, the National Fish and Wildlife Foundation go a check for $7 million from Princess Cruises—part of a $40 million settlement the cruise line made with the feds in 2016 to resolve allegations that it illegally dumped oil waste and falsified oil spill records.

Stephen Lee will cover debate on the two bills.

The changes spelled out in the landmark 2016 toxic substances law present

challenges as well as opportunities—and raise many questions, say Beveridge & Diamond's Mark Duvall, Ryan Carra, and Tim Serie in a Practitioner Insights piece coming later today.

Among the questions they explore are how the EPA decides which chemical substances to address, how to influence whether the agency designates a substance as low-priority, and how to influence whether it conducts a risk evaluatior for a substance.

Other Stories We're Covering

- Four nominees for top-level EPA jobs, including ones for the chemical and air offices who have drawn opposition, will get Senate committee votes at a hearing rescheduled from last week.
- A European Commission committee scheduled a Wednesday vote among representatives of European countries on a 10-year renewal of glyphosate on the continent; Stephen Gardner is covering.
- The House natural resources panel will hold a Wednesday hearing on how states can be empowered to manage the sage grouse, a bird found in 11 Western states whose numbers are dwindling. Alan Kovski will monitor.
- An international conference in Manila this week seeks to explore how countries can protect wildlife and their ecosystems; Adam Allington is tracking.
- Air pollution in India's capital soared off the charts again as Indians shot off firecrackers to celebrate a Hindu festival despite a court's banning of fireworks sales.

An Indian pedestrian protects his face in New Delhi.
DOMINIQUE FAGET/AFP/Getty Images

This Week's Events

On The Hill

- **Tuesday, 10 a.m. • Hurricanes** • House energy committee's oversight panel assesses public health preparedness during the recent hurricane season.
- **Wednesday, 10 a.m. • Wildfires** • Senate environment committee looks at draft legislation to address wildfires.
- **Thursday, 10 a.m. • Cyber** • Senate energy committee discusses technology that can protect electric grids against cyberattacks.

Elsewhere

- **Monday, 10 a.m. • Asia Water** • Wilson Center events looks at Asia's mountains and potential for new approaches to water and climate security.
- **Monday, 10 a.m. • Green Bonds** • Environmental Finance newsletter holds its third annual Green Bonds America conference in New York.

- **Monday, 3 p.m. • Chemicals** • Newly expanded North Carolina science advisory board meets to discuss chemicals' environmental impacts.
- **Tuesday-Thursday, All Day • Sustainability** • Sustainable business conference in Huntington Beach, Calif., includes former Vice President Al Gore among its speakers.
- **Tuesday, 6 p.m. • Flint Water Crisis** • Michigan Democratic Rep. Dan Kildee and the Lifetime Network screen film in Washington about Flint, Mich., water-contamination crisis.
- **Wednesday, 1 p.m. • Climate** • Harvard's health and environment center sponsors discussion of carbon-footprint calculations.
- **Wednesday-Thursday, All Day • Climate Risk** • Environmental scientists discuss climate risk at Maine workshop.

Quote of the Day

"I don't spend any time with polluters. I prosecute polluters. What I'm spending time with are stakeholders who care about outcomes."
—EPA head Scott Pruitt in Time magazine, pushing back against environmentalists' criticism that he devotes too much attention to conversing with polluting industries.

Around the Web

- The EPA continues to remove climate references from its website, an environmental group says.
- A lack of ocean-observation technology and research ships hurtU.S. ability to track changes in climate, a new National Academies report says.
- A pipeline that can pump nearly 900,000 barrels of tar sands oil across the Canadian border daily has won Trump administration approval.
- More than two-dozen accidents have occurred at BP's Alaska oil and gas operations this year, including five that risked dozens of workers' lives, BuzzFeed finds.
- The House may take up a bill this week aiming to open the way for storage of spent fuel from commercial nuclear power plants at Nevada's Yucca Mountain.

Subject: Playbook Power Briefing, presented by Morgan Stanley: Judge issues GAG ORDER in MANAFORT and GATES cases -- CBO issues new preliminary estimate for ACA mandate repeal -- GOP Senate leaders to brief conference TOMORROW on tax reform

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Morgan Stanley

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

TEXAS REP. AL GREEN said on the House floor that the chamber will vote on a resolution to impeach Donald Trump before Christmas.

Good Wednesday afternoon. THE CBO said that repealing the Obamacare mandate would reduce the deficit by $338 billion from 2018 to 2027 in a preliminary estimate. The savings would come from reduced spending on ACA subsidies. ***More from Jen Haberkorn*** http://politi.co/2zqT3zf

FIRST IN PLAYBOOK -- OHIO SEN. ROB PORTMAN, a member of the Senate Finance Committee, huddled with conservative outside groups this afternoon to discuss tax reform. The meeting -- hosted by the American Action Network, whose offices are down the street from the White House -- comes as the Senate prepares to release its tax reform bill. **PORTMAN** told the group that last night's electoral results give Republicans even more of a reason to get results and get tax reform done, according to one attendee. **SPOTTED** : American Action Forum president Doug Holtz-Eakin, AAN Executive Director Corry Bliss, America Rising's Jeff Larson, American Crossroads' Steven Law, America First Policies' Erin Montgomery, White House Senate leg affairs liaison Amy Swonger, Treasury's Shannon McGahn, Derrick Dockery from Speaker Paul Ryan's office, Bill Miller of BRT and Mattie Duppler from the National Taxpayers Union.

-- ALSO A SCOOP: COMING OFF OF A GOOD NIGHT FOR DEMS -- DOUG JONES, who is running against Roy Moore in Alabama, is making the trek to Washington to raise money next Tuesday. DSCC Chair Jon Tester (Mont.) and Sens. Mark Warner (Va.) and Martin Heinrich (N.M.) are listed as special guests for the fundraiser. Hosts include: Jeff Forbes, Zach Williams, Libby Greer, Jay Driscoll, Elizabeth Lowery and Jenny DiJames.

GET READY -- "Senate GOP to unveil tax bill that diverges from House plan," by Seung Min Kim and Josh Dawsey: "GOP leaders will brief the conference on the details of their long-awaited tax overhaul legislation on Thursday morning at 11:30 a.m. in the Strom Thurmond room at the Capitol, according to two sources. The session is meant to

walk senators who are not on the tax-writing Finance Committee through the intricacies of the GOP's tax bill before unveiling it to the public. The plan is expected to have significant differences from the House legislation." http://politi.co/2yhGLrv

-- **STEVEN MNUCHIN** to Bloomberg's Michael McKee: "Our strong preference is that the corporate tax rate starts next year." https://bloom.bg/2AvaFdG

NOT CHANGING COURSE -- "EPA's Pruitt vows to continue rolling back rules despite alarming climate report," by USA Today's Ledyard King: "EPA Administrator Scott Pruitt said a newly released government report that lays most of the blame for the rise of global temperatures to human activity won't deter him from continuing to roll back the Obama-era Clean Power Plan, a major rule aimed at combating climate change. 'We're taking the very necessary step to evaluate our authority under the Clean Air Act and we'll take steps that are required to issue a subsequent rule. That's our focus,' Pruitt said in an interview with USA TODAY Tuesday. 'Does this report have any bearing on that? No it doesn't. It doesn't impact the withdrawal and it doesn't impact the replacement.'" https://usat.ly/2j9MzAW ... ***The government report*** http://bit.ly/2jdvDcV

THE LATEST ON RUSSIA -- "Judge issues gag order in Manafort, Gates case," by Josh Gerstein: "The federal judge overseeing the criminal case against former Trump campaign chairman Paul Manafort and his associate Rick Gates has issued a gag order limiting comments to the media and the public by lawyers, defendants and witnesses in the case. U.S. District Court Judge Amy Berman Jackson's directive Wednesday doesn't ban such statements outright, but prohibits any remarks that 'pose a substantial likelihood of material prejudice to this case.'" http://politi.co/2zr0EOv

-- **"Russia investigators probe 2016 GOP platform fight,"** by Josh Meyer: "U.S. investigators are focusing on an enduring mystery of the 2016 election: whether Trump campaign officials made the Republican Party platform more friendly to Russia as part of some broader effort to collude with the Kremlin, according to congressional records and people familiar with the probes.

"Congressional investigators have interviewed ex-Donald Trump aides and advisers including J.D. Gordon, the national security policy representative at last year's GOP convention, about the campaign's push to remove proposed language from the 2016 Republican platform that called for giving weapons to Ukraine. People involved with crafting the platform also were expecting interest from special counsel Robert Mueller's team, such as witness interviews or producing documents, some of those sources said." http://politi.co/2AsGAv7

-- **"Inside secret court hearing in Mueller's Trump-Russia probe:** Audio reveals details of George Papadopoulos' July arraignment in closed Virginia courtroom," by Josh Gerstein http://politi.co/2AsHl7r

ROLLBACK -- "New Trump Rules Pare Back Obama's Opening to Cuba," by WSJ's Louise Radnofsky and Felicia Schwartz: "The Trump administration on Wednesday

continued its bid to pare back former President Barack Obama's campaign to normalize ties with Cuba, announcing regulations tightening travel and financial transactions by Americans. ...

"The changes being detailed Wednesday are mainly connected to the ability of individuals to travel to the island while also curtailing some business interactions, though leaving much of Mr. Obama's shift in place. Under rules that will come Wednesday from the Treasury Department and the State Department, many Americans who want to visit Cuba will have to do so by traveling through operators who are subject to U.S. jurisdiction and be accompanied by a representative of a sponsoring organization that is also subject to U.S. jurisdiction." http://on.wsj.com/2As4yqx

****** **A message from Morgan Stanley:** Consumers want new and now, a trend pushing athletic-wear brands to rethink how fast they can design and manufacture footwear. The rise of "fast fashion" is pushing brands to continuously roll out new models. The shift poses both a challenge and an opportunity. Read more. ******

AFTERNOON READ -- MICHAEL KRUSE in **POLITICO MAGAZINE -- "Johnstown Never Believed Trump Would Help. They Still Love Him Anyway":** "A year later, the local unemployment rate [in Johnstown, Pa.] has ticked down, and activity in a few coal mines has ticked up. Beyond that, though, not much has changed -- at least not for the better. Johnstown and the surrounding region are struggling in the same ways and for the same reasons. The drug problem is just as bad. 'There's nothing good in the area,' [Pam] Schilling said the other day in her living room. 'I don't have anything good to say about anything in this area. It's sad.' Even so, her backing for Trump is utterly undiminished: 'I'm a supporter of him, 100 percent.'

"What I heard from Schilling is overwhelmingly what I heard in my follow-up conversations with people here that I talked to last year as well. Over the course of three rainy, dreary days last week, I revisited and shook hands with the president's base -- that thirtysomething percent of the electorate who resolutely approve of the job he is doing, the segment of voters who share his view that the Russia investigation is a 'witch hunt' that 'has nothing to do with him,' and who applaud his judicial nominees and his determination to gut the federal regulatory apparatus. But what I wasn't prepared for was how readily these same people had abandoned the contract he had made with them. Their satisfaction with Trump now seems untethered to the things they once said mattered to them the most." http://politi.co/2yiArAh

THE FUTURE IS HERE -- "Uber Partners With NASA in Vision for Managing Flying Cars," by Bloomberg's Natalie Wong and Edward Ludlow: "The ride-sharing startup has said it plans to roll out an on-demand vertical take-off and landing (VTOL) network in Dallas and Dubai by 2020, and Wednesday added Los Angeles to the list. But many regulatory hurdles will need to be cleared before that can happen, including approval by the Federal Aviation Administration, which will have to figure out how flying cars can get along with airplanes, helicopters and drones in the sky. On Tuesday, Uber took a step toward resolving that by signing an agreement with the National Aeronautics and Space

Administration to develop new traffic concepts that will enable safe and efficient operations of robotic flight systems, the company said." https://bloom.bg/2AtdpYT

FLASHBACK -- POLITICO, NOV. 4: "On Election Night last year, Trump ripped up his speech and made a personal appeal for national unity. It was a glimpse of a presidency that might have been." http://politi.co/2AjqKTp

-- WASHINGTON POST, NOV. 7: "The victory speech was a glimpse of a presidency that might have been." http://wapo.st/2Akfg1a

ELI LAKE in Bloomberg View, "The Promising Crisis in Saudi Arabia: Purging rivals is often a bad sign. But in this case it may show an impatience to reform": "To start, Trump's son-in-law, Jared Kushner, has been cultivating his own relationship with the Saudi crown prince and heir apparent in the last year. ... And even though Kushner is a foreign-affairs amateur compared with the pros in the cabinet, his instincts are not wrong. Mohammed bin Salman has publicly stated his desire to move Saudi Arabia in the direction in which U.S. presidents from both parties have prodded the kingdom for decades. This includes a willingness to target not only fundraising for terrorist groups, but also the radical clerics who spread a hateful and extremist ideology; allowing women to drive and participate more in public life; allowing outside foreign investment; and modernizing a sclerotic military." https://bloom.bg/2zsH6t0

DANIEL'S POSTCARD FROM THE FAITH ANGLE FORUM -- ANDREW SULLIVAN, speaking on the effects of overuse of technology: "One of the great mistakes that people make is thinking that being online constantly and on your phone constantly is simply an addition to what you're already doing. ... But I think that over time you realize that in fact it's not. It really is either/or. You're either present or you're in that world, in this world of constant distraction, news and ideas and a world that is not actually happening around you or even with people you connect with. ... I realize that of the 8 or 9 hours I spent a day online, I wasn't spending with my friends, I wasn't spending with my husband, I wasn't spending actually reading anything. I was absorbing information which is a very different thing." ***Sullivan's NYMag cover story, "I Used to Be a Human Being"*** http://slct.al/2zFs3yX

MEDIAWATCH -- JOE BIDEN will appear on all four hours of NBC's "Today" on Nov. 13. He'll also appear on "The Late Show with Stephen Colbert" that night.

JOB SEARCH -- Listing at the NRA for "Field Representative, South Texas" ***Job posting on Daybook*** http://bit.ly/2jcXb1J

HOT TRAILER -- The first trailer for "The Post," starring Meryl Streep and Tom Hanks as WaPo's Katharine Graham and Ben Bradlee in the aftermath of the New York Times' big Pentagon Papers scoop, posted yesterday. http://bit.ly/2ygo0EU

SPORTS BLINK -- "Secret services: The hidden sports finances of Army, Navy and Air Force," by USA Today's Brent Schrotenboer and Steve Berkowitz: "All three

U.S. service academy sports programs are part of treasured federal institutions that are funded by taxpayer dollars. Yet unlike other public universities directly funded by taxpayer support, Navy, Air Force and Army say they don't have to disclose coaches' employment contracts and other financial records that even private schools must provide.

"The bigger question is why. A USA TODAY Sports inquiry found the answer lies in loopholes and outsourcing that is largely a result of the academies getting pulled into the vortex of the big-spending world of major-college sports." https://usat.ly/2jdddZt

SPOTTED -- Gary Cohn and his wife at Cafe Milano last night ... former DHS Secretary Tom Ridge on the Dulles shuttle, chatting up and asking about the families of the shuttle's staff (who recognized him immediately, according to our tipster) ... Sen. Mark Warner (D-Va.) dining at Nobu DC last night before attending the Virginia victory rally

SPOTTED at a book party last night for Ken Stern and his new book "Republican Like Me: How I Left the Liberal Bubble and Learned to Love the Right" ***($16.79 on Amazon*** http://amzn.to/2znF3ZO): Host Amb. Bobby Mandell, Susan Eisenhower, Susan Lagana, Kate Stack, Ben Chang, Luxembourg Amb. Sylvie Lucas, Adm. Mike Lyden, Steve Menashi.

OUT AND ABOUT -- GCI, Alaska's largest telecom provider, hosted an event at NCTA headquarters in Washington last night celebrating the completion of a rural broadband network. **SPOTTED:** Sens. Lisa Murkowski (R-Alaska) and Dan Sullivan (R-Alaska), Reps. Don Young (R-Alaska) and Patrick McHenry (R-N.C.), Nick Hanson, Greg Chapados, Tina Pidgeon, Meg Baldino, Heather Handyside, Michael Powell, Tina Pelkey, Mike Dubke, Carl Forti, Chris Maloney, Mike Pawlowski, Larry Burton, Robyn Engibous ***Pic of Murkowski and Nick Hanson doing a 'seal hop'*** http://bit.ly/2ygmiDu

BONUS BIRTHDAY -- Ashley Balcerzak, a federal politics reporter at the Center for Public Integrity (hat tip: Dave Levinthal)

****** **A message from Morgan Stanley:** It has become commonplace for consumers to see new footwear styles online and shop for them instantly-followed by speedy delivery. For the world's largest athletic brands, the shift toward "new and now" poses both a challenge and an opportunity. Revamping the lengthy design and manufacture process for footwear can be arduous, while streamlining the process to incorporate new technology for creating prototypes and 3D printing can speed production of key materials. These and other innovations could boost revenues, improve margins, reduce operational risk, and finally, win more market share in an already booming category. Since 2007, global sales of athletic wear have increased 61%, and faster supply chains can help sustain that growth for years to come. As brands shift investments toward digital design and automated manufacturing, digitization could have a significant impact on supply chains. Read more. ******

Subject: POLITICO's Morning Energy: Trump's 2-for-1 reg order gets day in court — A detour on the road from Montreal to Kigali — Heartland backing Pruitt's uphill climate fight

By Esther Whieldon | 08/10/2017 10:00 AM EDT

With help from Emily Holden and Alex Guillén

TRUMP'S 2-FOR-1 REG ORDER GOES TO COURT : A federal judge will hold a hearing this morning on President Donald Trump's "2-for-1" regulatory executive order that directed agencies to identify two rules for revision or repeal for every one they finalized. Three groups - the Natural Resources Defense Council, Public Citizen and the Communications Workers of America - will argue Trump's order is unlawful and endangers public welfare by threatening health and safety rules. The administration says Trump's order is a valid exercise of presidential authority and doesn't require agencies to do more than identify potential rules to cut. The White House also argues it is too early to challenge the order, and the groups must wait for an agency to act on it before going to court. The 10 a.m. hearing at the U.S. District Court will be held before Judge Randolph D. Moss, an Obama appointee.

A DETOUR ON THE ROAD FROM MONTREAL TO KIGALI: Finding ways to get the U.S. to comply with an international treaty to limit the use of a heat-trapping chemical got more difficult this week, Pro's Eric Wolff reports. The D.C. Circuit Court's decision to block EPA from using a key section of the Clean Air Act to rein in hydrofluorocarbons means there won't be a simple way for the U.S. to implement the Kigali amendment to the Montreal Protocol.

The way is long, and uncertain: Treaty backers now must not only sell the Senate on ratification, they must persuade both chambers of Congress to write implementing legislation if the treaty is affirmed. Either that or they'll have to persuade EPA Administrator Scott Pruitt to use the agency's power to regulation chemicals under the Toxic Substances Control Act. And even though the move is backed by business interests, getting Pruitt to write a new climate regulation would be no small feat. Treaty proponents must still convince a skeptical Trump administration, which has been dismissive of both multi-party treaties and climate science, on bringing the treaty to Congress.

Green groups are looking for a short cut: NRDC's David Doniger says they group is exploring an en banc appeal of Tuesday's court ruling. If that were to succeed, the rule would go back into effect, and treaty backers can go back to focusing on the Senate.

HEARTLAND BACKING PRUITT'S UPHILL CLIMATE FIGHT: The Heartland Institute, a group that rejects climate science, is voicing its support for EPA's Pruitt to challenge a finding that EPA must limit greenhouse gas emissions. The group's comments follow POLITICO's reporting that other conservative allies of the administration haven't endorsed that strategy. "A lot of resources will be expended in fighting this," H. Sterling Burnett, a Heartland research fellow, told ME. "Ultimately if you don't overturn the endangerment finding, Trump or whoever comes after him will have to impose their own carbon restrictions. ... You can't get around it."

Burnett argues climate models are often wrong and can't show with certainty that humans are causing climate change. A draft report from federal climate scientists that emerged on Tuesday contradicts that view. Burnett says Pruitt could challenge the endangerment finding on procedural or scientific grounds and should pursue both, although EPA might not finish the fight before the end of the Trump administration.

FALSE ALARM AT EPA: D.C. Police and Federal Protective Service officers responded to reports of gunshots inside EPA's Pennsylvania Ave. headquarters around 5 p.m. Wednesday, but authorities said the reports of gunshots were "unfounded," no one was injured and the building was secure."

Welcome to Thursday! I'm your guest host, Esther Whieldon. Joe McClelland of FERC was the first to answer that Abigail Fillmore was the first First Lady to keep her day job as a teacher for more than a year after she married Millard Fillmore, the future 13th U.S. president. Joe also knew that Abigail met her husband in 1819 when she was his teacher at New Hope Academy in New York. Today's trivia question: Name the first female artist to be commissioned by the U.S. government to sculpt a statue (Hint, the statue is in the Capitol). Bonus points if you can name the statue, where the artist is buried today and what sculpture marks her grave. Send me your guesses, tips, energy gossip and comments at ewhieldon@politico.com and follow us on Twitter @esthernow, @aadragna, @bjlefebvre, @Morning_Energy, and @POLITICOPro.

ONE IN FIVE MINE INSPECTORS MEDICALLY UNFIT: As many as one in five federal mine inspectors doesn't meet the physical requirements necessary to do the job, Ian Kullgren reports. The Labor Department said on Wednesday it would create individualized assessment plans for employees who do not pass routine physical exams.

CALL IT THE REVERSE CARBON TAX: West Virginia Governor and new Republican Jim Justice, who made billions as a coal magnate, says President Donald Trump is "really interested" in his plan to subsidize Appalachian coal production, according to news reports. The subsidy would involve the Department of Homeland Security paying eastern utilities $15 per ton of Appalachian coal burned, according to Bloomberg . Justice says he has discussed the plan, which analysts peg at costing more than $1.6 billion annually, with Vice President Mike Pence, Jared Kushner and Energy Secretary Rick Perry. The subsidy likely would face opposition from Western coal producers, the natural gas industry, and the wind and solar sectors.

Why DHS? Justice says a healthy reliance on coal for electricity is the best protection against terror attacks on energy infrastructure, echoing an argument made frequently by EPA Administrator Scott Pruitt. "Can you imagine what would happen if we lost the power in the east for a month, or two months, or three months?" Justice said. "It would be like a nuclear blast went off. You would lose hundreds of thousands of people. It would be just absolute chaos beyond belief.'

COMMISSION REJECTS CALL TO CLOSE SUNIVA TRADE HEARING: The US International Trade Commission on Wednesday rejected a request by the Solar Energy Industries Association and SunPower Inc. to close a portion of the agency's Aug. 15 hearing to the public.

The commission ruled it has already obtained enough confidential information from solar companies and SEIA to consider all of the group's arguments "without resorting to the extraordinary measure" of closing part of the hearing.

INTERIOR AIMS TO EXPAND HUNTING, FISHING IN WILDLIFE REFUGES: Following up on Secretary Ryan Zinke's pledge to create more opportunities for sportsmen to use public lands, the Interior Department's Fish and Wildlife Service is proposing to allow more hunting and fishing in 10 wildlife refuges in Georgia, South Carolina, Indiana, Minnesota, North Dakota, Oklahoma, Oregon and Wisconsin. The agency will accept comments on the proposed rule for 30 days after publication in the Federal Register, which is expected this morning. For the 2017-2018 season, FWS is also adding refuge-specific regulations on topics such as hunting dog use, ATV riding and minimum age requirements.

ZINKE OKS LAND DONATION NEAR ELK STOMPING GROUNDS: Zinke on Wednesday gave BLM the thumbs to accept the donation of about 4,000 acres of a former ranch that would for the first time allow public access to prime elk hunting grounds in the Sabinoso Wilderness in Northeastern New Mexico. The public has been cut off from the 16,000-acre area because it is surrounded by private land. But the Wilderness Land Trust bought a closed down ranch bordering Sabinoso and has offered to donate it. New Mexico Sens. Tom Udall, Martin Heinrich and Zinke toured the Sabinoso by horseback in late July.

CERES REPORT SAYS AUTOMAKERS NEED TO EVOLVE FASTER: A new report out today by Ceres that says that the increasing importance of operating costs and synergy between autonomous vehicles and electrification, fuel efficiency and electrification are key to automakers succeeding in the fast changing marketplace. The report argues that automakers are blaming their financial woes on fuel economy standards but that the standards are actually stimulating investment in advanced technologies "that are necessary for automakers' long-term financial health, especially given oil price volatility."

NOAA CLIMATE REPORT DUE OUT TODAY: The National Oceanic and Atmospheric Administration and American Meteorological Society are slated to release their annual check up on the state of the planet's climate this afternoon. More than 450 scientists from over 60 countries contributed to the report, which will highlight such indicators as greenhouse gases, temperature, sea level rise and glacier sizes. The report comes just days after the controversy over an earlier report that US scientists feared could be altered by the Trump administration.

Leading the News

Energy
White House Denies Murray Emergency Request, Despite Trump Backing
The White House denied requests from Murray Energy Corp. to issue an emergency order to keep Murray's coal mines and FirstEnergy Corp. coal plants operating and the companies out of bankruptcy, despite President Donald Trump's promises to back the requests.

News

Biofuels
U.S. Proposes Duties on Biodiesel From Argentina and Indonesia
Biodiesel producers in Indonesia and Argentina are benefiting from government subsidies, and their exports to the U.S. should be slapped with duties of as much as 68 percent, according to the initial results of a Commerce Department probe.

Coal Mining
Colorado Governor Backs Arch Coal's $12 Million Royalty Cut
Colorado Gov. John Hickenlooper (D) is supporting a request that would save Arch Coal $12 million a year in federal royalties, a spokeswoman for the governor tells Bloomberg BNA.

Emissions Trading
California Auction Raises $640 Million for Greenhouse Gas Fund
California raised an estimated $640 million for its greenhouse gas fund by auctioning permits to curb carbon emissions—a result that analysts said shows restored confidence in the state's cap-and-trade program.

Energy

Brazil's Utility Giant Soars as Government Plans Privatization

Brazil's troubled state-run utility Eletrobras jumped the most in almost two decades on a government proposal to privatize the company amid the country's deep fiscal crisis.

Energy

Energy Transfer Told to Revise Rover Gas Line Drill Plans

Energy Transfer Partners must submit revised horizontal directional drilling plans for the Rover natural gas pipeline along with other information before FERC will allow the company to resume drilling in certain areas, the agency said in an Aug. 22 filing.

Mining

Supplying Lithium Gets Trickier as Electric Revolution Looms

Hidden within the salt flats high in the Andes mountains of South America are vast deposits of the lithium that Elon Musk may need for his electric-car revolution. But extracting the mineral from brine ponds created by Orocobre Ltd. has proved more difficult than expected.

Motor Vehicles

Ford Offers U.K. Drivers Cash to Scrap Dirty Diesel Engines

Ford Motor Co. became the latest automaker to offer cash to U.K. drivers if they scrap the most polluting vehicles on the roads, targeting about 15 million cars and vans across the country.

Oil & Gas

Colorado Governor Orders Pipeline Rule Update After Fatal Accidents

Colorado Gov. John Hickenlooper (D) Aug. 22 directed the state's Oil and Gas Conservation Commission to upgrade its rules on inspection and pressure-testing of natural gas flow lines, one of a series of steps he has taken to improve safety following two deadly accidents. Hickenlooper announced in all seven steps the state will take involving the oil and gas industry. In April, two men were killed when a leaking flow line connected to a natural gas well owned by Anadarko Petroleum Co. ...

Oil & Gas

Power Plant Emissions Should Be Part of Pipeline Review: Court

Carbon emissions from gas-burning power plants should have been considered in federal regulators' review of a Florida natural gas pipeline, a federal appeals court ruled Aug. 22, siding with conservation groups.

Pipeline Safety

Energy Transfer Suit Claims Greenpeace Incites Eco-Terrorism

Energy Transfer Partners LP accused Greenpeace International, Earth First! and other groups of inciting terrorist acts and vandalism to generate publicity and raise money for their causes while hampering the ability of the Dakota Access pipeline majority owner to raise money for projects.

Regulatory Policy

Regulatory Activity Dips to New Lows in Trump Administration

The pace of regulatory activity has dipped to new lows in the first six months of the Trump administration, bringing welcome relief to businesses beset by rules from the prior administration, but dismaying public safety and civil rights advocates who fear crises are coming.

Renewable Energy

China's Top Wind Utility Lifts Profit With Policy Help

China Longyuan Power Group Corp., the nation's biggest developer and operator of wind farms, said government-led efforts to boost clean energy consumption supported higher first-half profit.

Subject: Playbook Power Briefing, presented by Koch Industries: TRUMP on VEGAS: 'Act of pure evil,' will visit city on Wednesday -- THE POLITICAL REALITY: Congress UNLIKELY to tighten gun laws -- AT LEAST 58 dead, 500+ injured

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Koch Industries

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

TRUMP TO LAS VEGAS WEDNESDAY -- POTUS ON THE DEADLIEST MASS SHOOTING IN MODERN U.S. HISTORY: "He brutally murdered more than 50 people and wounded hundreds more. It was an act of pure evil." http://politi.co/2fKJMN2 ... ***The president's full statement*** http://politi.co/2xaGiuO

THE PRESIDENT AND FIRST LADY are leading a moment of silence at 2:45 p.m., the White House announced. **SARAH SANDERS** will brief the press at 2 p.m.

THE LATEST FROM NEVADA -- "Mass shooting on the Strip stuns Las Vegas; 58 dead, 515 injured," by The Nevada Independent's Jackie Valley and Megan Messerly: Las Vegas police said a man opened fire at about 10:08 p.m. from the 32nd floor of the Mandalay Bay Resort and Casino down into a crowd of about 22,000 at an outdoor concert happening across the street, killing 58 and injuring 515 more. The shooting triggered panic in the city's tourist-heavy corridor and flashing lights up and down the boulevard. The initial death toll would make the shooting the worst mass shooting in recent U.S. history, following the killing of 49 people at Pulse nightclub in Orlando in 2016.

"Police identified the lone suspect of the mass shooting, who they believe killed himself prior to police entering a hotel room where he was located, as 64-year-old Stephen Paddock from Mesquite. Las Vegas Metro Sheriff Joseph Lombardo said early Monday morning Paddock was found with 'an excess of 10 rifles.' Lombardo said police have located a female person of interest named Marilou Danley out of the country and that she was not with Paddock when he checked into the hotel, though Paddock was using some of Danley's identification. He said police have had conversations with Danley and believe her 'at this time not to be involved.'

"Police did not release a possible motive described Paddock as a 'lone wolf-type actor,' and that the mass shooting did not appear to be an act of terrorism 'at this point,' talking with reporters early Monday morning. An FBI official at a later press conference confirmed that there did not appear to be any connection between Paddock and

extremist groups such as ISIS." http://bit.ly/2xaaNkO

-- "Las Vegas Shooter Stephen Paddock Had Recent Large Gambling Transactions," by NBC News' Pete Williams, Tracy Connor and Kalhan Rosenblatt http://nbcnews.to/2x9dHGx

-- POLITICAL REALITIES: Congress is extraordinarily unlikely to tighten gun laws. In the last decade, there have been a spate of high profile shootings -- including of two members of Congress -- and those have not sparked movement on this issue ... But, this also will make it harder for the NRA and other gun-rights advocates to push their agenda. The House was considering gun-related legislation -- but we have to imagine that will be difficult to move on at this point.

-- DEPT. OF IF PAST IS PRECEDENT: WHAT THE NEXT 24-48 HOURS WILL LIKELY LOOK LIKE : Democrats have already started to say the nation needs tighter gun laws. Republicans, by and large, will say Congress should wait for all the facts, and will note that more stringent restrictions on gun purchases would not solve every shooting and would not stop someone who wants to kill from getting a gun.

-- TRUMP'S FULL DANCE CARD: Largest mass shooting in American history in Las Vegas ... Historic storm in Puerto Rico (administration needs Congress to OK another $13 billion) ...Clean up in Texas and Florida... Rewriting the tax code... A border security/DACA package ... Government shutdown in roughly two months.

-- @JenniferJJacobs: "White House canceled only 2 other press photo opportunities of day, with prime minister of Thailand. Removes chances to ask Trump questions." ... "Admin event on deregulation has been closed to the press, and a routine Pentagon briefing called off, too, in wake of the Vegas shooting."

WHITE HOUSE, per pooler Marissa Schultz of the N.Y. Post: "The President has spoken to the Governor of NV, The Mayor of Las Vegas and the [Sheriff.] We will continue to update as appropriate."

****** **A message from Koch Industries:** As an employer of over 70,000 people across all 50 states, Koch companies innovate new ways to make everyday products better while using fewer natural resources. Our diverse businesses help improve basic necessities like food, clothing, shelter, transportation and more. See how we are focused on the future at **ChallengeAccepted.com**. ******

THE FAMILY -- "Las Vegas shooter's brother lives in Orlando, 'completely dumbfounded' by massacre," by the Orlando Sentinel's David Harris http://bit.ly/2fL3BUJ

-- BUZZFEED'S Ryan Broderick is tracking all of the hoaxes related to the shooting that are circulating online http://bzfd.it/2flvLj1

SWAMP CHECK -- "Trump says he's trying to 'reduce size of government' -- but he's really not," by USA Today's Paul Singer: "The few thousand jobs Trump has not filled are a drop in the bucket for a federal workforce that stood at about 2.8 million in August, more or less unchanged since December. The federal workforce is now back to 2013 levels after dipping to about 2.7 million in 2014. And if you include state and local workers -- some of whom are paid for by federal government block grants -- government employment nationwide has been at a seven-year high since last September, hovering about 22.3 million." https://usat.ly/2fL1Sie

RUSSIA WATCH -- "HP Enterprise let Russia scrutinize cyberdefense system used by Pentagon," by Reuters' Joel Schectman, Dustin Volz and Jack Stubbs: "Hewlett Packard Enterprise allowed a Russian defense agency to review the inner workings of cyber defense software used by the Pentagon to guard its computer networks, according to Russian regulatory records and interviews with people with direct knowledge of the issue.

"The HPE system, called ArcSight, serves as a cybersecurity nerve center for much of the U.S. military, alerting analysts when it detects that computer systems may have come under attack. ArcSight is also widely used in the private sector. The Russian review of ArcSight's source code, the closely guarded internal instructions of the software, was part of HPE's effort to win the certification required to sell the product to Russia's public sector, according to the regulatory records seen by Reuters and confirmed by a company spokeswoman." http://reut.rs/2fKfOJh

OBAMAS TO NEW YORK? -- PAGE SIX'S EMILY SMITH: "Obamas eyeing Upper East Side apartment": "The Obamas have been looking at 10 Gracie Square on the Upper East Side, situated between East End Avenue and East River Drive and near the mayor's residence Gracie Mansion, according to sources who have seen the couple arriving at the building for viewings. Built in 1930, the white-glove, full-service, pre-war building has 15 floors and 43 apartments. Other notables who have lived there include Gloria Vanderbilt, conductor André Kostelanetz and New Yorker critic Alexander Woollcott." http://pge.sx/2yTFqZ0

NEW SUPER PAC PLAYER -- THE ATLANTIC'S ROSIE GRAY -- "A New Pro-Trump Super PAC Takes Aim at the Republican Establishment": "Jeff Giesea, Mike Cernovich, and Jack Posobiec, organizers of the 'Deploraball' party to celebrate President Trump's inauguration earlier this year, are behind the super PAC, which is being called #Rev18. All three are known quantities in the pro-Trump alternative media that emerged during the campaign and presidency, powered by Trump's rise; they have since distanced itself from more extreme alt-right figures, often favoring the term 'new right.' Cernovich has become known as an occasional breaker of news about the White House, while Posobiec rose to prominence after playing a key role in the #MacronLeaks story. The trio plans to back anti-establishment primary challengers in the midterms." http://theatln.tc/2x94RbH

VALLEY WATCH -- "Facebook rolls out new ad policies amid Russia

investigation," by Nancy Scola: "Facebook -- in response to the use of its advertising offerings by Russian operatives to influence the 2016 U.S. presidential election -- says it is making changes to better understand how one-off advertisements factor in advertisers' broader strategic goals. Facebook will require its human and machine ad-reviewers to pay greater attention to the complete circumstances around ad purchases and their intended audience, the company said on Monday. Moreover, those reviewers will screen ads for what the company described as subtle expressions of violence. The company said it will add more than 1,000 human reviewers to its ad teams around the world." http://politi.co/2xaoYX1

AFTERNOON READ -- BEN SCHRECKINGER'S debut in **GQ -- "How Mike Flynn, Jr. Is Dealing with Being Trapped Inside the Mueller Investigation":** "Essentially, says a senior Trump transition official, the Flynns may try to mount a Pretty Average Dude defense. The myriad legal hassles the Flynns now face stem not from nefarious intent, the official argued, but from the fact that Flynn Jr. was in charge of the Flynn Intel Group's paperwork and was unqualified for his position. That's not to say, the official stressed, that Flynn Jr. would become 'the fall guy,' just that he believed Junior was in way over his head. 'I wouldn't expect him to know who Farrah Fawcett is, let alone a FARA filing,' said the official.

"According to a person who worked closely with the Flynn Intel Group and told me they are cooperating with Mueller's team, Flynn Jr. -- who accompanied his father to Moscow for a December 2015 gala hosted by the Russian state broadcaster RT -- made several other forays abroad with his father, which, this person says, are now one focus of investigative scrutiny. 'I've been asked about trips and what I know about who went where and why and how long they were gone,' said the person, who declined to elaborate on exactly who was asking the questions." http://bit.ly/2fKYl38

MEDIAWATCH -- "Gawker Is for Sale and Its Articles Could Be Deleted," by WSJ's Jonathan Randles: "As it stands, the site is potentially more valuable to a person who wants articles removed than it is to a person who wants the archive preserved, a person familiar with the matter said, pointing to venture capitalist Peter Thiel who secretly financed Hogan's case, the ruling on which drove it out of business. A new owner of Gawker could also face legal pressure to remove articles, people familiar with the matter said." http://on.wsj.com/2xalbJd

TODAY'S BEYOND THE BELTWAY -- Illinois Republicans still furious with Rauner over HB40 signing -- The New Jersey angle to the Trump presidency
http://politi.co/2fLeJAR

DESSERT -- "The World According to Dan Brown," by NYT's Sarah Lyall: "Anyone who has read Dan Brown's work -- and with 200 million copies of his books in print, you know who you are -- is familiar with his signature technique of inserting little chunks of expository information into the narrative. Among the topics addressed in his latest thriller, 'Origin': the wide-ranging talents of Winston Churchill, the elusive appeal of abstract art, the exciting peculiarities of Gaudi's Sagrada Familia cathedral and the

latest insane developments in the world of artificial intelligence. This is central to the Brown approach, because he himself prefers literature that is instructive and, ideally, not wholly invented. 'I feel like if I'm going to take time reading, I better be learning,' he said recently." http://nyti.ms/2xainMi

TRANSITIONS -- Sery Kim started as senior adviser to the assistant secretary of public affairs at the Department of Health and Human Services last week. ... **Daniel Bucheli** has returned to the Hill as Rep. Mike Coffman's (R-Colo.) communications director and deputy chief of staff. He was the national press secretary at the White House Office of National Drug Control Policy, but resigned after two weeks "because I really did not see it as a good fit for myself," he told us in an email.

ENGAGED -- Andrew Reagan, DCCC alum and campaign manager at the Environmental Defense Fund, got engaged on Saturday to **Leslie Tisdale,** communications director and congressional liaison for the U.S.-China Economic and Security Review Commission. "He surprised his new bride-to-be at a tucked away meadow near the Anacostia River. He planned a surprise brunch with friends and family. They met at a Halloween party in 2015 on Capitol Hill. He was dressed as Ronald Reagan and she was dressed as Charlie Blackwood from 'Top Gun.'" ***Pic*** http://bit.ly/2yjLPzi

WEEKEND WEDDINGS -- Cara Edmundowicz, a GOP fundraiser who runs the 1735 Group LLC and an RGA alum, on Saturday married **Philip Aftuck,** a senior associate at The Bernstein Companies, at Lowndes Grove Plantation in Charleston, South Carolina. "We met while attending GW in 2006; we were friends first, but have officially been together for 9 years." *Pic* http://bit.ly/2fL8w7T

SPOTTED: Phil Cox, Marie Sanderson, Paige Hahn, Amy Allman Dean, Mary Ann Laconte, Caitlin Mackintosh Schroder, Danielle Cleveland, Brian Sanderson, Creigh Behnke, Mike Senich, Heather Dodgins (Jeffreys), Rachel Wolbers, Erika Gudmundson, Emily Aden, Adam and Tracy Bernstein and Joe and Shelly Galli.

--"Britni Rillera, Anthony Lynn" -- N.Y. Times: "Ms. Rillera, 31, is a federal-affairs lobbyist in Washington for the Trust for Public Land, a San Francisco organization that works to establish parks and other protected areas. ... Mr. Lynn, 35, is a strategy management consultant in the federal services division, in Washington, of the consultancy Accenture. ... The couple met in 2007 in a Senate cafeteria on Capitol Hill at a luncheon for young African-American Senate staff." ***With pic*** http://nyti.ms/2fCsNJ4

****** **A message from Koch Industries:** According to the World Health Organization, 633 million people lack access to safe water worldwide. At Koch, we are addressing this global crisis with innovative membrane filtration technologies to help turn surface and wastewater back into clean drinking water. It's already making a difference in places such as São Paulo, Brazil, one of the world's largest cities. This is one of the many challenges that our more than 70,000 employees across America are working on each day. From water and agriculture, to renewable fuels, energy efficiency and other

advancements that help people improve their lives, our team members are encouraged to think like entrepreneurs and challenge the status quo. Here, everyone is encouraged to speak up with ideas to create greater long-term value for society, our customers and businesses, while also reducing waste so more natural resources are available to meet future needs. Go behind the scenes at **ChallengeAccepted.com**. ******

Subject: POLITICO's Morning Transportation: Infrastructure déjà vu — More execs quit manufacturing board — NTSB, safety group analyze highway crashes

By Brianna Gurciullo and Stephanie Beasley | 08/16/2017 10:00 AM EDT

INFRASTRUCTURE DÉJÀ VU: President Donald Trump signed an executive order Tuesday intended to cut the federal environmental permitting process down to two years and make sure one agency is in charge of a project's forms. As our Lauren Gardner reports for Pros, the order "is another drip in the trickle of actions Trump has taken to highlight his interest in bolstering the nation's infrastructure," but the president's plan for $1 trillion in private and public investment remains elusive. (Here's the text of the executive order, and a fact sheet on the Trump administration's infrastructure-related executive orders and budget proposal.)

Toot your own horn: Transportation Secretary Elaine Chao said in a statement Tuesday that DOT has pinpointed "more than two dozen policies and rules" to make the permitting process quicker. She also highlighted INFRA, the grant program that DOT overhauled so its criteria better lined up with the Trump administration's focus on drawing in funding from sources other than the federal government.

Gut check: Tuesday's announcement, during a maelstrom of otherwise bad press for the president, seemed tailor-made to try to shift the dialogue back to one of his signature issues. But the real prize - the $1 trillion plan Trump pledged on the campaign trail - is little more than a few ideas on paper. The administration continues to promise more details this fall.

Speaking of timetables: Gary Cohn, the director of the National Economic Council, told reporters Tuesday that an infrastructure package will "come on the heels" of a tax overhaul. "We hope it's this year," Cohn said. "We need to get taxes done between now and Thanksgiving. We need to get infrastructure going. As soon tax comes out of the House and goes to the Senate, we'll put infrastructure in the House."

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Don't forget to send tips, feedback, and lyrics to sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"We count only blue cars, skip the cracks in the street / And ask many questions, like children often do." (h/t Kristina Webb at The Palm Beach Post)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

'HERE COMES THE WATER': The executive order that Trump issued Tuesday also rescinds the Federal Flood Risk Management Standard. The standard, instituted by President Barack Obama, "requires that new federally funded projects ... be built to withstand the stronger storms

and additional flooding projected to occur as the climate changes," Pro Energy's Annie Snider reports , noting that it "has not actually taken effect yet; each federal agency is tasked with developing its own regulation for implementing the standard, and none have yet been finalized."

TWEET DU JOUR: Anyone who watched the video of Trump's comments about his executive order knows that he spent much more time talking about what happened in Charlottesville, Virginia, than about infrastructure. NBC News' Kristin Donnelly tweeted this pic of new White House Chief of Staff John Kelly listening as Trump spoke at Trump Tower.

'STUCK IN THE MIDDLE WITH YOU': When asked Tuesday about Trump's attacks on her husband, Senate Majority Leader Mitch McConnell (R-Ky.), Chao had this to say: "I stand by my man. Both of them."

HOW TIMELY: As the Trump administration continues to refine its infrastructure policy, the Association of Equipment Manufacturers has released a new poll that it says shows the majority of people across the country support the idea of investing in infrastructure as an economy booster. Out of 3,481 people surveyed in urban, rural and suburban areas, about 89 percent believed that infrastructure investments would strengthen the economy, AEM said. Eighty-two percent believed investments in infrastructure would also create more jobs.

THE NUMBERS ARE PILING UP: Scott Paul, the president of the American Alliance for Manufacturing, and AFL-CIO President Richard Trumka are among the latest batch of executives to resign from Trump's manufacturing council over the president's response to violence in Charlottesville. "I'm resigning from the Manufacturing Jobs Initiative because it's the right thing for me to do," Paul tweeted Tuesday morning. Trumka quit after Trump made additional comments about the topic during his Tuesday infrastructure presser.

DHS PERSONNEL UPDATE: After having been floated as a potential successor to FAA Administrator Michael Huerta, Miami-Dade Aviation Department Director and CEO Emilio Gonzalez is now rumored to be in the running for a senior position at DHS, sources say. CyberScoop's Shaun Waterman writes that Gonzalez is on a short list of candidates for the department's top spot, along with Acting Secretary Elaine Duke and former Deputy DHS Secretary James Loy, among others. But sources tell MT that if Gonzalez is being considered for an agency position, it would more likely be for something like TSA deputy administrator or - again - at FAA. The White House did not respond to a request for comment.

NOT QUITE OUT OF THE WOODS: Motor vehicle deaths decreased slightly during the first six months of this year, but the numbers are still higher than they were two years ago, according to preliminary data from the National Safety Council. The group estimates that 18,680 people have been killed in vehicle crashes since January, while 2.1 million were seriously injured. The data indicates a 1 percent dip, or 250 fewer deaths, from the same period in 2016. However, the estimated death toll is still 8 percent higher than it was in 2015, NSC notes. The numbers are "leveling off," but addressing prevention of future deaths will require "improvements in technology, engaging drivers and investing in our infrastructure," said NSC President and CEO Debbie Hersman. The group said motor vehicle fatality trends could be affected by recent improvements in the U.S. economy and lower gas prices.

NO, SPEED RACER, NO: NTSB released the full version of its most recent study on speeding-related crashes. The agency first released findings from the study at a press event late last month. The data connects speeding to at least 112,580 highway crash fatalities between 2005 and 2014. NTSB has said that although the risks of speeding are on par with driving under the influence of alcohol, the former issue does not receive nearly as much attention nor does it carry the same "social consequences." The NTSB recommends increased use of automated speed enforcement technologies and more consistent state and local reporting of speeding-related crashes, among other items.

A4A's CRYSTAL BALL: Airlines for America predicts that 16.1 million people will take flights with U.S. carriers from Aug. 30 to Sept. 5. (Programming note: Labor Day is Sept. 4.) That would be a 5 percent increase from the same stretch in 2016, when approximately 15.4 million travelers flew with U.S. airlines. A4A anticipates that Hartsfield-Jackson Atlanta International Airport, Los Angeles International Airport and Chicago O'Hare International Airport will be the "busiest" hubs in the country from that Wednesday to Tuesday.

'HERE COMES THE OIL TRAIN': New Jersey Senate Democrats, who hold a majority in the state's upper house, are looking to vote to override Republican Gov. Chris Christie's veto of a bill to increase oversight of oil trains. The measure "would require the operators of trains carrying hazardous materials to have emergency response plans on file with the state Department of Environmental Protection," Ryan Hutchins reports for POLITICO New Jersey Pro. "Christie conditionally vetoed the measure in July over concerns it could make information about the locations of the trains available to terrorists." (To override Christie's veto, two-thirds of both houses would have to vote "yes.")

KNIVES OUT: House Transportation Committee member Todd Rokita and Rep. Luke Messer, both Republicans from Indiana, are engaged in what POLITICO's Maggie Severns and Kevin Robillard have dubbed "the GOP's nastiest primary."

FOR YOUR RADAR: Chao will visit Alaska next week and meet with Republican Sen. Lisa Murkowski, who told the Ketchikan Daily News that she plans to talk to Chao about replacing an Alaska Marine Highway System ferry.

QUOTE DU JOUR: "We've gotten some deals done on the train ... I mean, you're looking for somebody, and you know you have a captured audience for about a minute. For the Senate, that's a long time." -Sen. Ben Cardin (D-Md.), who spoke to The Washington Post's Martine Powers for a story about the Senate's subway.

MT MAILBAG: A group of mostly shippers sent a letter this week to the leaders of two congressional panels with jurisdiction over the Surface Transportation Board, asking them to "urge" the board to launch a formal investigation into CSX's service issues. The Rail Customer Coalition - a group that includes the Auto Alliance, Global Automakers, the Farmers Union and others - also asked the chairmen and ranking members of the Senate Commerce and House Transportation committees to "examine the ramifications of the CSX service breakdown, and whether there are adequate means available to the STB to mitigate the adverse impacts to the rail

network."

ICYMI: The STB sent a letter to Hunter Harrison, the president and CEO of CSX, this week asking that the company give the board's staffers certain performance metrics ahead of the calls they are holding every week with CSX officials. The board will publish the information to its website.

SHIFTING GEARS: Andrea Waldock Niethold, formerly Rep. Lou Barletta's (R-Pa.) chief of staff, is Canadian National Railway Company's new director of government affairs in D.C. ... David Quinalty is leaving the Senate Commerce Committee, where he's been policy director for communications and technology, to work for Waymo as its leader of federal policy and government affairs, Pro Technology's Steven Overly reports .

THE AUTOBAHN:

- "Companies linked to Mike Pence seek an upper hand in infrastructure policy." International Business Times .

- "New Boston transit chief Ramirez has no transit experience." The Associated Press .

- "Uber's former self-driving chief urged calling out Musk." Bloomberg.

- "Helicopter involved in Charlottesville crash was involved in previous incident." The Washington Post .

- "German government steps in to keep Air Berlin flying." POLITICO Europe .

- "NTSB documents offer insight but no cause for Silver Spring building explosion that killed 7." The Washington Post .

- "Alarming airport security holes: Are we vulnerable to another 9/11-type attack?" Forbes .

- "Uber settles with FTC over data-privacy protections." The Wall Street Journal.

- "Metro adds cell service between Metro Center and Stadium-Armory stations." DCist .

- "The world's shipping companies are going super-sized." Bloomberg.

THE COUNTDOWN: DOT appropriations run out in 45 days. The FAA reauthorization expires in 45 days. Highway and transit policy is up for renewal in 1,141 days.

Driving the Day

Happy hump day from Denver. **SOME NEWS --** We asked **COLORADO GOV. JOHN HICKENLOOPER** during a Playbook Exchange event here if he would run for the White House on a ticket with **OHIO REPUBLICAN GOV. JOHN KASICH.** He said: "I don't think Kasich would ever do that ... You never know. You never say. He's an easy person to work with. He's strongly opinionated. And quick to his opinion. But he also knows as much about the federal budget, and understands health care at a deeper level than almost any other governor I know. ... I don't think it's in the cards. But I do like the idea of working with him in some context at some point." The governor told us Trump has told him he's taken notice of his appearances on TV.

-- WILL HICKENLOOPER RUN AGAINST SEN. CORY GARDNER (R-COLO.)? He said he was "disappointed" with Gardner's stance on health care. "That's not the Cory Gardner I thought I knew." Hickenlooper said he is "not ruling anything out." When asked what he thinks about when he considers running for a seat in Washington, Hickenlooper joked, "I think why me? What did I do to hurt you?" ***Video of the event at S&P Global's Denver office*** http://bit.ly/2ujrpA8

SPOTTED : Reince Priebus and Anthony Scaramucci both dining Tuesday afternoon at the Lafayette restaurant at the Hay Adams. Reince was with one other person, Scaramucci was with four. They were at separate tables.

READ THIS STORY, about how Treasury Secretary Steven Mnuchin is pushing for a clean debt ceiling increase and, in part, is banking on Democrats to carry it. http://politi.co/2vs7LXJ . It's very hard to see how this is not going to be a huge legislative fight in the fall. Conservatives are going to want to notch a legislative

achievement alongside lifting the debt limit. Democrats are out of power in every sense, and will want a clean increase but won't want to be seen as carrying it. The ceiling needs to be lifted by the end of September. Government funding also runs out then. And the White House has said they want to finish tax reform by the end of October.

TOP TALKER -- BEHIND THE CURTAIN -- "Full transcript: Trump's Wall Street Journal interview, " by Josh Dawsey and Hadas Gold: "President Donald Trump called his son-in-law a 'good boy' while thanking Wall Street Journal editor-in-chief Gerard Baker for a positive editorial about Jared Kushner and said the leader of the Boy Scouts told him his jamboree speech was 'the greatest speech ever made to them.' The comments, made to The Wall Street Journal and obtained in a transcript by POLITICO, show Trump holding forth at length with Baker and engaging in a familiar back and forth. Baker, according to the transcript, asked many of the questions and took the lead byline on the main piece about the interview as well, an unusual step for the editor in chief of a paper with a large White House reporting staff. The Journal has not published a full transcript of the interview. ...

"Matt Murray, the Journal's deputy editor-in-chief, warned staffers in a conference call in recent days about leaking the transcript, saying it would be a breach of trust, according to several sources familiar with the call. 'Damn right I told them that. It's true,' Murray said on Tuesday via a Journal spokesperson. According to the transcript, Ivanka Trump stopped by the Oval Office during the interview, telling Baker she heard he was there and wanted to say hello. ... Baker told Ivanka Trump, 'It was nice to see you out in Southampton a couple weeks ago,' an apparent reference to a party thrown last month attended by many politicos, business titans and media elites thrown by Washington Post heiress Lally Weymouth ... Ivanka Trump and Baker also chatted about their daughters, both named Arabella." ***With the full transcript*** http://politi.co/2vhPWKC

BREAKING -- EARLY LEAD FOR DEMOCRATS -- NEW POLITICO/MORNING CONSULT POLL -- "Poll: Democrats surge ahead on generic ballot," by Steven Shepard: "Republicans trail Democrats by 7 percentage points on the generic congressional ballot, according to a new POLITICO/Morning Consult poll, the Democratic Party's greatest advantage on the generic ballot since the poll began asking the question this past spring.

"The survey, conducted last Thursday through Saturday, shows a generic Democrat leading a generic Republican, 44 percent to 37 percent, with 19 percent of registered voters undecided. The two parties were tied, 40 percent apiece, in the previous week's poll." http://politi.co/2uiOgMm

TRUMP'S WEDNESDAY -- THE PRESIDENT will announce a legal immigration overhaul with Sens. Tom Cotton (R-Ark.) and David Perdue (R-Ga.). He'll also meet with Sen. Rob Portman (R-Ohio) in the afternoon.

VICE PRESIDENT MIKE PENCE in Montenegro made brief remarks to the pool. Per WaPo's Ashley Parker, Pence said: "As you mentioned, NATO is made up of large

countries and small countries, but the United States of America has no small ally."

NEXT UP -- "U.S. Plans Trade Measures Against China," by WSJ's Jake Schlesinger and Bob Davis: "The Trump administration is planning trade measures to force Beijing to crack down on intellectual-property theft and ease requirements that American companies share advanced technologies to gain entry to the Chinese market. The administration is considering invoking a little-used provision of U.S. trade law to investigate whether China's intellectual-property policies constitute 'unfair trade practices,' according to people familiar with the matter. That would pave the way for the U.S. to impose sanctions on Chinese exporters or to further restrict the transfer of advanced technology to Chinese firms or to U.S.-China joint ventures. ...

"One big question hanging over the White House review is whether the administration pursues any complaint through the World Trade Organization, or whether it chooses to impose penalties on its own without first seeking permission from the international body, which some Trump advisers have argued is incapable of dealing with China's trade practices. Trump aides have regularly vowed to pursue a more unilateral approach to trade but have so far done little along those lines. It is unclear how long the administration's internal review will take before an announcement is made. Officials at one point had signaled that an announcement could come as soon as this week." http://on.wsj.com/2vrtXB6

-- ANDREW RESTUCCIA and **DOUG PALMER:** "Trump's aides have been deeply divided on trade, with top trade adviser Peter Navarro and chief strategist Steve Bannon calling for aggressive measures even as others like National Economic Council Director Gary Cohn have urged caution. But an administration official said the decision to launch a Section 301 investigation won broad support among the president's ideologically diverse staff." http://politi.co/2uiKpi2

MONEY CHASE -- AP'S JULIE BYKOWICZ: "Trump's fundraising prowess is the engine of the [RNC] and a lifeline for every Republican planning to rely on the party for financial help during next year's congressional races. Leaning heavily on Trump's appeal among small donors, the party has raised $75 million in the first six months of the year, more than double what the [DNC] had raised by the same point in President Barack Obama's first year." http://bit.ly/2wI5F8v

DRAIN THE SWAMP! -- "Trump Loyalist Mixes Businesses and Access at 'Advisory' Firm," by NYT's Nick Confessore and Ken Vogel: "Mr. Lewandowski started his new business, Lewandowski Strategic Advisors, in May, according to corporate documents filed in Delaware, eight days after he announced he would part ways with the Washington lobbying firm he helped found, Avenue Strategies. Mr. Lewandowski has recently discussed expanding the new firm by adding, among others, two more Trump insiders -- the former Trump deputy campaign manager David Bossie and George Gigicos, who stepped down Monday as Mr. Trump's White House advance director -- according to two associates.

"Among the first new clients of Lewandowski Strategic Advisors is an Ohio-based company called Community Choice Financial. The company is a leader in the payday lending industry, which has faced heightened federal scrutiny in recent years. ... Mr. Lewandowski, who is known for his keen understanding of Mr. Trump's news media tastes and habits, used an appearance on NBC's 'Meet the Press' on Sunday to press his new client's interests, calling for Mr. Trump to oust the bureau's director, Richard Cordray, an Obama holdover who has led the effort to pass new payday lending requirements. ... Rejecting a question from the 'Meet the Press' host, Chuck Todd, about whether he had 'a client that wants to see' Mr. Cordray fired, Mr. Lewandowski said: 'No, no. I have no clients whatsoever.'" http://nyti.ms/2vrrcQt

THE LATEST ON HEALTH CARE ...

-- "Republicans in Congress Bypass Trump to Shore Up Health Law," by NYT's Robert Pear and Thomas Kaplan: "Congressional Republicans moved on Tuesday to defuse President Trump's threat to cut off critical payments to health insurance companies, maneuvering around the president toward bipartisan legislation to shore up insurance markets under the Affordable Care Act. Senator Lamar Alexander of Tennessee, the influential chairman of the Senate Health, Education, Labor and Pensions Committee, announced that his panel would begin work in early September on legislation to 'stabilize and strengthen the individual health insurance market' for 2018. ...

"In the House, two Republicans, Representatives Tom Reed of New York and Charlie Dent of Pennsylvania, teamed with Democrats to promote incremental health legislation that would also fund the cost-sharing subsidies. The moves were a remarkable response to the president's repeated threats to send health insurance markets into a tailspin. They offered tangible indications of cooperation between the parties after Republican efforts to scrap the Affordable Care Act collapsed in the Senate last week, all but ending the seven-year Republican quest to overturn President Barack Obama's signature domestic achievement. Lawmakers from both parties concede that the health law needs improvement, as consumers face sharp premium increases and a shrinking number of insurance options in many states." http://nyti.ms/2f7tMEj

****** **A message from Morgan Stanley**: Making an Impact Now: Millennials want more access to sustainable investing while still in their early earning years. Now, they have it. Learn more. ******

TOP-EDS -- LANHEE CHEN and **TEVI TROY** in the **WASHINGTON POST: "How Republicans can fix Obamacare now":** "On the legislative front, there are several rifle-shot provisions that could be attached to must-pass pieces of legislation, such as continued funding for the Children's Health Insurance Program. The Congressional Budget Office estimates that medical liability reform could save almost $50 billion over 10 years. And allowing the purchase of insurance across state lines would help expand insurance markets, consequently, improving options for consumers in states burdened by heavy insurance mandates. Republicans could also eliminate the Independent

Payment Advisory Board, a government body that has drawn bipartisan criticism for the extraordinary power it has to make significant cuts to the Medicare program." http://wapo.st/2vhxotW

-- SEN. JAMES LANKFORD (R-Okla.) in the **WSJ**, **"How To Make The Senate Work Again:** Keep The Filibuster But Change Other Rules That Promote Delay": "How do we get the Senate working again? First, we should reduce floor debate time for executive nominees from 30 hours to eight or less. The Senate could debate and vote on five or more nominees a week, instead of just one or two. Interestingly, this rule change was adopted for a short time by the Senate in 2013, under Harry Reid, as part of a temporary agreement to fill nominations. It worked then, and it would work now. Second, we should lower the vote threshold on the 'motion to proceed,' which begins legislative debate and amendment consideration, from 60 votes to 51." http://on.wsj.com/2w4oxZT

IF YOU READ ONE THING -- ANNIE KARNI: "In Trump's White House, the women are the survivors": "Kellyanne Conway's office has a different vibe than other corners of the West Wing. Unlike some of the drab work spaces belonging to her male counterparts, whose offices look as impersonal as the day they moved in, Conway's office is decorated with colorfully framed, oversized family photos mounted on the walls and a copy of Ivanka Trump's book 'Women Who Work' prominently on display. The comfy digs are a sign that Conway, the White House counselor who recently has been keeping a lower profile, is planning on being here for the long haul - even though some of her colleagues, including chief strategist Steve Bannon and recently departed chief of staff Reince Priebus, have at times tried to cut her out of the information loop.

"Meanwhile, former colleagues like Priebus, Anthony Scaramucci, Sean Spicer, Michael Flynn, Michael Dubke, Michael Short and Boris Epshteyn have been fired, or simply resigned to save themselves. Even Bannon, according to multiple people close to President Donald Trump, has been the target of the president's recent frustrations and anger, and he has been trying to lower his genius-behind-the-throne profile in order to avoid sharing Priebus' unhappy fate. Conway, however, is not alone in surviving the snakepit. The quiet endurers of Trump's tumultuous White House, by and large, are the women who serve in his administration. That fact that may seem ironic in an administration run by a man who has launched sexist attacks on everyone from morning show host Mika Brzezinski to his former campaign opponent Hillary Clinton - and who in the past has been accused by more than a dozen women of groping or kissing them against their will.

"But the women of the West Wing, at least so far, have had the more stable ride. is not alone. Former Goldman Sachs partner Dina Powell has risen in the ranks to become deputy national security adviser. She was also on the final shortlist of people Trump was considering for the chief of staff job given to retired Gen. John Kelly, according to two White House officials. It was Powell, alongside U.N. Ambassador Nikki Haley, who was invited to ride in Trump's car, known as 'The Beast,' from the White House to Andrews Air Force Base last Friday, hours before the president unceremoniously fired Priebus in the rain. Communications adviser Hope Hicks maintains an unassailable position as a

surrogate family member and loyal aide by the president's side, where she has stood since before there was even a campaign. Sarah Huckabee Sanders has risen to the position of press secretary, after Spicer resigned because he was not given the full control of the communications department that he demanded." http://politi.co/2wkSaFV

TRIAL BALLOON - "Kelly eyes DHS spokesman for communications director, sources say," by CNN's Dylan Byers: "[Dave] Lapan, who has worked with Kelly for over a decade, is at the top of a short list to serve as the White House's top official on messaging and communications. He would take the position formerly held by Anthony Scaramucci. Kelly's interest in Lapan suggests that he is as eager to impose discipline on the White House messaging strategy as he is to impose order on the chaotic and fractious West Wing. Lapan has a background that, like Kelly's, is steeped in years of military experience. Before DHS, he led press operations at the Defense Department and the Marine Corps. Reached for comment, Lapan told CNNMoney he had not spoken to Kelly or anyone else at the White House about the position." http://cnnmon.ie/2tYnp8R

-- REPORTERS WE SPOKE TO said this would be a good hire for the White House. He respects the media and the job that journalists do.

THANKS, BUT NO THANKS -- "Sasse rebuffs Heritage for top job," by Eliana Johnson: "The Heritage Foundation has approached one of the Senate's leading anti-Trump Republicans, Ben Sasse, to gauge his interest in serving as president - an indication the influential conservative think tank may turn away from its supportive posture toward the president. Sasse, who was elected to his first term in the Senate in 2014, has swatted down the overtures from Heritage's board of trustees, according to two sources familiar with the recruitment effort. The Nebraska senator rose to national prominence when he announced early in the primary calendar that he would support neither Donald Trump nor Hillary Clinton, and he has been a persistent critic of Trump ever since." http://politi.co/2vmrlDU

-- "Senior [EPA] official quits, decrying 'triumph of myth over truth,'" by E&E's Ariel Wittenberg: "Elizabeth 'Betsy' Southerland worked at EPA for 30 years, most recently directing the Office of Water's Office of Science and Technology. Southerland slammed Pruitt's EPA for launching a 'repeal, replace, modify initiative' for regulations. ... She also described President Trump's executive order requiring that agencies repeal two regulations for every new one as 'a real Sophie's choice for public health agencies like EPA.' She said, 'Should EPA repeal two existing rules protecting infants from neurotoxins in order to promulgate a new rule protecting adults from a newly discovered liver toxin?'" http://bit.ly/2uUBCGP ... ***Her exit memo*** http://bit.ly/2vi4k5h

M.I.A. -- "Trump's CEO Brain Trust Comes Up Short on Big Ideas for Policies," by Bloomberg's Matt Townsend, Shannon Pettypiece and Joe Deaux: "Elon Musk of Tesla and Walt Disney's Bob Iger have quit. Jeffrey Immelt of General Electric and JPMorgan Chase's Jamie Dimon have dissented. President Donald Trump's business brain trust -- originally these executives, plus some 50 other chief executive officers chosen to help

shape White House policy -- has so far come up short on big ideas. In fact, there's been little activity for the strategic and policy forum and the manufacturing group, according to people familiar with the matter who asked not to be identified. After initial meetings early in Trump's presidency -- which the White House promoted with great fanfare -- his administration hasn't convened the groups for months or set firm dates for future meetings." https://bloom.bg/2u2MRhw

DOJ WATCH -- "Sessions offers rare warning on dangers of police misconduct," by Josh Gerstein: "As Attorney General Jeff Sessions delivered his usual recitation of the ills of violence and drugs plaguing America Tuesday, he added in a problem he rarely brings up unprompted: police misconduct. Sessions often chastises others for badmouthing police and, indeed, his remarks to an African-American law enforcement group in Atlanta, included just such a passage. But what was more notable was his public acknowledgment that 'bad' officers were contributing to a lack of community trust.

"'We all know the cases of the last several years when in confrontations with police, lives have been cut short,' Sessions told the National Organization of Black Law Enforcement Executives conference. 'Just as I'm committed to defending law enforcement who lawfully have to use deadly force to defend themselves while engaged in their work, I will also use the power of the office I'm entrusted with to hold any officer responsible who violates the law.' 'You know all it takes is for one bad officer to destroy the reputations of so many who work every day to build good relationships in these communities and who serve with honor and distinction,' Sessions added." http://politi.co/2u2saCl

COMING ATTRACTIONS -- "Justice Dept. to Take On Affirmative Action in College Admissions ," by NYT's Charlie Savage: "The Trump administration is preparing to redirect resources of the Justice Department's civil rights division toward investigating and suing universities over affirmative action admissions policies deemed to discriminate against white applicants, according to a document obtained by The New York Times. The document, an internal announcement to the civil rights division, seeks current lawyers interested in working for a new project on 'investigations and possible litigation related to intentional race-based discrimination in college and university admissions.'" http://nyti.ms/2w4WRUH

THE JUICE ...

-- CALIFORNIA REP. BARBARA LEE is being reappointed by House Minority Leader Nancy Pelosi to the post of House Democratic Representative to the United Nations, POLITICO California Playbook author Carla Marinucci writes in. The dedicated anti-war activist has made news recently with her effort to repeal the 2001 Authorization for Use of Military Force.

FUN READ - "'The moment when it really started to feel insane': An oral history of the Scaramucci era," by WaPo's Monica Hesse, Ben Terris and Dan Zak: ***With cameos from Matt Schlapp, Max Boot, Sens. Tim Kaine (D-Va.), Tim Scott (R-S.C.), and***

Chris Murphy (D-Conn.), Tommy Vietor, Eli Stokols, Sarah McBride, Henry Gomez, Olivia Nuzzi, Evan McMorris-Santoro, Yashar Ali, Ben Wikler, Kat Timpf.

Playbook Reads

TRUMP'S COST CUTTING -- "Boeing Jets Once Destined for Russian Carrier to Be Next Air Force One: Planes will be converted as part of an effort to cut the cost of replacement program," by WSJ's Doug Cameron: "The U.S. will buy two 747 jumbo jets from Boeing Co. for use as the next Air Force One fleet, converting planes previously ordered by a bankrupt Russian airline. Boeing suggested selling the planes as part of an effort to cut the cost of an Air Force One replacement program that President Donald Trump criticized as too expensive before taking office. 'We're working through the final stages of coordination to purchase two commercial 747-8 aircraft and expect to award a contract soon,' Air Force spokeswoman Ann Stefanek said on Tuesday."
http://on.wsj.com/2vnC1C3

REMEMBER HIM? -- "Prosecutors inappropriately inquired about ex-congressman Aaron Schock's sex life, defense attorneys say," by WaPo's Matt Zapotsky: "Defense attorneys for former congressman Aaron Schock (R-Ill.) have asked a federal judge to dismiss the criminal charges against him, arguing in a court filing Tuesday that investigators acted inappropriately in the case, including by exploring Schock's sex life and whether he was gay.

"Schock's defense attorneys asserted that prosecutors made 'repeated inquiries to witnesses into who he has slept with and whether he is gay,' questioning at least a dozen witnesses on the topic of Schock's sexuality, his relationships and his sleeping arrangements. The attorneys argued the inquiries were so inappropriate that they could have affected witnesses who testified before the grand jury, and thus the indictment against Schock should be thrown out. 'The government's inquiries into Mr. Schock's sexuality and romantic relationships were not just distasteful and offensive,' Schock's attorneys wrote. 'They were prejudicial.' A spokeswoman for the U.S. Attorney's Office in the Central District of Illinois, which is prosecuting the case, declined to comment. ...

"'The government has investigated nearly every facet of Mr. Schock's professional, political, and personal life,' defense attorneys wrote. 'This even includes his sex life. It is no secret that there has long been speculative gossip in the media about Mr. Schock's sexual orientation. For no apparent reason, the government has felt itself compelled to investigate this too.'" http://wapo.st/2hmeYCr

OUT GOLFING -- "First Golfer: Donald Trump's relationship with golf has never been more complicated," by Alan Shipnuck in Sports Illustrated: "At most other golf courses in America the TV is tuned to Golf Channel, on mute, but throughout last

summer and fall, the television in Trump Bedminster's shop was on Fox News, with the sound blaring. As President, Trump has already made four visits to the club. He has his own cottage adjacent to the pool; it was recently given a secure perimeter by the Secret Service, leading to the inevitable joke that it's the only wall Trump has successfully built. Chatting with some members before a recent round of golf, he explained his frequent appearances: 'That White House is a real dump.' (A White House spokesperson denies this occurred.) ...

"Trump favors the latest in TaylorMade equipment, owing to a long-standing friendship with Mark King, the company's former CEO. But when Prime Minister Abe gave Trump a gold-colored Honma Beres S-05 driver, it went straight into the bag. (Retail price of the club: $3,755. The gift was made in November, and as President-elect, Trump was permitted to accept a gift that he would not have been allowed to take after the inauguration; Presidents are forbidden from accepting a present from a foreign government with a value that exceeds $390.) ... A Wall Street banker and member of a Trump club with knowledge of the financing of the $63 million Turnberry [Scotland] purchase expects the deal to be a subject of interest to special prosecutor Robert Mueller, given the foreign lenders he says were involved. ...

"[F]or the President, politics and golf are now inextricably linked. During the [U.S. Women's] Open, one of the few players to enjoy an audience with him was Sandra Gal, a member of the European Solheim Cup team from Germany. He quizzed her about the speed of the greens, thickness of the rough and other details about how his course was playing. 'I asked him how he was doing,' Gal says, 'and he said, "This Russia stuff is nasty business. Much nastier than trying to make a three-foot putt."' http://bit.ly/2f77ouA

MUELLER'S MUSCLE -- "Former Justice Department official joins Mueller team," by Reuters' Karen Freifeld: "Greg Andres started on Tuesday, becoming the 16th lawyer on the team, said Josh Stueve, a spokesman for the special counsel. Most recently a white-collar criminal defense lawyer with New York law firm Davis Polk & Wardwell, Andres, 50, served at the Justice Department from 2010 to 2012. He was deputy assistant attorney general in the criminal division, where he oversaw the fraud unit and managed the program that targeted illegal foreign bribery." http://reut.rs/2f7sIQC

THE MOOCH TALKS TO HUFFPO -- "Why The Mooch Lost His Cool," by HuffPost's Vicky Ward: "Scaramucci said he felt burned by the [Lizza] interview. 'The Lizzas and Scaramuccis have been friends for over 50 years. My dad knew his dad from construction, and we were building a personal relationship. Most of what I said was

humorous and joking. Legally, it may have been on the record, but the spirit of it was off. And he knew that.' Still, Scaramucci told me, he has plans to take Lizza out for a beer. When I asked Lizza for his response, he wrote back: 'I've only known Anthony in his capacity as a Trump surrogate and then White House communications director. We are not and have never been 'old family friends,' though I think our fathers knew each other, so maybe that's what he's talking about. (The Long Island Italian world in that generation is relatively small.) But again, that would not be a reason to suppress an explosive on-the-record interview.'" http://bit.ly/2vmunrY

FOR JARED -- "What Kushner's Leaked Speech Gets Wrong About Mideast Peace: The president's son in law thinks he knows better than the peace processors who came before him. He's about to get a rude awakening," by Aaron David Miller in POLITICO Magazine: "While he says he always tries to 'We don't want a history lesson. We've read enough books.' I know how frustrating the past can be in Mideast peace talks: It's where the parties retreat, far too often blinded by their own claims and grievances, which seem to hold the future hostage. But for a would-be peacemaker, if you ignore history it will bury you. Israeli and Palestinian officials can overwhelm you with intricate stories about which patch of land belonged to whom when and who double-crossed whom in previous negotiating rounds. You don't need to be a historian to be a successful negotiator, but knowing which gripes matter and which ones don't is crucial." http://politi.co/2wkjgNr

--"Trump's Peace Envoy Expands His Team," by Haaretz's Amir Tibon: "The Trump administration is working to staff up Jason Greenblatt's team to support his peace efforts. The most recent addition: Victoria Coates, a former foreign policy adviser to Senator Ted Cruz." http://bit.ly/2uUJDvy

VALLEY TALK - NICK BILTON in Vanity Fair, "Inside Travis Kalanick's Fight to Retake Uber": "Kalanick ... is probably the most aggressive and relentless C.E.O. that I have personally ever spent time with. And weeks after being ousted from Uber ... he is trying to stage his own comeback. ... After speaking with more than half-a-dozen people close to Kalanick and Uber's board of directors, it appears to me the jilted C.E.O. is up for the fight. ... Everyone I spoke to about Kalanick, however, told me that he is unequivocally trying to manipulate a return to the company in an operations role. (He currently sits on its board.) ... According to Kara Swisher at Recode, Kalanick prefers to liken his own potential homecoming to Jobs's epic return to Apple, with Kalanick telling people he is 'Steve Jobs-ing it.' Aaron Sorkin, get your typewriter ready!" http://bit.ly/2tYaqEi

MEDIAWATCH - per Alex Weprin in Morning Media: "The latest round of buyouts and layoffs at The New York Times will cost the company $25 million, according to a Times filing with the SEC on Tuesday."

****** **A message from Morgan Stanley** : According to Morgan Stanley research, 86% of Millennials-broadly defined as those born between the early 1980s and 2000-say they are interested in sustainable investing. They are also twice as likely to invest in a stock or a fund if sustainability is part of the value-creation thesis. With Millennials on track to become the largest demographic in America-by 2020, one in three U.S. adults will be a Millennial-the growing interest in sustainable, responsible and impact investing cannot be ignored. However, most sustainable investing opportunities cater to individuals with significant wealth, while the next generation is still in its early earning years. The growing demand for impact investing solutions is driving change, and opportunities created with reduced account minimums for this audience are benefiting investors of all ages. Read more from Morgan Stanley. ******

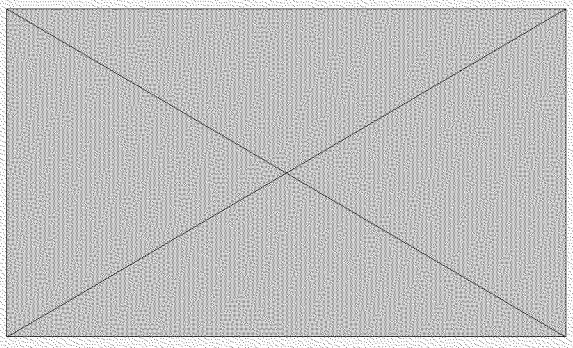
Subject: AEI Today: This is not draining the swamp

Unfortunately, President Trump will meet today with Prime Minister Najib of Malaysia, a visit the Wall Street Journal in an editorial last week characterized appropriately as "Trump's Malaysia Swamp."

AEI's daily publication of independent research, insightful analysis, and scholarly debate



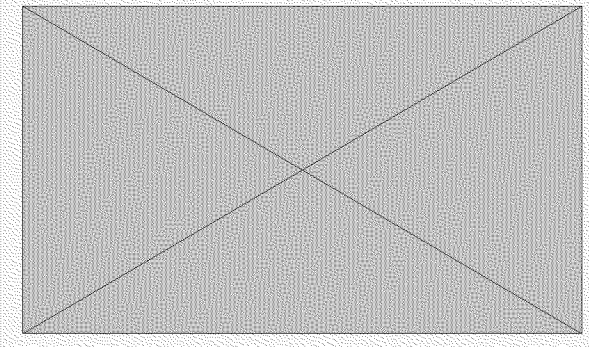
Reuters

This is not draining the swamp

Paul Wolfowitz | AEIdeas

President Trump met yesterday with Prime Minister Najib Razak of Malaysia, a visit that a Wall Street Journal editorial characterized appropriately as "Trump's Malaysia Swamp." Or as an expert on Southeast Asia quoted in The New York Times put it, "Even a photo op with Kim Jong-un would be better." If the White House is serious about reforming Washington, it should have found a diplomatic excuse to postpone this

embarrassing meeting.

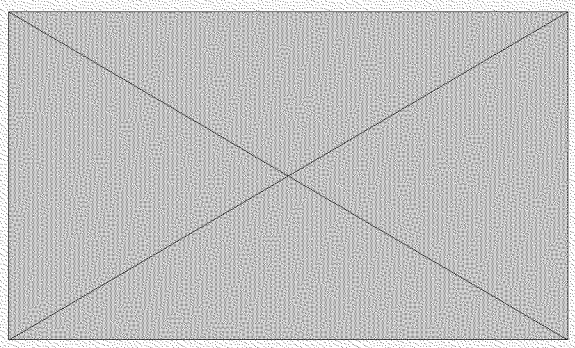


Reuters

The UK's immigration derangement

Dalibor Rohac | US News & World Report

If you want to infuriate a Brexiter, tell them that last year's vote was driven by bigotry. No, they will reply: It was about sovereignty and British control over British laws. Fair enough. But a strong preoccupation with immigration makes the UK public an outlier in Europe. What most of Britain's immigration problems have in common, however, is that they are the results of choices made by British governments — not by bureaucrats in Brussels.



Reuters

Before debating

single payer, let's decide what it is

Joseph Antos | AEIdeas

Anticipating today's release of Sen. Bernie Sanders' (I-VT) single-payer health care bill, an enterprising reporter asked several health policy experts one simple question: How do you define "single payer"? Under the rubric of "Medicare for all," single payer is gaining traction with Democrats as both parties move further toward their respective extremes. But don't be fooled. Sen. Sanders' promises don't come cheap.

Reuters

Polls: Only 29 percent of Americans would deny 'dreamers'

Karlyn Bowman and Eleanor O'Neil | AEIdeas

President Trump last Tuesday announced his decision to rescind the Deferred Action for Childhood Arrivals program put in place by President Obama in 2012. Polls indicate public opinion is at odds with Trump's decision. Surveys from 2011 to 2015 show Americans have been supportive of allowing people brought to the US illegally as children to gain legal status for some time.

Subject: BREAKING NEWS: Trump rolls back Obamacare's contraception rule

The Trump administration will allow virtually any employer to claim a religious or moral objection to Obamacare's birth control coverage mandate under a sweeping rollback announced today.

The administration is scaling back the fiercely contested requirement that employer health plans must provide contraception at no out-of-pocket cost, fulfilling a vow to President Donald Trump's conservative base that opposed the requirement as an infringement on religious freedom. Women's health advocates have already promised lawsuits to block the new rules, which take effect immediately.

Driving the Day

BREAKING OVERNIGHT -- ANOTHER ATTACK IN SPAIN -- AP/BARCELONA: "Police on Friday shot and killed five people wearing fake bomb belts who staged a car attack in a seaside resort in Spain's Catalonia region hours after a van plowed into pedestrians on a busy Barcelona promenade, killing at least 13 people and injuring over 100 others. Authorities said the back-to-back vehicle attacks - as well as an explosion earlier this week elsewhere in Catalonia- were connected and the work of a large terrorist group. Three people were arrested, but the driver of the van used in the Barcelona attack remained at large and the manhunt intensified for the perpetrators of the latest European rampage claimed by the Islamic State group. ...

"Authorities were still reeling from Thursday's Barcelona attack when police in the popular seaside town of Cambrils, about 130 kilometers (80 miles) to the south, fatally shot five people near the town's boardwalk who had plowed into a group of tourists and locals with their blue Audi 3. Six people, including a police officer, were injured, though it wasn't clear how badly. Catalonia's interior minister, Joaquim Forn, told Onda Cero radio that the five suspects killed in a subsequent shootout with police were wearing fake bomb belts." http://bit.ly/2wWlkfl

Good Friday morning. It is day 210 of Donald J. Trump's presidency. He has another 1,251 days in his first term. There are 445 days until Election Day 2018.

STORY OF THE DAY -- JOHN BRESNAHAN and **RACHAEL BADE** -- **"The agonizing, 8-page memo on how to chauffeur a congressman":** "Empty his trash. Always have hand sanitizer and gum at the ready. And don't bother with 'unnecessary conversation' - the congressman doesn't have time for your chit-chat. Demanding, high-maintenance bosses are notorious on Capitol Hill. The late Sen. Ted Kennedy's staff had to walk his dog, poop pick-up and all. Former Texas Sen. Kay Bailey Hutchison made her male aides carry her purse. The latest addition to the list: Rep. Todd Rokita, an Indiana Republican running in one of next year's most competitive Senate races.

"Who knew it could take eight pages of instructions on how to properly escort a member of Congress around his district? Yet there it is, laid out in mind-blowing detail, in a memo obtained by POLITICO that's sure to make any young, eager-beaver political aide shudder. Tasks listed in the document, entitled 'Instructions on Staffing and Driving - District Version,' include handing Rokita a cup of black coffee upon picking him up at his home, acting as a physical barrier between him and trackers looking to capture embarrassing footage of the congressman, and 'avoid[ing] sudden acceleration or braking' while driving. 'The goal is to provide as smooth a ride as possible,' reads the instruction manual, co-authored by a former chief of staff to the congressman and Tim Edson, Rokita's ex-communications director turned campaign spokesman.

"Drivers are expected to transport not only Rokita's toothbrush and toothpaste but also stock and tote around the district a nearly 20-item supply box that Rokita's staffers call 'the football.' The contents include gum, hand sanitizer, business cards, bottled water, napkins and Kleenex, Lozenges-brand cough drops, a stapler and stapler remover, Post-it notes and Shout wipes, among other items. ...

"Asked about the memo, Rokita's campaign spokesman Tim Edson wrote in an email that 'there is nothing embarrassing about always being prepared.' Edson blamed the leaked memo on his boss' longtime nemesis, Rep. Luke Messer (R-Ind.), who's running against Rokita for the GOP nomination to challenge Democratic incumbent Sen. Joe Donnelly." http://politi.co/2v7xjEK ... ***The memo*** http://bit.ly/2w8aR37

FIRST IN PLAYBOOK -- CHARLOTTESVILLE, STANDING UP TO TRUMP SEEPS

INTO 2018 -- MARK PUTNAM , the top-flight Democratic ad maker, has cut another ad for Amy McGrath, the Marine veteran running against Rep. Andy Barr in Kentucky. The spot -- set at the end of a runway -- talks about her fighter pilot service after 9/11. But she eventually says "There are times when politicians might have to make a difficult choice: do you stand with the president, or do you stand with the country? Right now is one of those times. Every Republican congressman and senator has to make a choice. Standing up to the president may not be what they signed up for, but when the president is in solidarity with white supremacists and Nazis, those members of Congress have to stand up and tell him he's wrong." ... "That's why I'm running for Congress against Andy Barr in Kentucky. He has yet to condemn the president on anything." http://bit.ly/2wg0bjh

-- THIS LINE OF ATTACK could be fruitful for Democrats who are looking to tie Trump to Republican lawmakers. So far, GOP operatives believe that Trump is his own brand apart from the Republican Party. If that changes, it could be a major drag on GOP incumbents in the 2018 midterms.

OVER TO YOU, MR. PRESIDENT -- SEN. JEFF FLAKE (R-Ariz.) in the **NYT: "We Need Immigrants With Skills. But Working Hard Is a Skill":** "Someone recently said, 'When Mexico sends its people, they're not sending their best.' The man who said that never met Manuel Chaidez." http://nyti.ms/2x9UUWZ

-- IF YOU HADN'T GUESSED BY NOW, that someone Flake is referring to is President Donald Trump.

-- @Team_Mitch: "Jeff Flake is an excellent Senator and a tireless advocate for Arizona and our nation. He has my full support. -MM".

4TH ON-RECORD BANNON COMMENT IN 3 DAYS -- "Trump embraces culture war with call to preserve Confederate statues," by WaPo's Bob Costa and David Nakamura: "Bannon -- a hard-line nationalist whose position has been threatened in recent days by his clashes with moderate colleagues and his blunt remarks to a liberal magazine -- has fiercely defended Trump in internal staff discussions, according to White House officials. In an email to The Washington Post on Thursday, Bannon said Democrats do not understand Trump and underestimate his appeal. 'This past election, the Democrats used every personal attack, including charges of racism, against President Trump. He then won a landslide victory on a straightforward platform of economic nationalism,' Bannon wrote. 'As long as the Democrats fail to understand this, they will continue to lose. But leftist elites do not value history, so why would they learn from history?'" http://wapo.st/2w7RRSj

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

READ THIS ONE -- "White House aides squirm at Trump's rhetoric but stay put: Officials said they don't expect anyone in the West Wing to resign, despite distaste for Trump's Charlottesville comments," by Annie Karni and Ben White: "National security adviser H.R. McMaster and his deputy, Dina Powell, have been unhappy with Trump's rhetoric on race over the past week, according to a White House official. But neither of them is considering resigning - they have told people it is too serious and dangerous a moment in the world for them to simply walk away." http://politi.co/2xah8rY

WALL STREET JOURNAL EDITORIAL BOARD -- "The men and women who have joined the Trump Administration aren't doing so because it enhances their reputations. They have no illusions about Mr. Trump's character flaws, or if they did, they don't any more. They are trying to serve their country. They know nearly 63 million Americans voted for Donald Trump, and that it does the country no good to root for a Presidency's disintegration.

"They see a rare moment of united Republican government to move in a better direction on domestic policy. Or they want to correct the erosion of American power and influence that accelerated during the Obama years. But that task gets harder with every reckless Trumpian flight from normal presidential behavior. Every person has to decide how long he or she can serve in good conscience. But we hope the best stay as long as they can for the good of the country." http://on.wsj.com/2vIYn0O

-- "Gary Cohn stays put -- for now -- following Trump's comments on Charlottesville," by WaPo's Damian Paletta and Renae Merle: "The White House on Thursday took the unusual step of saying that National Economic Council Director Gary Cohn would not resign, trying to contain the fallout from President Trump's controversial comments about the deadly riot in Charlottesville over the weekend and his assertion that 'very fine people' were protesting alongside neo-Nazis. Cohn, who funded the Cohn Jewish Student Center at Kent State University in 2009, was mortified by Trump's comments, three people close to him said, and he has been bombarded with calls from friends asking him if he will leave.

"Instead, the White House said that Cohn plans to stay put and focus on advancing Trump's economic agenda. It was unclear, though, how long Cohn would remain in the job or if he is still a leading candidate to be nominated as the next chairman of the Federal Reserve." http://wapo.st/2vOqYQC

-- LUNCH WITH THE FT -- STANLEY FISCHER on **COHN:** "Fischer declares that the current incumbent would be an 'excellent choice', pointing out that she has made the potentially market-unsettling process of unwinding Fed stimulus 'sedate. She has done it very well.' That said, Fischer says he likes Cohn, whom he used to sit next to at dinners thrown by Goldman Sachs during the IMF's annual meetings. And he isn't worried that Cohn is not an economist. 'The chairman of an institution such as the Fed, one of the primary things he needs is the ability to judge the advice he is getting,' he says." http://on.ft.com/2fQVJRh

MORE CHARLOTTESVILLE REPUBLICAN REACTION ...

-- **SEN. BOB CORKER** (R-Tenn.) on POTUS, via Nooga.com: "The President has not yet been able to demonstrate the stability nor some of the competence that he needs to demonstrate in order to be successful ... He also recently has not demonstrated that he understand the character of this nation. He has not demonstrated that he understands what has made this nation great and what it is today, and he's got to demonstrate the characteristics of a president who understands that." http://bit.ly/2xam3ck

-- "Sen. [Tim] Scott says Trump's 'moral authority is compromised,'" by Vice's Shawna Thomas: "'I'm not going to defend the indefensible ... [Trump's] comments on Monday were strong. His comments on Tuesday started erasing the comments that were strong. What we want to see from our president is clarity and moral authority. And that moral authority is compromised when Tuesday happened. There's no question about that.' Scott added that the president hasn't reached out to him to discuss Charlottesville." http://bit.ly/2v73JPT

-- ARNOLD SCHWARZENEGGER to ATTN: "I have a message to the Neo-Nazis, to the White Nationalists, and to the Neo-Confederates ... Your heroes are losers. You are supporting a lost cause. And believe me, I knew the original Nazis, because you see, I was born in Austria in 1947, shortly after the Second World War. And growing up, I was surrounded by broken men, men who came home from a war filled with shrapnels and guilt, men who were misled into a losing ideology. And I can tell you: that these ghosts you idolize spent the rest of their lives living in shame and right now, they're resting in hell." http://bit.ly/2wgjVTT

TRUMP'S FRIDAY -- THE PRESIDENT is heading to Camp David around 11 a.m. and arrives there at 12:15 p.m. He has a working lunch, then meets with the National Security Council. Trump heads back to his country club in Bedminster around 4:15 p.m.

TRUMP INC. -- "Three fundraising giants cancel plans for galas at Mar-a-Lago," by WaPo's Drew Harwell and David Fahrenthold: "The American Cancer Society, a high-dollar client at the club since at least 2009, cited its 'values and commitment to diversity' in a statement on its decision to move an upcoming fundraising gala. Another longtime Mar-a-Lago customer, the Cleveland Clinic, abruptly changed course on its winter event only days after saying it planned to continue doing business at Mar-a-Lago, a leading venue for charitable events in the posh resort town. The American Friends of Magen David Adom, which raises money for Israel's equivalent of the Red Cross, also said it would not hold its 2018 gala at the club 'after considerable deliberation,' though it did not give a reason. The charity had one of Mar-a-Lago's biggest events last season, with about 600 people in attendance." http://wapo.st/2vlY85l

HACKED -- "Online activist group Anonymous posts what it says are private contact details for 22 GOP members of Congress," by WaPo's Todd Frankel and Craig Timberg: "A group affiliated with the online activist group known as Anonymous

Thursday posted what it says are the private cellphone numbers and email addresses for 22 Republican members of Congress in a bid to push for President Trump's impeachment, reigniting the use of hacked information in U.S. political battles." http://wapo.st/2wVwQrH

HOUSE CHIEF DEPUTY WHIP PATRICK MCHENRY: SCALISE HAS TO RELEARN TO WALK -- Gaston Gazette: "McHenry: This has been a challenging year for us as Americans. Let's just be honest about it. Two months ago, I saw somebody who so hated the president of the United States that he shot my friends that were out playing baseball at 7 o'clock one morning. And my friend Steve Scalise got shot that morning. I saw him Monday night, he's recovering well. He's got to re-learn to walk as a result of it, two months later. He has a long road ahead. But he is good, sound mentally, emotionally, spiritually, encouraging. But I saw my friend get shot because somebody so hated the president that he wanted to take it out on Republicans." http://bit.ly/2vIU71t

FOR YOUR RADAR -- "Mattis says a decision is closer on strategy for Afghanistan," by AP's Robert Burns: "After months of sometimes heated internal debate, the Trump administration has almost reached a decision on a new approach for fighting the 16-year-old war in Afghanistan, Defense Secretary Jim Mattis said Thursday. He gave no hint of what the strategy would look like. In remarks at the State Department, Mattis told reporters President Donald Trump will confer with his national security team Friday at the Camp David presidential retreat in Maryland, and said the talks 'will move this toward a decision.' 'We are coming very close to a decision, and I anticipate it in the very near future,' he added." http://bit.ly/2vOfufU

HMM -- "Pentagon Forces Out Popular Press Spokesman," by Foreign Policy's Dan De Luce and Paul McLeary: "The Defense Department has parted ways with a senior media adviser who had years of experience working with reporters, a move that is sure to aggravate the administration's already difficult relations with the press corps. The abrupt departure of Steve Warren, an Army colonel who established a rapport with Pentagon correspondents over the course of his career, coincides with broader complaints raised by journalists about how the department is providing information and handling media access to Defense Secretary James Mattis. ...

"Dana White, the assistant secretary of defense for public affairs, played a key role in Warren's departure, current and former officials told Foreign Policy. In an emailed statement, White said Warren became ineligible for the position due to White House objections. ... Several reporters who had committed to travel with Mattis to the Middle East were informed late Monday -- just four days before they were to leave -- that they had been disinvited from the trip. This follows a pattern that has become increasingly common under Mattis, where reporters who have completed their visa paperwork and made plans to take multi-day international travel were told they were no longer welcome, with little explanation." http://atfp.co/2vIPIeQ

-- REUTERS: "Top U.S. general reaffirms commitment to Japan amid North Korea tensions," by Tim Kelly in Tokyo: Joint Chiefs Chairman Gen. Joe Dunford "restated

Washington's 'ironclad commitment' to the security of its close Asian ally, Japan, on Friday amid regional tensions over North Korea, telling his counterpart in Tokyo that 'an attack on one is an attack on both of us.'" http://reut.rs/2uVV3g9

THE JUICE ...

-- STEVEN MNUCHIN is facing new calls to step down from the administration. More than 250 of Mnuchin's fellow Yale class of 1985 alumni have written an open letter pushing him to resign. "We call upon you, as our friend, our classmate, and as a fellow American, to resign in protest of President Trump's support of Nazism and white supremacy. We know you are better than this, and we are counting on you to do the right thing." ***The letter*** http://bit.ly/2vIIreR

-- NYT's MAGGIE HABERMAN: "James Murdoch, Rebuking Trump, Pledges $1 Million to Anti-Defamation League": "In an email on Thursday, a copy of which was obtained by The New York Times and confirmed as authentic by a spokesman for Mr. Murdoch's company, the Fox scion gave an extraordinarily candid statement against the white supremacist sentiment that swept through Virginia last weekend. It was also the most outspoken that a member of the Murdoch family has been in response to the week's events. ...

"'I'm writing to you in a personal capacity, as a concerned citizen and a father. It has not been my habit to widely offer running commentary on current affairs, nor to presume to weigh in on the events of a given day save those that might be of particular or specific concern to 21CF and my colleagues,' he wrote. 'But what we watched this last week in Charlottesville and the reaction to it by the President of the United States concern all of us as Americans and free people.'

"He added: 'These events remind us all why vigilance against hate and bigotry is an eternal obligation -- a necessary discipline for the preservation of our way of life and our ideals. The presence of hate in our society was appallingly laid bare as we watched swastikas brandished on the streets of Charlottesville and acts of brutal terrorism and violence perpetrated by a racist mob. I can't even believe I have to write this: standing up to Nazis is essential; there are no good Nazis. Or Klansmen, or terrorists. Democrats, Republicans, and others must all agree on this, and it compromises nothing for them to do so.'" http://nyti.ms/2wVwgtK ... ***The email*** http://nyti.ms/2vIVNYG

TALKER -- NEW YORKER COVER -- "Blowhard," by David Plunkert, who rarely does work on politics, shows Trump alone in a sailboat, with the sail looking like a KKK hood. "President Trump's weak pushback to hate groups -- as if he was trying not to alienate them as voters -- compelled me to take up my pen," he said. http://bit.ly/2uWmxIJ

FIRST PERSON -- "I Voted for Trump. And I Sorely Regret It," by Julius Krein in the NYT: "I supported the Republican in dozens of articles, radio and TV appearances, even as conservative friends and colleagues said I had to be kidding. As early as September 2015, I wrote that Mr. Trump was 'the most serious candidate in the race.' ... I saw the decline in this country - its weak economy and frayed social fabric - and I thought Mr. Trump's willingness to move past partisan stalemates could begin a process of renewal. It is now clear that my optimism was unfounded. I can't stand by this disgraceful administration any longer, and I would urge anyone who once supported him as I did to stop defending the 45th president. Far from making America great again, Mr. Trump has betrayed the foundations of our common citizenship. And his actions are jeopardizing any prospect of enacting an agenda that might restore the promise of American life." http://nyti.ms/2uVWDyn

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

BUSINESS BURST -- "AT&T-Time Warner Deal, an Early Trump Target, Reaches Advanced Stage," by WSJ's Drew FitzGerald and Joe Flint: "The government review of AT&T Inc.'s $85 billion takeover of Time Warner Inc. has reached an advanced stage, people close to the situation said, a significant milestone in a deal that was closely

watched for signs of how the Trump administration would view large mergers. The deal's regulatory review has hit a late-stage point where AT&T lawyers are discussing merger conditions with the Justice Department, the people said. The review process has reached that point despite a vacant seat atop the department's antitrust division. An approval could underscore the administration's pro-business credentials at a time when President Donald Trump's ties with America's CEOs are under severe stress." http://on.wsj.com/2wgazYa

THE PLAYBOOK INTERVIEW: DAVID SKORTON, SECRETARY OF THE SMITHSONIAN

David Skorton, secretary of the Smithsonian Institution, warms up on his flute before joining a rehearsal with the Smithsonian Jazz Masterworks Orchestra at Smithsonian's National Museum of American History in 2015. | Andrew Harnik/AP Photo

Smithsonian Secretary David Skorton initially thought a search firm had the wrong mail merge when he was contacted about the position more than two years ago. "To this day it is possible they did have the wrong mail merge," he joked in an interview with Playbook in his office in the Smithsonian Castle last week. "I guess they couldn't get their first 26 candidates." The cardiologist and former president of Cornell and University of Iowa just passed the two-year mark at his newest job, where he is charged with overseeing the institute's museums, national zoo and partnerships with over 200 affiliate museums across the country.

Skorton, who helped celebrate the Smithsonian's 171st anniversary last week, said that while the scientific and historical aspects are perhaps the most known, the arts are just as crucial a part of the institution's mission: "I didn't want to use a stethoscope to make a living, I wanted to use this," he said, pointing to a flute he keeps in his office next to his desk. "That's my advocation. I spend a lot of time on music. I feel like I come partly from the arts in my heart."

More highlights...

ON PUBLIC SKEPTICISM OF SCIENTIFIC FINDINGS: "Concern by the scientific community that the public does not either grasp or believe the results of science is nothing new. ... As unpopular as this may be with my fellow scientists, I think it is largely our responsibility, the scientists' responsibility, because we don't emphasize dissemination of scientific information to the public in a form it can be digested by non-

specialists ... [and we don't explain] how the method works. The scientific method is a self-correcting endeavor, and scientists are professional skeptics. ... We really need to spend more time ... being an interface between the sometimes very obscure areas of work that we do ... and the general public, even the broadly educated public who just don't happen to come from a science background. ... I think both science and the media have in a sense failed the American public by not making that stuff more digestible."

ON FOSTERING PUBLIC CONVERSATIONS: "One of the things that the Smithsonian has done, in a way that wasn't organized across the institution, is to convene conversations for and among the public on issues that are troubling. We're not policymakers, we're not regulators. We're in an industry that's still trusted in America. Americans trust libraries, archives, museums. I think [we're] bringing together that trust that the public has in us and our capabilities of bringing people together. ... We started a website called Smithsonian Second Opinion, and I'll convene panel discussions and try hard to get the panelists across the spectrum of opinion. ... We're going to do this every three or so months. We're about to record the second one on immigration, the third one which will be just a few months from now, which will be entitled something like 'does art matter?' That's another way in which we're going to parly what I hope is continuing trust that the American public has in the Smithsonian." ***The first Second Opinion on climate change*** http://bit.ly/2uW8b3U

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

September 27, 2017

Latest News

EPA Seeks To Dismiss Fluoride Suit, Defending Stance On TSCA 'Uses' Issue

EPA is urging a federal court to dismiss environmentalists' suit challenging its rejection of their petition seeking to ban the practice of fluoridating water under the Toxic Substances Control Act (TSCA), with the agency defending its views on the key issue of which chemical uses must be considered in TSCA assessments and possible future regulation.

Environmentalists Urge EPA To Scrap 'Illegal' Plan For Narrower CWA Rule

Environmentalists and public health groups are urging EPA to scrap its “flatly illegal” plan to repeal the Obama administration's Clean Water Act (CWA) jurisdiction rule and replace it with a policy much narrower in scope, arguing that EPA should instead use the 2015 rule as a “starting point” for any revisions to jurisdiction policy.

House Panel Wrestles With Agencies' Role In Water Infrastructure Projects

A House Transportation & Infrastructure Committee panel is wrestling with how the federal government should address the nation's water infrastructure needs in a potential upcoming infrastructure legislative package, especially as EPA and other agency funding is not expected to increase despite widespread calls for a larger federal funding role.

EPA Says E-Manifest On Track Despite Lingering Implementation Concerns

EPA officials at a Sept. 26 meeting said the agency is on schedule to issue a final user fee rule for its new electronic manifest (e-manifest) hazardous waste system by December, and to launch the system by next June, even as the program faces an uncertain budget and lingering industry and state concerns over its implementation.

D.C. Circuit Queries State's Standing For Philadelphia Ozone NAAQS Suit

The U.S. Court of Appeals for the District of Columbia Circuit is querying Delaware over whether it has legal standing for its suit challenging EPA's decision to give Philadelphia an extra year to attain federal ozone standards, suggesting a high bar

for the First State to overcome procedural hurdles for the case ahead of Oct. 5 oral argument.

IRIS Launches Three New Assessments As Leaders Pledge 'Paradigm Shift'

EPA's influential but controversial Integrated Risk Information System (IRIS) risk assessment program is starting three new chemical assessments just as its leaders are pledging a "paradigm shift," including faster assessment times and greater relevance to internal and state partners.

Pruitt Review Of Hanford Cleanup Decision Awaits Additional Consultation

EPA Administrator Scott Pruitt has yet to review a Superfund cleanup decision for the Hanford site in Washington state -- one of the first records of decision (RODs) scheduled for such review as part of a new centralized decision-making effort for costly cleanups -- with no sign-off expected until after an additional consultation with a Native American tribe scheduled for next month, according to the agency.

Daily Feed

Pallone seeks IG 'factual record' on possible Pruitt lobbying violations

The Democrat is seeking to determine whether Pruitt unlawfully lobbied to pull out of the Paris climate agreement and on other issues.

Trailer makers ask D.C. Circuit to stay EPA's truck GHG rule

They argue that pausing the regulation would not harm any party and that their challenges to the trailer requirements are likely to succeed on the merits.

Court orders EPA to release more ethanol emissions data

A district court judge says EPA improperly limited the scope of its response to a Freedom of Information Act request for data on ethanol's air pollution impacts.

Exxon, environmentalists eye settlement in novel climate suit

A possible settlement could resolve environmentalists' suit claiming that federal waste and water permitting laws require climate resiliency planning at an Exxon oil terminal.

Ewire: Exxon touts methane cuts as EPA readies rule delay

In today's Ewire: The world's biggest energy company announces new commitments to cut methane. What does it mean for EPA's rules?

EPA poised to finalize 2018 RFS after quick OMB review

The White House completed its review of the final 2018 renewable fuel standard in

just five days, clearing the path for EPA to promulgate it.

Subject: POLITICO's Morning Transportation, presented by Coalition for Future Mobility: Shuster talks infrastructure, gas tax — TSA on academic probation — Rubio re-ups Cuban airport security bill

By Brianna Gurciullo | 10/27/2017 10:01 AM EDT

With help from Stephanie Beasley and Lauren Gardner

ONE AFTER THE OTHER: Rep. Bill Shuster (R-Pa.) wants lawmakers to dive into working on an infrastructure package as soon as efforts to overhaul the tax code wrap up - but, he argued Thursday, the White House has to be more specific about what it wants. "Waiting until tax reform is done, I think [an infrastructure package] should be tucked in right behind it," the Transportation Committee chairman told reporters. Shuster said he's "been talking to some senators" about an infrastructure bill, but no lawmaker wants to get ahead of the White House. "There's no sense in me going out there and putting something out, and then all of a sudden the president beats it down," Shuster said. "We need the White House - the bully pulpit - to be saying, 'Here's our principles,' and let us go to work." Crafting a bill would take "some weeks," he said.

Let's see ... After the gas tax came up during a meeting with National Economic Council Director Gary Cohn and the Problem Solvers Caucus this week, Shuster said he doesn't believe "there's a will" among House lawmakers to raise the levy as they consider a tax overhaul. "But I think as we go through the process - [with] Gary Cohn, the White House and the Senate - there'll be opportunities to talk to folks and see where we go," he said. He also added: "I know that, from my experience here in the House and talking to some senators, Democrats would get on board, I think, to get a tax reform bill if we did something to take care of the Highway Trust Fund."

A matter of some urgency: "The trust fund will go broke in 2020," Shuster said. "Just in case people don't realize it, that's an election year. ... I mean, we can't continue to beg, borrow and steal from different pots of money because it's just not out there anymore."

ANOTHER WEEK DOWN: Thanks for connecting at POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Send along tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"Now there's nothin' left and not a reason / There's nothin' left to believe in / When just one remains / I've sailed away."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

** **A message from the Coalition for Future Mobility:** Impaired drivers cause one third of fatal crashes. Tell Congress to greenlight Autonomous Vehicle testing and deployment. http://bit.ly/gl-sd **

PILOT TRAINING IN FOCUS: The FAA posted partial recommendations from an Aviation Rulemaking Committee Thursday that have achieved near-consensus on a hotly debated topic: training requirements for prospective airline pilots. Our Lauren Gardner writes : The committee "recommends allowing airline-provided training programs to count as credit toward required flight hours to become a commercial airline pilot. Those programs would be subject to FAA approval. Only pilots with prior military experience or with certain academic backgrounds - populations that can already receive credit toward the 1,500 hour requirement - would be eligible to participate in those programs."

The breakdown: But the Air Line Pilots Association - which blasted the FAA for releasing what it said was an incomplete body of work - and the airlines disagree on how much credit such a program should be worth toward the 1,500 hours. ALPA says 250 hours across the board, while the airlines think the credit should vary based on experience - but in a way that would favor pilots coming from thinner academic backgrounds. In the end, the airlines' approach would lead to all military and degree-holding pilots coming through such a program being eligible to apply for a co-pilot's certificate with just 500 hours of flight time.

Maybe, maybe not: A spokesman for Senate Commerce Chairman John Thune (R-S.D.) said he'd be "open to considering" the alternatives considered by the ARC "if doing so increased support for the FAA bill," which is currently being held up over language he championed to give regulators more leeway to approve additional pathways for flight-hour credit. But Senate Minority Leader Chuck Schumer 's office pointed to a statement he made denouncing a separate advisory committee's recommendation last month that the 1,500-hour requirement be changed - indicating that the biggest opponent to the FAA bill's training language isn't swayed.

THOUGH WE DOUBT YOU MISSED IT ... The House cleared the Senate's budget on Thursday, but the vote was a squeaker, with discord over the state and local tax deduction leading some Republicans to oppose it. Now, Senate Republicans will be able to pass tax legislation without Democratic votes, POLITICO's Jennifer Scholtes and Rachael Bade report. House Ways and Means Chairman Kevin Brady (R-Texas) has said the GOP will unveil a tax bill Nov. 1.

Can't stop, won't stop: Meanwhile, Senate Majority Leader Mitch McConnell told members that the chamber could be in session the week of Thanksgiving, POLITICO's Seung Min Kim reports. At the moment, senators are scheduled to be in recess.

TSA ON ACADEMIC PROBATION: We caught up with Rep. Michael McCaul (R-Texas) before he jetted out for the weekend, and he said he remains concerned that the report card for TSA's airport screenings shows the agency still falls short of an "A" in some areas, more than two years after the DHS inspector general dropped a bombshell report identifying security failures. McCaul said he expects to have a briefing with the IG's office next week to discuss its latest covert checkpoint investigation. The office said last week that it had identified more "vulnerabilities" but has not yet revealed its findings. More for Pros here.

TWEET DU JOUR: From the Eno Center for Transportation's Jeff Davis: "There are 18 Senate-confirmable positions at @USDOT. Here is today's status." Check out the breakdown.

MENÉNDEZ LAWYERS WANT MISTRIAL: Attorneys for Sen. Bob Menéndez (D-N.J.) and the co-defendant in his corruption trial are arguing that the judge should declare a mistrial, POLITICO New Jersey's Matt Friedman reports . "We have been precluded ... both during cross-examination and, now, repeatedly in our case of putting forward our defense," one lawyer said, blaming prosecutors and the judge himself. But Judge William Walls responded: "At this point, I'm not really impressed by your argument that what I have done or not done so far is perhaps grounds for a mistrial." The same day, Sens. Lindsey Graham (R-S.C.) and Cory Booker (D-N.J.) testified in court as character witnesses for Menéndez, with both saying they think he is "honest and trustworthy."

RUBIO RE-UPS CUBAN AIRPORT SECURITY BILL: Sen. Marco Rubio (R-Fla.) has reintroduced legislation aimed at heightening security for flights between the United States and Cuba. The measure, a new version of a bill that Rubio introduced last year after DOT reinstated commercial flights to the island nation, is identical to one the House passed earlier this week. Both measures call for TSA to audit screening procedures and personnel at all 10 Cuban airports with international flights. TSA also would be required to hash out an agreement with Cuba to let inspectors evaluate security protocols at airports, and U.S. airlines would have to disclose deals with Cuba's government.

ON BOARD: Patricia Chasse Hiatt is now deputy director of airport safety and standards at the FAA, according to Aviation News Today, an American Association of Airport Executives publication. She worked at TSA for 15 years. Meanwhile, Patrick Warren, who has been FRA's executive director, will soon be deputy director of the Office of Airport Planning and Programming.

SLICE OF PI: POLITICO Influence reports : "The Intelligent Transportation Society of America has tapped Shailen Bhatt as its next president and chief executive. Bhatt was previously the executive director of Colorado's Transportation Department and before that held a similar position in Delaware. He also worked for the Federal Highway Administration during the Obama administration. [...] He succeeds Regina Hopper, who left ITS America this summer after a rocky tenure that saw much of the staff depart. David St. Amant has served as interim president and chief executive since August. Korn Ferry handled recruiting for the position."

SHIFTING GEARS: Alexandra Viers is now a government relations specialist at Boeing after a stint at the Center for Strategic and International Studies, per PI.

SPOTTED: Sen. Deb Fischer (R-Neb.) at the American Trucking Associations conference in Orlando earlier this week. The lawmaker and long-time trucking advocate was seen chatting with ATA leadership and members, including FedEx, during a reception at the event. Fischer's office did not respond to a request for comment on her attendance.

Subject: White House reviewing proposal to consider Clean Power Plan replacement

By Emily Holden

10/11/2017 03:48 PM EDT

The White House is reviewing EPA's advance proposal to consider a replacement to the Obama administration's climate standards for power plants, according to a notice that the Office of Management and Budget received the document Tuesday.

EPA officially proposed to revoke the Clean Power Plan Tuesday. On a call with conservative interests, administration officials said a proposal about a replacement could be issued in the next few weeks, as POLITICO reported.

The agency argued in moving to withdraw the regulation that Obama's EPA illegally set requirements that would have required companies to shift away from coal-fired power plants and use more natural gas and renewable power for electricity. EPA argued it only has authority to regulate coal plants directly.

Officials on the call also suggested the agency is considering letting states set their own standards for coal plants.

The document OMB received is called "State Guidelines for Greenhouse Gas Emissions from Existing Electric Utility Generating Units."

Any replacement rule would likely require coal plants to run more efficiently but is not expected to significantly reduce power-sector carbon dioxide emissions that cause climate change.

EPA has said it has not yet decided whether to pursue a replacement, although a Supreme Court ruling and endangerment finding written by the agency require it to address greenhouse gas emissions from power plants. Some conservatives want Administrator Scott Pruitt to fight that endangerment finding.

Arkema Blasts Highlight Safety Agency Facing Ax Under Trump

Posted September 07, 2017, 7:02 A.M. ET

By Sam Pearson

A federal agency that could unravel why Arkema's Texas chemical plant exploded after Hurricane Harvey is a tiny office with 40 employees that the Trump administration has proposed to kill.

The U.S. Chemical Safety Board could be the only federal agency able to answer why the Crosby, Texas, chemical plant storing organic peroxides exploded several times following extensive flooding from the hurricane. And while the board has already convinced lawmakers to try to keep the agency open for fiscal 2018, the new investigation could showcase its unique role to both the public and a White House that has given no indication it will support the board's work in coming years.

The CSB has a statutory mandate to investigate the root cause of chemical incidents, a broader task than that of the Environmental Protection Agency or the Occupational Safety and Health Administration, both of which regulate the plant. CSB investigators arrived at the plant Sept. 5.

"The implications of Harvey on the chemical industry in the Gulf kind of show the importance of the Chemical Safety Board and the role that it can play in preventing these kind of incidents, or worse, that happened at Arkema," Jordan Barab, former OSHA deputy director, told Bloomberg BNA Sept. 6. "We're going to be seeing a lot more of these extreme weather events, particularly in the Gulf region," and chemical companies will have to figure out how to adapt.

Former CSB Member Gerald Poje told Bloomberg BNA Sept. 6 the Arkema incident raised significant questions about whether Texas or the company should have done more to ensure safety.

Poje said the state should figure out what it could have done to ensure plants like Arkema did not make the impacts of the storm worse "with a monumental human-caused disaster."

OSHA and the EPA are unlikely to investigate because there is no evidence Arkema was out of compliance with their regulations during the hurricane, Mark Farley, a partner at the law firm Katten

Muchin Rosenman LLP in Houston, told Bloomberg BNA Sept. 6.

OSHA said in a statement it was "premature to speculate" if previous process safety management violations at the plant contributed to the explosions. The plant also is not known to have violated any EPA chemical security regulations, but the agency could issue fines if violations are found.

CSB has a broader mandate, Farley said, to determine if government and industry need to "do something different, especially when such highly hazardous chemicals are involved."

Arkema spokesman Stan Howard said in an email to Bloomberg BNA Sept. 6 the company plans to cooperate with CSB.

Unique Role in Investigating

As part of the investigation, CSB staff will attempt to determine the root cause of the chemical explosions, which could stem from both lax company procedures and gaps in regulation that don't account for the hazards present at the plant and similar sites. CSB investigators typically seek evidence like samples of failed equipment, company records, and other data to reconstruct what occurred.

While Arkema may conduct its own internal review to determine what happened, only CSB's report is required to be made public.

This gives the CSB "a vital role in safety and health, both for workers and the public," Jim Frederick, assistant health and safety director at the United Steelworkers union, told Bloomberg BNA Sept. 6.

In other high-profile cases in which CSB has been involved, such as the Deepwater Horizon oil spill in 2010, the board's probe of the blowout led to recommendations for offshore drilling operators and federal regulators to tighten a variety of standards to "shift from correcting individual 'errors' identified post-incident to a systematic approach for managing human factors."

The board could recommend regulatory fixes, including things that are "often uncomfortable to politically powerful people" and are unlikely to be examined by OSHA and EPA under the Trump administration, James Goodwin, a senior policy analyst at the Center for Progressive Reform, told Bloomberg BNA.

The investigation's findings "will be relevant well beyond the facility, responders, planners, and community directly impacted by the incident," Timothy Gablehouse, government affairs director at the National Association of SARA Title III Program Officials, said in an email to Bloomberg BNA.

While the CSB may examine how existing regulations affected the Crosby plant, Farley said other agencies are not likely to change them at this time because it does not align with administration policy.

"Certainly this administration is not inclined to undertake additional regulatory efforts, especially where it's not clear that they are necessary," Farley said.

'Proactive' Approach, Cooperation

Chemical Safety Board Chairperson Vanessa Sutherland said last week investigators had "a number of document requests" for the company. The CSB can obtain non-public information from

Arkema by administrative subpoena if necessary, and seek legal action against the corporation if it refuses to comply.

Arkema Inc. defused the situation without injuries to its employees or the public, but only through a multi-day evacuation that strained emergency responders and rattled residents of Crosby, who were kept 1.5 miles from the plant over safety fears. The company said in a Sept. 3 statement it "took proactive action" to conduct a controlled burn of six remaining containers of the chemicals, and local officials lifted an evacuation zone early Sept. 4.

Democrats' Last-Ditch Effort to Aid Climate Fund Falls Short

Posted September 07, 2017, 01:37 P.M. ET

By Dean Scott

A last-ditch Democratic effort to restore U.S. spending for a United Nations climate fund was narrowly repelled by Republican Senate appropriators Sept. 7 in a major step for President Donald Trump's campaign to zero out international aid to address climate change.

The Senate Appropriations Committee voted, 14-15, to reject a proposal by ranking Democrat Sen. Patrick Leahy (Vt.), that would have provided $750 million in fiscal 2018 for the Green Climate Fund fund that helps developing nations adapt to climate change impacts and pursue low-carbon development.

Leahy proposed to amend the $51.2 billion fiscal 2018 spending bill covering the State Department and foreign operations. The bill advanced by the Senate Appropriations Subcommittee on State, Foreign Operations, and Related Programs didn't included funds for the climate program.

The Obama administration, over objections of the Republican-led Congress, sent a total of $1 billion to the climate fund, which was created by developed nations to encourage poorer, developing nations to sign on to a global climate change accord reached in Paris in 2015.

EPA Lines Up Five Problematic Chemicals for Regulation

Posted September 07, 2017, 02:58 P.M. ET

By Pat Rizzuto

The EPA has identified the ways five particularly problematic chemicals continue to end up in plastics, rubber, wiring and other products as it prepares to limit their health risks.

All five chemicals are fast-tracked for regulation because of their tendencies to persist in the environment, accumulate up the food chain, and due to their toxicity—a class of chemicals known as "PBTs."

These PBT characteristics have prompted many industrialized countries to limit their uses or ban them outright.

Companies also have voluntarily phased out production of some of the compounds, but some are inadvertent byproducts of chemical manufacturing. And substitutes may not be available for some uses.

The Environmental Protection Agency's work was triggered by the 2016 amendments to the primary U.S. chemicals law, the Toxic Substances Control Act. The amendments required the EPA to propose—no later than June 19, 2019—a regulation to reduce risks and exposures from persistent, bioaccumulative and toxic chemicals. The risks and exposures must be reduced "to the extent practicable," the amended law said.

The agency must issue a final rule no more than 18 months after it's been proposed.

Manufacturers

Akzo Nobel N.V., for example, has told the EPA it made or imported one of the five chemicals—phenol, isopropylated, phosphate (3:1)—in 2012, 2013, 2014 and 2015. This particular phenol is used as a flame retardant, lubricant, hydraulic fluid, and for other industrial purposes, according to EPA information.

Akzo Nobel reviewed its uses of that phenol in 2015 and restricted it to only those applications where substitutes aren't available and the use is proven safe, Andrew Wood, senior spokesman, told Bloomberg BNA.

Other chemical manufacturers that made or imported one or more of the PBT compounds include Albemarle Corp., ICL North America, Lanxess, the SI Group, Inc., and Shell Chemicals, the petrochemicals arm of Royal Dutch Shell.

Chemicals

During a Sept. 7 webinar, EPA staff is scheduled to describe the agency's plans to figure out the extent to which the five chemicals are still in use or in products, and the amount of them that may end up in people's bodies or in the environment. The five chemicals and the uses the EPA has identified are:

• decabromodiphenyl ethers (DecaBDE; CAS No. 1163-19-5), a flame retardant for textiles, plastics, wiring insulation, and building and construction materials,

• hexachlorobutadiene (HCBD; CAS No. 87-68-3), used as a solvent to make rubber compounds and as hydraulic, heat transfer, or transformer fluid,

• pentachlorothiophenol (PCTP; CAS 133-49-3), used to make rubber more pliable for industrial uses,

• phenol, isopropylated, phosphate (3:1; CAS No. 68937-41-7), a flame retardant in consumer products and also used as a lubricant, hydraulic fluid, and for other industrial purposes, and

• 2,4,6-tris(tert-butyl) phenol (CAS No. 732-26-3), an antioxidant that can be used as fuel, oil, gasoline, or lubricant additive.

Production Volumes

The national aggregate production volume—which includes importation—of decaBDE dropped between 2012 and 2015 due to a voluntary phase-out to which several major manufacturers agreed. It dropped from a range of 10 million and 50 million pounds in 2012 to less than 25,000 pounds in 2015.

The total production of phenol, isopropylated, phosphate (3:1) remained at a range between one million and 10 million pounds all four years, according to information its manufacturers provided the EPA.

The EPA withheld the production and/or importation volumes of two of the chemicals—PCTP and 2,4,6-tris(tert-butyl) phenol—because so few companies made or imported them that releasing the production volume could reveal proprietary information.

No company reported making or importing HCBD. The countries that have adopted the Stockholm Convention on Persistent Organic Pollutants agreed in May to reduce the unintentional release of that chemical, which is a byproduct of the production of solvents such as perchloroethylene, trichloroethylene, and carbon tetrachloride. HCBD also is used to make rubber, chlorofluorocarbons, lubricants, and may be used to recover chlorine gas chlorine production plants, according to EPA information.

Interior Nominee Says He Wants Collaboration, Streamlining

Posted September 07, 2017, 02:10 P.M. ET

By Alan Kovski

A nominee for a top regulatory role managing energy and other federal lands' resources promised senators Sept. 7 he would collaborate with state, local, tribal, private and environmental advocacy interests to smooth out land management policies.

Joseph Balash, nominated to be an Interior Department assistant secretary, referred frequently to his experience as a state regulator as he testified at his nomination hearing before the Senate Energy and Natural Resources Committee.

While working at the Alaska Department of Natural Resources, a state backlog of applications for work on federal lands was reduced by more than 50 percent after studies to identify the problems, he said.

No one opposed Balash at the nomination hearing. The committee will vote later on his nomination after more vetting through conversations and document reviews. The position requires Senate approval.

If Balash is confirmed as assistant secretary for land and minerals management, he will oversee the Bureau of Land Management, the Bureau of Ocean Energy Management, the Bureau of Safety and Environmental Enforcement, and the Office of Surface Mining, Reclamation and Enforcement.

Energy Regulator Nominees Back Technology-Neutral Stance

Posted September 07, 2017, 02:24 P.M. ET

By Rebecca Kern

Republican and Democratic nominees for the Federal Energy Regulatory Commission agreed that the agency should be technology neutral when it comes to regulating electric power generation, differing from a pro-coal stance of the current FERC chairman.

"FERC is not an entity whose role includes choosing fuels for the generation of electricity," Kevin McIntyre, who was nominated for a Republican commissioner seat, said at a Sept. 7 Senate Energy and Natural Resources Committee confirmation hearing. McIntyre, who was also nominated to serve as chairman of the commission, is currently an attorney in the Washington offices of the Jones Day law firm.

Richard Glick, who has been nominated to fill a Democratic commissioner seat, also said "FERC doesn't have authority to prop up technologies." Glick is currently a Democratic general counsel for the committee.

The comments contrast with commentary from those made by Neil Chatterjee, the agency's temporary chairman, in an Aug. 14 FERC podcast. Chatterjee, the former energy aide for Senate Majority Leader Mitch McConnell, said that coal-fired power plants are a crucial part of America's energy mix that needed to be "properly compensated to recognize the value they provide."

Committee Chairman Sen. Lisa Murkowski (R-Alaska) told reporters after the hearing that she wants to hold a vote on the nominees by late next week. If the two nominees are confirmed by the Senate, it will bring FERC back to a full panel of five commissioners.

"It is my intention to urge my colleagues to get their questions in and to ask you to be rapid with your responses so that you can be moved through and so that you can get to work," Murkowski said during the hearing.

Trump's Trade Barrier Push Threatens U.S. Energy Profits, Critics Say

Posted September 07, 2017, 11:35 A.M. ET

By Brian Dabbs

Trade expansion poses the biggest potential boon to U.S. energy companies, yet the Trump administration's rhetoric threatens that prospect, said several speakers at an event to discuss NAFTA renegotiations.

President Donald Trump has so far chosen to prop up the U.S. oil and gas industry by rolling back environmental regulations, but that rollback will only save energy behemoths like ExxonMobil Corp., Chevron Corp., "pennies on the dollar," David Goldwyn, chairman of the Atlantic Council's Energy Advisory Group, said at the Sept. 7 event.

Trump's attacks on Mexico, typified by a call to build a border wall on Mexico's tab, may derail cross-border pipeline projects already underway, Jeff Schott, a trade specialist at the Peterson Institute for International Economics, said. In fact, the administration's pledge to crack down on free trade, typically regarded as duty-free trade, with Mexico and other countries, jeopardizes huge opportunities for U.S. companies, experts said.

"If there is any concern about some destabilization in the bilateral relationship, investors will pull back, slow down, or even reverse investments," Schott, who also advises the U.S. Trade Representative, said.

Renegotiating NAFTA

The U.S., Canada, and Mexico concluded Sept. 5 the second round of North American Free Trade Agreement renegotiations in Mexico City. Top trade officials from the three countries are now

scheduled to meet for a third round in Ottawa at the end of this month.

At the outset of negotiations in mid-August, Robert Lighthizer, the U.S. trade representative, said the U.S. aims to improve trilateral energy relations, but didn't elaborate on ways to achieve that.

Mexico was virtually excluded from energy negotiations in NAFTA, which entered into effect in 1994. Mexico's Constitution prevented foreign development of domestic resources, but sweeping constitutional changes in 2013 ended the state-owned Mexican fossil fuel company Petróleos Mexicanos' (Pemex) 75-year monopoly in the energy sector.

And in early December 2016, Mexico awarded deepwater development rights to Chevron, Exxon Mobil, Total SA, and China-owned CNOOC Ltd. in its competitive oil auction.

The preservation of that access is a top priority for U.S. companies, Rep. Michael McCaul (R-Texas) told Bloomberg BNA after speaking at the event, sponsored by the Atlantic Council, a Washington-based think tank that focuses on international affairs. McCaul led a congressional delegation to Mexico in June.

EU Firm on Climate Pledges Despite U.S. Withdrawal From Pact

Posted September 07, 2017, 02:11 P.M. ET

By Stephen Gardner

Full implementation of the 2015 Paris climate accord should be advocated by the European Union at the forthcoming UN climate summit despite U.S. President Donald Trump's decision to pull out of the agreement, the European Parliament's environment committee decided Sept. 7.

The committee voted 54-0, with six abstentions, for a nonbinding resolution that sets out EU priorities for the Nov. 6-17 meeting in Bonn, Germany. Among its main goals, the EU should push for more climate funding to aid poorer countries and prepare for 2018 when a "facilitative dialogue" on countries' emissions reductions commitments will start, the resolution says.

At the 2018 dialogue, the parties to the Paris agreement will assess their progress in reducing greenhouse gas emissions and plan their next steps after 2020. The resolution says the EU should set an example by "revisiting its own mid- and long-term goals and policy instruments" as early as possible. The EU pledged in the Paris agreement to reduce its emissions 40 percent from 1990 levels by 2030.

Ulriikka Aarnio, international climate policy coordinator with the group Climate Action Network Europe, told Bloomberg BNA Sept. 7 the Bonn summit primarily would focus on technical preparations for the 2018 assessments, which would be a "first stocktake" of the success countries have had in reducing emissions to meet their goal of keeping global warming to within 2 degrees Celsius compared to pre-industrial levels.

A draft of the resolution ahead of the environment committee vote emphasized keeping the implementation of the Paris agreement on track and did not mention the U.S. decision to exit the agreement. However, an amendment to the resolution approved by lawmakers said that the U.S. decision was a "step backwards."

The U.S. withdrawal from the Paris Agreement does not take effect until 2020, and the country has

the right to participate as a party at the Bonn summit, Aarnio said. Negotiators from the rest of the world wanted to press ahead with implementation of their climate commitments, she said, and "no-one is really keen to discuss Trump and the U.S. situation any more."

The European Parliament will vote to make the resolution on the Bonn summit final during a plenary session Oct. 2-5.

Rising Chemical Export Requests Could Spur Delays, EU Agency Says

Posted September 07, 2017, 10:58 A.M. ET

By Stephen Gardner

The addition of new chemicals under an international export convention is challenging the European Chemicals Agency with a rising tide of export requests, potentially causing delays for chemicals companies.

According to the agency, the number of notifications—which chemicals exporters are required to submit under the European Union's Prior Informed Consent Regulation (PIC, Regulation (EU) 649/2012)—increased by 74 percent since 2014 to nearly 8,000 in 2016. The number of companies filing notifications rose from 390 to 1,177.

The export notifications are on the rise because new substances are being added to Annex I of the PIC Regulation and companies are becoming more aware of their obligations under the law.

"The expectation is that more chemicals will be added to Annex I," leading to a greater workload in the future, the agency said in a Sept. 6 statement to Bloomberg BNA.

Limited Staff

The agency said it has only seven full-time staff working on the implementation of the PIC Regulation and will request that EU institutions allocate additional resources when its budget for the 2018-2020 period is discussed.

Jasper Jansen, communications manager with Dutch chemicals company AkzoNobel, told Bloomberg BNA Sept. 6 that it was required to file notifications for exports of some hazardous substances and "overall, we are satisfied" with the system set up by the chemicals agency to handle the notifications.

European Chemicals Agency Director Geert Dancet said in a statement Sept. 6 that unless the agency received new resources, however, it "cannot guarantee the same level of quality as we have achieved so far."

When exporters want to export a listed chemical, they have to notify their national authority no later than 35 days before the export. The national authority then has 10 days to check the notification and pass it onto the EU chemicals agency. About 5 percent of these notifications are delivered late, according to the agency. ECHA then has 10 days to get in touch with the authority in the importing country to notify them of the export; about 1percent of these notifications are now running late.

According to a report it published Sept. 6, the agency has already experienced some delays in processing export notifications and passing them onto importing countries and with authorities in EU

member countries forwarding notifications to the European Chemicals Agency.

Annex Contains 200 Substances

The EU PIC Regulation implements the Rotterdam Convention on the PIC Procedure for Certain Hazardous Chemicals and Pesticides in International Trade in the bloc, which seeks to ensure that companies only export certain hazardous substances to countries that have previously consented to their import.

The regulation's Annex I contains 200 substances for which consent must be sought from authorities in the importing country, or for which an export notification must be filed with the European Chemicals Agency.

According to the chemicals agency's website, the greatest number of notifications for exports out of the EU are submitted for chloroform, benzene and 1,2-dichloroethane, which is used in applications such as the production of polymers, pharmaceuticals, and pesticides.

Companies that manufacture the substances in the EU include AkzoNobel and Germany's BASF. BASF told Bloomberg BNA Sept. 6 it was unable to comment on the PIC export notification procedure.

The U.S. signed the Rotterdam, or PIC, Convention, but never ratified it. Since 157 countries and regions are parties to the treaty, however, U.S. chemical and pesticide manufacturers exporting to those parts of the world must comply.

—With assistance from Pat Rizzuto.

Brazil's Rattled Wind Power Supply Chain Looks Ahead

Posted September 07, 2017, 01:35 P.M. ET

By Michael Kepp

Suppliers in Brazil are hoping the upcoming energy auctions will kick-start a jittery wind-power sector that's trying to deal with the country's worst recession in decades, officials from several companies told Bloomberg BNA.

Brazil is home to six major foreign and local turbines makers in addition to hundreds of equipment component suppliers. Most had set up shop after the government began holding energy auctions in late 2009, signaling the push for wind power in Brazil.

During the past two years, however, a prolonged national recession has haunted Brazil, the world's ninth largest wind market in installed capacity. This in turn has caused ripple effects for those in the supply chain that produce and distribute the parts and pieces for wind power equipment.

"WEG's component suppliers, dependent on a constant flow of orders, have maintained investments to supply us and we've guaranteed them a minimum of orders to keep them afloat," said Joao Paulo Gualberto da Silva, wind power director for WEG Energy S.A., a local equipment maker. "But we've also told them to tighten their seat belts for the next two years."

Gaulberto da Silva cited other supply-chain hurdles, including transportation bottlenecks and the

need for Brazil's Development Bank "to fine-tune" the eligibility conditions for wind farm developers wanting low-cost government financing.

"Specialized trailers for hauling wind turbine blades have a 5-meter lateral width which, in Brazil, means that, besides hiring a private escort, they also need a federal police escort," Gualberto da Silva told Bloomberg BNA. "And from mid-July to mid-August this year, the federal police ran out of money to pay for such escorts, which caused delays in delivering our wind equipment orders."

Eager for Auctions

The country has not held an auction for future wind power since December 2015 and has scheduled two end-year energy auctions, both of which will sell wind power. One auction will be held Dec. 18 and the other Dec. 20. Supply chain companies like German equipment supplier Wobben welcomed the auction news since it means wind farm developers that win future supply contracts likely will place equipment orders.

"I'm fairly optimistic about the next future wind auctions because the wind sector has experienced repressed demand for the last three or four years," said Julio Cesar Pinheiro Goes, purchasing director in Brazil for Nordex SE, a German wind turbine maker. "This recession is temporary because the market runs in cycles. We'll survive this moment."

But Rogerio Zampronha, president of the Brazilian arm of Denmark's Vestas Wind Systems A/S, the world's biggest wind turbine maker, said, "A lack of economic predictability in Brazil makes life difficult for wind equipment suppliers here. We need some [government] guarantee that there will be wind auctions each year."

Rosana Santos, product and strategy marketing director in Brazil for General Electric, one of the country's biggest wind turbine makers, had a more optimistic outlook on the supply chain. "Brazil needs to auction between 2,000 and 2,500 megawatts of wind power a year to maintain a healthy supply chain. And because of repressed demand, I'm hoping that at the two December auctions developers sell from 1,500 megawatts to 2,000 megawatts of future wind power," she told Bloomberg BNA.

China Proposes First Public Pollution Disclosure Requirement

Posted September 07, 2017, 6:51 A.M. ET

By Michael Standaert

China's major manufacturers for the first time would have to publicly disclose emissions of sulfur dioxide, nitrogen oxides, and other nationally regulated pollutants under a proposal by the Ministry of Environmental Protection.

The proposal—which also calls for the creation of a searchable database of manufacturers and pollutants—represents a major step toward improving the information companies must share, one of the leading advocates for environmental transparency told Bloomberg BNA.

"Government disclosure of pollution information [such as air and water quality] has made great progress, but when it comes to corporate disclosure, it has been far from satisfactory," Ma Jun, director of the Institute of Public and Environmental Affairs, a nonprofit group which publishes a pollution map tracking water and air pollution data across China, told Bloomberg BNA.

The proposal requires the reporting from major sources of pollution such as iron and steel manufacturers, coal-fired power plants and cement and textile plants.

These companies now have to report their pollution to the government, but there's currently no requirement to make that information available to the public. Under the proposed plan, major sources of pollution would have to release information publicly about their pollution and detail efforts to implement pollution prevention and control.

"Assuming that this becomes real, it will encourage companies to pollute less and to be more careful," said Dan Harris, managing partner of the law firm Harris Bricken LLP, whose specialties include international and corporate law. "I am guessing there will be many western companies that will be more careful in choosing their suppliers based on this."

Foreign companies in many cases release environmental responsibility reports with emissions reports and other environmental data about their supply chains. They could suffer harm to their reputations from association with heavily polluting suppliers.

A public comment period on the draft will continue until Sept. 18. China gave no indication when the proposal could be implemented.

The U.S.-China Business Council declined to comment, saying it did not have sufficient detail on the proposal. The American Chamber of Commerce in China did not respond to requests for comment.

China Eyes 707 Megawatts of Pilot Wind Farms Free of Subsidies

Posted September 07, 2017, 8:07 A.M. ET

By Bloomberg News

China, the world's biggest clean-energy investor, selected 707 megawatts of wind power pilot projects that will receive the same subsidy-free payment for electricity as coal plants.

The projects are in the Chinese regions of Hebei, Heilongjiang, Gansu, Ningxia and Xinjiang, according to a Wednesday statement on the National Energy Administration's website.

Project developers won't receive renewable energy certificates for the electricity they generate, which will only be consumed in places where it's produced.

The move is part of the nation's efforts to push wind power's costs down to parity with coal. China currently subsidizes the portion that renewable power prices exceed that of coal.

Rare Earth Metals Electrified by China's Illegal Mining Clean-Up

Posted September 07, 2017, 8:00 A.M. ET

By Bloomberg News

Rare earth metals are booming again as a clampdown on wildcat miners in China crimps supply in the world's biggest producer, while the clean energy boom bolsters their use in everything from

electric vehicles to wind turbines.

Prices for "light" rare earths, including neodymium and praseodymium, have exploded in recent months as traders and consumers snap up material that's becoming scarcer. China's shutting down illegal producers as the industry is swept up in the same kind of government clampdowns that have shaken other metals markets in 2017. Among many other applications, the elements are needed to make magnets used in motors and turbines.

"The prices of light rare earths still have upside for the longer term," Alice Mu, a Beijing-based analyst at researcher Argus Metals, said via Wechat message. "There are shortages emerging from the supply side as China's government shuts down illegal mines, purchases for state reserves, and implements tighter environmental policies."

China, which produces more than 80 percent of the world's rare earths, is clamping down on mining as part of a campaign to tackle pollution and tighten control of its massive industrial complex. Measures to curb production have already driven up prices of aluminum and steel and now rare earths are feeling the heat just as demand accelerates.

Praseodymium-neodymium oxide, a raw material for the metal, has almost doubled this year, according to Shanghai Steelhome E-Commerce Ltd. Neodymium surged by nearly a third in August alone and is up 81 percent in 2017. Demand for some rare earths may exceed supply in the second half after the crackdown on illegal mines, Ma Rongzhang, secretary-general of the China Rare Earth Industry Association said, according to a Shanghai Securities News report last week.

Electric Revolution

The rare earths join once-niche metals including lithium and cobalt as beneficiaries of rapid growth in the electric vehicle industry and renewable energy.

Global sales of electric vehicles increased by 55 percent last year to 695,000, primarily driven by China, according to Bloomberg New Energy Finance. While that's a tiny fraction of the world total, they'll account for more than half of new sales by 2040 when a third of all cars on the road will be electric-powered, BNEF forecasts.

Usage of magnetic rare earths in such vehicles is expected to grow from about 2,000 metric tons last year to 7,000 tons by 2020 and 12,000 tons by 2024, according to a presentation dated last month from Lynas Corp., the biggest rare earths miner outside China. Its shares are up 160 percent this year.

Growth in demand for wind turbines will double usage of the metals to 4,000 tons by 2024, according to Lynas. BNEF forecasts that onshore wind power will account for a quarter of all new power generating capacity additions globally over the next 23 years.

The last time rare earth prices spiked was in 2010-2011, when China triggered fears of a global shortage by restricting its exports. Prices eventually slumped as manufacturers turned to alternatives. The World Trade Organization subsequently ruled in favor of a U.S. complaint that China violated trade rules.

Similar to China's major steelmakers, which are benefiting from the clampdown on smaller rivals, the nation's chief state-owned rare earths producers are enjoying a strong year. China Northern Rare Earth Group High-Tech Co., the biggest, is up 53 percent this year, while China Minmetals Rare Earths Co. is up 27 percent.

Chilean Court Order on Wetlands Impacts May Shut Kinross Mine

Posted September 07, 2017, 03:15 P.M. ET

By Tom Azzopardi

The future of Kinross Gold's mining operations in northern Chile could depend on whether the Canadian company successfully appeals a court decision limiting the amount of water it can extract from wells near sensitive wetlands.

The Second Environmental Court based in Santiago upheld the limits Sept. 1 imposed last year by Chile's environmental regulator Superintendencia del Medio Ambiente (SMA) after finding that water extracted by Kinross subsidiary Compañía Minera Maricunga (CMM) had caused the water table in the Pantanillo-Ciénaga Redonda basin to fall. The drop is blamed for drying up at least 70 hectares of the Negro Francisco and Laguna Santa Rosa Lake Complex.

The wetlands site—listed under the 1971 Ramsar Convention on Wetlands of International Importance—is used as a breeding ground by rare species of Andean flamingos and other birds.

The court's orders forced Kinross to bring forward plans to mothball its Maricunga mine, which relies on the wells for water, by ceasing active operations to August last year, leading to the loss of 300 jobs.

In a Sept. 5 statement to Bloomberg BNA, the company said that it "vigorously disagrees with the ruling and is assessing its options, including a potential appeal to the Chilean Supreme Court." It blames the drop in water levels on a regional drought.

Water is a sensitive issue in arid northern Chile—home to the bulk of the country's mines—and the industry is turning increasingly to the Pacific Ocean for its water. But the pumping and desalination involved is expensive, especially for mines such as Maricunga which is located over 4,000 meters above sea level in the Andean Altiplano.

SMA head Cristian Franz said Sept. 4 that the environment court's ruling "ratifies the responsible, serious and objective actions of [the SMA] in recent years…in the overwhelming majority of cases, these courts have supported our decisions."

But Kinross hinted that it saw room for an appeal based on science as the court had approved SMA's orders on "purely procedural grounds."

"In its ruling, the Tribunal did not reach any conclusions relating to alleged wetlands impacts due to CMM's groundwater pumping, including detailed technical reports submitted by CMM showing a lack of such impacts," the company said.

Since halting operations at Maricunga, Kinross has been assessing its plans for the mine, including a possible sale to a third party.

"Future plans for the site will depend on a variety of factors…we continue to keep our options open," the company said.

South Korea Pours Millions Into Building Solar Panels on Landfills

Posted September 07, 2017, 9:36 A.M. ET

By Elaine Ramirez

Landfills are not just for garbage anymore. At least not in South Korea where the government and a landfill operator are coordinating to place solar power facilities at four disposal sites.

South Korea plans to install enough solar power generation facilities to supply 80,000 households by 2021 with a 390.3 billion won ($344.2 million) infrastructure project as the new Moon Jae-in government aims to transform the power matrix into 20 percent renewable energy by 2030.

"The metropolitan area is playing a leading role in realizing a resource recycling society through the expansion of energy facilities," Kim Dong-jin, director of resource circulation at the Ministry of Environment, said in the statement. "We plan to develop the landfill as a new renewable energy mecca and as a success model for responding to the new climate era."

The three-phase project to construct 250 megawatts of solar power generation facilities over four landfills in Incheon, west of capital Seoul, is expected to become a "win-win model" of mutual profit between metropolitan landfill management, local governments, power generation companies, foreign investors, and local residents, the ministry said in a Sept. 4 statement.

The initial stage of the project, to produce a 10-megawatt capacity facility, which was approved last month, is being produced by a consortium of Thai investor Pea Encom, Hong Kong investor NWS Group, Landfill Site Management Corp., Korea Western Power, Korea Southern Power, LG Serveone, Seoul Energy Corporation, Incheon U-City, and some local residents, Park Sang-cheol, deputy director of the ministry's waste-to-energy division resource circulation bureau, told Bloomberg BNA on Sept. 6.

The plan, he said, "is finalized in the sense that 250 megawatts will be achieved by 2021, but specific investors and details are yet to be decided."

The solar power produced will be mainly used for commercial sale and facility operations, Park said.

New Energy Paradigm

President Moon Jae-in, who entered office in May, has maintained South Korea's commitments to the Paris climate accord of lowering emissions by 37 percent of business-as-usual levels by 2030. He has also vowed to phase out nuclear and coal plants, and replace them with clean energy to create a renewable energy supply of 20 percent of total power, up from 6.6 percent as of 2015, according to Korea Energy Agency data. Solar power contributes about 10.7 percent of the country's renewable energy, according to 2015 data.

South Korea plans to expand the supply of renewable energy such as biogas, landfill gas, and solar power by turning waste and idle sites in the metropolitan area into renewable energy hubs, the environment ministry said.

Suk Chan-woo, sales manager for local wind and solar device producer Eco Power, said demand for solar power facilities this year is similar to last year's but is expected to increase.

"Of course the policy will work positively for the industry," he told Bloomberg BNA on Sept. 6. "We are planning on increasing production, but not just yet as nothing is finalized [with contracts]."

Seok Sang-Il, energy and chemical engineering professor at South Korea's Ulsan National Institute of Science and Technology, said as long as solar energy was not to much more expensive than power generated by state-run Korea Electric Power Corp. and didn't cause a public inconvenience, it's a good way to boost the country's renewable energy matrix.

Hydro power faces constraints in water storage and dam construction, while the wind in the country does not blow in the right direction for efficient power generation, he noted.

"Once you exclude all of these, solar energy is the alternative in the end," he said.

"There is a lot of unused land [at landfills] so the proportion of renewable energy used can increase greatly" with the solar facility installations, he added.

But Seok said this project alone wouldn't be enough to help South Korea reach its 20 percent renewable energy goal, since the amount of waste is fixed along with the amount of energy that can be taken from it.

"The government is trying to increase the solar and wind power so that will play a major role in reaching the rate" of the 20 percent renewable energy goal, he said.

Subject: Today on Climate Beat

August 14, 2017

Today on Climate Beat . . .

. . . we went to court, where the Sierra Club has filed a Freedom of Information Act suit to obtain communications from the Department of Energy (DOE) with third-party groups, including fossil fuel groups, about the development of DOE's much-anticipated electric grid study.

Out in the West, the U.S. Court of Appeals for the 9th Circuit is set to schedule a November oral argument to consider the oil industry's challenge to Oregon's low-carbon fuel standard (LCFS), which if successful could lead the Supreme Court to review an earlier ruling by the circuit court that upheld California's LCFS.

And over at EPA, our daily news roundup looked at a report that EPA Administrator Scott Pruitt is doing much of his work to roll back major Obama-era climate and other environmental regulations in secret, with the help of a small group of political appointees.

Refineries' Toxic Gas | Harvey Damage | EPA Economic Reviews

Posted August 30, 2017, 7:01 A.M. ET

By Chuck McCutcheon

Houston's hazardous air pollution has spiked as Hurricane Harvey shuts down refineries and petrochemical complexes.

Emergency shutdowns released more than 2 million pounds of harmful pollutants into the air, according to initial reports to Texas regulators.

Affected Houston-areas refineries include ExxonMobil's sprawling Baytown complex, as well as refineries run by Chevron-Phillips, Petrobas, Royal Dutch Shell. It also includes the shutdown of Motiva Enterprises' Port Arthur facility—the nation's largest crude oil refinery.

While the shutdowns may be necessary from a safety perspective, shutting down boilers and other equipment can produce significant amounts of air pollution. Chevron Phillips reported to Texas' Commission on Environmental Quality that the company expects to exceed permitted limits for several hazardous pollutants, such as 1,3-butadiene, benzene, and ethylene, during shutdown procedures.

Energy-Incident Response Headaches

Harvey also is taxing the various government responses to damaged energy infrastructure.

A 14-inch pipeline in La Porte, Texas, spewed a toxic gas for several hours—just one of the infrastructure incidents challenging regulators as Harvey dumps record-breaking rain on the state. The Texas Commission on Environmental Quality is monitoring oil, gas, and other facilities reporting spills and giving technical guidance to wastewater operators in flood-impacted areas. And the Pipeline and Hazardous Materials Safety Administration is working with pipeline operators to give them better views of the integrity of their facilities.

Model Lacks Clarity: EPA Advisers

Economic modeling can be confusing—even to EPA's Science Advisory Board.

Its members told the EPA that the agency model for evaluating broad economic costs and benefits of air pollution regulations isn't clear enough to help the public. The analysis is intended to help utilities, industries, and policymakers determine the effects of federal regulations on factors like energy prices and employment.

Board members who met Aug. 29 to discuss their draft report on EPA's draft economy-wide model asked for clarifications and transparency on the model's shortcomings.

What Else?

• "Garbage juice:" North Carolina lawmakers schedule a Wednesday veto-override vote to allow landfill operators to spray leachate and wastewater into the air to manage solid waste.

• Wisconsin's top environmental regulator is joining EPA's regional leadership team in Kansas.

• Duke Energy could add 700 megawatts of solar-power capacity to Florida's grid by 2021 and stop billing customers for a halted nuclear project under a plan filed with state regulators.

• Post-Harvey, federal and state leaders should pause to make sure money being spent will help prevent future damage, analysts say.

Today's Events

• Noon | Women in Green forum | How women impact the environmental industry

• 2 p.m. | EPA webinar | How drought and other environmental concerns affect global water quantity and quality

• 3 p.m. | World Resources Institute report | Helping Asia's poorest people access water pollution information

Quote of the Day

"This is a tremendously costly endeavor, and that's why we haven't done it already." — Peter Wilcoxen, head of an EPA Science Advisory Board panel, on finishing a draft report on modeling the economic impacts of regulation.

From Our Inbox

• A list of Harvey resources compiled by the Association of Air Pollution Control Agencies.

• Governments and business may face more lawsuits for failing to prevent damage from floods, heat waves, and other climate change risks, a commentary published in Nature says.

• A Massachusetts company using ammonia in its refrigeration system is now complying with federal laws, EPA announces.

All About: EPA Gasoline Waivers

The EPA is temporarily relaxing various environmental regulations to pave the way for more gasoline availability in crisis-struck Gulf states. That's because gasoline is needed to offset shortages tied to oil refinery shutdowns and flooding, the agency and governors in Texas and Louisiana say.

But the move is leaving biofuel producers confused.

Administrator Scott Pruitt in recent days gave the go-ahead to gas stations in parts of Texas and Louisiana to sell fuel that breaks environmental rules on smog prevention. Those rules involve arcane regulations on the Reid Vapor Pressure (RVP) of gas—which is used to measure ozone threats—and a type of refinement that limits pollutant emissions.

Pruitt, however, isn't allowing sales of gasoline containing 15 percent ethanol (E15), which is banned from sale in the summer months over RVP concerns. That issue has drawn the most attention to the RVP metric in recent years.

"The waivers issued don't do anything to allow expanded E15 blending," Renewable Fuels Association Executive Vice President Geoff Cooper said in a statement. Cooper said the waiver will allow sales of gasoline without any ethanol, a move that he said "seems odd."

The renewable fuel standard requires biofuel blending into gasoline, and now most gasoline sold nationwide contains 10 percent ethanol.

Pruitt also lifted gasoline requirements for 13 Atlanta-area counties. An agency spokesperson said EPA "is ready to act expeditiously" if extreme and unusual supply problems occur elsewhere.

Maryland Wants to Muck Out Exelon Dam to Save Chesapeake Bay

Posted August 30, 2017, 8:00 A.M. ET

By Leslie A. Pappas

One "big and dirty flush" from a Maryland dam could wipe out decades of efforts to clean up the Chesapeake Bay.

The Conowingo Dam on the Susquehanna River, a hydroelectric power station owned by Chicago-based Exelon Corp., is no longer blocking pollution from contaminating the Chesapeake Bay, and Maryland is pushing a $3.9 million plan to start dredging the backed up muck to protect the estuary.

"The sediment has value, but it doesn't have value if it's leaking through the dam into the Chesapeake Bay," Maryland's Secretary of the Environment Ben Grumbles told Bloomberg BNA. "Pollution prevention is the key."

Maryland Aug. 31 is expected to solicit plans to dredge 25,000 cubic yards of the nearly 200 million tons of sediment trapped by the dam as part of a pilot program to reduce pollution. But the program is only the start given that 2 million to 3 million cubic yards of sediment accumulates each year, Roy McGrath, director of the Maryland Environmental Service, told Bloomberg BNA.

While the dredging is only a small step, Grumbles said it's one piece of a "holistic strategy" to restore and protect the Chesapeake Bay.

Dredging could buy Maryland the time it needs to look at steps to reduce upstream pollution that eventually flows into the bay. But removing the 31 million cubic yards of sediment needed to restore the reservoir to 1996 levels would cost nearly $3 billion, the U.S. Army Corps of Engineers estimated, with another 3 million cubic yards of sediment dredged each year at a cost of $267 million annually.

"We all need to continue pollution prevention efforts upstream," Grumbles said.

Exelon Won't Fund Dredging

Exelon Generation Co. LLC agrees the problem is upstream pollution, and the company has balked at paying for the dredging operation. Exelon has spent about $7.8 million studying the issue since 2010, company spokeswoman Deena O'Brien told Bloomberg BNA in an emailed statement. The company found 70 percent to 80 percent of the sediment that washes into the bay during storms comes from upstream sources, and not from the Conowingo Pond.

Maryland has pushed the power company to contribute more to the dredging solution, even threatening to block the company's bid to renew a license from the Federal Energy Regulatory Commission to operate the dam.

"Exelon Generation believes protecting the vitality of the Chesapeake Bay is a multi-stakeholder, multi-state issue," O'Brien said.

The company "will support" Maryland's plan to solicit dredging bids though it will not play a formal role, she said.

Diminished Dam Could Drive New Standards

The dam has reached "dynamic equilibrium," according to a 2016 report Maryland issued with the U.S. Army Corps of Engineers. Dynamic equilibrium means that over time, the same amount of pollution and sediment flowing into the Conowingo reservoir is also flowing out. That diminished storage capacity means that a million more pounds of phosphorus from the Susquehanna will flow into the bay each year, Grumbles said.

"Some people are fixated on these extreme events," Donald F. Boesch, president of the University of Maryland Center for Environmental Science, which is studying the chemistry of sediment in the bay, told Bloomberg BNA, "but it's the year-to-year pollution that really matters."

That added pollution will make it even harder for Maryland to meet its goals under the Chesapeake Bay watershed cleanup plan, a pollution "diet" that aims to reduce levels of pollutants to certain federal standards by 2025. Maryland is one of six states and the District of Columbia that fall in the 64,000-square-mile watershed and must stay within federally mandated pollution discharge limits known as total maximum daily loads (TMDLs).

When Environmental Protection Agency first laid out those pollution limits in the 2010 Chesapeake Bay TMDL, the agency estimated the Conowingo trapped 55 percent of sediment, 2 percent of nitrogen, and 40 percent of phosphorus.

The EPA is conducting a midpoint assessment of nitrogen, phosphorus, and sediment levels in the bay to develop the next phase of cleanup, and the Conowingo's reduced capacity may force states to meet even more stringent pollution reduction targets.

Dredging's Value Questioned

While Maryland hopes the dredging plan will buy the time necessary to tackle upstream pollution, some researchers and groups involved in the bay cleanup question whether it is worth the cost.

Pollutants such as nitrogen are water soluble and will pass through the dam whether it gets dredged or not.

The 2016 sediment study by the U.S. Army Corps of Engineers concluded that nutrients from upstream "are a bigger threat to water quality than just the sediment," Sarah Gross, an Army Corps spokeswoman, told Bloomberg BNA in an email.

Dredging the Conowingo Dam "would result in only minor water quality improvements" to the Chesapeake Bay and "would be required regularly, if not annually, to achieve any net improvement," Gross said.

The Chesapeake Bay Foundation, an environmental group focused on the bay's health, argues that upstream states such as Pennsylvania and New York must do more to reduce nitrogen, phosphorus, and sediment runoff before it gets into the watershed in the first place.

Joel D. Blomquist, a hydrologist with the U.S. Geological Survey in Baltimore who has monitored sediment for 30 years, said scientists need to learn more about how sediment moves now that the dams have reached a dynamic equilibrium.

"There's legitimate debate around the question of needing to dredge," Blomquist told Bloomberg BNA. "We need to continue to decrease the amount of phosphorus and the amount of fine-grain sediments reaching the Chesapeake Bay," Blomquist said, but "there are multiple strategies to do that."

Xcel to Close Coal-Fired Units at Colorado Power Plant

Posted August 30, 2017, 02:44 P.M. ET

By Tripp Baltz

Xcel Energy Inc. plans to close two of its three coal-burning units at the Comanche Generating Station in Pueblo, Colo., as part of a group stipulation to pursue $2.5 billion in clean energy investments.

The company, in an Aug. 29 filing with the Colorado Public Utilities Commission, said the new generation projects will be identified and selected through a competitive process targeting a mix of utility and independent power producer-owned facilities. Portfolio estimates are up to 1,000

megawatts of wind, up to 700 megawatts of solar and up to 700 megawatts of natural gas, it said.

The filing with the commission was a provision with a coalition of 14 companies and groups to pursue $2.5 billion in clean energy investments in rural Colorado, the company said. The group of 14 includes the city of Boulder, Climax Molybdenum Co., the Colorado Energy Office, the Colorado Solar Energy Industries Association, the Colorado Building and Construction Trades Council and the Colorado Office of Consumer Counsel.

California

GENERAL ENVIRONMENT AND SAFETY
California Capital Access Program/On-Road Heavy-Duty Vehicle Air Quality Loan Program
California GENERAL ENVIRONMENT AND SAFETY

Emergency rule of the Pollution Control Financing Authority amends regulations under 4 CCR 8070 through 8078.3 (nonconsecutive), adopts regulations under 4 CCR 8078.22 through 8078.35, and repeals regulations under 4 CCR 8078.1 and 8078.2 regarding the California Capital Access Program (CalCAP) small business loan program. The program authorizes the PCFA to contract with specified financial institutions to make loans to eligible small businesses that may have difficulty obtaining capital. The rule revises definitions and program requirements, adds a recapture mechanism to recycle older contributions to support future loan enrollments, and

removes outdated provisions. The rule also establishes the CalCAP Air Resources Board On-Road Heavy-Duty Vehicle Air Quality Loan Program to assist owners and operators of small fleets of heavy-duty diesel trucks in achieving early compliance with statewide truck and bus requirements to reduce diesel particulate matter emissions. The rule is effective Aug. 7, 2017, and expires Feb. 6, 2018. Contact: Bianca Smith; PCFA; 916-653-5408; bsmith@treasurer.ca.gov

WATER
Alteration of Terrain
New Hampshire WATER

Final rule of the Department of Environmental Services amends regulations under NHAR Env-Wq 1501.02 through 1509.08 and adopts regulations under NHAR Env-Wq 1510.01 through .08 to update procedures and criteria for obtaining permits for activities that alter terrain and existing runoff conditions. The rule clarifies that the part applies to the development of undeveloped land or the redevelopment of previously developed land and establishes best management practices for blasting to minimize groundwater contamination. The rule also updates various application, notification, compliance, inspection, and management plan requirements and increases applicable fees. In addition, the rule updates various requirements concerning deeds, easements, and conveyances and modifies agency certification requirements. Finally, the rule establishes a new general permit-by-rule for temporary access/staging areas for work having a wetlands permit. The rule is effective Aug. 15, 2017. Regulatory Update

New Jersey

AIR
Air Pollution Control, Procedures, and Penalties
New Jersey AIR

Proposed rule of the Department of Environmental Protection, Division of Air Quality, amends regulations under NJAC 7:27-8.1 through -22.35 (nonconsecutive) and :27A-3.10; adopts regulations under NJAC 7:27-17.9; and repeals regulations under NJAC 7:27-8 Appendix Table B, -16.26, -17.7, -19.24, -22 Appendix Table B, -30, and -31 concerning air emission control and permitting exemptions, hazardous air pollutant reporting thresholds, and Clean Air Interstate Rule nitrogen oxides (NOx) trading program and NOx budget trading program. The rule provides exemptions from air emission control and permitting requirements for volatile organic compounds (VOCs) and NOx and provides flexibility for facilities to use certain low-emitting temporary and portable equipment during and after natural and human-caused disasters. The rule also updates certain hazardous air pollutant reporting thresholds for source permits and removes caprolactam and methyl ethyl ketone from the list of hazardous air pollutants. In addition, the rule removes obsolete provisions concerning the CAIR NOx trading and budget programs to reflect federal requirements. A hearing is scheduled for Sept. 6, 2017, in Trenton. Comments are due Oct. 6, 2017. Contact: Alice Previte; DEP; 609-292-9398

WATER

Drinking Water/Community Water Systems, Private Well Testing, Maximum Contaminant Levels
New Jersey WATER

Proposed rule of the Department of Environmental Protection amends regulations under NJAC 7:9E-2.1, :10-5.2, :10-5.3, :10-12.30, and :18-6.4 concerning private well testing, drinking water standards, and certification of laboratories and environmental measurements. The rule establishes a maximum contaminant level and monitoring requirements for public community and public nontransient noncommunity water systems of 0.013 micrograms per liter (µg/L) for perfluorononanoic acid (PFNA) and of 0.030 µg/L for 1,2,3-trichloropropane (1,2,3-TCP). The rule also specifies information concerning PFNA and 1,2,3-TCP that must be included in annual consumer confidence reports, requires public nontransient noncommunity water systems to begin monitoring for radionuclides in 2019, and updates the monitoring and analytical requirements applicable to public water systems for other contaminants. In addition, the rule requires testing of private wells subject to sale or lease and of newly constructed wells for public noncommunity water systems and nonpublic water systems for 1,2,3-TCP; ethylene dibromide; and 1,2 dibromo-3-chloropropane. Finally, the rule applies existing regional requirements for testing for gross alpha particle activity and arsenic to the entire state and clarifies the laboratory procedures for such testing. A hearing is scheduled for Aug. 29, 2017, in Trenton. Comments are due Oct. 6, 2017. Contact: Ryan Knapick; DEP; 609-292-5550

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

October 23, 2017

Latest News

Suit Over RFS Marks First Of Many Tests For Pruitt's Sue-And-Settle Policy

The Sierra Club Oct. 19 filed a suit alleging that EPA has failed to conduct required environmental impact and air quality reviews for its Renewable Fuel Standards (RFS), litigation that will likely mark the first of many tests for Administrator Scott Pruitt's new policy limiting the use of settlements in such cases.

Pruitt Rejects Conservatives' Call To Review GHG Finding In CPP Notice

EPA Administrator Scott Pruitt says the agency does not plan to take comment on the Obama administration's greenhouse gas endangerment finding as part of an advance notice of proposed rulemaking (ANPR) for how to replace the Clean Power Plan (CPP), a move likely to disappoint conservatives who have sought an assault on the finding to forestall any future GHG rules.

EPA Asks Appeals Court To Clarify Legitimacy Factor Vacatur In DSW Ruling

In what appears to be one of the Trump EPA's first litigation rehearing requests, the agency is asking a federal appeals court to clarify its vacatur of one of the four criteria used in an Obama-era solid waste rule to determine if recycling of hazardous materials is legitimate, asking the court to allow EPA to use a Bush-era rule's version of the factor.

Trump EPA Removes 'Climate' References From Its State Energy Website

The Trump EPA has removed references to “climate change” from an agency webpage that previously offered resources to state and local governments regarding climate adaptation, renewable energy and energy efficiency, with the new site geared only to “energy resources.”

DOJ Poised To Issue Guide Clarifying Sessions' Settlement Directive

BALTIMORE -- A top Justice Department (DOJ) official says the department could soon issue long-awaited guidance for implementing Attorney General Jeff Sessions' directive barring third-party payments in settlements, a ban that has drawn concern

from industry groups that it could undercut the use of popular EPA supplemental environmental projects (SEPs).

Biofuels Sector Faults Pruitt's Pledge On RFS, Raising Doubts On Nominee

A biofuels industry source says EPA Administrator Scott Pruitt's written pledge against cutting biofuels production targets below those in the agency's proposed 2018 renewable fuel standard (RFS) fails to address the sector's fears about cuts to the RFS, raising doubts about the prospect that a Trump nominee to EPA, whose confirmation has stalled over the issue, will advance.

Daily Feed

EPA extends comment period on plan to retain SO2 NAAQS

EPA is giving stakeholders more time to weigh in on the future of its sulfur dioxide ambient air standard, which the American Petroleum Institute wants the agency to weaken.

DOD agrees to improve internal SDWA reporting

GAO concluded that until the department "takes steps to increase the clarity and understanding of its internal reporting requirements, it may not have the data it needs to fully oversee compliance."

EPA names new research chief after Kavlock announces retirement

Jennifer Orme-Zavaleta, currently director of EPA's National Exposure Research Laboratory (NERL), will serve as its acting research chief until President Donald Trump names a political appointee to the role.

Ewire: Former EPA chief Reilly urges automakers to back GHG rules

In today's Ewire: The George H.W. Bush administrator urges automakers to back up their calls to address climate change by supporting current GHG and fuel economy limits. Plus: Trump tells EPA to stop RFS changes.

Environmentalists fault boiler MACT 'work practice standards'

Environmentalists are sparring with EPA over the merits of the Obama-era decision to include “work practice standards” in the agency's boiler air toxics rule.

Subject: Wheeler attended Murray meetings on DOE coal aid but says he didn't write company's pitch

By Alex Guillén

11/08/2017 01:08 PM EDT

Andrew Wheeler, the nominee for EPA deputy administrator, says he represented Murray Energy in meetings with Energy Department and congressional officials to support Trump administration efforts to prop up ailing coal-fired power plants.

Wheeler, who counted Murray among his clients as a lobbyist at Faegre Baker Daniels, faced numerous questions at his confirmation hearing today over his work for the company, which would be one of the main beneficiaries of DOE's proposed grid rule, and its CEO Bob Murray, a top supporter of President Donald Trump. Wheeler said he attended a Murray Energy meeting at DOE where the grid proposal was discussed several months ago, as well as a meeting on Capitol Hill on the subject. He said he de-registered as a lobbyist in August.

Sen. Sheldon Whitehouse pressed Wheeler over Murray's comments in a recent PBS Frontline documentary. The CEO said he gave Trump "an action plan" outlining coal policies to pursue, including eliminating the Clean Power Plan.

"I did not work on that and I do not have a copy of that memo," Wheeler told Whitehouse at the Senate Environment and Public Works Committee hearing.

Wheeler said Murray gave him a copy to read in December or January. "I looked at it and handed it back to him, I don't have it," Wheeler said, adding that he did not recall any specifics.

Whitehouse said he hopes to get a copy of the plan with the help of EPW Chairman John Barrasso (R-Wyo.) now that Wheeler confirmed its existence.

WHAT'S NEXT: The committee will likely vote on Wheeler's nomination in the coming weeks.

Subject: POLITICO's Morning Score: Top Trump donor ponies up to take out Flake — FBI searched campaign office tied to Hunter — Rep. Niki Tsongas to retire

By Maggie Severns | 08/10/2017 10:00 AM EDT

With Kevin Robillard, Zach Montellaro, Daniel Strauss and Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

PRIMARY MONEY - "Top Trump donor ponies up to take out Flake," by POLITICO's Alex Isenstadt: "Robert Mercer, a reclusive hedge fund billionaire who was intimately involved in Trump's rise and helped to bankroll his 2016 campaign, is contributing $300,000 to a super PAC supporting former state Sen. Kelli Ward, who is challenging Flake in a Republican primary next year. It's the latest sign that Trump's political machine is preparing to take on Flake, whose persistent attacks have angered the president. The White House has met with Ward and two other Republicans who are mulling primary challenges to the Arizona senator, former state Treasurer Jeff DeWit and former state GOP Chairman Robert Graham." Full story.

FIRST IN SCORE - Morales launches bid for Rokita's now-open seat: Republican Diego Morales, a former senior adviser to Mike Pence, will run for the seat being vacated by GOP Rep. Todd Rokita's seat as Rokita makes his Senate bid. Morales, a businessman and a veteran, said via a statement from his campaign that he believes the district wants "someone with an understanding of national security who shares their conservative values and is guided by faith," along with "supporting President Trump." The 4th congressional district leans heavily Republican.

ALL THE RAID - "FBI searched campaign office tied to Hunter," by POLITICO's Rachael Bade: "The FBI in late February raided the offices of GOP Rep. Duncan Hunter 's former campaign treasurer as part of an ongoing criminal investigation into allegations he used tens of thousands of dollars in campaign funds for personal expenses, court documents show. Federal law-enforcement officials on Feb. 23 seized several computers, tablets and iPads, bills and disbursement records, as well as a computer hard drive, from Election CFO, an Alexandria, Va.-based company that handled the California Republican's campaign finances. The raid was disclosed in a search and seizure warrant filed with the Eastern District of Virginia and signed by U.S. Magistrate Judge Michael Nachmanoff. ...

The three-term lawmaker and his wife personally repaid more than $60,000 in charges following news reports suggesting he used campaign funds to cover personal expenses, which would be in violation House rules and federal campaign law. Hunter has denied any wrongdoing." **Full story.**

- Hunter's Democratic opponent responds: Hunter's CA-50 is heavily Republican, but DCCC

Chairman Ben Ray Lujan has already donated to Democratic candidate Josh Butner, a former Navy SEAL challenging Hunter. Butner's statement on Wednesday: "As this FBI investigation into Congressman Hunter's alleged corruption drags on, Hunter has proven he is unable to focus on his constituents that need a leader in Washington who is 100% focused on delivering results for the people of East County."

SUMMER RETIREMENT WATCH - Rep. Niki Tsongas (D-Mass.) announced Wednesday that she will not run for reelection, retiring at the end of this term. "I have learned in life that there is a time for endings and for new beginnings. After much thought, I have decided that this is one of those times," she said in a statement. She currently represents Massachusetts' 3rd district, after initially being elected in the 5th district in 2007. It is a reliably Democratic district that is not expected to flip.

- Tsongas' announcement sparked a flurry of interest, our colleagues at POLITICO Massachusetts report: "Among those eyeing a run: Ellen Meehan, the wife of former Democratic Rep. Marty Meehan - who represented the district before Tsongas - and a former campaign chair for Tsongas. ... Within hours of Tsongas' surprise announcement, the rare opening in the Massachusetts congressional delegation attracted several other prominent Democrats. State Sen. Barbara L'Italien and former state Sen. Barry Finegold, who finished fourth behind Tsongas in the 2007 Democratic special primary election, both said in statements that they are also considering running for the seat.

Two additional Democratic names from the 2007 special primary election are also surfacing. State Sen. Jamie Eldridge, who came in third place, told POLITICO he is 'taking a look' at running. Another potential candidate is state Sen. Eileen Donoghue, who finished a close second to Tsongas. **Full story.**

PRIMARY NO-GO - Tennessee state Sen. Mark Green will not challenge Corker, by the Tennessean's Joel Ebert: "State Sen. Mark Green will not seek higher office in 2018 and instead focus on establishing a new organization to encourage people of faith to run for public office. ... Prior to Wednesday's announcement, there was some speculation that Green could challenge U.S. Sen. Bob Corker - who has yet to officially say whether he's running in 2018 - or even seek the seat U.S. Rep. Diane Black is vacating. ... Green alluded to a potential U.S. Senate run in the future, saying, 'I think that's going to be an opportunity for me potentially later.' U.S. Sen. Lamar Alexander is up for re-election in 2020." **Full story.**

Days until the 2017 election: 90.

Days until the 2018 election: 454.

AIR COVER - Majority Forward airing ads in four states on Medicare and Medicaid: Majority Forward, the nonprofit tied to Senate Majority PAC, is spending about $875,000 on ads in three states with vulnerable Democratic Senators: North Dakota (Heidi Heitkamp), Indiana (Joe Donnelly) and Montana (Jon Tester). And also, oddly, in Delaware, where Sen. Tom Carper is up for reelection in 2018. The ads are focused on Medicare and Medicaid. In Indiana, the spot praises Donnelly for pushing legislation preventing "Washington bureaucrats" from "arbitrarily cut[ting] Medicare." **Watch it here.**

- Americans for Prosperity adds digital tax ads: The Koch-backed Americans for Prosperity is adding digital ads to its existing ad campaign supporting tax reform. The ads thank lawmakers who have been pushing for tax reform in Congress. See a sample ad here.

MOM PAC - "Danny Ainge says family has 'zero to do' with how $250,000 super PAC contribution spent" in UT-03 special, by the Deseret News' Lisa Riley Roche: "Danny Ainge and his wife contributed $250,000 to a political action committee supporting their son, Tanner, in his 3rd Congressional District primary race but have nothing to do with how the money's being spent, the elder Ainge said Tuesday. 'The money is theirs to do what they want to do with it. We're at their mercy,' Danny Ainge told the Deseret News. 'I know it sounds like there is some involvement, but there is not. We have zero to do with the super PAC.' Ainge, the general manager of the Boston Celtics, said he hasn't seen the mailers and commercials produced by the Conservative Utah PAC that have been criticized as negative campaigning. 'I've got a full-time job, and I'm not paying attention to all that stuff,' he said. 'We're just trying to support our son. ... We think he has a chance to have a real positive impact, and we're trying to give him a chance.'" **Full story.**

- New super PAC appears to back Jenkins in West Virginia primary, POLITICO's Theodoric Meyer reports: Allies of Rep. Evan Jenkins (R-W.Va.) appear to have formed a super PAC to help him in his upcoming Republican Senate primary against state Attorney General Patrick Morrisey, as the two men battle for the chance to face Democratic Sen. Joe Manchin next year. ... The site accuses "Lobbyin' Patrick Morrisey" - who worked as a Washington lobbyist before running for attorney general in 2012 - of throwing "away conservative principles to lobby for liberals" and charges that he's "Desperate to get back to the DC swamp that made him rich." **More here.**

SNACK ATTACK - Our Revolution says DNC insulted group with barricades and offer of donuts: BuzzFeed's Ruby Cramer reports that the outside political group aligned with Bernie Sanders is unhappy with the Democratic Party. "The grievances converge around a recent trip to deliver petitions to the party's headquarters in Washington, where [Our Revolution President Nina Turner] and other progressives were greeted by barricades, security guards, and an offering of donuts and water that she saw as an empty gesture, indicative of an institution that isn't 'smart enough, humble enough, to say let's take a step back and really listen to the people,' ... all of which has left Turner, the newly appointed head of Our Revolution, with the view that, as she puts it, 'the establishment side of the Democratic Party have shown themselves to be dictators.'" **Full story.**

OBAMA ALUMNI NETWORK - Krish Vignarajah, a former Obama administration official, announced her campaign for governor of Maryland on Wednesday. In a press release Vignarajah said "I am running for Governor because I am worried my daughter will not have the same opportunities my parents gave me when they brought our family here when I was a baby girl. ... The deficit in leadership from our current Governor could not come at a worse time."

POLL - Northam leads Gillespie by 6 points in Virginia governor's race, Campaign Pro's Daniel Strauss reports: "Democrat Ralph Northam leads Republican Ed Gillespie by 6 percentage points in the race for Virginia governor, according to a new Quinnipiac University poll. Northam, the lieutenant governor, leads Gillespie, 44 percent to 38 percent - unchanged from a 47-39 lead in the previous Quinnipiac survey from mid June . The June poll did not include numbers for Libertarian Cliff Hyra; the new poll found Hyra with 4 percent support. Neither candidate is well-defined, though voters are more familiar with Gillespie, who unsuccessfully ran for Senate in 2014." **Full story.**

DAILY WAR EAGLE - A new Senate Leadership Fund ad Wednesday gets straight to the point: President Donald Trump endorsed Sen. Luther Strange for Senate. The ad, called "Endorse," is a quick six-second spot, highlighting Trump's tweet endorsing Strange on Tuesday night. Watch the ad **here**.

- In an interview with AL.com Strange said, "I don't want to spoil the surprise. I think there will be more to come from the president." He also gave the home state paper an account of how the endorsement process went down: "I just got a call saying the White House was calling and hold for the president. ... We had about a 15-20 minute conversation that covered a lot of territory, that focused on the election. He said I'm going to send out a tweet - I'm happy to do it. Let me know how I can help."

- Ryan to campaign for Jones: Rep. Tim Ryan will be in Birmingham this weekend rallying supporters behind Democrat Doug Jones in the race, according to an email sent to supporters. Ryan represents Ohio's 13th district and has been one of House Minority Leader Nancy Pelosi's biggest critics in the House.

STARS AND BARS DEBATE REDUX - "The Confederate Flag Fight Is Back," by BuzzFeed News' Henry Gomez: "Virtually all established Republican Party leaders would like, as they say, to 'move past' the issue - and few want to talk about it. But the people who want to talk about preserving monuments and keeping the flag in the sky really want to talk about it. And in the ground zero of the flag fight - South Carolina - Republican operatives describe [former Gov. Nikki] Haley's push as a one-time response to a tragedy that rekindled wide national scrutiny of the Confederate flag. ... The issue popped up last week in the state's competitive Republican race for governor. Several audience members at a forum in conservative Pickens County grilled Catherine Templeton - a former member of Haley's cabinet whose consulting firm was among those who cheered the flag's removal at the Statehouse - about her stance on removing Confederate symbols. 'You cannot rewrite history,' said Templeton, who has emerged as a top primary challenger to Henry McMaster, the lieutenant governor who became governor after Haley left to become the U.S. ambassador to the United Nations. 'I don't care whose

feelings get hurt.'" **Full story.**

CODA - QUOTE OF THE DAY: "Even those that want me to die don't want me to die right away, so that's good." - Sen. John McCain on his recovery during a Facebook Live video.

Republicans need to stop bashing the CBO

Michael R. Strain | Bloomberg View

The Congressional Budget Office (CBO) is under fire. Mick Mulvaney, President Trump's budget director, questioned whether "the day of the CBO [has] come and gone." Newt Gingrich says to "abolish CBO. It is totally destructive. It is totally dishonest." And members of the House Freedom Caucus just last week authored amendments to cut the CBO's funding in half. This is all ridiculous: Expert analysis isn't the problem. Bad legislation is.

Reuters

Self-pardon would equal self-immolation

John Yoo | The Philadelphia Inquirer

In the wake of accounts that independent counsel Robert Mueller has turned his investigation to the first family, President Trump tweeted last weekend that he has the "complete

power to pardon." His aides and lawyers suggested that the president might pardon not only his son and son-in-law but also himself. President Trump actually has the Constitution about right on this one. But exercises of raw presidential power have other consequences.

Twenty20

New research: Carbon taxes and the earned income tax credit

Aparna Mathur and Adele Morris | Tax Policy Center

Economists have long argued that a price on carbon, such as through a carbon tax, is an indispensable mechanism to stabilize greenhouse gases in the atmosphere. One concern about the policy, however, is its negative effect on low-income households. As a result, some have called for a US carbon tax that channels at least some revenue to these households. New research takes a look at the consequences of such a plan.

Reuters

India has problems, but comparing it to Pakistan is ludicrous

Sadanand Dhume | AEIdeas

When it comes to minority rights, India's record over the past seven decades is incomparably better than Pakistan's. But anyone who cares about pluralism in India needs to worry about the direction the country is headed as attacks on the 170-million-strong Muslim minority

become increasingly common. Islamism provides a unique challenge in today's world; those moderates pushing back against it are the some of the bravest people among us.

Subject: BREAKING NEWS: Cruz opposes latest Obamacare repeal

Sen. Ted Cruz said today that he doesn't support the latest Obamacare repeal plan drafted by Sens. Bill Cassidy and Lindsey Graham and suggested that the proposal also lacks the vote of Sen. Mike Lee.

The Texas Republican said at the Texas Tribune festival in Austin that he and Lee had offered amendments to the Graham-Cassidy proposal that would go further to bring down Obamacare premiums but that the changes weren't included in the latest draft of the bill.

Subject: Morning Energy: EPA plans carbon rule replacement — Clinton's big energy idea that wasn't — Carper won't back Trump's EPA air pick

By Anthony Adragna | 09/13/2017 05:49 AM EDT

With help from Eric Wolff, Alex Guillén, Esther Whieldon and Darius Dixon

EPA PLANS FOR CLEAN POWER PLAN REPLACEMENT: EPA plans to take the first step toward replacing the Clean Power Plan by the first week of October as it publishes its plan to rescind the Obama administration's carbon limits for power plants, Pro's Emily Holden reports.

EPA Administrator Scott Pruitt had been averse to replacing the rule, and sources tell Emily that when OMB first began reviewing the Clean Power Plan withdrawal in June the agency did not have plans to replace it. The decision to signal the agency will write a replacement comes after months of lobbying from electric company executives and suggests Pruitt may not challenge the legal finding that EPA must regulate greenhouse gases. One likely approach to a new emissions regulation would focus on improving coal-plant efficiency, so generators make more power while burning less coal.

The repeal-and-replace proposals come as patience was wearing thin at the D.C. Circuit, which has avoided issuing an opinion on the Clean Power Plan itself while EPA reconsidered the rule. In an August warning shot to EPA, judges said failing to propose a replacement meant the agency was avoiding a "statutory duty" to regulate carbon emissions, though it agreed to keep the case on ice through Oct. 7. EPA spokeswoman Liz Bowman said she "would not comment on proposals going through interagency review."

TRUMP OFFICIAL TO HOST CLIMATE MEETING: National Economic Council Director Gary Cohn will host a breakfast meeting to discuss "international energy and climate issues" the day before the opening of the U.N. General Assembly next week, POLITICO's Andrew Restuccia reports. The invitation obtained by POLITICO says the huddle is an "opportunity for key ministers with responsibility for these issues to engage in an informal exchange of views and discuss how we can move forward most productively." But an administration official stressed the meeting will not focus solely on climate change.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the Analysis Group's Sue Tierney was first up to identify Massachusetts as the home of eight previous House speakers. HILLARY'S CAMPAIGN IDEA THAT ALMOST WAS BUT THEN WASN'T: Among other revelations contained in her new book, Hillary Clinton said she was intrigued by Peter Barnes' proposal to create a sort of Alaska Permanent Fund for the whole country. The idea, dubbed by her campaign "Alaska for America," would have taken royalties from oil and gas production — plus receipts from a carbon tax, financial transactions taxes, fees on airwaves used by cell phones and broadcasters, and other resources — and used them to give Americans a guaranteed minimum income. But, alas, as she and Bill worked the calculator, they found the math didn't work.

"We decided it was exciting but not realistic, and left it on the shelf. That was the responsible decision," she wrote in "What Happened." "I wonder whether we should have thrown caution to the wind and embraced 'Alaska for America' as a long-term goal and figured out the details later."

About that carbon tax: Clinton says her campaign also looked more specifically at the idea of a carbon tax dividend, but once again could not get math to work out without new costs for the middle class, which she had vowed against. "Still," she added, "it's tantalizing."

Canary was the coal mine: Clinton argues the Obama team's slow efforts to counter the emerging Republican narrative that his administration began a "war on coal" hurt Democrats in 2016, Pro's Alex Guillén reports. "The Obama administration was slow to take on this false narrative," she wrote. Clinton encouraged Obama to roll out the Clean Power Plan in 2015 in coal country, and pair it with a major initiative to bring new investments and jobs to the region as a way of softening the blow.

Interior Secretary Ryan Zinke also makes a cameo: Clinton recounts an awkward encounter at the inauguration when she said she was surprised Zinke came over to greet her because in 2014 he had called her the "Antichrist." "Maybe he'd forgotten, because he didn't come equipped with any garlic or wooden stakes, or whatever one uses to ward off the Antichrist. But I hadn't forgotten," Clinton writes, adding that she absolutely reminded Zinke of his remark. "He was taken aback and mumbled something about not having meant it. One thing I've learned over the years is how easy it is for some people to say horrible things about me when I'm not around, but how hard it is for them to look me in the eye and say it to my face." (Zinke's wife, Lola, disputed the story.)

CARPER WON'T BACK WEHRUM: Top EPW Democrat Tom Carper told reporters Tuesday he won't back Trump's nominee to run the EPA's air office, Bill Wehrum. "This nominee is troubling," he said. "I don't say that about all of this administration's nominees, but this one is troubling." Chairman John Barrasso told reporters the committee would have "four or five" confirmation hearings next week, though he wouldn't specify which nominees that includes. He separately said EPW was "working on a time" for EPA Administrator Scott Pruitt to come testify before it.

NELSON: GOP 'DENYING REALITY' ON CLIMATE CHANGE: Even as he said he didn't want to play partisan politics in the aftermath of Hurricane Irma, Florida Sen. Bill Nelson knocked Republicans — including his likely 2018 opponent Gov. Rick Scott — for opposing

action to address manmade climate change, POLITICO's Michael Grunwald reports . "It's denying reality," Nelson said. "You can call it politics or whatever, but the Earth is getting hotter. This storm is another reminder of what we're going to have to deal with in the future." He added it would be a crucial issue during his reelection contest.

EPA-INTERIOR VOTES EXPECTED: You'd be forgiven for forgetting the House is still working through its mega-spending package H.R. 3354 (115), but five outstanding EPA and Interior-related amendments should get votes today. The amendments would bar EPA from enforcing its methane rule, block the social cost of carbon from future rule makings, prohibit the closure of EPA regional offices and slash the agency's budget by an additional $1.87 billion, among others. Full list of all pending amendments to the bill here.

CCS WEEK KICKS OFF IN EARNEST: Senate EPW today holds a hearing on how to accelerate deployment of carbon capture and sequestration technologies around the country. Look for lots of discussion of the FUTURE Act, S. 1535 (115), one of the few pieces of legislation ME can remember that boasts the support of both Barrasso and Sheldon Whitehouse . Witnesses include Matthew Fry, a policy adviser to Wyoming Gov. Matt Mead and former DOE senior official Julio Friedmann.

HELPING OUT THE LITTLE GUYS? The House Energy and Commerce Committee's environment panel will hold a hearing today on a quartet of bills aimed at postponing or loosening various emissions regulations. H.R. 1917 (115) would delay the brick MACT until legal challenges have played out (coincidentally, the D.C. Circuit revealed Tuesday that oral arguments over that rule will take place Nov. 9). H.R. 1119 (115) would expand Cross-State Air Pollution Rule compliance options for 19 plants, mostly in Pennsylvania, that burn coal waste for electricity. H.R. 453 (115) would extend some deadlines for a residential wood heater emissions rule. And H.R. 350 (115) aims to clarify that anti-tampering provisions in vehicle emissions rules do not apply to vehicles used only for racing, an issue that flared up last year under EPA's Phase 2 heavy-duty truck rule. Some of these bills passed the House in previous years, but failed to gain traction in the Senate. If you go: The hearing kicks off at 10 a.m. in Rayburn 2123.

ENDANGERED SPECIES MEASURES GETTING MARKED UP: A litany of controversial measures get marked up today at the House Natural Resources Committee, including H.R. 3668 (115) a sportsmen's package that Democrats have condemned as enabling the deregulation of gun silencers and five bills taking bites at the Endangered Species Act. They are: H.R. 424 (115), which would redo Interior rules delisting the gray wolf; H.R. 2603 (115), which would bar non-native species from being listed as endangered or threatened under the statute; H.R. 3131 (115), which would lower attorney fees that could be awarded in ESA litigation; H.R. 717 (115), which would allow federal agencies to factor cost into listing decisions and prioritize listing petitions rather than decide them in the order they're received; and H.R. 1274 (115), which would require the availability of all data used in listing decisions to impacted states. The fun kicks off at 10 a.m. in Longworth 1334.

BLAST FROM THE PAST: ME got to briefly chat with former EPA Administrator Gina McCarthy after she met with Senate climate caucus members to "catch up" on various environmental issues. She declined to weigh in on Pruitt's comment that it's "insensitive" to

discuss climate change in the aftermath of hurricanes Harvey and Irma, but said, "I think we all know that storms like that get as intense as those storms were because of an impact on climate. If you want safe and healthy communities, you're going to have to address the issue of climate change. Period."

ICAHN'T BELIEVE EPA: Sen. Sheldon Whitehouse cast a jaundiced eye over Pruitt's letter denying email communication with billionaire Carl Icahn. "On its face, this letter suggests Mr. Icahn had far less control over RFS policymaking than he had suggested publicly," Whitehouse spokesman Rich Davidson told ME. "On the other hand, Pruitt has a long-established skill in obscuring his contacts with the industry that pulls his strings." Pruitt said the agency searched the inboxes of 39 agency officials and came up empty on Icahn emails.

RESHUFFLED ELECTRICITY BOARD REVS UP TODAY: DOE's newly configured Electricity Advisory Committee assembles this afternoon to kick off a meeting with a half dozen fresh faces and a two-day agenda that will cover the agency's much-discussed electric grid study, include a two-hour panel on cybersecurity and a rundown of a National Academies report on grid resiliency. Perry let the membership of 14 EAC members lapse recently and installed six new members, effectively shrinking the board's overall size. But the person Perry tapped as the new EAC chairman, Michael Heyeck of American Electric Power, isn't apparently able to attend, according to the agenda, which describes ERCOT engineer John Adams as acting chairman this week. Most of the cybersecurity talk — including panel discussion and a presentation on a draft DOE multiyear energy sector cybersecurity plan — is slated for Thursday morning. The meeting starts at 1:30 p.m. at the offices of the National Rural Electric Cooperative Association in Arlington, Va.

GAO TO PROBE PERRY'S HEALTHCARE TWEETS: GAO has agreed to a request from Rep. Frank Pallone, top Energy and Commerce Democrat, to issue a legal opinion on whether DOE's use of its Twitter account to promote an op-ed by Secretary Rick Perry on health care violated the Antideficiency Act, the Anti-Lobbying Act and the Consolidated Appropriations Act of 2017. Pallone first made the request in late July.

ZINKE TELL STAFF TO UP GAME ON FIRE PREVENTION: Zinke directed staff on Tuesday to be much more proactive on fire prevention, including by hiring contractors if necessary to clear dead trees, removing vegetation away from roads and buildings that could prove quick fire fodder and to include fire prevention in resource management planning. The move comes as wildfires rage in the West. "It makes little sense to be thinning to protect structures when we see flames on the ridge and smoke in the air—fuel management is more effective when undertaken before fires break out," Zinke said in the memorandum.

ITC VOTE ON SOLAR TRADE CASE COMING NEXT WEEK: The U.S. International Trade Commission will vote Sept. 22 on whether the U.S. solar industry has been injured by low-cost imports, according to an ITC website announcement. The case has the solar industry on tenterhooks, as domestic companies that install cheap foreign-made panels believe raising equipment costs will harm business. A Trump administration official has already signaled the administration would likely impose tariffs if the ITC determines there has been injury.

MAIL CALL! HOUSE SCIENCE PROBES OBAMA APPOINTEE: After DOE's inspector general found the government spent $138,000 on an employee's graduate degree unrelated to his job, House Science Chairman Lamar Smith sent a letter requesting documents on what the agency is doing to prevent something similar from happening again. "The Committee is concerned this could be an indication of a more widespread occurrence of inappropriate training authorizations and expenditures within DOE," Smith wrote.

McCOLLUM HITS PRUITT OVER ATTACK ON JOURNALIST: Rep. Betty McCollum, who oversees the Appropriations Interior and EPA Subcommittee, sent a letter to Pruitt Tuesday condemning the agency's personal attacks on an AP reporter as an "inappropriate use of taxpayer resources" and urging the agency to "act in a more professional manner and refrain from such unacceptable personal attacks."

WEIGHING IN ON TAX REFORM: Citizens For Responsible Energy Solutions Forum sent letters to House and Senate tax writers outlining their priorities as tax reform efforts get off the ground in earnest. Atop their wish-list? Maintaining existing energy investment and production tax credits, sunsetting tax credits for mature energy industries and reducing the corporate tax rate to at least 25 percent.

PRIORITIES OUTLINED FOR STATE ENVIRONMENTAL REGULATORS: Wyoming's Todd Parfitt became president of the Environmental Council of the States on Tuesday and said in a welcome note a key priority would be "reorienting the state-U.S. Environmental Protection Agency relationship." He's also a rumored candidate for regional EPA administrator.

MOVER, SHAKER: Sam Hirsch, former principal deputy at DOJ's Environment and Natural Resources Division, has rejoined Jenner & Block as a partner in its Washington office.

FREE FOOD ALERT! Stop by 406 First Street SE today between 11 a.m. and 1 p.m. for some Old Bay, Parmesan garlic and sea salt french fries courtesy of the National Biodiesel Board and some of the city's best food trucks. You'll also learn how the oil used to cook the fries can be turned into clean-burning biodiesel.

EPA to replace Clean Power Plan Back

By Emily Holden | 09/12/2017 09:04 PM EDT

EPA plans to publish its proposal to rescind the Clean Power Plan and take its first step to replace the rule by the first week of October, according to a source familiar with the process.

The decision to publish an advance notice of EPA's intent to issue a new regulation on carbon emissions from power plants comes after months of lobbying from electricity company executives who think it would be the smart legal move. EPA Administrator Scott Pruitt had previously been resistant to replacing the Obama-era rule.

Without a rule on the books, environmental advocates could sue the agency — leaving businesses in limbo while the courts sort out the issue, industry officials had warned.

The U.S. Court of Appeals for the D.C. Circuit has frozen consideration of lawsuits against the Clean Power Plan while asking for status updates from EPA. In August, judges told EPA that without a replacement rule in place it was avoiding a "statutory duty" to regulate carbon emissions under the Clean Air Act. The judges agreed to keep the case on hold through Oct. 7.

EPA's decision to pursue a replacement rule suggests Pruitt may not challenge a legal finding that EPA must regulate greenhouse gases.

The agency told the court it would publish a rule to withdraw the Clean Power Plan this fall. The OMB first reviewed the rule withdrawal in June. At that time, EPA did not have plans to replace the Clean Power Plan, sources said.

Pruitt, as attorney general of Oklahoma, joined other states' lawyers in arguing that the Obama administration went too far in trying to curb carbon levels by encouraging states to shift away from burning coal and toward renewable power and natural gas.

One likely approach to a replacement rule would focus on improving coal-plant efficiency, so generators make more power while burning less coal.

"We aren't going to comment on proposals going through interagency review," EPA spokeswoman Liz Bowman said via email.

Cohn to participate in energy, climate discussion at United Nations Back

By Andrew Restuccia | 09/12/2017 03:37 PM EDT

National Economic Council director Gary Cohn will host an energy and climate change discussion with international officials in New York next week, an administration official confirmed.

The Monday meeting comes the day before the opening of the United Nations General Assembly, where President Donald Trump and dozens of other world leaders will speak.

Cohn invited officials from more than a dozen countries to the breakfast meeting to discuss "international energy and climate issues," according to a copy of the invitation obtained by POLITICO.

The invitation, which Cohn sent on Sept. 7, says the huddle is an "opportunity for key ministers with responsibility for these issues to engage in an informal exchange of views and discuss how we can move forward most productively."

The administration official stressed that the meeting, first reported by the New York Times, will not focus solely on climate change.

Trump infuriated foreign diplomats when he announced in June that he would withdraw from the Paris climate change agreement, which has won the support of nearly 200 nations. Cohn was among White House officials pushing Trump not to exit the Paris agreement at the time.

But so far, the United States has not formally withdrawn, and Trump administration officials have sent mixed signals about whether it is willing to reach a deal to remain in the pact.

The State Department announced last month that the U.S. would continue participating in international climate change negotiations, including talks aimed at implementing the Paris pact, "to protect U.S. interests and ensure all future policy options remain open to the administration."

Trump, who has called climate change a "hoax" perpetrated by the Chinese, has said the United States is getting an unfair deal in the Paris agreement.

Clinton: Obama was too slow to counter 'war on coal' narrative Back

By Alex Guillén | 09/12/2017 03:30 PM EDT

Hillary Clinton says in her new book that former President Barack Obama took too long to challenge Republican criticism that his administration had started a "war on coal," which hurt Democrats in last year's election.

"The Obama administration was slow to take on this false narrative," she wrote in "What Happened."

But Clinton did admit that her infamous comment at a March 2016 town hall event that "we're going to put a lot of coal miners and coal companies out of business," was a gaffe and an "unfortunate comment."

And she argued that the politics around coal are a microcosm of how Democrats have fallen out of touch with white working class voters.

Democrats' support for air and water pollution regulations made them an "easy scapegoat" for long-term misfortunes in coal country, Clinton wrote, "despite strong evidence that government

regulation is not the primary cause for the industry's decline."

The former secretary of State wrote that she suggested Obama roll out the Clean Power Plan in 2015 in coal country, and pair it with a major initiative to bring new investments and jobs to the region. "That might have softened the blow a little," she wrote.

Obama ultimately announced the regulation from the White House alongside EPA Administrator Gina McCarthy, which Clinton argued was "seen by many folks in West Virginia as another signal that Democrats didn't care about them. Once that perception takes hold, it's hard to dislodge."

Embracing a narrative about how industrial areas can "reinvent" themselves for 21st century jobs was a vote-winner, according to Clinton. Clinton lost Pennsylvania, but won a landslide victory in Pittsburgh, the city President Donald Trump cited as a concern when he pulled out of the Paris climate agreement earlier this year.

"Trump may think of that city as an emblem of the industrial past ... but the reality is that Pittsburgh has reinvented itself as a hub of clean energy, education, and biomedical research," Clinton writes.

Pittsburgh's mayor has committed the city to meeting the Paris deal's reduction goals, even as the U.S. withdraws from the agreement.

But ultimately, the coal issue remains as one of her top disappointments, particularly since it contributed to her losses in Pennsylvania and Ohio.

"Did they turn against me because I served as Obama's Secretary of State and believed climate change was a real threat to our future? Or did their rage flow from a deeper tribal politics?" she wrote. "All I knew for certain was they were angry, they were loud, and they hated my guts."

Despite the campaign promises of Trump, "the hard truth is that coal isn't coming back," Clinton wrote, adding, "Politicians owe it to communities that have relied on the industry for generations to be honest about the future."

Clinton also criticized Don Blankenship, who headed Massey Energy when its Upper Big Branch disaster killed 29 workers in 2010. Shortly before he reported to prison last year, he showed up outside a Clinton campaign event in West Virginia.

"Blankenship endangered his workers, undermined their union, and polluted their rivers and streams, all while making big profits and contributing millions to Republican candidates," Clinton writes. "He should have been the least popular man in West Virginia even before he was convicted in the wake of the death of twenty-nine miners. Instead, he was welcomed by the pro-Trump protesters in Williamson. One of them told a reporter that he'd vote for Blankenship for President if he ran.

"Meanwhile, I pledged to strengthen the laws to protect workers and hold bosses like

Blankenship accountable — the fact that he received a jail sentence of one year was appalling — yet I was the one being protested."

Trump picks Bush-era EPA official for air chief Back

By Alex Guillén | 09/07/2017 07:16 PM EDT

Pesident Donald Trump has nominated Bill Wehrum, a George W. Bush-era EPA official who since has represented a variety of energy industry interests, to run EPA's powerful air office.

POLITICO reported in July that Wehrum was expected to receive the nod.

As head of EPA's Office of Air and Radiation, Wehrum will play a key role in undoing many of the Obama-era regulations most opposed by Republicans, including the Clean Power Plan, the 2015 ozone standard and forthcoming vehicle emissions rules. Wehrum has been critical of EPA's authority to regulate greenhouse gases, even after the Supreme Court's 2007 ruling saying EPA did have such authority.

He served as a counsel to Jeff Holmstead, Bush's first-term air chief, before replacing Holmstead in an acting capacity from 2005 to 2007. Bush nominated Wehrum to the job permanently, but Democrats blocked his nomination from proceeding in the Senate.

Wehrum spent the past decade as a partner at the Washington, D.C., law firm Hunton & Williams. His clients have included the American Petroleum Industry, American Fuel & Petrochemical Manufacturers, the Utility Air Regulatory Group, the American Chemistry Council, the National Association of Manufacturers and the American Forest & Paper Association.

WHAT'S NEXT: The Senate Environment and Public Works Committee will review Wehrum's nomination in what is certain to be a contentious process.

Florida Sen. Bill Nelson: Republicans 'denying reality' on climate change Back

By Michael Grunwald | 09/12/2017 09:06 PM EDT

Democratic Senator Bill Nelson of Florida, after surveying the damage that Hurricane Irma

inflicted across his state, blasted Republican politicians who reject the science and minimize the importance of climate change—including his likely opponent in 2018, Governor Rick Scott.

In an interview Tuesday evening with POLITICO, Nelson said it's clear that manmade global warming made Irma worse by increasing the temperature and the height of the seas that fueled the storm. He said he didn't want to play partisan politics in the aftermath of a hurricane, but then went on to criticize Republicans in general and Scott in particular—though not by name—for opposing climate action. He noted that both the Trump administration in Washington and the Scott administration in Tallahassee have reportedly discouraged government employees from even talking about climate change.

"It's denying reality," Nelson said. "You can call it politics or whatever, but the Earth is getting hotter. This storm is another reminder of what we're going to have to deal with in the future."

Nelson, a former astronaut, launched into a detailed explanation of the science of climate change and the greenhouse effect, and how it has helped make the waters around Florida higher and warmer in recent decades. He said it would be a crucial issue in his reelection campaign, even as he avoided the words "Rick Scott."

"It's certainly going to be an important issue, and if certain people such as the one you mentioned is my opponent, there's a significant contrast in what we believe," Nelson said.

Florida is a swing state in presidential elections, but its state government and statewide offices tilt heavily Republican; Nelson has been an exception to the red wave, but a well-known, well-funded opponent like Scott would be by far his most difficult challenge to date. He clearly sees climate as a potential wedge issue in a state with a heavily coastal population and increasing vulnerability to Irma-type disasters. Scott did not discuss the issue in his frequent Irma briefings; a spokesperson for the governor, when asked about Nelson's comments, said, "Now is not the time for politics. This storm is not a partisan issue. Now is the time to focus on helping Florida rebuild."

But in the past, he has questioned climate science—or declined to affirm the scientific consensus that it's being cause by humans, often noting, "I am not a scientist"—and fossil-fuel interests have supported his campaigns. In 2015, the Miami Herald reported that Scott's administration had even banned the use of the terms "climate change," "global warming" and "sustainability" in official documents.

Nelson is not known in Washington as a leader on climate issues, but he said he's focused on them since he was Florida's insurance commissioner in the 1990s. He's fought against President Trump's proposed cuts to climate science at agencies like NOAA, NASA and EPA, and said he helped persuade the Obama administration to launch a satellite, first dreamed up by Al Gore, that takes continuous pictures of the Earth from deep space.

But Nelson didn't really argue that he deserved kudos for accepting the conclusions of the scientific community; he argued that Republicans on the other side of the issue need to explain why they think "99.5 percent of climate scientists" are wrong. Several prominent Republicans in

South Florida—including Miami-Dade County mayor Carlos Gimenez and Reps. Carlos Curbelo and Ileana Ros-Lehtinen—have made it clear they believe Washington needs to take climate seriously. Nelson pointed out that politicians don't question government scientists when they say a hurricane is coming—but when the same agencies use the same scientific instruments to measure long-term climate trends, opinions suddenly differ.

"It's ironic, isn't it?" Nelson said. "They accept the hurricane information, but deny the climate information ... Look, some people still think the Earth is flat."

Pruitt: EPA had no emails communications with Icahn Back

By Eric Wolff | 09/12/2017 02:28 PM EDT

EPA had no email communication with billionaire and former Trump adviser Carl Icahn, EPA Administrator Scott Pruitt told Sen. Sheldon Whitehouse (D-R.I.) in a letter this week.

In the letter sent Monday and provided to POLITICO by an EPA official, Pruitt said EPA searched the inboxes of 39 high-ranking officials for messages to or from Icahn between Feb. 17 and Aug. 18, and they found no emails on any subject.

Pruitt's letter was a response to four different letters from Whitehouse and other Senate Democrats seeking information on Icahn's efforts to modify the Renewable Fuel Standard to benefit his refining company. Icahn was an unpaid adviser to Trump until last month, when he resigned his title after questions arose about his advocating for policies that would help his businesses.

Pruitt did acknowledge meeting with Icahn as part of his vetting process to join the Trump administration.

"Mr. Icahn was one of many of the president's advisors that I met with during my confirmation process," he wrote. "During that meeting, I made no assurances with regard to the point of obligation or any other substantive issue."

DOE shrinks electricity advisory board Back

By Darius Dixon | 09/06/2017 05:34 PM EDT

Energy Secretary Rick Perry is installing new members to the Energy Department's Electricity Advisory Committee even as he whittles down the size of the board.

The 2016-17 roster for the board, which reports to the assistant secretary for electricity deliverability and energy reliability, had numbered 32 people, but including the new members, it will now total 24, since 14 members didn't have their terms renewed.

DOE says that three members had asked the agency not to renew their terms because of other commitments or because they had left the country.

Perry installed six new members: Mike Heyeck, a former AEP executive and founder of Grid Group; Paul Hudson, ex-chairman of the Texas Public Utilities Commission; Mladen Kezunovic, and engineering professor at Texas A&M; Bryan Olnick, an executive with Florida Power & Light; David Wade, CEO of the Electric Power Board of Chattanooga; and Tom Weaver, an official with AEP.

EAC members serve two-year terms, but about half of the positions are staggered so that some measure of continuity is maintained.

The board, which typically meets three times a year, is purely advisory and works on a range of power-related issues. The panel's charter states that there be "approximately 30" members.

Those not returning are: Ake Almgren, Merwin Brown, Paula Carmody, Paul Centolella, Carlos Coe, Phyllis Currie, Mark Lauby, Janice Lin, Anne Pramaggiore, Paul Roberti, Sue Tierney, Rebecca Wagner, Audrey Zibelman, and Carl Zichella.

WHAT'S NEXT: The electricity advisory committee will meet next Wednesday and Thursday in Arlington, Va.

Subject: Amid leak crackdown, EPA air employees receive instructions on guarding sensitive info

By Emily Holden

09/20/2017 10:48 AM EDT

Staffers within EPA's Air Office are expected to complete an hour-long webinar today about protecting classified information, as the White House aims to crack down on leaks and has directed all agencies to conduct the training.

A Tuesday email from the Air Office's human resources director obtained by POLITICO explains that many but not all Air Office personnel have access to either classified information or controlled unclassified information, such as about critical infrastructure or confidential business information. It said "the White House has tasked federal agencies with reinforcing key concepts in the handling and protecting of this information."

One source at EPA said employees already receive annual training on handling sensitive materials and rarely have access to classified information.

In an earlier email POLITICO reviewed, Donna J. Vizian, acting assistant administrator for EPA's Office of Administration and Resources Management, explained that the White House on Sept. 8 directed all agencies to hold leak-limiting training during this week.

Buzzfeed reported that National Security Adviser H.R. McMaster sent the request along with "'[s]uggested training materials," including videos of Attorney General Jeff Sessions' August news conference about leaks and a Fox News interview with the director of the National Counterintelligence and Security Center.

The Air Office email said the improper disclosure of sensitive information "can have serious consequences to national security." But it notes that whistleblowers are protected if they disclose illegal conduct, a waste of funds or threats to the public.

EPA's press office did not immediately respond to a request for comment.

Conservatives turn on Silicon Valley — and the free market

James Pethokoukis | The Week

After the 2012 election, national Republicans made a concerted effort to hack into Silicon Valley. The Romney campaign had just gotten thoroughly outclassed by the Obama technology team, and the GOP figured it couldn't hurt to have closer ties with a sector of vast wealth and cultural influence. Things are a little different in the party of President Trump. Maybe conservatives today have simply lost faith in the market they for so

long claimed to love.

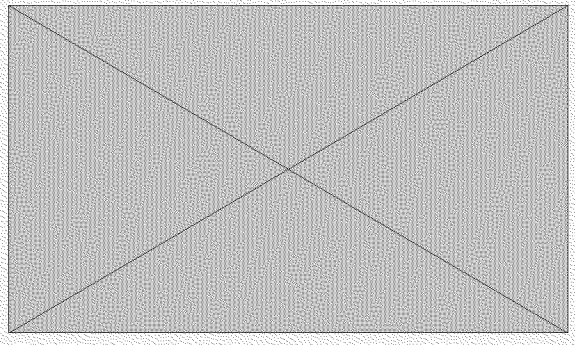
60-second take: The history of failed North Korea diplomacy

Michael Rubin | AEI video

North Korea's nuclear threat has been 35 years in the making. AEI's Michael Rubin looks back to determine just how effective the US diplomatic strategy has been in deterring Pyongyang's nuclear weapons program. "The North Korean nuclear crisis dates back to 1980 when a spy satellite detected nuclear reactor construction," he says. "The problem is North Korea views diplomacy less as a means to peace and more as a way to buy time."



Reuters

America's got talent, but not nearly enough

Edward Conard | The Wall Street Journal

President Trump has proposed cutting the number of green cards issued each year from one million to 500,000 and issuing them based on skill levels. This approach gets it half right. Increasing skills-based immigration would be good for the economy, but cutting the number of green cards squanders the best opportunity for economic growth. Without substantial immigration, the US simply can't grow enough to pay for retiring baby boomers without inflicting considerable damage.

No, education reform isn't in retreat

Andy Smarick | US News & World Report

Is big, bold education reform in retreat? The Every Student Succeeds Act ended the Bush Obama era of sweeping federal action embodied by the No Child Left Behind Act, Race to the Top, and the School Improvement Grant program. It also severely limited the US Department of Education's ability to unilaterally exert its will. Many find this all disheartening because they believe that major federal action is how the nation shows it cares deeply about something. Not always so.

Driving the Day

Good Wednesday morning. THE BIG PICTURE -- REPUBLICANS' MASSIVE MESS.

-- PRESIDENT TRUMP went all in for a Senate candidate -- following Mitch McConnell's lead -- and was thoroughly embarrassed, losing to Roy Moore, a man who many in D.C. have said is not fit to serve in Washington.

-- ROY MOORE ran a campaign almost entirely against **MITCH MCCONNELL.** So, if Moore wins in December -- a good, but not great, bet -- the Kentucky Republican will be working with a functional majority of 51 lawmakers, making passing any big legislation that much harder. With that partisan makeup, two defections will sink anything.

-- DEMOCRATS ARE ALREADY HOPING they can tie the firebrand Moore to other Republican candidates for federal office. There are far too many inflammatory lines for this space, but just recently, Roy Moore lamented racial tensions between "reds and yellows." He has a long history of those types of remarks.

-- WITH THE FAILURE OF GRAHAM-CASSIDY, Republicans do not have a single major legislative victory going into October. They are counting on a tax code rewrite to carry them into the 2018 election year.

-- WHAT HAPPENED TO INFRASTRUCTURE? Well, according to WaPo's Tory Newmyer and Damian Paletta, Trump has abandoned his plan to include the private sector in funding a massive public works program, which means states and local governments would have to pony up. To put it bluntly -- Republicans are nowhere on this front. If they played their cards right, they could've gotten several moderate Democrats to support an infrastructure package. ***Tory and Damian's story***

http://wapo.st/2wjauQ1

-- THE TAX BLUEPRINT THAT WILL BE UNVEILED TODAY will be vague and leave a lot for lawmakers to decide down the road. There are many reasons why tax reform is a good deal harder than the White House thinks. Republicans don't want to hike taxes on rich folks, and anything sniffing of that will be difficult. Margins in both chambers are incredibly thin. There are less than 40 days left in the legislative year. The White House has indicated it believes it will get Democratic support, but it's clear if you spend a few moments talking to lawmakers on Capitol Hill the vast majority of Democrats aren't much interested in supporting a plan they had no say in.

-- REMEMBER THIS: Six Republicans crafted the tax blueprint behind closed doors. Now 535 lawmakers with opinions will have a say in the details. And thousands of lobbyists looking to protect their carve outs will get in on the action.

-- SEN. BOB CORKER'S RETIREMENT is another blow to Senate Republicans. The two-term Tennessee Republican is a key ally of McConnell's but many thought he would have faced a primary opponent from the right. Now, the primary to succeed him will be messy, and the general could be surprisingly challenging for Republicans. He could be just the first Senate GOPer looking for the exits before the 2018 midterm election.

WHAT THE ALABAMA SPECIAL MEANS FOR MCCONNELL -- "Mitch McConnell's dreadful day," by John Bresnahan, Burgess Everett, and Josh Dawsey: "For Mitch McConnell, Tuesday was about as bad as it could get. A vulnerable incumbent senator, Luther Strange, lost handily to Roy Moore, who used the Senate leader as his campaign punching bag. McConnell pulled the plug -- again -- on repealing Obamacare. One of his close allies, Sen. Bob Corker (R-Tenn.), announced his retirement. And President Donald Trump is back on McConnell's case, dubbing him 'weak' at a private dinner with conservative activists on Monday evening.

"McConnell's job is in no immediate danger, and he hopes to pivot quickly to tax reform. Yet months of woes are now taking their toll on the GOP leader's agenda, and his caucus. 'It's been a hard summer for all of us,' admitted Sen. John Thune of South Dakota, the No. 3 GOP senator.

"Asked Tuesday if he was having a 'tough day,' McConnell ignored the question. And that was before Corker announced his retirement and Moore won. 'We haven't given up on changing the American health care system,' McConnell said. 'We're not going to be able to do that this week, but it still lies ahead of us, and we haven't given up on that.'" http://politi.co/2hytDY1

-- "Moore's win spells trouble for GOP establishment in 2018," by Alex Isenstadt in Montgomery, Alabama: "Insurgent Roy Moore's rout of incumbent GOP Sen. Luther Strange in Alabama's special election Tuesday has senior Republicans bracing for a wave of resource-draining primaries across the map that could undermine their best-laid plans to defeat Democrats in 2018. Moore's win -- over an incumbent who benefited

from millions of dollars in spending by a super PAC aligned with Senate Majority Leader Mitch McConnell - is certain to provide fuel for conservative challengers lining up to take on sitting senators in states like Arizona, Nevada, Mississippi.

"The result was a major setback for President Donald Trump, who went all-in for Strange in a state where the commander-in-chief is overwhelmingly popular. And it emboldened Trump's former chief strategist, Steve Bannon, who said the Alabama race is the opening front in a pitched midterm war against GOP incumbents - and an opportunity to undermine his nemesis, McConnell. After the race was called, Bannon stood backstage with Moore as the victorious candidate prayed.

"As he introduced Moore at Tuesday's victory party, Bannon made clear that he was looking far beyond Alabama, which he called the start of a 'revolution.' 'You're going to see in state, after state, after state, people that follow the model of Judge Moore - that do not need to raise money from the elites, from the crony capitalists, from the fat cats in Washington, DC.,' said Bannon at Moore's victory party. The race, he said, centered on the question of 'who was sovereign - the people or the money - and Alabama answered today, the people.'" http://politi.co/2wUmxHM

BIG-PICTURE BOB COSTA -- "After Alabama, GOP anti-establishment wing declares all-out war in 2018": "The stunning defeat of President Trump's chosen Senate candidate in Alabama on Tuesday amounted to a political lightning strike -- setting the stage for a worsening Republican civil war that could have profound effects on next year's midterm elections and undermine Trump's clout with his core voters." http://wapo.st/2fpY9Td

-- AT THE WHITE HOUSE ... "Regrets? In Alabama Senate race, Trump had a few," by Josh Dawsey: "President Donald Trump began distancing himself from Sen. Luther Strange before ballots were even cast in Alabama's GOP Senate primary, saying at a dinner on Monday night that the candidate he backed was likely to lose - and suggesting he'd done everything he could do given the circumstances. Trump told conservative activists who visited the White House that he'd underestimated the political power of Roy Moore, the firebrand populist and former judge who defeated Strange on Tuesday with the backing of Trump's former chief strategist Steve Bannon, according to three people who were there. Attendees said the president asked questions that suggested he harbored doubts about his endorsement." http://politi.co/2ysn4NB

-- JONATHAN MARTIN and **ALEX BURNS** on **A1** of the **NYT:** "On Dec. 12, Mr. Moore will face Doug Jones, a former federal prosecutor and the Democratic nominee, in a race that will test the party loyalties of center-right voters who may be uneasy about their nominee. It may also reveal just how reliably Republican the state has become in the quarter-century since a Democrat last won a Senate election here.

"Mr. Jones said in an interview Tuesday afternoon that he believed voters would reward a candidate focused on 'kitchen-table issues,' and said Alabama's public reputation was at stake in the election. 'People are tired of being embarrassed in this

state,' Mr. Jones said. 'People want to see someone who can get things done.'" http://nyti.ms/2y8JZS2

-- "After Luther Strange loses in Alabama, Trump's supportive tweets disappear," by Henry C. Jackson: "Trump ... appears to have deleted at least two tweets, sent earlier in the day, that offered strong endorsements of Strange. ... 'Luther Strange has been shooting up the polls since my endorsement,' read one tweet that later disappeared from his feed. 'Finish the job -- vote today for big Luther.'" http://politi.co/2xJuXkp

****** **A message from Morgan Stanley**: Batteries may power the future of the auto industry. Read more about disruption in the automotive industry from Morgan Stanley. ******

IT'S FINALLY HERE ... TAX REFORM DETAILS -- NYT'S GLENN THRUSH and **ALAN RAPPEPORT: "Trump to Propose Sweeping Tax Cut for Corporations and Individuals":** "President Trump will propose a sweeping rewrite of the federal tax code on Wednesday, outlining a plan to reduce rates for corporations and individuals and eliminate some popular deductions, in a move that will set off a scramble among powerful groups eager to protect their tax breaks.

"The proposal will call for slashing the corporate tax rate to 20 percent from 35 percent, doubling the standard deduction for individual taxpayers and slightly increasing the bottom tax rate to 12 percent from 10 percent, according to two officials briefed on the details of the blueprint.

"The framework, which has been agreed upon by Republican leaders in the House and Senate, leaves most of the details to Congress but proposes a reduction in the individual rate to 35 percent from 39.6 percent, while leaving the door open for an unspecified, higher bracket for the wealthiest Americans. The plan would also, for the first time, create a 25 percent tax for 'pass through' businesses, which account for the vast majority of business income in the United States and are currently taxed at individual rates." http://nyti.ms/2hytDat

-- WAPO'S DAMIAN PALETTA, MIKE DEBONIS and **CAROLYN Y. JOHNSON:** "By refusing to specify on Wednesday which tax breaks could be jettisoned, GOP leaders make a calculated effort to try to postpone any backlash while they try to build a coalition, said the people, who spoke on the condition of anonymity because they were not authorized to discuss the internal negotiations.

"But they plan to lean heavily into promising Americans that the tax changes will lead to a wave of economic growth that will spur new jobs and better wages if the tax blueprint is passed into law.

"Trump told a group of Democrats and Republicans on Tuesday the tax framework could lead the economy to grow more than 6 percent a year, more than double what

even his advisers had hoped for, and a view that many economists believe is preposterous." http://wapo.st/2fQA8p8

-- HOW HE PLANS TO SELL IT ... -- "Trump plans to enlist grassroots and Democrats to sell tax plan he will call biggest in history," by USA Today's Heidi M. Przybyla: "Trump will make the announcement alongside Indiana Sen. Joe Donnelly, a Democrat planning to travel with the president, and in tandem with the plan's release by Republican negotiators on Capitol Hill. Donnelly is considered one of the most endangered Democratic senators up for reelection in 2018; he will make the trip unless he is needed in Washington for Senate votes. ...

"Trump told dinner attendees that he thought a previous event in North Dakota, where he was accompanied by that state's Democratic senator, Heidi Heitkamp, was a success and that he wants to model future events off it. Yet one Democrat who attended the Tuesday meeting with Trump said Democrats haven't been consulted on a plan that will favor the wealthy, create more incentives to ship jobs overseas and force cuts to Medicare and Social Security." https://usat.ly/2hx6uc6

-- ... BUT THERE IS CONCERN HE'LL FLY OFF THE RAILS: "Trump hits the road to sell tax plan - but some worry what he'll say," by Nancy Cook and Ben White: "President Donald Trump is expected to tout the Republicans' new tax blueprint as one of the biggest tax cuts in recent American history at a Wednesday rally in Indiana - but Republican lawmakers, lobbyists and others are worried about exactly what he'll say. ... 'He's the one guy left in Washington who still wants a 15 percent corporate rate,' said one person close to the president and the tax reform discussions. 'They could put 20 percent down on paper and he could go out and say 15 percent anyway. He goes to these tax meetings and people just hammer him but he still wants 15 percent.'" http://politi.co/2wV9TUj

HOUSE REPUBLICANS have a five-hour retreat today at National Defense University, where they will talk about tax reform. ***The House Republican Conference video pushing tax reform*** http://bit.ly/2fyudrT ... They are also launching a website, fairandsimple.gop.

TRUMP'S WEDNESDAY -- THE PRESIDENT meets with Rex Tillerson at 10:30 a.m., and then heads to Indianapolis for a tax reform speech, which is slated to begin around 3:20 p.m.

NEW POLITICO/MORNING CONSULT POLL -- MOST POPULAR CABINET MEMBERS: Defense Secretary James Mattis topped the list of Trump's most popular advisers with a **40%** favorable rating (+20% net favorable), according to a new POLITICO/Morning Consult poll. **EVERY CABINET MEMBER** is under water. **JOHN KELLY: 39%** (+17 net), **BEN CARSON: 42%** (+9% net), **DAVID SHULKIN: 28%** (+9 net), **REX TILLERSON: 35%** (+7% net), **SONNY PERDUE: 24%** (+4% net). **LEAST POPULAR: BETSY DEVOS,** who has **28%** favorable, and **40%** unfavorable rating. **JEFF SESSIONS: 34%** (-4% net), **RICK PERRY: 30%** (-3% net), **STEVEN MNUCHIN:**

26% (-3% net), **RYAN ZINKE: 22%** favorable, **22%** unfavorable, **22%** have no opinion of him, and **34%** haven't heard of him.

THE BACKSTORY -- "Trump's N.F.L. Critique a Calculated Attempt to Shore Up His Base," by NYT's Glenn Thrush and Maggie Haberman: "President Trump was restless on the flight home from his rally on Friday night in Alabama, griping about the size of the crowd, wondering how his pink tie played with his audience and fretting about the low energy of the Senate candidate he was there to bolster. But there was one part of the trip that cheered him up, according to three people close to the president: rallygoers' thunderous approval of his attack on Colin Kaepernick, a former N.F.L. quarterback, for kneeling in protest during the national anthem, a slam punctuated by an epithet-laced suggestion that team owners fire employees who disrespect patriotic tradition. ...

"In private, the president and his top aides freely admit that he is engaged in a culture war on behalf of his white, working-class base, a New York billionaire waging war against 'politically correct' coastal elites on behalf of his supporters in the South and in the Midwest. He believes the war was foisted upon him by former President Barack Obama and other Democrats - and he is determined to win, current and former aides said." http://nyti.ms/2yl2ee2

ELIANA JOHNSON and **ALEX ISENSTADT: "Trump defends NFL stance at GOP donor dinner":** http://politi.co/2k1YsIZ

-- "A majority of adults disagree with Trump on firing athletes who kneel during anthem: Reuters/Ipsos poll," by Reuters' Chris Kahn: "A majority of Americans disagree with President Donald Trump's assertion that football players should be fired for kneeling during the national anthem, even though most say they would personally stand during the song, according to an exclusive Reuters/Ipsos opinion poll released on Tuesday. The Sept. 25-26 poll found that 57 percent of adults do not think the National Football League should fire players who kneel. This included 61 percent of NFL fans who watch at least a few games per season. The results were split along party lines, however, as 82 percent of Democrats and 29 percent of Republicans disagreed with the president's comments about firing football players." http://reut.rs/2wU2vgH

-- HOT JOB - "Senior Communications Strategist" at the NFL: http://bit.ly/2xzcWDj

RUSSIA WATCH -- "IRS shares information with special counsel in Russia probe," by CNN's Manu Raju, Pamela Brown and Evan Perez: "The IRS is now sharing information with special counsel Robert Mueller about key Trump campaign officials, after the two entities clashed this summer over both the scope of the investigation into Russia's meddling in the 2016 election and a raid on former Trump campaign chairman Paul Manafort's home, people briefed on the matter tell CNN. ...

"After several months of being at odds, one source said, the IRS Criminal Investigation division is now sharing information about campaign associates, including

Manafort and former White House national security adviser Michael Flynn. The sharing happened after the two camps reached an agreement following consultation with officials at the Treasury Department. CNN has learned the IRS Criminal Investigation agents had been working with the FBI to investigate Manafort since before the election in a similar probe that centered on possible money laundering and tax fraud issues, according to the sources." http://cnn.it/2wWrhrG

-- "Special counsel interviews with White House staff could start later this week," by CNN's Gloria Borger and Pamela Brown: "Special counsel investigators could start interviewing current and former White House staff as soon as later this week regarding the Russian probe, two sources familiar with the matter tell CNN. One source cautioned it is still being worked out with Robert Mueller's office and said it might be delayed until next week." http://cnn.it/2wVwxvN

-- "Blumenthal: '99 percent sure' of Russia indictments," by Darren Samuelsohn: "Criminal charges against two former top advisers to President Donald Trump are virtually certain, Democratic Sen. Richard Blumenthal said Tuesday. Michael Flynn and Paul Manafort are almost sure to be indicted as a result of Special Counsel Robert Mueller's probe into Russian interference in the 2016 election, the Connecticut senator told POLITICO. 'I'm about 99 percent sure there will be some criminal charges from this investigation,' said Blumenthal, a member of the Senate Judiciary Committee. ... Blumenthal said he is less certain Trump himself would end up facing charges, including for possible obstruction of justice for his firing of FBI Director James Comey." http://politi.co/2xFeNs9

TRUMP'S CABINET ...

-- DRIP, DRIP, DRIP: "Price's private-jet travels included visits with colleagues, lunch with son," by Dan Diamond and Rachana Pradhan: "Health and Human Services Secretary Tom Price took a government-funded private jet in August to get to St. Simons Island, an exclusive Georgia resort where he and his wife own land, a day and a half before he addressed a group of local doctors at a medical conference that he and his wife have long attended.

"The St. Simons Island trip was one of two taxpayer-funded flights on private jets in which Price traveled to places where he owns property, and paired official visits with meetings with longtime colleagues and family members. On June 6, HHS chartered a jet to fly Price to Nashville, Tennessee, where he owns a condominium and where his son resides. Price toured a medicine dispensary and spoke to a local health summit organized by a longtime friend. He also had lunch with his son, an HHS official confirmed. An HHS official said both the Georgia and Tennessee trips were for official government business and were paid for by the department." http://politi.co/2wjM8p8

-- WAPO: "EPA spending almost $25,000 to install a secure phone booth for Scott Pruitt," by Brady Dennis: "The Environmental Protection Agency is spending nearly $25,000 to construct a secure, soundproof communications booth in the office of

Administrator Scott Pruitt, according to government contracting records.

"The agency signed a $24,570 contract earlier this summer with Acoustical Solutions, a Richmond-based company, for a 'privacy booth for the administrator.' The company sells and installs an array of sound-dampening and privacy products, from ceiling baffles to full-scale enclosures like the one purchased by the EPA. The project's scheduled completion date is Oct. 9, according to the contract. Typically, such soundproof booths are used to conduct hearing tests. But the EPA sought a customized version -- one that eventually would cost several times more than a typical model -- that Pruitt can use to communicate privately." http://wapo.st/2y7PHU1

-- "Dismayed by Trump, Head of Drug Enforcement Administration to Leave," by NYT's Mike Schmidt: "The acting head of the Drug Enforcement Administration will resign at the end of the week, according to law enforcement officials, who said he had become convinced that President Trump had little respect for the law. The official, Chuck Rosenberg, who twice served as chief of staff to the former F.B.I. director James B. Comey and remains a close confidant, had grown disillusioned with Mr. Trump. The president fired Mr. Comey in May, and then in July told law enforcement officers 'please don't be too nice' when handling crime suspects. Mr. Rosenberg forcefully rejected Mr. Trump's comment, sending an email to all D.E.A. employees at the time to tell them that they should not mistreat suspects." http://nyti.ms/2wWh8Ln

WHAT SEN. MARK WARNER IS READING -- "Russian-funded Facebook ads backed Stein, Sanders and Trump," by Josh Dawsey: "Green Party presidential candidate Jill Stein was the beneficiary of at least one of the Russian-bought political ads on Facebook that federal government officials suspect were intended to influence the 2016 election. Other advertisements paid for by shadowy Russian buyers criticized Hillary Clinton and promoted Donald Trump. Some backed Bernie Sanders and his platform even after his presidential campaign had ended, according to a person with knowledge of the ads. The pro-Stein ad came late in the political campaign and pushed her candidacy for president ...

"The ads show a complicated effort that didn't necessarily hew to promoting Trump and bashing Clinton. Instead, they show a desire to create divisions while sometimes praising Trump, Sanders and Stein. A number of the ads seemed to question Clinton's authenticity and tout some of the liberal criticisms of her candidacy. There is no indication Stein, Sanders or Trump was aware of the advertisements, which were described to POLITICO by people with knowledge of them." http://politi.co/2yFR21j

FOR YOUR RADAR -- "U.S. does not believe Cuba is behind sonic attacks on American diplomats," by McClatchy's Franco Ordonez and Anita Kumar: "The White House does not believe the Cuban government is behind the mysterious sonic attacks against U.S. personnel but plans to pull American staff out of Havana as the number of cases climbs, according to multiple U.S. sources familiar with the investigation. 'No one believes that the Cubans are responsible,' said one source, echoing comments from others who are closely involved in the situation. 'All of the evidence points that they're not.' Sources would not say who U.S. intelligence believes is responsible." http://hrld.us/2wUb776

VALLEY TALK -- "Tech Firms Add $300 Million to Trump Administration's Computer Science Push," by NYT's Cecilia Kang: "Many of the country's largest tech companies, including Amazon, Facebook, Google, Microsoft and Salesforce, on Tuesday pledged a total of $300 million for computer science education, part of a partnership with the Trump administration meant to prepare students for careers in technology. The corporate donations follow a White House effort to direct federal money toward teacher training and resources that bolster science, technology, engineering and math, or STEM, education. President Trump on Monday directed the Education Department to put $200 million in grant money toward computer science education." http://nyti.ms/2xAeJYQ

WOMEN RULE PODCAST: "Trump's tough talk on Iran might have repercussions: Actress and activist Nazanin Boniadi has a message for President Trump: stop emboldening Iranian leaders by threatening to blow up the deal your predecessor made with Iran. In the latest Women Rule podcast, the British-Iranian actress emphasizes that 'the nuclear issue has overshadowed human rights' in Iran for too long, and that increasingly harsh rhetoric from D.C. will result in further oppression of the Iranian people. 'The hardliners in Iran are fully aware that if they solve the nuclear issue and they get rid of the nuclear standoff with the U.S., the global attention will shift back onto human rights in Iran,' she said. 'That's the last thing they want.'" ***Listen to the podcast*** http://politi.co/2olmtJ7

****** **A message from Morgan Stanley**: Amid a confluence of regulatory, market and technological factors, the production and sales of battery-powered electric vehicles may finally shift into high gear. Subject: Greens urge court to revive EPA's methane rule for new oil and gas wells

By Alex Guillén

07/31/2017 11:06 AM EDT

Environmentalists today asked a federal court to order EPA to resume enforcing its methane rule for new oil and gas wells after the agency did not ask for an appeal in the window provided by the court.

A panel of three judges on the D.C. Circuit Court of Appeals earlier this month ruled Administrator Scott Pruitt's 90-day stay of the methane rule was unlawful but agreed to keep Pruitt's stay in place for two weeks to give the agency a chance to appeal. That time ran out last week, and while industry groups and states opposed to the rule asked for *en banc* review by the full court, EPA has remained silent.

The environmental groups today called the industry and state rehearing petitions "transparent attempts to seek further delay" that should not stop the court from ordering EPA to lift Pruitt's administrative stay, which otherwise is slated to expire on Aug. 31.

"The filing of such flimsy petitions cannot be permitted to accomplish the very delay this Court found unlawful, to the detriment of Petitioners' members and other Americans who are suffering continued exposure to dangerous—and easily preventable—air pollution," they wrote.

WHAT'S NEXT: The court must decide whether to grant the environmentalists' request and order the rule reinstated, or explore the industry and states' appeal requests. The order keeping Pruitt's stay of the rule in place temporarily was specifically said to give EPA time to appeal, which the agency has not done.

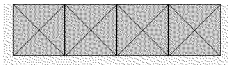
Administrator Pruitt Addresses National Tribal Operations Committee

WASHINGTON (October 11, 2017) – Today, Environmental Protection Agency (EPA) Administrator Scott Pruitt addressed the National Tribal Operations Committee (NTOC) where he spoke on the pressing issues facing environmental leaders in Indian country and how best the Agency and tribal leaders can collaborate on their shared goals and challenges.

“EPA is committed to working and partnering with tribal governments to address our shared environmental concerns and challenges,” **said Administrator Pruitt**. “I understand the important role that tribal governments play in environmental management, and the unique government-to-government relationship that tribes have with the federal government. The process that we engage in as co-regulators is very important. I believe that regulations ought to make sense, and part of that is engaging directly with tribal governments --taking comments and consulting with tribal governments, so that we are making informed decisions.”

In 1984, President Regan published the Federal Indian Policy supporting the primary role of tribal governments matters affecting American Indian Reservations. EPA has worked to recognize the importance of tribal governments in regulatory activities to ensure healthy outcomes for American citizens living on Indian Reservations.

"The 1984 EPA Indian Policy is a critical instrument that provides both the EPA and Native American tribes with principles that illustrate the federal trust relationship," **said National Tribal Caucus Chairman Evaristo Cruz**. "On behalf of the National Tribal Caucus we would like to thank Administrator Pruitt for upholding and honoring this legacy that EPA has instituted."



Administrator Pruitt will continue to work with American’s tribal partners and is reaffirming EPA’s 1984 Policy that will continue to advance cooperative federalism within the policy’s principles.

EPA Administrator Scott Pruitt with members of the National Tribal Caucus.

Flooded Houston Facing Threat From Air, Too, With Toxic Gas Releases

Posted August 30, 2017, 6:21 A.M. ET

By Adam Allington

Houston residents face a less obvious threat from the air as they deal with historic flooding: The Hurricane Harvey-caused shutdown of the region's massive petrochemical industry released more than 2 million pounds of harmful pollutants into the air as of Aug. 29, according to initial reports to Texas regulators.

"I think it's one of those unseen events that perhaps doesn't get recognized in all of the chaos and devastation of the storm," said Elena Craft, a senior scientist with the Environmental Defense Fund in Austin. "Two million pounds is roughly 40 percent of what the entire Houston region released in 2016. A lot of the concern stems from not knowing what you're breathing."

With 4.5 million residents, Houston is the fourth most-populated U.S. city. Over the weekend and on Monday, residents of industrial fence-line communities were reporting strong gas and chemical-like smells coming from the nearby plants and refineries.

Harvey prompted emergency shutdown of Houston-area refineries include Exxon-Mobil's sprawling Baytown complex, as well as refineries with Chevron-Phillips, Petrobas, Royal Dutch Shell, and Motiva Enterprises' Port Arthur facility—the nation's largest crude oil refinery.

While necessary from a safety perspective, the process of shutting down the plants produced significant amounts of air pollution.

Sudden shutdowns and startups can release chemical plumes including carbon monoxide, benzene and sulfur dioxide, because the filtration systems are not calibrated to run at lower temperatures. It's analogous to the initial puff of exhaust from a car tailpipe when the engine is first started.

In a mandatory filling with the Texas Commission on Environmental Quality (TCEQ), Chevron Phillips reported that it expects to exceed permitted limits for several hazardous pollutants, such as

1,3-butadiene, benzene and ethylene, during shutdown procedures.

Enforcement During Natural Disasters

Houston has been the site of several major flood events in recent years and chemical companies are still on the hook to minimize emissions, even during emergency shutdowns. If they don't they are subject to penalties and corrective action.

"They [fines] do have teeth," said Matt Kuryla, an environmental lawyer at Baker Botts LLP focusing on air quality.

Kuryla said the TCEQ holds a meeting every two weeks in which it has the power to assess fairly heavy fines for emissions events, up to $1 million.

"Under the rules that govern episodic emissions, companies are required to keep detailed records of the amount of chemicals released, and the steps taken to mitigate and correct the unauthorized emission," said Kuryla.

Kuryla noted that startups and shutdowns can be done under ideal circumstances without causing significant pollution. In those cases, excess hydrocarbons are usually taken care of through burning, or "flaring." It may smell to people living downwind, but it's not toxic, he said.

Questions of Policing Permits

According to the TCEQ's 2016 enforcement report, regulatory efforts in the state resulted in 1,404 administrative orders issued with over $8.9 million to be paid as penalties.

But Craft said those TCEQ penalties accounted for less than 3 percent of illegal air pollution released last year during industrial malfunctions in Texas.

The Environmental Integrity Project, a Washington, D.C.-based advocacy group made up of former EPA officials, recently took the EPA to court, alleging the federal agency isn't properly policing Texas air pollution permits, which they argue are too lax and complicated.

Hurricane Waivers?

The EPA has discretion to grant waivers during a natural disaster, but even for something as extreme as Hurricane Harvey, air pollution waivers might be more difficult to come by.

"This is an area of air pollution that is well known and heavily regulated," said Richard Alonso, a parnter in the environmental group at Sidley Austin LLP based in Washington D.C.

Alsonso said EPA learned a lot from Hurricane Katrina in 2005. No one questions whether refineries and chemical plants need to be shut down during natural disasters, but the question regulators will be increasingly faced with going forward is—how much do they need to pollute the environment to do so?

"The shutdown and restart emissions are regulated by the state and these should be minimized as much as possible," said Alonso. "It is not the Wild Wild West."

Looming Landfill Issues

More likely, he said, are waivers for specific environmental rules that would slow the cleanup and recovery process.

EPA Administrator Scott Pruitt already exercised his authority under the Clean Air Act last week to waive certain fuel requirements to address shortages resulting from Hurricane Harvey.

The next looming environmental issue could be four to five weeks down the road, said Alonso.

"They're going to have landfill issues," he said. "Once the cleanup starts, they will fill up quickly, and a lot of this is really nasty construction debris, things like asbestos, insulation, et cetera— the kind of stuff that normally wouldn't be simply tossed away."

Refineries' Toxic Gas | Harvey Damage | EPA Economic Reviews

Posted August 30, 2017, 7:01 A.M. ET

By Chuck McCutcheon

Houston's hazardous air pollution has spiked as Hurricane Harvey shuts down refineries and petrochemical complexes.

Emergency shutdowns released more than 2 million pounds of harmful pollutants into the air, according to initial reports to Texas regulators.

Affected Houston-areas refineries include ExxonMobil's sprawling Baytown complex, as well as refineries run by Chevron-Phillips, Petrobas, Royal Dutch Shell. It also includes the shutdown of Motiva Enterprises' Port Arthur facility—the nation's largest crude oil refinery.

While the shutdowns may be necessary from a safety perspective, shutting down boilers and other equipment can produce significant amounts of air pollution. Chevron Phillips reported to Texas' Commission on Environmental Quality that the company expects to exceed permitted limits for several hazardous pollutants, such as 1,3-butadiene, benzene, and ethylene, during shutdown procedures.

Energy-Incident Response Headaches

Harvey also is taxing the various government responses to damaged energy infrastructure.

A 14-inch pipeline in La Porte, Texas, spewed a toxic gas for several hours—just one of the infrastructure incidents challenging regulators as Harvey dumps record-breaking rain on the state. The Texas Commission on Environmental Quality is monitoring oil, gas, and other facilities reporting spills and giving technical guidance to wastewater operators in flood-impacted areas. And the Pipeline and Hazardous Materials Safety Administration is working with pipeline operators to give them better views of the integrity of their facilities.

Model Lacks Clarity: EPA Advisers

Economic modeling can be confusing—even to EPA's Science Advisory Board.

Its members told the EPA that the agency model for evaluating broad economic costs and benefits

of air pollution regulations isn't clear enough to help the public. The analysis is intended to help utilities, industries, and policymakers determine the effects of federal regulations on factors like energy prices and employment.

Board members who met Aug. 29 to discuss their draft report on EPA's draft economy-wide model asked for clarifications and transparency on the model's shortcomings.

What Else?

• "Garbage juice:" North Carolina lawmakers schedule a Wednesday veto-override vote to allow landfill operators to spray leachate and wastewater into the air to manage solid waste.

• Wisconsin's top environmental regulator is joining EPA's regional leadership team in Kansas.

• Duke Energy could add 700 megawatts of solar-power capacity to Florida's grid by 2021 and stop billing customers for a halted nuclear project under a plan filed with state regulators.

• Post-Harvey, federal and state leaders should pause to make sure money being spent will help prevent future damage, analysts say.

Today's Events

• 2 p.m. | EPA webinar | How drought and other environmental concerns affect global water quantity and quality

• 3 p.m. | World Resources Institute report | Helping Asia's poorest people access water pollution information

Quote of the Day

"This is a tremendously costly endeavor, and that's why we haven't done it already." — Peter Wilcoxen, head of an EPA Science Advisory Board panel, on finishing a draft report on modeling the economic impacts of regulation.

From Our Inbox

• A list of Harvey resources compiled by the Association of Air Pollution Control Agencies.

• Governments and business may face more lawsuits for failing to prevent damage from floods, heat waves, and other climate change risks, a commentary published in Nature says.

• A Massachusetts company using ammonia in its refrigeration system is now complying with federal laws, EPA announces.

All About: EPA Gasoline Waivers

The EPA is temporarily relaxing various environmental regulations to pave the way for more gasoline availability in crisis-struck Gulf states. That's because gasoline is needed to offset shortages tied to oil refinery shutdowns and flooding, the agency and governors in Texas and Louisiana say.

But the move is leaving biofuel producers confused.

Administrator Scott Pruitt in recent days gave the go-ahead to gas stations in parts of Texas and Louisiana to sell fuel that breaks environmental rules on smog prevention. Those rules involve arcane regulations on the Reid Vapor Pressure (RVP) of gas—which is used to measure ozone threats—and a type of refinement that limits pollutant emissions.

Pruitt, however, isn't allowing sales of gasoline containing 15 percent ethanol (E15), which is banned from sale in the summer months over RVP concerns. That issue has drawn the most attention to the RVP metric in recent years.

"The waivers issued don't do anything to allow expanded E15 blending," Renewable Fuels Association Executive Vice President Geoff Cooper said in a statement. Cooper said the waiver will allow sales of gasoline without any ethanol, a move that he said "seems odd."

The renewable fuel standard requires biofuel blending into gasoline, and now most gasoline sold nationwide contains 10 percent ethanol.

Pruitt also lifted gasoline requirements for 13 Atlanta-area counties. An agency spokesperson said EPA "is ready to act expeditiously" if extreme and unusual supply problems occur elsewhere.

Harvey Makes Second Landfall as Gulf Coast Relentlessly Battered

Posted August 30, 2017, 8:16 A.M. ET

By Brian K. Sullivan and Kelly Gilblom

On the morning of Aug. 30, disaster analyst Chuck Watson had pegged $42 billion as a reasonable estimate for the cost of destruction Tropical Storm Harvey would leave in its wake. By the end of the day, he'd added another $10 billion.

Harvey's initial blast along the Texas coast as a Category 4 hurricane was bad enough, sending gasoline prices surging and crude futures plunging as refineries shut. Now the storm has returned, making landfall a second time in southwestern Louisiana, which was devastated by Hurricane Katrina in 2005.

The storm has brought torrential rain and the collapse of levees, dams, and drains. That combination has analysts raising damage estimates by the hour and could easily push the catastrophe above the rank of Superstorm Sandy, the second-costliest weather disaster in U.S.

history.

"We're on the verge of having cascading failures," said Watson, a Savannah, Georgia-based disaster modeler with Enki Research. "It is conceivable that we could get into the $60 to $80 billion range without that much effort."

Louisiana, including New Orleans, is familiar with apocalyptic storms. Hurricane Katrina killed at least 1,800 and caused $160 billion in damage. Sandy, which slammed into New York and New Jersey in 2012, claimed 147 lives along its path from the Caribbean, including 72 in the U.S. The damage was about $70.2 billion, according to the U.S. National Centers for Environmental Information in Asheville, North Carolina.

The death toll from Harvey had reached at least 18 on Aug. 30, according to the Austin American-Statesman newspaper. The New York Times cited Texas authorities as saying they believed Harvey caused at least 30 deaths.

A nighttime curfew, from 10 p.m. to 5 a.m., was imposed in Houston the night of Aug. 29 as the storm's center drifted back toward the Gulf of Mexico. The storm made landfall between Port Aransas and Port O'Connor in Texas on Aug. 25, stalled out further inland over the weekend and is now trekking eastward. It is expected to reach the Lower Mississippi Valley by Aug. 31.

The storm will be followed by tornadoes from Louisiana to Arkansas. East Texas could get another 10 inches (25 centimeters) of rain throughout the week.

"Harvey aligned perfectly to bring intense rain bands over Houston," said James Done, a project scientist and meteorologist at the National Center for Atmospheric Research in Boulder, Colorado. As it drifted along the coast on Aug. 28-29, it also "perfectly aligned for Houston to get the peak rainfall."

Harvey also created a situation where Gulf of Mexico waters have kept drumming hard up against the coastline, preventing rain water from running off into the sea and backing everything up for miles around.

The ferocious arrival was tempered by high-pressure systems across the U.S., including a large one that pushed temperatures in California beyond 100 degrees Fahrenheit (38 Celsius), said Phil Klotzbach, a hurricane researcher at Colorado State University. Harvey became "a pebble in a stagnant stream."

Predictions were that some areas east of Houston would witness 50 inches or more of rain by the time Harvey moved off into the central U.S. As of 3 a.m. local time Aug. 30, the gauge at Mont Belvieu, east of the city, showed 51.88 inches had fallen since the start of the storm. That may be the most in recorded history for a tropical cyclone in the contiguous U.S., breaking a mark also set in Texas back in 1978.

The record for all 50 states in such a storm was set in 1950 in Hawaii—52 inches.

Harvey's deluge was made all the worse because the ground was already saturated by heavy rainfall earlier in the season. "We have had roughly a year's worth of rain in the last three months," said Wendy Wong, a National Weather Service meteorologist in Dickinson, Texas, a city that was evacuated.

Watson said disaster models just aren't calibrated for a thing like Harvey. For instance, a typical scenario will assume infrastructure such as dams, levees and drainage systems will fail when stress rates reach 80 to 90 percent. "We are seeing failures at 60 percent," he said.

The pressure on the Addicks and Barker reservoirs west of Houston spurred the Army Corps of Engineers to release water, which flooded neighborhoods that had been dry before. Now such deliberate flooding should be more calculated, Watson said.

"We're starting to get into the apocalyptic—this is what we don't want to have happen," he said.

The Army Corps didn't immediately respond to a request for comment, but said earlier on Aug. 29 that no decision had been made to increase discharge rates and that dam releases were expected to occur for several months.

Watson's other concern is how slowly water is draining away from Houston. Done said the reason may be that Harvey's surge is keeping up pressure on bays, inlets and the mouths of rivers, preventing runoff.

It could also be evidence that the pipes and drainage systems are failing, Watson said. That, of course, would increase the ultimate financial pain of the storm. The Army Corps said in a statement that the dams are operating "as expected."

'Precarious Situation'

Now, New Orleans and the rest of coastal Louisiana are feeling the brunt of Harvey's soaking rains, threatening yet another major U.S. refining center. The hurricane center said 3 to 6 inches could fall across eastern Louisiana, including New Orleans. Mississippi, Arkansas and Alabama could soon get as much as 10 inches. Storm surge warnings, which means there is a danger of facing a life-threatening inundation of water, are in effect for much of the Gulf Coast.

The storm shut an estimated 3.9 million barrels a day of refining capacity due to flooding and port closures, according to Goldman Sachs Group Inc. analysts including Damien Courvalin. Buffalo Gas Plant at Stanton, Texas, reduced sale of natural gas liquids by 58 percent as fractionator plants in Houston were closed, while Targa Resources Corp. said damage to its facilities is minimal so far.

The infrastructure in New Orleans, "can barely keep up," Done said. "New Orleans is in a very precarious situation."

The forecast calls for the storm to continue into the central U.S., and it's expected to become a tropical depression by tonight. And even then, Houston won't be free from threats.

Rainfall over the state will eventually need to make its way into the Gulf, which means several more pulses of water could be coming the city's way, Watson said.

"There is another train that is heading toward Houston," Watson said. "Behind every one of these dollar signs is a family that doesn't have a house anymore."

As Dicamba Dust Settles, Scientists and Industry Spar

Posted August 30, 2017, 7:30 A.M. ET

By Tiffany Stecker

Arkansan soybean farmers are wrapping up a summer of harvesting bumper crops alongside the crippling devastation of their neighbors' fields. The same herbicide is causing both optimism and bitterness in the region, and discussions over its future use is dividing farmers, scientists, and industry.

Dicamba, a weedkiller first registered in 1967, has undergone a makeover to fight weeds immune to most herbicides. BASF Corp., Monsanto Co., and DuPont this year stocked new versions of dicamba, designed for use with Monsanto's soybeans and cotton that are genetically-engineered to withstand the new herbicides. But the herbicide spread easily to neighboring farms, falling on vulnerable crops.

This summer was one the best growing seasons in years for Arkansans in terms of controlling insidious weeds that creep into fields. It also was a year of unusual harm to nearly a third of the state's soybean crops, marked by curled leaves, stunted growth, poor yields, and J-shaped pods that have been tied to new formulations of the herbicide.

What was a blockbuster year for many growers cost others millions of dollars, pitting farmer against farmer and scientists against the herbicide's manufacturers.

State university scientists believe the new formulations can't be managed to control the damage. They easily evaporate, or "volatilize," and can spread potentially thousands of feet over a couple of days into a neighbor's field.

"As a weed scientist, I can't tell you how to fix this problem," Jason Norsworthy, an extension scientist with the University of Arkansas told a group of farmers and industry representatives Aug. 17.

The manufacturers are loathe to blame volatility, saying the herbicides were studied extensively before their launch earlier this year. The damage, they say, could be due to errors in applying the herbicide, poorly written instructions, and generally weak control of physical drift—the travel of liquid droplets of dicamba via wind or weather patterns.

To avoid a repeat of the disaster next year, Arkansas' Plant Board convened a task force of growers and trade association representatives to craft recommendations on the spraying of dicamba.

On Aug. 24, the task force agreed to develop preliminary recommendations for the Plant Board to send to the governor. The panel suggested that the Plant Board impose an April 15 cut-off date for spraying the chemical and thereby prevent spraying in the hot summer months. The cut-off date also effectively would bar use of the herbicide for many farmers, given that most of the soybean planting happens in May.

The task force will incorporate the recommendations in a formal report due in the next three weeks. If implemented by the Arkansas Plant Board, the recommendations will drive hundreds of farmers' decisions next year. A compromise between those who have gained from the new dicamba and those who have suffered won't be easy. Farmers in Arkansas have been clamoring for solutions to their weed problems for years, and are feeling the pressure of declining grain prices that can

threaten the viability of their farm operations in just one season.

Grasping for Solutions

"It's something that we desperately need to control the weeds," Justin Blackburn, a 33-year old, eighth generation soybean and corn grower in Northeastern Arkansas, told Bloomberg BNA. "We're grasping for anything that works."

Hundreds of thousands of soybean acres, plus trees, vegetables crops, and flowering plants that feed honeybees, have shriveled this year as the new product for killing weeds came on the market. Soybeans are particularly sensitive to dicamba. The only crops that are safe are Monsanto Xtend seeds that are genetically engineered to withstand the herbicide. About 35 percent of the soybeans planted this year in the state are Xtend crops.

"We've got some serious issues we've got to address," Wes Ward, the state's Agriculture Secretary, told Bloomberg BNA. "We're hoping that this task force…can try to nail this down a little better."

In preparing its recommendations, the 19-person panel must consider conflicting information from university researchers and the manufacturers of the new herbicide.

Manufacturers hailed new formulations as a cure for stubborn weeds that suffocate crop yields. The aptly-named pigweed—also called palmer amaranth—began to resist applications of the widely-used weedkiller glyphosate after the turn of the 21st century. Weeds also have developed resistance to another class of herbicides called protoporphyrinogen oxidase (PPO) inhibitors. Resistant weeds can cut yields by up to 91 percent in corn and up to 79 percent in soybean, according to Purdue University Extension.

The new products were made to be less prone to evaporate and spread to neighboring fields than the dicamba of the past. But starting in late May, complaints began to mount. Dozens of calls to the Plant Board turned to hundreds. To date, 950 complaints have been filed.

The State Plant Board voted to ban spraying of dicamba in crops on June 23. As of Aug. 10, an estimated 900,000 acres of Arkansas soybean fields have been allegedly damaged by dicamba, according to state extension scientists, about one-third of the total soybean damage for the nation as a whole.

Ground Zero

Dicamba works by mimicking plant hormones that make weeds grow abnormally and eventually die.

More than 2,200 reports of dicama injury, affecting more than 3 million acres of soybeans, are being investigated nationwide, according to the University of Missouri's Integrated Pest Management program. Northeastern Arkansas is ground zero for the damage.

In Mississippi County, a sprawling horizon of soybean and cotton fields one hour northwest of Memphis, Tenn., 240 dicamba misuse complaints were filed this year—one quarter of all of the complaints in the state.

David Wildy, a task force member who pushed for an April 15 cutoff date for spraying the chemical, is one of the most vocal critics of the new formulations. A silver-haired grower of soybeans, corn, and other crops from Manila, in the northeastern part of Arkansas, he's earned awards for his high

production, management style, and outreach to the agricultural community.

Earlier this season, Wildy estimated his loss from soybean damage to be a little shy of $1 million, injury that is not covered by federal crop insurance or private insurance unless a neighbor admits to spraying dicamba and agrees to cover the loss with liability insurance.

"This technology is driving a wedge between farmers," he told Bloomberg BNA.

Arkansas was the only state of 34 not to approve XtendiMax for use, despite allowing farmers to plant Extend seeds that can withstand applications of dicamba. The Plant Board denied XtendiMax's approval because university scientists were not able to do independent tests, particularly under local conditions, Arkansas Agriculture Department spokeswoman Adriane Barnes told Bloomberg BNA in an email. This dampened their confidence in the product.

In A Pickle

Monsanto's vice president of global strategy Scott Partridge said the refusal to approve the use of Xtendimax drove farmers to use older versions of dicamba not suitable for use with the company's genetically-modified seeds. It's no surprise that Arkansas has fared the worst in the dicamba crisis, Partridge told Bloomberg BNA.

"I can understand why Arkansas is scrambling," he said. "I think they got themselves into a bit of a pickle."

Some states that have seen little to no problems with dicamba, a pattern BASF attributes to more in-person training. Arkansas Agriculture Secretary Ward told Bloomberg BNA that his state relied on the protocol for Mississippi, which did not require face-to-face training.

On a press call Aug. 17, BASF pointed to the in-person training in states like Alabama, North Carolina, and Georgia as a likely reason for fewer complaints in those states.

"We do recognize differences in agriculture around the country, but we shouldn't be quick to discount the value of in-person and face-to-face training," Scott Kay, vice president of U.S. Crops forBASF, said. "We do believe that's an important contributor to their reduced numbers of alleged complaints coming from those states."

But Norsworthy said those differences could be attributed to different agricultural systems, like smaller fields and forests interspersed with farmland.

In that county, a farmer was shot and killed after a dispute with a dicamba-spraying neighbor last year. At the time, Xtend seeds were legal, but the Environmental Protection Agency had not yet approved the new versions of dicamba, leading to widespread "off-label" use. It is illegal to use older versions of dicamba on the genetically-engineered plants.

This year was supposed to be different. The EPA approved the new formulations last November, more than a year after the Agriculture Department allowed for Monsanto's Xtend seeds to go on the market. But this year's calls to the Arkansas Plant Board have far outpaced last year's 33 complaints, 23 of which were confirmed to be dicamba injury.

Record Soybean Crop

The crisis won't lead to a national soybean shortage. On the contrary, the U.S. is set to break its soybean record this year, and Arkansas is expected to produce 400,000 more acres than in 2016, with a slight increase in yields per acre, according to USDA. Monsanto Chief Technology Officer Robb Fraley said Aug. 29 that the company is planning to supply enough Xtend seeds for up to half of the U.S. soybean acreage for next year's growing season.

But that gain comes at a significant cost, Wildy said. Sycamore trees are wilting. Tomato plants are wiped out. Wildy needs and wants the technology. But if this is the price of progress, he says, it's not worth it. Non-agricultural plants—from ornamental trees to flowers that feed honeybees—have been affected too.

"When the general public gets involved, to me that's very serious," he said, referring to the broader number of groups affected.

Wildy planted about 300 of his 3,300 soybean acres with Xtend seeds this year. He said he will plant more next year as a protective measure if the state Plant Board allows continued use. Farmers pay about $8 more per acre for dicamba-resistant beans than for LibertyLink seeds, Bayer AG's technology that matches glufosinate-tolerant crops to a new version of the herbicide glufosinate—another result of farmers' clamor for tools to beat weeds.

Arkansas farmer Blackburn tends to 1,700 acres with his brother in Greene County. Last year, he was hit with a wave of dicamba that damaged his soybeans. This year, he went on the defense. The brothers planted every acre of their soybeans to be dicamba-resistant. It was an extra expense, he said, but worth it. It worked wonderfully until late June, when the state imposed its ban.

That bothers Blackburn. This new technology has brought benefits to farmers, and smearing the formulations with a broad brush means a step backwards.

"We followed all of the regulations, all of the guidelines," he said. "They're sort of making it out to be that everybody who sprays this stuff is an outlaw, is a criminal."

Still, Blackburn thinks the product is "flawed" because it's been so easy for farmers to misuse.

An April 15 cutoff wouldn't work for Blackburn, who spends that month planting corn and begins sowing soybeans in May.

'This Is A Product That Is Broken'

The task force meetings on Aug. 17 and Aug. 24 were held at the Winthrop Rockefeller Institute, atop the fog-covered Petit Jean Mountain north of Little Rock. Named after the state's Republican governor who pushed for civil rights and prison reform in his state, the resort-like stone lodge serves as a neutral outpost to discuss the region's most pressing matters, from rural healthcare to agricultural trade with Cuba.

The dicamba matter may be the most contentious issue addressed there yet. Norsworthy gave an hour-long presentation to the audience of about 50 at the Aug. 17 meeting, summarizing a number of his field studies on the new dicamba formulations.

In one experiment that was replicated by scientists at the University of Tennessee, Norsworthy covered certain soybeans with buckets in a field where he sprayed XtendiMax (Monsanto's dicamba herbicide) and Engenia (BASF's new formulation). He removed the buckets 30 minutes after spraying, and soon after, the plants exhibited the telltale signs of dicamba damage. Had it been drift,

the weedkiller would have moved away from the areas in minutes, Norsworthy said.

In another trial, Norsworthy sprayed two 3.5 acre plots with Engenia and XtendiMax each, with wind traveling 2.9 miles per hour. Though applied well below the label instruction limit of 15 miles per hour, the herbicide traveled more than 300 feet. With field sizes in the thousands of acres, a real life situation could see dicamba travel well beyond the state's quarter-mile buffer zone, he said.

His conclusion: When it comes to volatility, there's no buffer big enough, no nozzle spray fine enough, no wait period long enough, to control the movement. Drift can be controlled by the type of nozzle, by the boom height, and by refraining from spraying at times of high wind speed and at certain times of the day.

The distinction between drift and volatility is important. Regulations and label instructions on its use can control physical drift. Volatility is uncontrollable, Norsworthy said.

"This is a product that is broken," he told the task force Aug. 17.

Those findings bristled the handful of manufacturer representatives present, who had just a few minutes to defend their new herbicides. The presentation, they said, would taint farmers' opinions of the product and bring on hasty recommendations to restrict a necessary tool for clearing weeds.

"I wasn't happy with the process," Dan Westburg, a BASF technical services manager with a doctorate in weed science, told Bloomberg BNA at the meeting.

Companies worked hard to suppress this in their new formulations. Monsanto's proprietary VaporGrip technology was developed specifically to reduce volatility by preventing the formation of dicamba acid in a solution.

Perry Galloway, a farmer in Northeastern Arkansas and proponent of the technology, agreed that a presentation from only the extension scientists was "biased."

'Dicamba Is Heavier Than Air'

The companies brought their concerns to the Arkansas Plant Board. A week later at the second task force meeting, Monsanto deployed three scientists to defend their data. BASF had one presentation.

Monsanto has conducted extensive volatility studies since 2009, company scientists said at the Aug. 24 meeting. Those studies, mostly done in closed enclosures called humidomes, show that dicamba concentration in the air drops dramatically in the first day, meaning it can't volatilize and travel far.

"Volatility does occur, it absolutely occurs, but the amount that occurs will happen very quickly in 24 hours," Ty Witten, North America Crop Protection Systems Lead for Monsanto, told the participants. "Dicamba is heavier than air, it's going to fall over time."

Can dicamba drift? Yes, said Witten, maybe by 40 or 100 feet. But not by half a mile or ten miles, as some have suggested.

Tom Mueller, a professor of weed science at the University of Tennessee Institute of Agriculture, challenges this 24-hour claim from Witten in recent trials. He found that dicamba concentrations in the air can shoot back up the day following an application after dipping overnight.

Mueller has repeated this trial several times. “It always follows the same pattern,” he told Bloomberg BNA.

Mueller attributes the increase in concentrations to higher temperatures the following day rather than in the evening. Heat drives volatility, and researchers link the dicamba problems to a relatively new phenomenon in its use. Older formulations were applied only on corn in the cooler temperatures of early spring, he said, whereas the new versions are being sprayed in 90-degree June weather.

The EPA ultimately will decide the herbicide’s future. The agency gave companies a provisional two-year registration for the herbicides in 2016 and it is investigating the complaints and meeting weekly with Arkansas and other states affected via teleconference.

The underlying causes of the various cases of damage are not yet clear, EPA spokesman Robert Daguillard said, “but EPA is reviewing the available information carefully.”

If the EPA revokes the registration, or imposes greater restrictions, on use of the herbicides, they would not go into effect until the 2019 growing season. That leaves another year of rising tensions in the Heartland.

Maryland Wants to Muck Out Exelon Dam to Save Chesapeake Bay

Posted August 30, 2017, 8:00 A.M. ET

By Leslie A. Pappas

One “big and dirty flush” from a Maryland dam could wipe out decades of efforts to clean up the Chesapeake Bay.

The Conowingo Dam on the Susquehanna River, a hydroelectric power station owned by Chicago-based Exelon Corp., is no longer blocking pollution from contaminating the Chesapeake Bay, and Maryland is pushing a $3.9 million plan to start dredging the backed up muck to protect the estuary.

“The sediment has value, but it doesn’t have value if it’s leaking through the dam into the Chesapeake Bay,” Maryland’s Secretary of the Environment Ben Grumbles told Bloomberg BNA. “Pollution prevention is the key.”

Maryland Aug. 31 is expected to solicit plans to dredge 25,000 cubic yards of the nearly 200 million tons of sediment trapped by the dam as part of a pilot program to reduce pollution. But the program is only the start given that 2 million to 3 million cubic yards of sediment accumulates each year, Roy McGrath, director of the Maryland Environmental Service, told Bloomberg BNA.

While the dredging is only a small step, Grumbles said it’s one piece of a “holistic strategy” to restore and protect the Chesapeake Bay.

Dredging could buy Maryland the time it needs to look at steps to reduce upstream pollution that eventually flows into the bay. But removing the 31 million cubic yards of sediment needed to restore the reservoir to 1996 levels would cost nearly $3 billion, the U.S. Army Corps of Engineers estimated, with another 3 million cubic yards of sediment dredged each year at a cost of $267 million annually.

"We all need to continue pollution prevention efforts upstream," Grumbles said.

Exelon Won't Fund Dredging

Exelon Generation Co. LLC agrees the problem is upstream pollution, and the company has balked at paying for the dredging operation. Exelon has spent about $7.8 million studying the issue since 2010, company spokeswoman Deena O'Brien told Bloomberg BNA in an emailed statement. The company found 70 percent to 80 percent of the sediment that washes into the bay during storms comes from upstream sources, and not from the Conowingo Pond.

Maryland has pushed the power company to contribute more to the dredging solution, even threatening to block the company's bid to renew a license from the Federal Energy Regulatory Commission to operate the dam.

"Exelon Generation believes protecting the vitality of the Chesapeake Bay is a multi-stakeholder, multi-state issue," O'Brien said.

The company "will support" Maryland's plan to solicit dredging bids though it will not play a formal role, she said.

Diminished Dam Could Drive New Standards

The dam has reached "dynamic equilibrium," according to a 2016 report Maryland issued with the U.S. Army Corps of Engineers. Dynamic equilibrium means that over time, the same amount of pollution and sediment flowing into the Conowingo reservoir is also flowing out. That diminished storage capacity means that a million more pounds of phosphorus from the Susquehanna will flow into the bay each year, Grumbles said.

"Some people are fixated on these extreme events," Donald F. Boesch, president of the University of Maryland Center for Environmental Science, which is studying the chemistry of sediment in the bay, told Bloomberg BNA, "but it's the year-to-year pollution that really matters."

That added pollution will make it even harder for Maryland to meet its goals under the Chesapeake Bay watershed cleanup plan, a pollution "diet" that aims to reduce levels of pollutants to certain federal standards by 2025. Maryland is one of six states and the District of Columbia that fall in the 64,000-square-mile watershed and must stay within federally mandated pollution discharge limits known as total maximum daily loads (TMDLs).

When Environmental Protection Agency first laid out those pollution limits in the 2010 Chesapeake Bay TMDL, the agency estimated the Conowingo trapped 55 percent of sediment, 2 percent of nitrogen, and 40 percent of phosphorus.

The EPA is conducting a midpoint assessment of nitrogen, phosphorus, and sediment levels in the bay to develop the next phase of cleanup, and the Conowingo's reduced capacity may force states to meet even more stringent pollution reduction targets.

Dredging's Value Questioned

While Maryland hopes the dredging plan will buy the time necessary to tackle upstream pollution, some researchers and groups involved in the bay cleanup question whether it is worth the cost.

Pollutants such as nitrogen are water soluble and will pass through the dam whether it gets dredged or not.

The 2016 sediment study by the U.S. Army Corps of Engineers concluded that nutrients from upstream "are a bigger threat to water quality than just the sediment," Sarah Gross, an Army Corps spokeswoman, told Bloomberg BNA in an email.

Dredging the Conowingo Dam "would result in only minor water quality improvements" to the Chesapeake Bay and "would be required regularly, if not annually, to achieve any net improvement," Gross said.

The Chesapeake Bay Foundation, an environmental group focused on the bay's health, argues that upstream states such as Pennsylvania and New York must do more to reduce nitrogen, phosphorus, and sediment runoff before it gets into the watershed in the first place.

Joel D. Blomquist, a hydrologist with the U.S. Geological Survey in Baltimore who has monitored sediment for 30 years, said scientists need to learn more about how sediment moves now that the dams have reached a dynamic equilibrium.

"There's legitimate debate around the question of needing to dredge," Blomquist told Bloomberg BNA. "We need to continue to decrease the amount of phosphorus and the amount of fine-grain sediments reaching the Chesapeake Bay," Blomquist said, but "there are multiple strategies to do that."

Xcel to Close Coal-Fired Units at Colorado Power Plant

Posted August 30, 2017, 02:44 P.M. ET

By Tripp Baltz

Xcel Energy Inc. plans to close two of its three coal-burning units at the Comanche Generating Station in Pueblo, Colo., as part of a group stipulation to pursue $2.5 billion in clean energy investments.

The company, in an Aug. 29 filing with the Colorado Public Utilities Commission, said the new generation projects will be identified and selected through a competitive process targeting a mix of utility and independent power producer-owned facilities. Portfolio estimates are up to 1,000 megawatts of wind, up to 700 megawatts of solar and up to 700 megawatts of natural gas, it said.

The filing with the commission was a provision with a coalition of 14 companies and groups to pursue $2.5 billion in clean energy investments in rural Colorado, the company said. The group of 14 includes the city of Boulder, Climax Molybdenum Co., the Colorado Energy Office, the Colorado Solar Energy Industries Association, the Colorado Building and Construction Trades Council and the Colorado Office of Consumer Counsel.

EPA Chemical Analysis Program's Science Focus of Sept. 6 Hearing

Posted August 30, 2017, 10:49 A.M. ET

By Pat Rizzuto

EPA's chemical toxicity program will be at the forefront of a House Science Committee hearing Sept. 6., Bloomberg BNA confirmed.

The House Committee on Science, Space, and Technology, and its Subcommittee on Environment and its Subcommittee on Oversight will all participate in the hearing. It will focus on the Environmental Protection Agency's Integrated Risk Information System (IRIS), which analyzes the human health harms that chemicals may cause and the doses at which those harms could manifest.

The National Academies, Government Accountability Office, American Chemistry Council and others have criticized the IRIS program for years. They have said it takes too long to evaluate chemicals and that the program's rationale for many decisions isn't clear.

The academies, however, praised recent improvements the EPA has made to the IRIS program.

Kenneth Mundt, director of applied epidemiology for the consulting group Ramboll Environ, and former Dow Chemical Co. toxicologist James Bus, now a senior managing scientist at Exponent, will testify. Both scientists and those consulting firms have long worked for or on behalf of various chemical and tobacco companies as well as for trade associations. Bus also has directed four toxicological associations, including the Society of Toxicology.

No witnesses for the Democrats could be immediately confirmed.

Questions about the IRIS program's formaldehyde assessment are likely to arise at the hearing. In May, Mundt published a critique of a study on occupational exposure to formaldehyde. That study was critical in the EPA's IRIS program, National Toxicology Program, and International Agency for Research on Cancer's analyses of formaldehyde's cancer-causing potential and link to leukemia and related cancers. Mundt's analysis concluded the workers study did not support a link between formaldehyde exposure and leukemia.

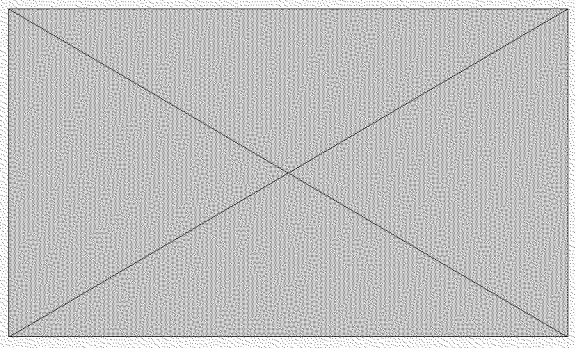
Subject: AEI Today: What the Fortune 500 teaches us about the free market

The lessons of creative destruction.

AEI's daily publication of independent research, insightful analysis, and scholarly debate

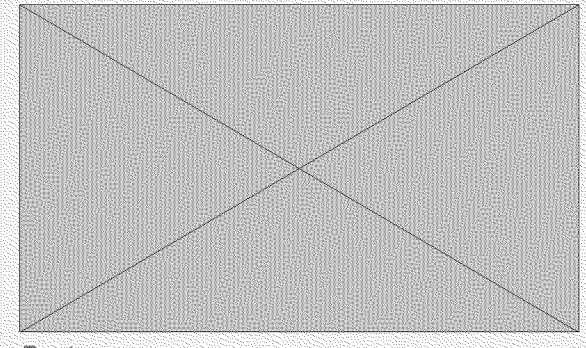


Reuters

What the Fortune 500 teaches us about the free market

Mark J. Perry | AEIdeas

Only 12% of the Fortune 500 companies in 1955 were still on the list 62 years later in 2017, and more than 88% of the companies from 1955 have either gone bankrupt, merged with another firm, or still exist but have fallen from the top Fortune 500 companies. Many of the companies on the list in 1955 are unrecognizable, forgotten companies today. What lesson can be learned from this creative destruction?

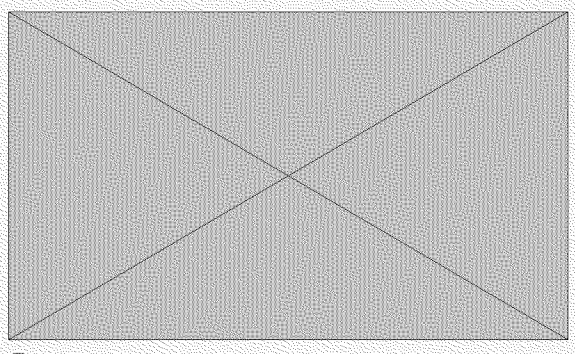


Twenty20

Finding the real value of college on future income

Mark Schneider and Rooney Columbus | AEI

Conventional wisdom holds that the surest path to labor-market success is through a bachelor's degree at a four-year college. While on average bachelor's degree holders earn more than those with sub-baccalaureate credentials, student earnings vary widely based on the degree pursued, the major studied, and the school attended. Many associate degrees offer valuable routes into the middle class.



Reuters

Decoding the

president's health care executive order

Joseph Antos and James C. Capretta | Health Affairs

The executive order signed by President Donald Trump on October 12 directs the Departments of Health and Human Services, Labor, and Treasury to develop federal regulations that could allow new and less expensive health insurance options for employers and consumers. The executive order does not itself change any federal regulations. Instead, it sets into motion a policy development process that could lead to new regulations or regulatory guidance within the confines of current law.

Reuters

Sorting out who is right on energy subsidies

Benjamin Zycher | AEI.org

Energy Secretary Rick Perry recently proposed to the Federal Energy Regulatory Commission that it consider a system of direct ratepayer payments to baseload generators, in the form of cost-recovery plus a rate of return for on-site stockpiles of fuel. That would amount to an extra payment for coal and nuclear generators, assuming state regulators do not

confiscate such payments by reducing allowed rates of return to other capital investment. According to Benjamin Zycher, this approach is problematic.

Subject: POLITICO's Morning Transportation: It's a bird! No, it's a … Russian spy plane? — Trump's 2-for-1 reg order goes to court — Tesla working on self-driving semi

By Brianna Gurciullo and Stephanie Beasley | 08/10/2017 10:00 AM EDT

With help from Alex Guillen

LOOK! UP IN THE SKY! IT'S A BIRD! NO, IT'S A... RUSSIAN SPY PLANE? Yup. A spy plane flown by the Russian military on Wednesday swooped over D.C. and past Bedminster, New Jersey, where President Donald Trump is staying right now. As our Kathryn A. Wolfe and Pro Defense's Bryan Bender report, it was "a perfectly legal bit of aerial reconnaissance that nonetheless appeared to be an attempt to troll President Donald Trump."

'Semi routine': The Treaty on Open Skies, signed in 1992, lets Russia (and other signatories, including the United States) do surveillance flights like this one, in the hopes of fostering openness among different countries. The Russian Air Force seems to have conducted nine other surveillance flights this year alone. "The missions happen on a semi-routine basis," a Pentagon official told POLITICO. Russia gave the United States a heads up about the flight, as mandated by the treaty. "We put together the flight plan and with a few exceptions - safety-wise or weather-wise - they are allowed to fly over pretty much the entire territory," the Pentagon official said.

IT'S THURSDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Don't forget to send tips, feedback and lyrics: sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"It feels good to know you're mine / Now drive me far - away, away, away / Far away / I don't care where, just far - away." (h/t Brianne O'Donnell at Finn Partners)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

TRUMP'S 2-FOR-1 REG ORDER GOES TO COURT: A federal judge will hold a hearing this morning on Trump's "2-for-1" regulatory executive order that directed agencies to identify two rules for revision or repeal for every one rule finalized, per our colleagues at Morning Energy . A trio of groups - the Natural Resources Defense Council, Public Citizen and the Communications Workers of America - argue that Trump's order is unlawful and endangers public welfare by threatening health and safety rules across the government. The administration says Trump's order is a valid exercise of presidential authority and doesn't require agencies to do more than identify potential rules to cut. The administration also argues that it is too early to challenge the order, and that the groups must wait for an agency to act on it before going to court. The hearing will happen in the U.S. District Court for the District of Columbia.

NOW LET'S GET IN FORMATION: Tesla is working on a self-driving semi, Reuters

scooped on Wednesday. The electric trucks would be capable of platooning, or traveling in tight groups with one truck shepherding the others. Reuters reports that a Tesla official told Nevada's department of motor vehicles that the company wants "to operate our prototype test trucks in a continuous manner across the state line and within the States of Nevada and California in a platooning and/or Autonomous mode without having a person in the vehicle."

LET'S NOT PUT A DEADLINE ON IT: A tax overhaul will get done when a tax overhaul gets done, said Senate Majority Leader Mitch McConnell. "I'm not going to tell you when we are going to finish tax reform, but we'll finish it," he said to a Rotary Club this week, as the Northern Kentucky Tribune reported . MT readers may remember that Marc Short, the White House's legislative affairs director, has said that the Trump administration sees a bill to overhaul the tax code passing the House in October and being cleared by the Senate the next month.

Great expectations: But McConnell argued that timetables for legislation, promulgated by Trump, have contributed to a narrative that lawmakers "haven't done much" this year. "Our new president, of course, has not been in this line of work before. And I think he had excessive expectations about how quickly things happen in the democratic process," McConnell said, according to ABC News . "So part of the reason I think people feel we're under-performing is because too many artificial deadlines, unrelated to the reality of the complexity of legislating, may not have been fully understood."

GET IT TOGETHER: DOT's inspector general says the agency's IT office is in need of "sound planning procedures and internal controls," or else its capacity to handle high-priority cybersecurity issues will be in trouble. The DOT Office of the Chief Information Officer didn't "adequately document or plan for its cybersecurity funding needs," according to an audit report released this week. If the office doesn't shape up, it "may inhibit DOT's ability to effectively use limited funds to mitigate IT vulnerabilities," the IG report said. Your MT co-host has more for Pros.

STRIKE AGAINST POSSIBLE TRANSGENDER BAN: Five transgender military service members are suing Trump over his Twitter plan to reinstate a ban on transgender people serving in the military, Pro Defense's Bryan Bender writes. The five anonymous troopers filed the suit in the U.S. District Court for the District of Columbia. They are being represented by lawyers from the GLBTQ Legal Advocates and Defenders and the National Center for Lesbian Rights.

Still waiting: Trump announced that he would bring back the ban via Twitter last month, but still has not issued an official policy or provided guidance to the Pentagon. Should the ban go into effect, it would apply to the Coast Guard, which is housed under DHS but can be absorbed into the Navy during wartime and must abide by DOD personnel rules.

RECLAIMING MY (AD) TIME: Washington Metrorail has also been hit with a lawsuit. The American Civil Liberties Union alleges that WMATA's policy of prohibiting ads that it considers "issues-oriented" or "intended to influence members of the public regarding an issue on which there are varying opinions" violates the First Amendment, former MT scribe Martine Powers writes for The Washington Post (hi Martine!). Rejected ads highlighted in the suit include a book promo for alt-right writer Milo Yiannopoulos, a PETA "Go Vegan" ad, another showcasing an

abortion pill and an ACLU ad in support of the First Amendment. "The ACLU said that Metro is enforcing its advertising guidelines capriciously, and that the prohibitions outlined in the guidelines are far too broad and wide-reaching," Powers reports.

HUNTER INVESTIGATION TAKES 'SERIOUS TURN': Earlier this year, the FBI scoured the offices of a company that once managed the campaign finances of Rep. Duncan Hunter, POLITICO's Rachael Bade reports . The raid was "part of an ongoing criminal investigation into allegations the California Republican used tens of thousands of dollars in campaign funds for personal expenses," Rachael writes. "The search warrant," she explains, "suggests the FBI's investigation into Hunter has taken a serious turn." Hunter is the chairman of the House Transportation Committee's Coast Guard panel. More here.

THIS IS MY LAST RESORT: Sen. Bob Menendez, the chairman of the Senate Banking Committee's transportation panel, appears to have exhausted all his options for fending off trial. The New Jersey Democrat's lawyers contended "that the U.S. Supreme Court's decision to toss former Virginia Gov. Bob McDonnell's corruption conviction should invalidate his own indictment," POLITICO New Jersey's Matt Friedman reports, but a federal judge said Wednesday that such a conclusion must be reached through a trial.

IT'S BEGINNING TO LOOK A LOT LIKE... 2018? Florida Gov. Rick Scott is taking fire from Sen. Bill Nelson, who could face Scott in next year's election. Nelson slammed the Republican governor this week "for backtracking on a proposal to crack down on state money flowing to organizations or investments that could benefit the Venezuelan government," POLITICO Florida's Daniel Ducassi reports . Nelson wouldn't tell reporters his thoughts on what kind of prospects Scott would have in a race against him. "I'm not one to go around and crow and huff and puff and beat my chest, but I know how to campaign," Nelson said. "I'll leave it at that." (h/t Florida Playbook)

CELESTIAL RUBBERNECKING?: The Federal Highway Administration and state transportation officials are worried that some folks might get so caught up in watching the Aug. 21 solar eclipse that they'll forget to obey the rules of the road, HuffPost reports . The coast-to-coast total eclipse is expected to cross 14 states and be within a day's drive of 200 million people. "Don't stand on the interstate. Don't pull your car over. Don't take a selfie from a bridge," FHWA spokesman Doug Hecox warned drivers via HuffPost. "The risk of driver distraction from this once-in-a lifetime event has never been greater. We don't want anyone to have an 'eclipse in judgment.'"

NTSB RELEASES NEW DETAILS ON EL FARO: After additional "listening sessions," the NTSB said it has been able to transcribe more pieces of dialogue from an audio recording recovered from El Faro. NTSB posted an updated transcript, along with other analytical information, to the docket on its ongoing investigation into why the cargo ship sank en route to Puerto Rico during Hurricane Joaquin in 2015. The agency said it would post a human performance factual report that will include information about oversight and training as well as a wreckage trajectory study on Aug. 18. "Two more factual reports, nautical operations and naval architecture, will be added in the coming weeks," NTSB said.

DO YOU HAVE ANYTHING WITH A 'TOUCH OF BITTERNESS?' After enduring another day of New York City's "summer of hell," why not crack open a cold one? And why not make it a beer that's actually called "Delayed"? That's right, Blue Point Brewery of Long Island is serving up the new drink in New York's Penn Station beginning next week. The pilsner "has just the right amount of drinkability with a touch of bitterness," Todd Ahsmann, the president of Blue Point, told Newsday. "This beer should hold you over while you wait for the train but provide just enough bite to keep you critical of the current state of transit," Ahsmann said. Check out the design of the can here. (h/t POLITICO hubby Patrick Ambrosio)

TWEET OF THE DAY: This footage posted by author Craig Pittman reminds your MT co-host of all the times her father told her to not just worry about herself but also the other drivers on the road.

SHIFTING GEARS: Kate Geldaker starts today as director of government affairs at Alaska Airlines. Geldaker's past jobs include senior legislative assistant for Sen. Amy Klobuchar (D-Minn.) and, most recently, deputy director of congressional affairs for the National Telecommunications and Information Administration.

THE AUTOBAHN:

- "L.A. gives green light for eminent domain to clear out Manchester Square." Los Angeles Times.

- "United apologizes after family's dog dies on flight." CBS News.

- "American flight underscores hazards posed by turbulence." The Associated Press.

- "Indiana highway gives 'black eye' to private investment in infrastructure." The Wall Street Journal.

- "Qatar Airways says evaluating air routes opened by boycotting countries." Reuters.

- "Hilarious rider complaints from the early years of the NYC subway." History Channel.

- "Metro's Office of Inspector General knew about falsified inspections nearly two years ago. Here's the report." The Washington Post.

- "Japan's Takata files another attempt to stay U.S. air bag lawsuits." Reuters.

THE COUNTDOWN: DOT appropriations run out in 51 days. The FAA reauthorization expires in 51 days. Highway and transit policy is up for renewal in 1,147 days.

Subject: Playbook Power Briefing, presented by JPMorgan Chase & Co.: George W. Bush: 'The health of the democratic spirit itself is at issue' -- TRUMP gives P.R. recovery effort a 10 -- JEFF FLAKE says he agrees with CORKER on Trump criticism

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by JPMorgan Chase & Co.

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Thursday afternoon. STRONG WORDS FROM FORMER PRESIDENT GEORGE W. BUSH in New York: "The health of the democratic spirit itself is at issue and the renewal of that spirit is the urgent task at hand. ... When we lose sight of our ideals, it is not democracy that has failed. It is the failure of those charged with preserving and protecting democracy ... Bigotry seems emboldened. Our politics seems more vulnerable to conspiracy theories and outright fabrication." ***More from Isaac Dovere*** http://politi.co/2zm2M8O ... ***Full transcript*** http://politi.co/2zBH0ia

TRUMP GETS BACKING FROM MOSCOW -- AP at 12:26 p.m.: "MOSCOW (AP) - Russia's Putin: Trump's foes don't allow him to fulfill his election promises."

CONSIDER THIS -- Pat Tiberi, a 17-year veteran of Congress who is one of the top lawmakers on the Ways and Means Committee, is resigning in the middle of a session during which the committee is rewriting the tax code! A full overhaul of the tax code is a career-long goal of most members of the Ways and Means Committee. To leave in the middle of it is basically unconscionable. ***Full statement*** http://bit.ly/2zyFHRb

-- CORRECTION: We wrote this morning that six of 24 lawmakers on Ways and Means were leaving Congress. It's actually seven. We forgot that Kristi Noem is running for governor of South Dakota. Other Republicans leaving include: Tiberi, Sam Johnson of Texas, Dave Reichert of Washington State, Lynn Jenkins of Kansas, Diane Black of Tennessee and Jim Renacci of Ohio.

SPOTTED -- EPA Administrator **SCOTT PRUITT** in first class on a Delta flight to Atlanta today.

TRUMP IN THE OVAL WITH P.R.'S GOVERNOR -- "Trump Gives Himself a 10 Out of 10 on Puerto Rico Storm Recovery," by Bloomberg's Justin Sink: "President Donald Trump Thursday said his administration's response to Hurricane Maria in Puerto Rico deserves a perfect '10' rating as he met at the White House with the U.S. territory's governor, Ricardo Rossello.

"'I think we've done a really great job,' Trump told reporters during an Oval Office meeting with Rossello, who is in Washington to press for disaster aid for the island. Rating the White House's handling of the storm on a scale of 1 to 10, Trump said, 'I give ourselves a 10,' because 'we have provided so much so fast.'

Rosello sidestepped a question from a reporter on how he would rate the administration's response. When Trump followed up by asking him, 'Did we do a great job?' Rossello answered: 'You responded immediately, sir.'" https://bloom.bg/2zAg7eL

-- @PR_Recovery: "29 days since landfall on Puerto Rico: Electricity restored: 21.60% Water restored: 71.58% Grocery stores open: 87.47%".

TRUMP also said they had the votes on the budget and "also addressed reports about Russian uranium and said this was the real Russia story while alleged collusion is a hoax," per Yahoo's Hunter Walker, today's pooler.

JEFF FLAKE POKES TRUMP -- Burgess Everett and Seung Min Kim: "If anything, Flake is determined to make his campaign against Trump-aligned candidate Kelli Ward a referendum on the future of the Republican Party. 'You can always eke out an election victory here and there,' he told POLITICO in an interview this week. 'But ... resentment is not a governing philosophy.' The GOP has 'deviated,' Flake added. 'We've taken a banner that is not familiar to us as Republicans. And I don't know how long this will last.'

"Flake chastised Trump's protectionist trade positions and his party's attempt to 'scapegoat' immigrants for the country's economic problems. And unlike other GOP senators, Flake publicly agrees with the sentiments of retiring Sen. Bob Corker (R-Tenn.), who recently blasted the president for potentially leading the country toward 'World War III' with his erratic tweets and foreign policy pronouncements.

"'How are we going to ever have agreements with our adversaries or with our allies if they think that we're not a reliable partner? And what we've seen lately will make them question whether we're a reliable partner,' Flake said. 'That's what Bob expressed. And a lot of us shared that concern.'" http://politi.co/2zAeQnO

****** **A message from JPMorgan Chase & Co.: 30 Years in the Waiting** It's been more than three decades since America reformed its tax system. As the world became more competitive, our tax code remained the same, putting America at a disadvantage when it comes to creating new jobs. Learn how tax reform can jump-start our economy: http://politi.co/2xE3I1i ******

REAL TALK ON NAFTA, from a Republican senator involved in trade, this morning at a media background briefing: "I think we've moved on a little bit beyond [the threat of withdrawing from NAFTA] ... [A]s the president has said, if we can't cut a good deal we're going to withdraw. It's a negotiating posture but I don't think there's an interest in the part of the United States to withdraw and that's good because it would be

devastating to lose those markets to other countries ... [Q: Does the administration understand the severe consequences?]

"I think they do, I think they do and I'm not sure that was true at first but I think if you haven't seen it in terms of the rhetoric, I think you see it in terms of the actions, I think they realize. ... [Q: Do you think if talks collapse, nothing happens?] "Yeah, yeah. But I think something will happen because let's face it, Canada and Mexico have some beefs too that they would like to bring up."

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 6:54 a.m.: "Republicans are going for the big Budget approval today, first step toward massive tax cuts. I think we have the votes, but who knows?" ... **at 7:17 a.m.:** "Uranium deal to Russia, with Clinton help and Obama Administration knowledge, is the biggest story that Fake Media doesn't want to follow!" ... **at 7:56 a.m.:** "Workers of firm involved with the discredited and Fake Dossier take the 5th. Who paid for it, Russia, the FBI or the Dems (or all)?" ... **at 8:21 a.m.:** ".@foxandfriends 'Russia sent millions to Clinton Foundation'". ***The president also retweeted a supporter.***

CLIP AND SAVE -- @burgessev: "Sen. Heller says he will not talk to Politico as long as @RalstonReports is a contributor".

ON THE WORLD STAGE -- "Spain to impose direct rule as Catalonia leader refuses to back down," by The Guardian's Sam Jones: "The Spanish government is to suspend Catalonia's autonomy and impose direct rule after the region's president refused to abandon the push for independence that has led to Spain's biggest political crisis for 40 years.

"The announcement of the unprecedented measure came after the Catalan president, Carles Puigdemont, threatened a unilateral declaration of independence if the Spanish government did not agree to talks on the issue. In a letter to the Spanish prime minister, Mariano Rajoy, sent on Thursday morning - the deadline set by Madrid for the region to abandon its independence plans - Puigdemont said discussions were the only way to resolve the crisis." http://bit.ly/2zBpfzU

WAR REPORT -- "Private contractor used to evacuate U.S. forces in Niger ambush," by CNN's Barbara Starr, Greg Wallace and Jamie Crawford "A U.S. private aviation contractor conducted evacuations of US and Nigerien troops after they were ambushed on October 4 in Niger, according to U.S. Africa Command spokesperson Robyn Mack. Mack said that U.S. private contractor Berry Aviation was 'on alert during the incident and conducted casualty evacuation and transport for U.S. and partner forces.' What is unclear at this time is whether the private contractor airlifted the wounded and/or the deceased." http://cnn.it/2zB2rQr

TURN OF THE SCREW ON RUSSIA -- "Trump Campaign Staffers Pushed Russian Propaganda Days Before the Election," by The Daily Beast's Betsy Woodruff, Ben Collins, Kevin Poulsen and Spencer Ackerman: "Some of the Trump campaign's most

prominent names and supporters, including Trump's campaign manager, digital director, and son, pushed tweets from professional trolls paid by the Russian government in the heat of the 2016 election campaign. The Twitter account @Ten_GOP, which called itself the 'Unofficial Twitter account of Tennessee Republicans,' was operated from the Kremlin-backed 'Russian troll farm,' or Internet Research Agency, a source familiar with the account confirmed with The Daily Beast. ...

"Two days before election day, Trump campaign manager Kellyanne Conway tweeted a post by @Ten_GOP regarding Hillary Clinton's email. ... Three weeks before the election, Brad Parscale, the Trump campaign's digital director, retweeted a separate post from @Ten_GOP. ... President Trump's son Donald Trump Jr. followed the account until its closure on Aug. 23 of this year. Trump Jr. retweeted the account three times, including an allegation of voter fraud in Florida one week before the election." http://thebea.st/2zyUWtz

RECOVERY UPDATE -- "FEMA Is Spending Billions, and Some Questionable Companies Are Getting Work," by Christopher Flavelle and Paul Murphy in Bloomberg Businessweek: "Since Harvey, FEMA has awarded $215 million to a company called Composite Analysis Group Inc. to provide bottled water. According to a federal contractor database, Composite Analysis is also called Lipsey Mountain Spring Water Inc., which got $81 million in 2005 for services that included providing bottled water to areas hit by Hurricane Katrina. Lipsey missed at least 9 of 14 deadlines, failed to document its orders properly, submitted 'improper or inaccurate documentation,' and was paid $881,000 in unsupported costs, the U.S. Department of Defense's inspector general later concluded. Composite Analysis didn't respond to a request for comment. FEMA declined to answer questions about its vetting of the company.

"On Oct. 2, FEMA awarded $1.6 million to Inner Parish Security Corp. The U.S. Department of Labor found that Inner Parish committed hundreds of federal wage and labor violations dating back to at least 2002, according to records reviewed by Bloomberg, some on FEMA contracts. Inner Parish didn't return calls seeking comment. FEMA declined to answer questions about whether it knew about the company's legal history when deciding to award or continue the latest contract." https://bloom.bg/2zyCvVT

BUSINESS BURST -- "Alphabet Unit Leads $1 Billion Investment in Lyft," by Bloomberg's Eric Newcomer: "Alphabet Inc.'s investment arm, CapitalG, led a $1 billion investment in Lyft Inc. that values it at $11 billion, the ride-sharing startup said Thursday. The funding marks a major shift in Alphabet's allegiances away from Uber Technologies Inc., and suggests a tighter pairing of its Waymo autonomous vehicle technology with Lyft's transportation network." https://bloom.bg/2zySOln

PORTRAIT OF A PRESIDENT AS A YOUNG MAN-- "Obama Letters From 1980s Are Obtained by Emory University," by NYT's Sopan Deb: "'Your call gave me a boost,' reads a letter from a young Barack Obama. It was April 14, 1984, and Mr. Obama had transferred to Columbia University in New York City as a junior three years

earlier. The letter was addressed to Alexandra McNear, his girlfriend at Occidental College in Los Angeles, where he had transferred from. 'Somehow a clutter of numbers and appointments and bills had grown over your last letter,' wrote Mr. Obama, 22 at the time. 'Hearing your voice was like discovering a passage in a book I had read a while ago.'

"This is one of a series of handwritten notes that have been obtained by Emory University's Stuart A. Rose Manuscript, Archives and Rare Book Library in Atlanta and will be available to the public for the first time. There are nine letters in total, all from Mr. Obama to Ms. McNear, and they shed some light on Mr. Obama's formative years - the unease in his own identity, his cerebral nature, sense of isolation, and even the mundane aspects of being a college student." http://nyti.ms/2xSduYI

-- CAN YOU IMAGINE having your letters to your significant other in college released to the public? Jeez.

THE MORE YOU KNOW -- ELAINA PLOTT in GQ, **"Inside the Campaign Merch Graveyard":** "So what happens with all the stuff that a company like Hammerstone can't sell? Campaign volunteers are usually gifted the T-shirts and other basic apparel: a Republican operative who worked on the Rubio campaign tells me that kind of merch is given out first to volunteers, with the rest donated to someplace like Goodwill. Similarly, Moira Muntz of the Bernie Sanders campaign says they were able to get rid of most stuff by sending it to volunteers.

"As for leftover yard signs, [Jason] Worrix [director of My Campaign Store] says he encourages campaigns to give them to the Boy Scouts and Girl Scouts -- 'they do a lot of craft projects,' he says, 'and it's easy just to slap their own posters over campaign signage.' And what of the guacamole bowl, with its 'rustic charcoal coloring' and 'iconic 3-legged design'? A Jeb campaign source--yes, this person actually requested to go on background to discuss a guacamole bowl--says, unfortunately, they 'gave them away to staff.'" http://bit.ly/2zB9kRN

MEDIAWATCH - "The Economist starts new TV ad campaign in the U.S.," by Talking Biz News' Chris Roush: "The ad, titled 'The world needs another Economist reader,' was created by Economist Films and marks the first time that this unit has created a commercial to represent The Economist publication. ... The ad will air in October and November on national cable networks and in key target markets including San Francisco and Washington. The media buy also included a national broadcast spot on the 'Late Late Show with James Corden.'" http://bit.ly/2ySVH3m ... ***The ad, which is running with an initial six figure buy*** http://bit.ly/2x7tK3e

DESSERT -- "People in Russia are renting out grounded private jets by the hour just to take Instagram photos - here's what it costs," by Business Insider's Rosie Fitzmaurice: "[N]ow even ordinary people can fake a lavish lifestyle by hiring a grounded private jet as a backdrop for their Instagram snaps - well, at least in Russia they can. Moscow-based Private Jet Studio is selling two-hour photo shoots aboard the

Gulfstream G650 private jet for 14,000 roubles ($244 or £185) with a personal photographer included, or 11,000 roubles ($191 or £145) without. If you'd prefer a video of your experience, you can pay 25,000 roubles ($434 or £330) for a two-hour spot. You can also hire a team of hair and makeup professionals to polish your look beforehand." http://read.bi/2xQV5Gx

TOP TOONS -- MATT WUERKER talks to New Yorker cover artist **BARRY BLITT** about Trump and his upcoming book "Blitt." http://politi.co/2zAnGIG ... ***$29.82 on Amazon*** http://amzn.to/2zAPgiD

BOOK ALERT -- GEORGE WILL'S next book is scheduled for early 2019 and will be published by Hachette. He says it will focus on the conservative movement and "intellectual vandalism." ***The AP story*** http://bit.ly/2zA48xz

OUT AND ABOUT IN LOS ANGELES -- The Motion Picture Association of America PAC hosted a fundraiser last night for House Majority Leader Kevin McCarthy, with special guest Rep. Bob Goodlatte (R-Va.), at the Los Angeles home of Frank Luntz. The "suggested" donation to be a host was $20,000, according to the invite. Other hosts were PACs from 21st Century Fox, Comcast-NBC Universal, Disney, Sony Pictures Entertainment, Time Warner and Viacom.

SPOTTED: Rep. Will Hurd (R-Texas), outgoing MPAA chairman and former Sen. Chris Dodd (D-Conn.), Patrick Kilcur, Bill Bailey, Troy Dow, Hollyn Schuemann, Cameron Normand, Kris Jones, Mitch Rose, Melissa Maxfield, and Sam Lancaster.

TRANSITIONS -- Conor Maguire will start at WPA Intelligence as senior client strategist. He spent the last three election cycles at the RNC, most recently as director of external support. ... **Dale Oak** has started Clark Federal Solutions, a government relations and consulting firm; he previously was senior adviser to the chairman of House Appropriations.

... **Dominic Gabello** has left as chief of staff to Rep. Michelle Lujan Grisham (D-N.M.) to join the congresswoman's gubernatorial campaign as manager. ... **Deirdre Murphy Ramsey** has been promoted to director of communications at Precision Strategies and **Erin Lindsay** has been promoted to director of digital at the firm.

WEEKEND WEDDING -- Maggie Gage, head of Washington research at Credit Suisse and adjunct professor at Georgetown, married **John Parks** , who is joining the Washington Post digital team. "The late-afternoon ceremony took place outdoors amid Vermont fall foliage at the Shelburne Museum, just south of Burlington. ... The couple met a local bistro on U Street, while watching the opening game of the 2012 NFL season (Giants v. Cowboys)." ***Pic*** http://bit.ly/2I28OJI

****** **A message from JPMorgan Chase & Co.: Investing in America** The American economy powers the world, but our tax system is holding us back. A 2017 EY report found that reforming the tax system could have brought an additional $195 billion of

foreign direct investment into the United States, an increase of 14 percent. That investment can help companies expand, explore new strategies and grow. What does that mean for America? It can help jumpstart our economy, make our country stronger in an increasingly competitive world, and can mean more jobs and higher wages for the American workers. Learn more about what tax reform can mean for our country: http://politi.co/2z6j0D8 ******

Summaries

AIR
California SIP/Photochemical Assessment Monitoring System Network
AIR

Final rule of the EPA approves a revision to the California SIP concerning the establishment of a photochemical assessment monitoring system (PAMS) network in six ozone nonattainment areas within the state. The revision specifies that the South Coast Air Quality Management District (AQMD), the Sacramento Metro AQMD, the San Diego County Air Pollution Control District (APCD), the San Joaquin Valley Unified APCD, and the Ventura County APCD have implemented required PAMS networks and each district has included a provision on meeting quality assurance requirements. Additionally, the revision provides that the air districts have included a provision to assure that PAMS monitors will meet monitoring methodology requirements. Finally, the revision specifies that the air districts have provided assurance that their respective PAMS networks will be phased in over a period of not more than five years. The rule is effective Oct. 30, 2017. Contact: Doris Lo; EPA Region 9; 415-972-3959; lo.doris@epa.gov. Citations: 40 CFR 52.220

Regulatory Update

AIR
NESHAP for Phosphoric Acid Manufacturing and Phosphate Fertilizer Production
AIR

Final rule of the EPA revises the NESHAP for the phosphoric acid manufacturing and phosphate fertilizer production source categories. The rule extends the compliance date by which affected sources must include emissions from oxidation reactors when determining compliance with the total fluoride emission limits for superphosphoric acid process lines from Aug. 19, 2016, to Aug. 19, 2018. The rule also clarifies the use of measured pressure drop and blower design capacity to monitor the liquid-to-gas ratio of low-energy absorbers and adds an option for monitoring by use of a regression model to determine the gas flow rate through an absorber. In addition, the rule extends the compliance date for the monitoring requirement for low-energy absorbers from Aug.

19, 2015, to Aug. 19, 2018, for existing sources and those for which construction or reconstruction commenced by Aug. 19, 2015. Finally, the rule restores a provision that was inadvertently omitted to allow sources a ± 20 percent variability in the minimum liquid flow rate to the absorber. The rule is issued in response to petitions for reconsideration of an Aug. 19, 2015, final rule (80 FR 50386) filed by the Fertilizer Institute and the Phosphate Corp. of Saskatchewan. The rule is effective Sept. 28, 2017. Contact: Susan Fairchild; EPA, Office of Air Quality Planning and Standards; 919-541-5167; fairchild.susan@epa.gov. Regulatory Update

AIR
New Hampshire SIP/Central N.H. SO2 Nonattainment Plan
AIR

Proposed rule of the EPA would approve a revision to the New Hampshire SIP regarding the nonattainment plan for the Central New Hampshire 2010 one-hour sulfur dioxide (SO2) primary NAAQS nonattainment area. The plan addresses the state's attainment demonstration, reasonable further progress requirement, reasonably available control measures and reasonably available control technology, base-year and projection-year emission inventories, and contingency measures. The rule also would approve SO2 emission limits and associated compliance parameters for the Merrimack Station power plant in Bow. Comments are due Oct. 30, 2017. Contact: Leiran Biton; EPA Region 1; 617-918-1267; biton.leiran@epa.gov. Citations: 40 CFR 52

Regulatory Update

AIR
Stratospheric Ozone/Refrigerant Management Requirements
AIR

Direct final rule of the EPA revises a Nov. 18, 2016, final rule (81 FR 82272) that updated refrigerant management requirements of the National Recycling and Emission Reduction Program. The revision clarifies that retailers may sell small cans that were manufactured or imported before Jan. 1, 2018, holding two pounds or less of nonexempt substitute refrigerants for use in motor vehicle air conditioning that are not equipped with self-sealing valves to persons that are not certified as technicians under Sections 608 and 609 of the Clean Air Act. The rule is effective Dec. 27, 2017, if no adverse comments are received by Oct. 30, 2017. Contact: Sara Kemme; EPA, Stratospheric Protection Division; 202-566-0511; kemme.sara@epa.gov. Citations: 40 CFR 82.154

AIR
Virginia SIP/Removal of CAIR Trading Programs
AIR

Direct final rule of the EPA approves a revision to the Virginia SIP to remove the annual nitrogen oxide (NOx), seasonal NOx, and sulfur dioxide trading programs under the Clean Air Interstate Rule (CAIR). The CAIR was discontinued in December 2014 upon implementation of the Cross-State Air Pollution Rule. The rule is effective Nov. 27, 2017, unless adverse comments are received by Oct. 30, 2017. Contact: Sara Calcinore; EPA Region 3; 215-814-2043; calcinore.sara@epa.gov. Citations: 40 CFR 52.2420

FOOD SAFETY
Food Canning Establishments/Acidified Foods and Thermally Processed Low-Acid Foods
FOOD SAFETY

Notice of the FDA announces the submission of a continuing information collection request to

the OMB regarding food canning establishment registration, process filing, and recordkeeping for acidified foods and thermally processed low-acid foods in hermetically sealed containers. The collection addresses registration requirements (FDA 2541) for firms that manufacture, process, or pack the specified foods for introduction into interstate commerce. The collection also addresses data on food processing (FDA 2541d, FDA 2541e, and FDA 2541f) and aseptic processing of low-acid foods in hermetically sealed containers (FDA 2541g). In addition, the collection addresses requirements for maintenance of processing and production records, documentation of corrective actions, development of recall plans, and container marking requirements. Comments are due Oct. 30, 2017. Contact: Ila Mizrachi; FDA, Office of Operations; 301-796-7726; PRAStaff@fda.hhs.gov. Citations: 21 CFR 108.25, 108.35, 113, 114

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Connecticut/Millstone Power Station
GENERAL ENVIRONMENT AND SAFETY

Notice of the NRC announces the availability of an environmental assessment and finding of no significant impact regarding a request to exempt the Millstone Power Station, Unit No. 2, in Waterford, Conn., from fire protection program requirements for nuclear power facilities operating prior to Jan. 1, 1979. The exemption would allow Dominion Nuclear Connecticut Inc., of Waterford, to use operator manual actions 1, 9, 10, and 11 to achieve hot shutdown conditions for affected initiating fire areas with consideration of a loss of instrument air. GENERAL ENVIRONMENT AND SAFETY
Medical Devices Advisory Committee/Industry Representative Nominations
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a request for industry organizations interested in participating in the selection of nonvoting industry representatives to serve on the Medical Devices Advisory Committee in the Center for Devices and Radiological Health. The notice also requests nominations for nonvoting industry representatives to serve on specified device panels. The committee reviews and evaluates data on the safety and effectiveness of marketed and investigational devices and makes recommendations for their regulation. Statements of interest and nominations are due Oct. 27, 2017. Contact: Margaret Ames; FDA, Center for Devices and Radiological Health; 301-796-5960; margaret.ames@fda.hhs.gov

82 FR 45298 (09/28/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Nevada/Mesquite Replacement General Aviation Airport

GENERAL ENVIRONMENT AND SAFETY

Notice of the Federal Aviation Administration announces the cancellation of preparation of revisions to a draft environmental impact statement for the construction of a replacement general aviation airport in Mesquite, Nev. (73 FR 28461; 05/16/2008). The city of Mesquite, the owner and operator of the existing Mesquite Municipal Airport, has not included a replacement airport in its five-year airport capital improvement program. In addition, the federal land for the replacement airport is no longer available, therefore the FAA has determined that the need for the proposed replacement no longer exists. Contact: David Kessler; FAA, Airports Division; 310-725-3615

GENERAL ENVIRONMENT AND SAFETY
South Carolina/Lower Pelzer Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a hydroelectric application for the Lower Pelzer Hydroelectric Project located on the Saluda River in Anderson and Greenville counties in South Carolina. The applicants, Pelzer Hydro Co. and Consolidated Hydro Southeast LLC, both of Piedmont S.C., request a new license to continue operation of the project, develop canoe portage

facilities, and remove a 3,300-volt overhead transmission line that is no longer in use. The existing project includes a granite masonry dam, spillway, an impoundment, a powerhouse with generating units totaling 3,300 kilowatts, a tailrace, and transmission lines. Comments, motions to intervene, and protests are due Nov. 20, 2017. Contact: Navreet Deo; FERC; 202-502-6304; navreet.deo@ferc.gov

HAZARDOUS MATERIALS TRANSPORTATION
FHWA, FRA, FTA/Program for Eliminating Duplication of Environmental Reviews
HAZARDOUS MATERIALS TRANSPORTATION

Proposed rule of the Federal Highway Administration, Federal Railroad Administration, and Federal Transit Administration would implement requirements under Section 1309 of the Fixing America's Surface Transportation (FAST) Act to establish a pilot program for eliminating duplication of environmental reviews. The pilot program allows up to five states to conduct environmental reviews and make approvals for projects under state environmental laws and regulations instead of the National Environmental Policy Act. The rule would address application requirements and criteria to determine whether state laws and regulations are at least as stringent as applicable federal laws. It also would update the corrective action period that the agencies must provide to a state participating in the Surface Transportation Project Delivery Program. Comments are due Nov. 27, 2017. Contact: James Gavin; FHWA, Office of Project Development and Environmental Review; 202-366-1473. Hazardous Materials Regulations
HAZARDOUS MATERIALS TRANSPORTATION

Notice of PHMSA announces the submission of 11 continuing information collection requests to the OMB regarding the hazardous materials regulations. The collections address hazardous materials security plans; procedures for requesting changes, exceptions, and other determinations; and requirements for the design, construction, maintenance, and use of United Nations cylinders. The collections also address preparation of written oil spill response plans; manufacture, qualification, maintenance, and use of specification cargo tank motor vehicles; and certification of freight containers or transport vehicles for explosive shipments. In addition, the collections address testing requirements for nonbulk packagings; testing, inspection, and marking requirements for reusable cylinders; and documentation requirements for drivers of motor vehicles transporting flammable cryogenic liquids. In addition, the collections address approval of applicants for designated approval agencies and of containers and special loading requirements for vessels for hazardous materials. Finally, the collections address transportation of hazardous materials by rail and the manufacture, qualification, maintenance, and use of tank cars. Comments are due Oct. 30, 2017. OCCUPATIONAL SAFETY AND HEALTH
Hawaii State Plan
OCCUPATIONAL SAFETY AND HEALTH

Notice of OSHA announces a new Hawaii state plan operational status agreement with the Hawaii Occupational Safety and Health Division signed April 13, 2017. The agreement, which replaces a 2012 agreement, clarifies that OSHA retains coverage over all federal employees, contractors, and subcontractors at state national parks and any federal establishment on land under exclusive federal jurisdiction. OSHA also retains coverage over private-sector maritime activities; private-sector employees within the secured borders of military installations where access is controlled; the U.S. Postal Service, its contract workers, and contractor-operated facilities; and federal whistleblower provisions. The state plan retains coverage over all state and local government employers and regains coverage over all private-sector employers not covered by OSHA, including marine construction not performed on vessels or other floating facilities. The agreement is effective Sept. 28, 2017. Contact: Douglas Kalinowski; OSHA, Directorate of

Cooperative and State Programs; 202-693-2200; kalinowski.doug@dol.gov

Powered Industrial Trucks Standard
OCCUPATIONAL SAFETY AND HEALTH

Notice announces the intention of OSHA to seek OMB approval for a continuing information collection request regarding the powered industrial trucks standard. The collection addresses requirements regarding truck design, construction, labeling, and modification and certification and training for truck operators. The collection ensures the safe operation of powered industrial trucks and the prevention of hazards such as fires and explosions by faulty electrical systems, rollovers/tipovers that result from exceeding a truck's stability characteristics, and falling loads that occur when loads exceed the lifting capacities of attachments. Comments are due Nov. 27, 2017. Contact: Theda Kenney; OSHA, Directorate of Standards and Guidance; 202-693-2222. Citations: 29 CFR 1910.178

OCCUPATIONAL SAFETY AND HEALTH
Standard on Steel Erection
OCCUPATIONAL SAFETY AND HEALTH

Notice announces the intention of OSHA to seek OMB approval for a continuing information collection request regarding the standard on steel erection. The collection concerns requirements for controlling contractors to provide steel erectors with written notice of concrete strength and of any repairs, replacements, or modifications to anchor bolts. The collection also concerns requirements for employers regarding safety latches and hooks; certification of maximum capacity of multiple-lift rigging assembly; installation, anchoring, and use of steel joists and bridging; and fall protection systems. In addition, the collection addresses employer development of site-specific erection plans that include alternate means and methods to provide employee protection. Comments are due Nov. 27, 2017. Contact: Theda Kenney; OSHA, Directorate of Standards and Guidance; 202-693-2222; kenney.theda@dol.gov. Citations: 29 CFR 1926, Subpart R

TOXIC SUBSTANCES
Products Containing Organohalogen Flame Retardants
TOXIC SUBSTANCES

Notice of the Consumer Product Safety Commission announces the availability of a guidance document concerning certain consumer products that may contain organohalogen flame retardants (OFRs) in nonpolymeric additive form. The document is issued in response to the

commission's vote to grant a petition (80 FR 50238; 08/09/2015) to initiate rulemaking and direct commission staff to convene a Chronic Hazard Advisory Panel to study the effects of OFRs on consumers' health. The commission recommends that manufacturers of children's products, upholstered furniture sold for use in residences, mattresses and mattress pads, and plastic casings surrounding electronics refrain from intentionally adding OFRs to such products. The commission also recommends that consumers, importers, distributors, and retailers obtain assurances from manufacturers that such products do not contain OFRs. Subject: POLITICO's Morning Score: Moore, Strange head to Alabama runoff — Jones wins Democratic primary — Curtis wins GOP primary to replace Chaffetz — Court strikes down Texas districts

By Kevin Robillard | 08/16/2017 10:00 AM EDT

With Elena Schneider and Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

STRANGER THINGS - "Moore, Strange advance to GOP runoff in Alabama special election," by Campaign Pro's Daniel Strauss: "Former Alabama Supreme Court Justice Roy Moore and Sen. Luther Strange advanced to a Republican primary runoff in Alabama's special Senate race, which will put President Donald Trump and Senate Majority Leader Mitch McConnell's political clout on the line in September. Moore had 40 percent of the vote and Strange - who was backed by Trump and McConnell - had 32 percent after The Associated Press called the race. Rep. Mo Brooks trailed at 20 percent. Alabama election laws call for the top two primary finishers to compete in a runoff if no candidate gets a majority. Despite the weighty endorsements, Strange has been locked in fierce competition with the other Republican hopefuls this summer. He leaned hard into Trump's endorsement to try to make a show of strength in the first round and close in on Moore. '[President Trump] knows that I am the person in this race that's going to make this country great again,' Strange told cheering supporters Tuesday night. But Strange, who was appointed to the seat earlier this year when Attorney General Jeff Sessions left the Senate to join Trump's Cabinet, still ran behind Moore - and well behind the majority marker - in the first round. 'This is a great victory,' Moore told attendees at his election night party. 'The attempt by the silk stocking Washington elitists to control the vote of the people of Alabama has failed.'"

- "Whoever wins the Republican primary will be heavily favored in conservative Alabama, but Democrats have been hoping to make a stronger-than-expected showing in the special election. Former U.S. Attorney Doug Jones won the Democratic nomination outright Tuesday night, avoiding a runoff, after garnering big-name endorsements from former Vice President Joe Biden and Reps. John Lewis, Cedric Richmond and Terri Sewell. Democratic Senatorial Campaign Committee chairman Chris Van Hollen recently donated to Jones, who as a federal prosecutor won convictions against perpetrators of the 16th Street Baptist Church bombing, decades after the civil rights movement-era attack." **Full story.**

- From the stat book: To be fair to Strange, he has had little time to consolidate support since his appointment to the Senate. But his showing (approximately one-third of the vote) is the lowest primary vote share won by any U.S. senator since at least 2000. The next-lowest share in that time? Then-Sen. Richard Lugar took 39.5 percent of the vote in his 2012 primary against Richard Mourdock.

IN THE HOUSE - "Curtis wins UT-03 GOP primary," by Campaign Pro's Elena Schneider: "Provo Mayor John Curtis won Utah's GOP special election primary Tuesday, clearing the path for an establishment favorite to replace retiring Republican Rep. Jason Chaffetz in a rare race where President Donald Trump didn't factor. Curtis had 41 percent of the vote when The Associated Press called the race. Former state Rep. Chris Herrod, backed by the Club for Growth, got 38 percent, while first-time candidate and businessman Tanner Ainge received 28 percent with more than three-quarters of precincts reporting. Curtis, who led in public polling throughout the primary, weathered a barrage of negative TV ads in the closing weeks of the campaign. But Curtis picked up an early nod from Gov. Gary Herbert, who recorded a radio ad for the two-term mayor. Outside groups dropped nearly $1 million on the race, some of which was spent on casting Curtis as not conservative enough and for 'back[ing] taxes and fees 46 times,' along with a '$12 million sales tax,' according to a TV ad backed by the Club for Growth. Curtis's opponents also hammered him for being a registered Democrat nearly 20 years ago." **Full story.**

REDISTRICTING WATCH - "Two Texas districts struck down by federal court," by Campaign Pro's Scott Bland: "A U.S. district court ruled today that two Texas congressional districts - the 27th District, represented by Republican Blake Farenthold, and the 35th District, represented by Democrat Lloyd Doggett - would have to be redrawn due to unconstitutional racial gerrymandering. The court ruled that Texas' congressional map still had the 'taint' of 'racially discriminatory intent' from redistricting in 2011, which carried over into an interim plan suggested by a court in 2013. But the district court also ruled that there was no evidence of intentional discrimination in Texas' 23rd District, held by GOP Rep. Will Hurd and for years the state's only true battleground district. The court also declined to order the drawing of new minority-opportunity districts in the Dallas-Fort Worth and Houston metro areas. However, a redraw of the map to address the two districts struck down by the court could still affect the 23rd District (and others). Doggett's heavily Democratic district snakes from Austin to San Antonio, and shifts in population could affect the parts of the 23rd District that reach into San Antonio's suburbs." **Full story. Decision**.

- Texas Attorney General Ken Paxton, in a statement: "We appreciate that the panel ruled in favor of Texas on many issues in the case. But the portion of the ruling that went against Texas is puzzling considering the Legislature adopted the congressional map the same court itself adopted in 2012, and the Obama-era Department of Justice did not bring any claims against the map. We look forward to asking the Supreme Court to decide whether Texas had discriminatory intent when relying on the district court."

Days until the 2017 election: 83.

Days until the 2018 election: 447.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

PRIMARY POLITICS - Vukmir earns backing of Hendricks in Wisconsin Senate primary: Wisconsin State Sen. Leah Vukmir, who hasn't officially entered the GOP primary to challenge Democratic Sen. Tammy Baldwin, will have the backing of Beloit billionaire Diane Hendricks if she decides to run, the Milwaukee Journal-Sentinel reported on Tuesday. Hendricks, who has donated generously to Wisconsin Republicans, could serve as a counterweight to some of GOP primary entrant Kevin Nicholson's big-dollar supporters, including megadonor Richard Uihlein and the Club for Growth.

- Missouri Treasurer Eric Schmitt passes on Senate bid, clearing way for Attorney General Josh Hawley. Schmitt, as a fellow statewide elected official, would have been a major challenge for Hawley in the primary against Democratic Sen. Claire McCaskill. But he's clearing out for Hawley, he said in a statement. "I believe it is time for all of us to unite behind one candidate to be the Republican nominee for U.S. Senate, which is why I am supporting Attorney General Josh Hawley," Schmitt said. Republicans fear a replay of the 2012 GOP primary, where Rep. Todd Akin was able to win in a crowded field.

- SPEAKING OF HAWLEY - "Attorney general voted in Boone County in Aug. 8 special election," by the Springfield News-Tribune's Bob Watson: "Missouri Attorney General Josh Hawley voted in last week's special election, the Boone County Clerk's office told the News Tribune this weekend. Hawley's action appears to violate a state law, which says: "The attorney general shall reside at the seat of government and keep his office in the supreme court building." The Missouri Constitution defines the seat of government as Jefferson City. ... In February, Hawley said he and his legal team were convinced he was not breaking any laws by remaining in his Boone County home, which 'is 17 minutes away' from his office." **Full story.**

- "Bernie Sanders supporter jumps in to unseat Democrat in one of nation's hottest House races," by the Sacramento Bee's Angela Hart: "Brad Westmoreland, a Democrat and political newcomer, said he wants to shake up 'politics as usual.' He criticized [Ami] Bera for his stance on health care and for accepting campaign contributions from insurance companies. ... Andrew Grant, a Republican and Marine Corps veteran, is also running to unseat Bera." **Full story.**

CHARLOTTESVILLE FALLOUT, MARYLAND GOVERNOR EDITION - "Hogan calls for Taney statue at Maryland State House to be removed," by the Baltimore Sun's Pamela Wood: "The statue of Chief Justice Roger Brooke Taney, a Calvert County native and author of the infamous Dred Scott decision, has stood on the front lawn of the State House in Annapolis since 1872, withstanding multiple efforts to remove it. Hogan's announcement probably ensures that the bronze likeness of Taney will be removed from its prominent perch in the state capital. Hogan acknowledged the statue may send an inappropriate message in a country that continues to struggle over civil rights and equality. ... Hogan previously supported keeping Taney in his spot at the State House, and in 2015 called removing monuments to the Confederacy 'political correctness run amok.'" **Full story.**

- "Ben Jealous arrested in demonstration near White House; Baker speaks out on Trump,"

by the Baltimore Sun's Carrie Wells: "Maryland Democratic gubernatorial candidate Ben Jealous was arrested Tuesday in Washington during an immigrants' rights demonstration, his campaign said. ... Later, Prince George's County Executive Rushern Baker, another Democratic candidate for governor, called on President Donald J. Trump to resign from office. Baker released a statement Tuesday evening saying Trump 'is unfit to serve the people of our country and should resign, effective immediately.'" **Full story.**

PAGING PELOSI - Yesterday, we told you about Paul Davis' campaign launch in KS-02. But there's more: "Kansas Democrat Paul Davis announces congressional bid, says he won't vote for Pelosi," by the Kansas City Star's Hunter Woodall: "The man who many thought would make another run for Kansas governor is officially running for Congress instead. Democrat Paul Davis announced his entrance into the race for the 2nd District congressional seat Tuesday morning. If elected, he said, he does not plan to vote for Rep. Nancy Pelosi , the current House Democratic leader and former speaker of the U.S. House when Democrats last held the majority. 'This is a broken Congress right now, and I think the leaders of both political parties bear responsibility for that,' Davis said. 'And I think that we need new leadership in both political parties.'" **Full story.**

HOLLYWOOD TOUCH - Democrat Boyd Melson, a retired boxer and West Point graduate, announced he was running for Congress in New York's 11th district with a splashy new ad. The district is currently represented by Republican Dan Donovan, who won his election in 2016 by over 25 points. The ad comes from Hilltop Public Solutions, the same firm that produced the viral ad for Randy Bryce, the Democratic iron worker challenging Speaker Paul Ryan. **The ad** .

CORDRAY WATCH - "GOP Governors Step Up Effort to Discredit Cordray" by Morning Consult's Ryan Rainey: "Republican governors on Tuesday stepped up their efforts to discredit Consumer Financial Protection Bureau Director Richard Cordray as he approaches the end of his term and possibly considers a bid to run for governor of Ohio. On Tuesday, the Republican Governors Association filed a Freedom of Information request with the CFPB requesting documents on whether Cordray, a Democrat, used federal resources to coordinate with Democratic officials in his home state. The organization requested Cordray's phone logs and schedule since June 1, along with emails sent from bureau email addresses that reference the gubernatorial race. ... A CFPB spokesman did not immediately return a request for comment. In a statement provided to Morning Consult on Tuesday, Ohio Democratic Party Communications Director Kirstin Alvanitakis dismissed the RGA efforts. 'The Republican Governors Association is clearly running scared of losing the Buckeye State because they keep launching baseless attacks at Ohio Democrats,' Alvanitakis said." **Full story**.

ADMINISTRATION SPEED READ - "Trump Defends Initial Remarks on Charlottesville; Again Blames 'Both Sides,'" by the New York Times' Michael D. Shear and Maggie Haberman: "In a combative exchange with reporters at Trump Tower in Manhattan, the president repeatedly rejected bipartisan criticism for waiting two days before naming the right-wing groups and for placing blame on both the right and the left for the bloodshed on Saturday that ended with the death of a young woman after a car crashed into a crowd. ... Again and again, Mr. Trump said that not all of the protesters defending the Lee statue were neo-Nazis or white supremacists, and he said it was unfair to suggest that they were." **Full story.**

CODA - QUOTE OF THE DAY: "They didn't put themselves down as neo-Nazis, and you had some very bad people in that group. But you also had people that were very fine people on both sides. You had people in that group - excuse me, excuse me. I saw the same pictures as you did. You had people in that group that were there to protest the taking down, of to them, a very, very important statue and the renaming of a park from Robert E. Lee to another name." - President Donald Trump on Charlottesville protesters, according to a POLITICO transcript of Tuesday's press conference.

Subject: POLITICO's Morning Transportation: Adios Bannon — Final lap for new self-driving car guidance — Regulators: Mind the eclipse

By Stephanie Beasley and Brianna Gurciullo | 08/21/2017 10:02 AM EDT

BANNON OUT, INFRASTRUCTURE ... ?: Steve Bannon is exiting the White House, leaving some to wonder if he'll take with him his big-spending dream for infrastructure. Here's a refresher of just what Bannon told Hollywood Reporter last year: "I'm the guy pushing a trillion-dollar infrastructure plan. With negative interest rates throughout the world, it's the greatest opportunity to rebuild everything. Shipyards, ironworks, get them all jacked up. We're just going to throw it up against the wall and see if it sticks."

"To be sure": The reality is even having Bannon as a White House insider, the administration still has yet to produce more than a six-page outline of principles meant to inform its infrastructure package. More is promised in fall.

FINAL LAP FOR NEW SELF-DRIVING CAR GUIDANCE: NHTSA's updated guidance on self-driving cars is nearing public release, with the agency recently turning over the voluntary recommendations to the Office of Management and Budget for interagency review. Transportation Secretary Elaine Chao has said that the reworked guidelines would be coming as soon as September, a year after President Barack Obama's DOT rolled out the federal government's first-ever guidance on the technology. While under interagency review, those who could be affected by the guidance will be able to weigh in before NHTSA officially publishes them, Pro Technology's Steven Overly reports.

Meanwhile, on Capitol Hill ... A bill (H.R. 3388 (115)) dealing with self-driving vehicles won committee approval in the House last month, and a Senate bill is expected to be unveiled in the fall.

HAPPY MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Be sure to send tips, feedback, lyrics and your "Game of Thrones" reactions to sbeasley@politico.com or @Steph_Beasley.

"Drivin' faster in my car / Falling farther from just what we are / Smoke a cigarette and lie some more / These conversations kill / Falling faster in my car."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

TWEET DU JOUR: "The @USDOTFHWA predicts that on Monday, #Eclipse2017 could be one of the largest driver distractions in years. Please #JustDrive." - @NHTSA.gov

THIS IS IT! State transportation officials have spent months preparing for the ginormous traffic jams that could result from folks rubbernecking today's solar eclipse. Will all their planning pay

off? With an estimated 200 million people within a day's drive of the path of the eclipse, state highway officials from 14 states say they are ready for "what could be the largest traffic jam in U.S. history," The Washington Post's Terena Bell reports.

Be prepared: State officials have been keeping in touch with each other and also with FHWA, which has asked the states to suspend all road construction today. Honoring that request might be easier for some than others. Missouri, for example, will need to allow wide-load trucks on the road to help move rollercoasters and other rides from its state fair, which ended Sunday.

Turn around bright eyes: The American Trucking Associations also has a few words of advice for truck drivers planning to watch the solar eclipse while moving "the nation's goods" - mainly that they find a safe place to view it. "Since the last time we saw a solar eclipse from U.S. soil, the amount of cars on our roads has multiplied by 50 times, the demand for goods has grown, and highway users are more distracted than ever with new technology," said ATA Chairman Kevin Burch, president of Jet Express Inc. "It is important that we all work together and practice safety during moments like this and remember that even the smallest unsafe decision can ruin what could be a treasured memory."

UNVEILING BARCELONA'S JIHADIST TIES: Last week's deadly van-ramming incidents in Spain were not surprising to many security experts who have been tracking the growing influence of Salafism, a radical form of Islam, in the Catalonia region where the attacks occurred. POLITICO Europe's Giulia Paravicini reports that Catalonia, home to more than a quarter of the country's Muslim population, has been Spain's main hub for jihadist recruitment for the past decade. And Rita Katz of the SITE Intelligence Group said a pro-ISIS Twitter account had promised an "imminent attack" on Spain two weeks ago.

FAA DONS THE WHITE HAT AT SFO: The FAA is changing the landing rules at San Francisco International Airport after an Canada Airbus mistook a runway for a taxiway and nearly collided with planes queued up for departure, according to a report from The Mercury News. The FAA is longer allowing visual approaches to SFO at night with an adjacent parallel runway closed and will instead have controllers give pilots instrument or satellite-based approaches, FAA spokesman Ian Gregor told The Mercury News. The agency also plans to begin testing modified radar systems in the coming months.

TELL ME MORE, TELL ME MORE: Canadian auto workers are more open to the idea of tougher NAFTA rules of origin on automobile parts than their trade representatives or U.S. automakers, Pro Trade's Adam Behsudi and Megan Cassella write. U.S. Trade Representative Robert Lighthizer wants to renegotiate the rules in a way that would make it more difficult for U.S. and foreign automakers to shift production to Mexico, a proposal that drew ire from his Canadian and Mexican counterparts during talks last week.

But Canadian labor unions are all ears: "I can see putting a wall around Canada and the United States and then the two of us figuring out exactly what we are going to do with Mexico that we can both live with," said Jerry Dias, the president of Unifor, Canada's largest industrial labor union.

SPEED IT UP: The first day of NAFTA rounds concluded Sunday with the United States, Canada and Mexico agreeing that they want to wrap up negotiating ASAP, Doug Palmer writes.

LIGHT AT THE END OF THE 'SUMMER OF HELL' TUNNEL: Repairs to Penn Station in New York City should wrap up by Labor Day, according to Amtrak. "From a timing perspective, I'd say there's absolutely no reason we would not be at full service by Tuesday morning, Sept. 5," Amtrak COO Scot Naparstek told reporters on a call Friday. Ryan Hutchins has more for POLITICO New York Pro.

SLIGHTLY DETAILED: Let's just say House Transportation Committee member Todd Rokita likes things a certain way when he's traveling throughout his Indiana district. Drivers for the Republican lawmaker are supposed to adhere to an eight-page instruction manual, POLITICO's John Bresnahan and Rachael Bade report. Would you remember to follow all these steps?

MORE FROM NTSB ON EL FARO: NTSB on Friday added a human performance factual report and wreckage trajectory study to the docket for its ongoing investigation into the El Faro accident. A week earlier, the agency posted an updated transcript from the audio recording retrieved from the cargo ship, which sank during Hurricane Joaquin in 2015. NTSB has said it will add two more factual reports for nautical operations and naval architecture in the coming weeks.

WOULD YOU CUT IT OUT?!: TSA agents continue to add to their bounty of weaponry. In its latest "Week in Review" blog post , TSA said it discovered 77 firearms in carry-on bags during the week of Aug. 7 to 13. Of the 77 firearms, 65 were loaded and 12 had "a round chambered." TSA said its officers also retrieved an inert grenade from a passenger's bag in Austin, Texas. Other items that TSA officers find regularly include realistic replica firearms, BB and pellet guns, airsoft guns, brass knuckles, batons, stun guns "and many other prohibited items too numerous to note," TSA wrote. The agency hit a record earlier this month when it discovered 96 firearms in one week.

#OWNED: After two European airlines Etihad Airways owned a stake went bankrupt this year, some experts are laying part of the blame on European Union airline ownership rules, POLITICO Europe's Cathy Buyck reports . Etihad wasn't able to own a majority stake in Air Berlin or Alitalia because of nationality rules. Efforts to change ownership regulations are heating up with Brexit on the horizon. For example, Ryanair, which is based in Ireland, has a host of U.K. shareholders. After Brexit, those shareholders won't be EU citizens anymore, and Ryanair may need to sell their shares so it doesn't lose its EU ownership status.

LUNCH READ: The Washington Post's Lori Aratani chronicles the lifelong friendship between former Transportation Secretary Norman Mineta and former Wyoming Senator Alan. K. Simpson, who met when Mineta and his family were detained at the Heart Mountain Japanese internment camp in Wyoming during WWII. The two Boy Scouts "forged a bond" when they first met in 1942. That friendship endured during their tenures as members of Congress despite political differences. Simpson is a Republican. Mineta is a Democrat.

THE AUTOBAHN:

- "Wal-Mart applies for patent for blimp-style floating warehouse." Bloomberg.

- "From anti-Reagan art to Milo Yiannopoulos: 35 years of controversial ads on Metro." The Washington Post.

- "Colorado Debuts Driverless Truck To Protect Road Crews." The Associated Press.

- "Some gas with that sandwich? Convenience dominates fuel market." Bloomberg.

- Researchers say they've discovered the wreck of the USS Indianapolis. POLITICO.

THE COUNTDOWN: DOT appropriations run out in 40 days. The FAA reauthorization expires in 40 days. Highway and transit policy is up for renewal in 1,136 days.

From: Hadas Gold - POLITICO Media
Sent: Wed 8/2/2017 9:48:09 AM
Subject: Morning Media: WSJ's Trump interview transcript -- New Fox News lawsuit -- Shine, Lapan floated for W.H. communications team

By Hadas Gold | 08/02/2017 05:46 AM EDT

With Alex Weprin and Cristiano Lima

POLITICO OBTAINS FULL WSJ INTERVIEW TRANSCRIPT WITH PRESIDENT TRUMP: For a few days I had been chasing down a tip that the full transcript of the interview between The Wall Street Journal and President Donald Trump from last week was a doozy. The Journal had posted selected excerpts of the interview, but finally yesterday, thanks to the help of my colleague Josh Dawsey, we got our hands on the full thing. My tipsters were right.

-- The transcript is notable not only for all of Trump's comments, which I'll leave to others to describe, but also for how heavily involved Wall Street Journal editor-in-chief Gerard Baker was in the interview. It's uncommon that the editor of a newspaper would sit in on an interview with the president, let alone be the lead questioner, especially when the paper has a robust White House team. In fact, editors outnumbered reporters in the interview. Baker, Deputy Editor-in-Chief Matt Murray and Washington Bureau Chief Paul Beckett joined reporters Michael Bender and Peter Nicholas.

-- Baker also displays how familiar he is with Trump and his family, telling Ivanka Trump how nice it was to see her at a party thrown last month thrown by Washington Post heiress Lally Weymouth, now the Post's senior associate editor. That party was attended by many politicos, business titans and media elites.

-- Both the president and his daughter praised Baker for a Wall Street Journal editorial published the day before, which commended Trump's son-in-law and senior advisor Jared Kushner for setting "a disclosure example on Russia" in an 11-page statement released before meeting with Senate and House intelligence committees, describing his contacts with Russian figures during the campaign and after the election. Baker tried to wave them off, thanking them but saying it was colleagues on the editorial team (which is completely separate from the news side) that wrote the piece, but he was cut off by more praise.

-- The Journal's statement: "We are proud of the on-the-record interview we conducted with President Trump, which produced multiple, newsworthy articles. We published the noteworthy excerpts from the interview. We saw no reason to publish the cross talk that inevitably accompanies any conversation. In keeping with our long standing tradition of total separation between News and Opinion, opinion pieces are the sole responsibility of Paul Gigot [Editor of the Editorial page] and his time team."

-- Deputy editor-in-chief Matt Murray warned staffers in a conference call against leaking the transcript, saying it would be a breach of trust. "Damn right I told them that. It's true," Murray said via a journal spokesperson.

Read our full piece here.

NEW LAWSUIT ALLEGES WHITE HOUSE WAS BRIEFED ON RETRACTED FOX NEWS SETH RICH ARTICLE by Cristiano Lima: A former Fox News contributor is alleging in a lawsuit the network purposely misquoted him to claim former DNC staffer Seth Rich was connected to WikiLeaks posting hacked DNC emails, a conspiracy that has been rampant in right-wing media for months. In the lawsuit Rod Wheeler alleges a wealthy Trump supporter Ed Butowsky and Fox did so "to discredit reports that the Russians had hacked the DNC in order to help Donald Trump win the presidential election." Butowsky also claimed the President was aware and supportive of the effort. The White House denied that was the case, though former White House Press Secretary Sean Spicer did acknowledge that he took a meeting with Butowsky and Wheeler where they outlined the Fox News story. Fox News' head of news Jay Wallace fiercely denied the claims Tuesday, calling the accusations "completely erroneous." It's a long and complicated story. Read more, including the full text of the lawsuit, here.

-- Wheeler's lawyer, Douglas Wigdor, who has represented other cases brought against Fox, told Yahoo News they will seek to depose President Trump and Spicer to question them over their roles in the affair.

BILL SHINE IS UNDER CONSIDERATION FOR A WHITE HOUSE ROLE, The New York Times reports. Last week the former Fox News executive dined at the White House with the president, first lady, now-former Communications Director Anthony Scaramucci and Fox News hosts Sean Hannity and Kimberly Guilfoyle. I floated in the newsletter last week that Shine would be an obvious choice to come in and help the White House, especially if they wanted to, as Scaramucci had suggested, produce a daily broadcast from the grounds. Now the Times reports that the administration has spoken to Shine about a "behind-the-scenes role for Mr. Shine that took advantage of his skills producing and staging televised events." It's not clear where that stands now that Scaramucci, who was close to Shine, is out.

-- Fox & Friends hosts Brian Kilmeade and Ainsley Earhardt were also at that dinner with the president, first lady, Scaramucci, Shine, Hannity and Guilfoyle last week, HuffPost reports in a well-reported piece about Scaramucci's last days in the White House. The piece also revealed that Scaramucci and Ryan Lizza's fathers know each other from way back when.

WHITE HOUSE CONSIDERING DHS SPOKESPERSON DAVID LAPAN FOR COMMUNICATIONS DIRECTOR: Per CNN, new White House Chief of Staff John Kelly is eyeing Lapan, who has worked with Kelly for more than ten years and went with him to the Department of Homeland Security, for communications director. I asked Lapan about possibly joining the administration in my interview with him on Monday but he said he's had no conversations about it with Kelly. Lapan said the same to CNN. More here.

SPORTS ILLUSTRATED PROFILES TRUMP THROUGH GOLF: I love when non-political reporters write stories like these. Using their expertise and sources on their beat - in this case, golf - they gain insight and scoops the typical Washington reporters just don't have. In this case, reporter Alan Shipnuck reported that Trump has called the White House "a dump," is a pretty good golfer and that that Japanese Prime Minister Shinzo Abe gave Trump a fancy golf club. He also writes about how he's perceived by the Bedminster community, who he's golfed with, and that "a Wall Street banker and member of a Trump club with knowledge of the financing of the $63 million Turnberry purchase expects the deal to be a subject of interest to special prosecutor Robert Mueller, given the foreign lenders he says were involved." Read the full thing here.

NEW YORK TIMES BUYOUTS WILL COST $25 MILLION, by Alex Weprin: The latest round of buyouts and layoffs at The New York Times will cost the company $25 million, according to a Times filing with the SEC on Tuesday. The Times said that in the second quarter of this year, it spent $19.3 million on restructuring costs associated with the buyouts and layoffs, and expects to incur another $6 million in costs in the third quarter. You can read the whole filing, if you so choose, here.

LEGENDARY NEWSMAN MARK SILVA PASSED AWAY YESTERDAY. Silva, a "longtime Tallahassee bureau chief for the Miami Herald who went on to cover the White House for the Chicago Tribune, died early Tuesday at his home in Arlington, Va.. He was 63 and recently diagnosed with a brain tumor," according the Tampa Bay Times. WHCA President and Bloomberg White House correspondent Margaret Talev wrote "From his time at the Miami Herald and Knight Rider to the Chicago Trib, Bloomberg and most recently US News, Mark was a great journalist, role model, adviser and friend - to me for the past 20 years and to some of you for even longer."

REVOLVING DOOR:

Driving the Day

Good Sunday morning. WHAT EVERYONE IS TALKING ABOUT -- TRUMP'S SUNDAY MORNING THOUGHTS -- @realDonaldTrump at 6:44 a.m.: "If NFL fans refuse to go to games until players stop disrespecting our Flag & Country, you will see change take place fast. Fire or suspend!" ... **at 7:13 a.m.:** "...NFL attendance and ratings are WAY DOWN. Boring games yes, but many stay away because they love our country. League should back U.S."

-- **@RyanLizza**: "Goes to sleep threatening nuclear war. Wakes up suggesting boycott of NFL."

-- THE FIRST NFL GAME TODAY: "Jaguars and Ravens players kneel during national anthem, Baltimore owner supportive of demonstration," by N.Y. Daily News' Zachary Ripple: "Jaguars owner Shad Khan, the only minority owner in the NFL, also made a definitive statement, locking arms with his players during the anthem. Khan is one of several league owners to have contributed $1 million to Trump's inaugural committee. Ravens coach John Harbaugh was also on the sidelines locking arms with his players during the national anthem. ... Following the performance of the U.S. anthem, every player responded by standing during the performance of 'God Save the Queen.'" http://nydn.us/2fqus8p

-- @BenSasse: "NFL players: You have the right to protest Trump tmrw. But aren't there better ways than kneeling before the flag soldiers died to defend?" ... **@Patriots:** "Statement from #Patriots Chairman & CEO Robert Kraft" -- the first sentence: "I am deeply disappointed by the tone of the comments made by the President on Friday." http://bit.ly/2fpP8xn

N.Y. POST COVER -- "Trump trades blows with NBA, NFL ... JOCK SCRAP" http://nyp.st/2wey0O2

SUNDAY BEST -- MARTHA RADDATZ talks with **STEVEN MNUCHIN** on **ABC'S "THIS WEEK" -- RADDATZ:** "With all the urgent issues -- Korea, healthcare, why is the president etch talking about NFL players and disinviting NBA players to the White House?" **MNUCHIN** : "You know, the NFL has all different types of rules -- you can't have stickers on your helmet. You have to have your jerseys tucked in. I think what the president is saying is that the owners should have a rule that players should have to stand in respect for the national anthem. This isn't about Democrats, it's not about Republicans, it's not about race, it's not about free speech. They can do free speech on their own time, that this is about respect for the military and the first responders and the country."

RADDATZ: "The president is calling them SOBs. Is that the kind of language, no matter how you feel about the issue, that he should be using?" **MNUCHIN:** "I think the president can use whatever language he wants to use."

-- JOHN DICKERSON talks with **NRSC CHAIRMAN CORY GARDNER (R-COLO.)** on **CBS's "FACE THE NATION": DICKERSON:** "You spoke out about the president's tepid reaction to the violence in Charlottesville. The president has now stepped into the middle of the controversy about the NFL. I just wonder what you make of his remarks this week." **GARDNER:** "Look, I made it very clear in the aftermath of Charlottesville that there is no room in this country for hate, that the KKK, Neo-Nazis, white supremacist groups are hateful, that there's no room for them, and we must call evil by its name. And that is the KKK, Neo-Nazis, and white supremacists. When it comes to this recent spat with the NFL, look, there are far more important things that we ought to be focusing on. You've mentioned them. North Korea, Iran, concern about the health care bill. That's what I'm going to continue to focus on, making sure that we take care of this country's needs in a way that people know they're better off."

DEVIL'S ADVOCATE ALERT, HEALTH CARE EDITION... BUT WE'RE STILL SKEPTICAL -- Some Senate Republicans think the Graham-Cassidy bill is still very much alive. These senior GOP aides say if they get the bill onto the floor, they can address some senators' concerns in the debate process. Others say the bill will be refined in the coming days to address problems. We're a bit skeptical, since many of the concerns that have been expressed are fundamental -- for example, Sen. John McCain (R-Ariz.) says he wants a months-long process. Sen. Rand Paul (R-Ky.) continues to be a hard no. And it's unclear how Sens. Lisa Murkowski (R-Alaska) and Susan Collins (R-Maine) get to yes. But anything can happen these days, so we thought we'd flag for you.

WHAT YOU SHOULD BE THINKING ABOUT: If the Senate does pass something, the House will have to turn around and pass it without making any changes to the bill. That's tricky for the unruly chamber. They come into session Monday night and leave Thursday.

MORE SUNDAY BEST -- JAKE TAPPER talks to **SEN. SUSAN COLLINS (R-MAINE)** on **CNN's "STATE OF THE UNION": TAPPER:** "Your vote is pivotal on the Graham-Cassidy health care bill. Where are you? Yes or no?" **COLLINS:** "Jake, it's very difficult for me to envision a scenario -- scenario where I would end up voting for this bill. I have a number of serious reservations about it. I'm concerned about the impact on the Medicaid program, which has been on the books for more than 50 years and provides healthcare to our most vulnerable citizens, including disabled children and low-income seniors.

"I'm concerned about the impact on costs and coverage. We already have a problem under the Affordable Care Act with the cost of premiums and deductibles. And, finally, I'm very concerned about the erosion of protections for people with preexisting conditions, like asthma, arthritis, cancer, diabetes, and what it would mean to them."

-- CHUCK TODD talks to **SEN. RAND PAUL (R-Ky.)** on **NBC's "MEET THE PRESS": TODD:** "All right, senator, in the president's words, are you going to come around?" **PAUL:** "Well, I've always been a yes for a repeal. But the bill, unfortunately, the Graham-Cassidy bill basically keeps most of the Obamacare spending, almost all of the spending, and just reshuffles and block grants it to the states. So, block granting Obamacare doesn't make it go away. It just means you're keeping all the money we've spending through Obamacare, most of it; reshuffling it; taking the money from Democrat states and giving it to Republican states. I think what it sets up is a perpetual food fight over the formula."

TODD: "If you cannot accept the block-grant concept, then there is no way you'll ever support this bill. Is that fair to say? Because that's the centerpiece of this bill." **PAUL:** "Well, they could remove the block grants from it. And then, we could vote on what we actually all agree on."

HEADS UP: The Federal Aviation Administration's authority runs out at the end of the week. Congress also has to deal with that this week.

-- **@seungminkim:** "! @LindseyGrahamSC on him, RonJohn: 'We're not going to vote for a budget resolution that doesn't allow the health care debate to continue.'" ***NOTE:*** Coupling health-care repeal and tax reform is plausible, but would be incredibly difficult. It also means Republicans would be continuing to work on health care into 2018.

-- WAPO's DAVE WEIGEL and **SEAN SULLIVAN**, with an **IOWA CITY** dateline: **"Graham is 'pressing on' with the health-care bill. Other GOP senators signal they're moving on":** "Sen. Joni Ernst (R-Iowa) looked out at hundreds of Democrats crowded into a tense town hall meeting Friday afternoon and told them that they'd won. Just an hour earlier, Sen. John McCain (R-Ariz.) had come out against the GOP's latest attempt to repeal the Affordable Care Act on partisan terms.

"'I hope that Lamar and Patty can come back again together, hopefully next week,' said Ernst, referring to Sen. Lamar Alexander (R-Tenn.) and Sen. Patty Murray (D-

Wash.), who had been working on a bipartisan bill to stabilize the ACA. 'We can pick back up and try again.' ...

"Republican Senate aides have hinted in recent days at the possibility that new language in the bill might be released at some point. On Saturday, Health and Human Services Secretary Tom Price said in an interview on Fox News that Republicans were 'refining' the legislation. Still, there are no clear resolutions to the problems facing Trump and Senate Majority Leader Mitch McConnell (R-Ky.): Time and diminishing support." http://wapo.st/2xBnG6h

****** **A message from UC Davis:** As the No. 1 agricultural university in the nation, UC Davis understands how food touches every living thing and what's at stake if we don't answer its challenges. Our research innovations and partnerships with farms, industry and policymakers around the world help ensure healthy, safe food for all. Learn more at 21stcentury.ucdavis.edu. ******

RUBBER MEETS THE ROAD -- AP'S STEVE PEOPLES in **WESTFIELD, NEW JERSEY: "Vulnerable N.J. Republican navigates messy Trump era politics":** "This is not President Donald Trump's dinner party. Republican Rep. Leonard Lance, standing in the middle of Ferraro's dimly lit restaurant dining room, says it's not necessary to build a wall along the entire U.S. border with Mexico. He raises concerns about the White House's promised tax overhaul. And he condemns the brash personalities that have come to define the GOP in the age of Trump.

"'His personality and mine are vastly different. I'm comfortable with my personality,' Lance says as 19 men gathered for a private meeting of the Republican National Lawyers Association pick through their salads. ...

"'I will support him where I agree with him and I will not support him where I disagree with him,' Lance told The Associated Press in an interview inside his Westfield office, where the only photograph on the wall features Lance alongside former presidential nominee Mitt Romney, who once personified the 'Never-Trump' movement." http://bit.ly/2jU5teZ

TRUMP'S WEEK -- Monday: Lunch with VP Mike Pence and dinner with grassroots leaders ... **Tuesday:** President of Spain comes to D.C. ... **Wednesday:** Trip to Indiana to speak about tax reform. ... **Friday:** Trump speaks to the National Association of Manufacturers board.

POLITICO GETS RESULTS -- "Tom Price to halt taxpayer-funded travel on private jets: POLITICO has identified more than $400,000 in charter jet spending for the HHS secretary's travels since May," by Dan Diamond: "Health and Human Services Secretary Tom Price told Fox News on Saturday that he'll stop his taxpayer-funded travel on private jets, pending a formal review by his department's inspector general. 'We've heard the criticism. We've heard the concerns. We take that very seriously and have taken it to heart,' Price said.

"Price continued to take charter jets after a POLITICO investigation identified that the HHS secretary had been chartering private planes to conduct official business for months. The cost of his trips this past week was $56,500, according to a federal contract. An HHS spokesperson said this past week's schedule was already set and the plane had been pre-booked before POLITICO raised questions about Price's travels. POLITICO has now identified more than $400,000 in charter jet spending for Price's travels since May." http://politi.co/2jWYdiG

-- FROM DAN: "Price's decision follows a week of scoops by POLITICO, starting with an investigation by me and Rachana Pradhan that revealed the HHS secretary had been chartering private planes to conduct official business for months. ... Price on Saturday justified the charter trips as necessary for responding to the opioid crisis and hurricanes. However, POLITICO identified at least 10 distinct charter flights since May that were not related to either the opioid crisis or hurricane response, including flights to conferences in San Diego and Aspen, Colorado."

JMART'S GOOD POINT ON ALABAMA -- ROY MOORE as 2017 version of **TODD AKIN --** "Reading from prepared remarks at a debate on Thursday in Montgomery, Mr. Moore declared that 'crime, corruption, immorality, abortion, sodomy, sexual perversions sweep our land.' And appearing at a Baptist church last month in Jasper, Mr. Moore mused about what same-sex marriage could lead to. 'Maybe you can marry a horse or a cow, or five men or five women,' he said. It is the sort of message that terrifies Republican elites, who fear he could be a more weaponized version of Todd Akin, the 2012 Missouri Senate candidate who lost after saying women's bodies could block a pregnancy in cases of 'legitimate rape.'

"'Roy Moore would be the Todd Akin of 2017 and 2018 for every Republican on the ballot,' said Karl Rove, the Republican strategist, who is aligned with the Senate Leadership Fund. 'Republicans will be asked, 'Do you agree homosexuality should be punished by death, do you believe 9/11 was a result of God's anger?' He'll say outrageous things, the media will play it up, and every Republican will be asked, 'Do you agree with that?'" http://nyti.ms/2fIN9RI

ERIC GELLER: "Breaking nuclear deal could bring hacking onslaught from Iran": "A move by President Donald Trump to discard the Obama-era nuclear deal with Tehran could bring a swift retaliation from an increasingly aggressive Iranian hacker army. Some of those attacks may target America's power plants, hospitals, airports and other pieces of critical infrastructure, multiple cyber experts that track Tehran's hackers are warning. Iran's current Western hacking is limited almost entirely to commercial espionage and dissident surveillance, but the country could quickly redirect its efforts in the event of a rupture of the nuclear pact.

"Iran has spent years honing its digital skills through cyber campaigns that have pummeled regional adversaries, stolen trade secrets from foreign competitors and destroyed computers at the oil giant Saudi Aramco. And initially, the country also aimed

its cyber forces at the U.S., launching a barrage of distracting attacks on the financial sector and even successfully infiltrating a dam in New York state. But after the U.S. and six partners began discussions with Iran in 2013 to lift some economic sanctions in exchange for limits on Tehran's nuclear program, the country's hackers have largely spared the U.S., focusing instead on industrial espionage and hitting rival Middle Eastern powers." http://politi.co/2y1eclP

FOR YOUR RADAR -- "Trump cranks up North Korea threats as Pyongyang holds anti-U.S. rally," by Reuters' Haejin Choi in Seoul and Michelle Nichols at the U.N.: "U.S. President Donald Trump dialled up the rhetoric against North Korea again at the weekend, warning the country's foreign minister that he and leader Kim Jong Un 'won't be around much longer', as Pyongyang staged a major anti-U.S. rally. North Korea's Foreign Minister Ri Yong Ho told the United Nations General Assembly on Saturday that targeting the U.S. mainland with its rockets was inevitable after 'Mr Evil President' Trump called Pyongyang's leader a 'rocket man' on a suicide mission." http://reut.rs/2xBNlfl

-- @realDonaldTrump at 11:08 p.m.: "Just heard Foreign Minister of North Korea speak at U.N. If he echoes thoughts of Little Rocket Man, they won't be around much longer!"

-- @jimsciutto: "Breaking: U.S. B-1B bombers fly in show of force off #North Korea coast, farthest north of DMZ in 21st century" ... "And here is one of those B1Bs on takeoff": http://bit.ly/2fpf8c3

NEW WAPO/ABC NEWS POLL -- "Poll: Far more trust generals than Trump on N. Korea, while two-thirds oppose preemptive strike," by WaPo's Scott Clement and Phil Rucker: "Two-thirds of Americans oppose launching a preemptive military strike against North Korea, with a majority trusting the U.S. military to handle the escalating nuclear crisis responsibly but not President Trump, a new Washington Post-ABC News poll finds. Roughly three-quarters of the public supports tougher economic sanctions on North Korea in an attempt to persuade it to give up its nuclear weapons, while just about one-third think the United States should offer the isolated country foreign aid or other incentives. ...

"Overall, Trump's image continues to be negative, with 39 percent of Americans approving and 57 percent disapproving of the president's job performance. But the poll finds that clear majorities approve of Trump's response to recent hurricanes and support the agreement he struck with Democrats providing emergency disaster-relief funding and raising the nation's debt limit." http://wapo.st/2fq0Rvy

BIG SUNDAY READ -- BOSTON GLOBE SPOTLIGHT TEAM -- "Secrets in the sky: The United States remains an easy mark for drug dealers, terrorists and others who prize anonymity when registering aircraft or getting licensed to fly. So much for the lessons of 9/11": http://bit.ly/2jUJ7tQ

IN THE SKIES -- A Saudi Arabian registered A310 landed at Andrews Air Force Base from Newark Saturday afternoon. http://bit.ly/2fhQuGs

MAYBE GARY'S NOT DONE AFTER ALL -- "Yellen and Cohn Said to Be on Shortlist to Lead Federal Reserve," by NYT's Kate Kelly and Binyamin Appelbaum: "The White House has created a list of about a half-dozen candidates to be the next leader of the Federal Reserve, including its current chairwoman, Janet L. Yellen, and the president's chief economic adviser, Gary D. Cohn, according to two administration officials and a third person with knowledge of the process.

"The list also includes Jerome H. Powell, a member of the Fed's board of governors; Kevin Warsh, a former Fed governor; and the Stanford University economist John B. Taylor, the officials said. Preliminary interviews with some candidates have already begun with an eye toward presenting finalists to President Trump later this year. Ms. Yellen, whose four-year term ends in February, has been unusually successful in achieving the Fed's goals of minimizing unemployment and moderating inflation. But Mr. Trump, while praising her performance, has said that he may decide not to reappoint her. ...

"Mr. Trump has deputized four officials to lead the selection process for the Fed's next chairman, said one person familiar with the search: Treasury Secretary Steven Mnuchin; two of Mr. Cohn's aides on the National Economic Council, Jeremy Katz and Andrew Olmem; and John DeStefano, the White House personnel director." http://nyti.ms/2fplmZs

2020 WATCH -- "Biden rips Trump over race in South Carolina return," by Gabe Debenedetti in Charleston: "Former Vice President Joe Biden on Saturday evening urged Americans to stand up to hate groups - and took direct aim at President Donald Trump, who he said 'has publicly proclaimed the moral equivalency of Neo-Nazis, Klansmen, and those who oppose their hate.' Speaking at the centennial fundraising dinner for the Charleston branch of the NAACP, Biden said, 'This is a moment for this nation to declare what this president can't with any clarity, consistency, or vision: there is no place in America for hate groups.' ...

"The address was the latest, and most searing, in Biden's series of denunciations of the president and the current tenor of politics. It's been a rapidly escalating effort that far outstrips former President Barack Obama's Trump-era political work - and which has poured fuel on the speculation that Biden is considering a third run for the White House." http://politi.co/2wdGo0j

Playbook Reads

PHOTO DU JOUR: Baltimore Ravens players kneel down during the playing of the U.S. national anthem

before an NFL football game against the Jacksonville Jaguars at Wembley Stadium in London, on Sept. 24. This is the first NFL game since President Donald Trump said players should be fired for "disrespecting our flag." | Matt Dunham/AP Photo

SUNDAY BEST, PART III -- CHRIS WALLACE talks to **BILL GATES** on "Fox News Sunday": **WALLACE** on his conversation with President Trump earlier this year: **WALLACE:** "But it didn't have the impact you hoped?" **GATES:** "Well, in terms of the first budget that he came out with, no. That was a disappointment to us. It was taking the medical research budget, called the NIH bringing that down fairly dramatically. Taking the aid programs, including the on-going HIV commitments and bringing those, so definitely I was disappointed in that."

FOR YOUR RADAR -- "Merkel bids for fourth term as Germans head to the polls," by AP's Kirsten Grieshaber in Berlin: "Chancellor Angela Merkel was widely expected to win a fourth term in office as Germans went to the polls on Sunday in an election that is also likely to see the farthest right-wing party in 60 years, the anti-migrant Alternative for Germany, win seats in parliament. ... The latest polls had Merkel's conservative bloc at 34 to 37 percent support, the center-left Social Democrats with 21 to 22 percent and the anti-migrant Alternative for Germany, or AfD, with 10 to 13 percent support." http://bit.ly/2hrC8Ef

DEEP DIVE -- "The Metals Magnate And Manafort: A Kremlin Confidant Is Drawn Into The Trump Investigation," by Mike Eckel and Christopher Miller in Radio Free Europe: "Sometime in the mid-2000s, [Oleg] Deripaska connected with a Russian named Konstantin Kilimnik, whose education at Russia's Military University for Foreign Languages has led to speculation that he is employed by intelligence agencies, something he has denied. Kilimnik began working for Manafort in 2005 ... Asked about his conversations with Manafort, Kilimnik told RFE/RL on September 21 that they discussed the U.S. election campaign, but he declined to describe the e-mail in detail or to say whether there was an effort to reach out to Deripaska.

"'There were millions of emails. [...] we worked for 11 years. And we discussed a lot of issues, from Putin to women,' Kilimnik said via text message. ... Kilimnik wrote in another September 21 message[:] 'They are tough investigators and probably will get manafort for some financial crap. With that many years of international clients no one can be 100% clean.'" http://bit.ly/2y0X8MJ (h/t @KenVogel)

STEPH CURRY SPEAKS, via NYT's Scott Cacciola in Oakland: "'I don't know why he feels the need to target certain individuals rather than others,' Curry, a two-time N.B.A. most valuable player, said at a news conference after the team's first practice of the season. 'I have an idea of why, but it's kind of beneath the leader of a country to go that route. It's not what leaders do.'" http://nyti.ms/2fjJvNi

WAPO'S SALLY JENKINS -- "What President Trump doesn't get about the NFL": "How the NFL responds to Donald Trump's spit-foaming is hardly a test case for whether the republic will stand. Nevertheless, the league is a maker of manners in this country, so it means something that Commissioner Roger Goodell and others are

getting it right, striking the perfect calm but resistant tone in response to Trump's gutter-mouthing, a tone that says, 'We're not your personal WrestleMania, and don't use us for your sham body slams.' The NFL, faced with whether to play to the basest instincts of the audience, declined. It adhered to civility. ...

"The vast majority of the men on the field are not spoiled millionaires abusing their freedoms, as Trump charges. Rather, they have worked as hard as any farmers for their short-lived incomes and are dedicated to using their privilege to make things better for the people they play in front of. Brandon Marshall's Project Borderline foundation combats mental illness. Doug Baldwin is raising money for a family community center in Renton, Wash. And Kaepernick has given away $1 million to various organizations." http://wapo.st/2we8aKh

-- "UNC national championship team not visiting White House," by the News and Observer's Andrew Carter: "North Carolina's 2017 national championship men's basketball team will not visit the White House, a team spokesman said on Saturday, though the Tar Heels were invited to visit, as is the custom for teams that win college men's basketball and football national championships. Whether UNC would visit President Donald Trump's White House, if the Tar Heels won, became a topic of interest during the Final Four." http://bit.ly/2xCeSwQ

****** **A message from UC Davis:** To ensure the production of healthy, safe food, you need to know agriculture. And water management. Plant biology. Ecology. Economics. Engineering. Animal science. Human health. Policy. And community development. At UC Davis, the No. 1 agricultural university in the nation, we know a bright future in food requires expertise, research and collaboration across many fields. It's a complex effort, and one we're proud to cultivate with farms, industry and policymakers around the world. Learn more at 21stcentury.ucdavis.edu. ******

STARTLING ANECDOTE - STAN GREENBERG, "How She Lost" in the American Prospect: "Astonishingly, the 2016 Clinton campaign conducted no state polls in the final three weeks of the general election and relied primarily on data analytics to project turnout and the state vote. They paid little attention to qualitative focus groups or feedback from the field, and their brief daily analytics poll didn't measure which candidate was defining the election or getting people engaged." http://bit.ly/2fipWF4

WEST COAST WATCH -- "California Republicans looking for ways to increase their relevance in statewide races," by L.A. Times' Seema Mehta: "In an effort to avoid an embarrassing repeat of the Senate election in 2016, when no GOP candidate appeared on the November ballot, the California Republican Party may change its rules and pick sides in the primary.

"Party leaders hope that creating an endorsement process for statewide candidates would allow GOP voters to unite behind a single person in a multi-candidate primary field, increasing the chances that a Republican wins one of the top two spots in the primary and makes it to the general election." http://lat.ms/2hrEZNz

BONUS GREAT WEEKEND READS, curated by Daniel Lippman, filing from New York:

-- "Snopes and the Search for Facts in a Post-Fact World," by Michelle Dean in Wired - per Longreads.com's description: "How the legendary internet fact-finding site snopes.com came to be, and how a messy divorce and ownership and control squabbles have threatened the site's existence." http://bit.ly/2yiyF1p

-- "America Wasn't Built for Humans," by Andrew Sullivan in NYMag: "Tribalism was an urge our Founding Fathers assumed we could overcome. And so it has become our greatest vulnerability." http://nym.ag/2y0afh9

-- "These Women Are the Last Thing Standing Between You and Nuclear War," by Danielle McNally in Marie Claire: If an order comes, missileers "open a safe located between their workstations secured with two padlocks, one fastened on by each missileer. Inside is a code that the incoming encrypted message must match. But there's an A-side and a B-side and neither missileer knows both. It's all part of Two-Person Control - a system that ensures a rogue missileer can't start World War III on her own." http://bit.ly/2fFogpH

--"An Open Letter to Ta-Nehisi Coates: The Dream is real," by Jason D. Hill in Commentary: "I am saddened by your conviction that white people wield such a great deal of metaphysical power over the exercise of your own agency. In making an enemy of the Dream that is a constitutive feature of American identity, you have irrevocably alienated yourself from the redemptive hope, the inclusive unity, and the faith and charity that are necessary for America to move ever closer to achieving moral excellence." http://bit.ly/2wPHfDS

--"That Magic Feeling: A day at Abbey Road Studios," by James Rosen in National Review: "There is no happy ending to this story. Not many years from now - five? one? - the world will be reduced to an uninhabitable state in which no Beatles are alive. Nor will this essay meet the dictates of feel-good pop psychology, wherein my visit to Abbey Road Studios in London this summer neatly caps, and thereby helps me to turn the corner on, my Fab obsession." http://bit.ly/2jRaWmQ

-- "A Hospital Crisis Is Killing Rural Communities. This State Is 'Ground Zero,'" by Lauren Weber and Andy Miller in HuffPost: "Inside three Georgia counties that have struggled to keep their hospitals ??? and futures ??? alive." http://bit.ly/2hoJuZj

-- "The Salvation of Mosul," by Joshua Hammer in October's Smithsonian: "An Iraqi archaeologist braved ISIS snipers and booby-trapped ruins to rescue cultural treasures in the city and nearby legendary Nineveh and Nimrud." http://bit.ly/2wM77QU

-- "*Hopeful face*," by Andrew Caines in the Times Literary Supplement - per TheBrowser.com's description: "A horrible thought, but what if emoji are the future of writing, as well as its past - a reversion to the pictographic tradition of Egyptian

hieroglyphs, after the relatively brief reign of the printing press and the written word? Already, emojis are a much richer language than hieroglyphics ever were - 2,666 symbols, against roughly a thousand known hieroglyphs. 'Emoji represent how eager we are to influence the emotions of others, and to resolve ambiguity in language.'" http://bit.ly/2xtGOCY

-- "How Do You Like It Now, Gentlemen?" by Lillian Ross in The New Yorker's May 13, 1950 issue: "Ernest Hemingway, who may well be the greatest living American novelist and short-story writer, rarely comes to New York. He spends most of his time on a farm, the Finca Vigia, nine miles outside Havana, with his wife, a domestic staff of nine, fifty-two cats, sixteen dogs, a couple of hundred pigeons, and three cows." http://bit.ly/2xWGq10 (h/t Longform.org)

-- "Iris van Herpen's Hi-Tech Couture," by The New Yorker's Rebecca Mead: "The designer combines 3-D printing and hand stitching to reimagine the possibilities of the human body." http://bit.ly/2hp7sUb

-- "A High-End Mover Dishes on Truckstop Hierarchy, Rich People, and Moby Dick," by Finn Murphy, author of "The Long Haul: A Trucker's Tales of Life on the Road," in a Longreads excerpt: "A mover waits longer for coffee, longer in the service bays, longer for showers, longer at the fuel desk, longer everywhere in the world of trucks than the freighthauler. It's because we're unknown. We don't have standard routes, so we can't be relied on for the pie slice and the big tip every Tuesday at ten thirty. We're OK with being outside the fellowship because we know we're at the apex of the pyramid." http://bit.ly/2xzQpbu ... ***$18.32 on Amazon*** http://amzn.to/2jRoHlx

-- "If It Keeps on Raining," by Micah Fields in Oxford American: In Houston, "water lapped at the floorboards. The Jeep could clear two feet easy, but on a few occasions, we looked in the mirror to watch the boat lift off its trailer and shimmy behind us, then ease back onto its carpeted runners. We entered neighborhoods of homes where floods had already come and gone, where people had started the process of mucking the unsalvageable remnants of their dwellings." http://bit.ly/2hlhWYl

Playbookers

SPOTTED: Jack Del Rio, coach of the Oakland Raiders, having dinner at District Winery on Saturday night ahead of his team's game on Sunday versus the Redskins.

OUT AND ABOUT -- Three hundred people came out last night to celebrate Jeh Johnson's and wife Susan DiMarco's 60th birthday in a big tent outside the Montclair Art Museum in Montclair, New Jersey, DJ'd by Felix Hernandez. Food served included brisket, paella with crab and shrimp, lobster tacos, Halloumi cheese, and pigs in blanket. There was also a photo booth with cardboard cutouts of Jeh and Susan that guests took pictures with. Everyone also got a parting gift bag with a pocket Constitution and

chocolate truffles. ***Pics*** http://bit.ly/2xo5Kwr ... http://bit.ly/2wPsh0A

SPOTTED: Jonathan and Emily Alter, Tanya Bradsher, Todd Breasseale, Jonathan Capehart and Nick Schmit, Michael Chertoff, Penny Pritzker, Jack and Susanna Quinn, Charlie and Luiza Savage, Cyrus Vance Jr., Avril Haines, Elizabeth King, Bill Derrough, Chris Fonzone, Marc Morial, Alejandro Mayorkas, Amb. Phil Murphy, Amb. Joe Westphal, Pete Neffenger, Esther Olavarria, Tyler Moran, Roger Parrino, Paul Rosen, Steven Isenberg, Alice Lloyd, Aubrey Sarvis, Patti Steele, Frank Taylor, Mario Flores, Mary Alice Williams, and 10 members of the judiciary.

EMBASSY PARTY CIRCUIT -- Pool report: "The Royal Embassy of Saudi Arabia hosted its 87th National Day [yesterday], celebrating the anniversary of the country's establishment at the National Building Museum showcasing the Kingdom's rich cultural heritage, ongoing societal developments and long-standing partnership with the U.S. with Ambassador Khalid bin Salman bin Abdulaziz Al Saud." ***Pic of the new young ambassador by Daniel Swartz*** http://bit.ly/2weNj9k

ENGAGED -- BRITTANY BRAMELL -- currently assistant administrator for public affairs at TSA, and an alum of Uber, Boehnerland and Lindsey Graham for president, to **DAN PUNARO,** VP for Enterprise IT. Dan proposed at the Capitol, where they met more than a decade ago. Brittany's parents, four brothers and their families all flew from California to surprise her. ***Pic of the couple*** http://bit.ly/2hozOS3 (h/t Dan's father Gen. Arnold Punaro)

WEEKEND WEDDINGS -- KATIE WALSH, senior data and digital adviser at the RNC, and **MIKE SHIELDS,** partner at Convergence Media, got married Saturday night in Kiawah Island, South Carolina. **SPOTTED:** Reince and Sally Priebus, Johnny and Sarah DeStefano, Rob and Cindy Sims, Renee and Rep. Richard Hudson (R-N.C.), Sean and Emily Cairncross, Brian Walsh, Brad Parscale, Mike Ambrosini and Vanessa Morrone, Cara Mason, Tory McGuire, Sean and Emily Cairncross, Guy Harrison, Chris Hansen, Madeleine Westerhout, Jonathan Day, Muffy Day, Richard Waters. ***Pic of the couple with Reince and Sally Priebus*** http://bit.ly/2fjMp4T

-- Jeff Bechdel, chief content officer for America Rising, and **Riley Thomlison,** sales and marketing manager at IJR, "exchanged vows in front of family and friends that came from across the United States to celebrate in a ceremony as the sun set over the St. Louis Country Club. As per Pittsburgh tradition, the highlight of the reception was an immaculate table of cookies. The couple first met while working at America Rising, Jeff as communications director and Riley as video director in 2014." ***Pics*** http://bit.ly/2wMKNvk ... ***Their first dance*** http://bit.ly/2hoWLVi

SPOTTED: Joe Pounder, Byron Koay, Colin Reed, Alex Angel, Bexie Nobles, Luke Marchant, Candace Lee, Emily Bouck, Maggie Dougherty, Tom Brandt, Nick Colella, Jesse and Erin Blumenthal, Richard Sant, Kerry Rom.

-- Natalie Gillam, comms. director for Rep. Ryan Costello (R-Pa.), married **Mark**

McLaughlin, research director at Senate Leadership Fund, at Bald Head Island in North Carolina Saturday. Pool report: "They met while working at the NRSC. She is an esteemed graduate of the London School of Economics and alum of America Rising. Within GOP circles Mark is credited for finding Elizabeth Warren's Native American ancestry, John Walsh plagiarizing his thesis and Joe Donnelly outsourcing jobs to Mexico." ***Pics*** http://bit.ly/2xomFPr ... http://bit.ly/2xxDQ00

SPOTTED: Alleigh Marre, Zack Roday, Zach Gillan, Christina Bolling, Dianna Colasurdo and Jahan Wilcox.

--"Caroline Rabbitt, Andrew Tabler" -- N.Y. Times: "Mrs. Tabler, 30, is the communications director in Washington for Senator Tom Cotton, an Arkansas Republican. She graduated from Wake Forest University and received a master's degree in communications from Johns Hopkins University. ... Mr. Tabler, 33, is the special assistant to the under secretary of the Navy, and works in the Pentagon. From 2010-2011, he served as an ensign in the Navy, at the Naval Amphibious Base Coronado in San Diego. He graduated from George Washington University." ***With pic*** http://nyti.ms/2xxNq38

OBAMA ALUMNI -- "Allison Zelman, Max Lesko": "Ms. Zelman, 33, is the director of states for the [DNC] in Washington. She was until 2011 a policy assistant and speechwriter for the Domestic Policy Council at the White House. ... Mr. Lesko, 32, is the director of national organizing, intergovernmental outreach and the Children's Defense Fund Action Council for the Children's Defense Fund in Washington. Until Jan. 20, he was working in the Obama administration as chief of staff at the Office for Civil Rights at the Department of Education. ... The couple met in Portland, Ore., in 2008 while working on the Obama presidential campaign." ***With pic*** http://nyti.ms/2xC6fT4 ... ***Buffy Wicks' wedding Instapic of the couple*** http://bit.ly/2xrKfYU

Subject: Morning Media: Nancy Gibbs steps down -- Is tech ready to be regulated? -- Clinton's media postmortem

By Alex Weprin | 09/13/2017 05:38 AM EDT

'TIME' TURNOVER AS NANCY GIBBS STEPS DOWN: Nancy Gibbs is stepping down as editor-in-chief of Time magazine, after 32 years at the magazine, including four years leading it as editor. According to a statement from Time Inc., Gibbs will remain with the company through the end of 2017 as editorial director of the company's news group, a position she has held since last year. Gibbs, who is the first woman to have held the editor-in-chief role at Time, started at the magazine as a fact-checker in 1985. She who would go on to become a writer, before moving to management positions.

-No successor was named, but in an email sent to Time staff on Tuesday, Time Inc. CEO Rich Battista and Time Inc. chief content officer Alan Murray wrote: "Nancy is one of a kind and cannot be replicated. But we plan to move quickly to name a new editor-in-chief. Nancy has built not only a remarkable legacy but also a remarkable news organization, and we are determined to maintain its power and relevance in the years ahead."

-Gibbs gave an exit interview to Vanity Fair's Joe Pompeo. She told Joe that the decision to step down was hers, and that she hopes to contribute to Time in the future as a writer. As for what she will do next: "I've been thinking, are there places I could go and things I could do to address the challenges that are facing us as a country?"

CLOCK TICKS ON REGULATING TECH: It may be beginning to dawn on large technology companies that government regulation of some sort looms. With Facebook and Twitter acknowledging that firms with ties to Russia used their platforms to reach and influence voters, and tech companies disrupting and acquiring other businesses at a rapid pace, there is a general feeling in D.C. that something must be done about it. My colleague Nancy Scola notes that people on both sides of the ideological spectrum support some sort of change . "The free ride Silicon Valley has benefited from is finally coming to an end, and I see that on both sides of the political spectrum," said John Simpson, privacy project director at Washington-based Consumer Watchdog.

-BuzzFeed News editor-in-chief Ben Smith also does a good job explaining the problem: "The new spotlight on these companies doesn't come out of nowhere. They sit, substantively, at the heart of the biggest and most pressing issues facing the United States, and often stand on the less popular side of those: automation and inequality, trust in public life, privacy and security. They make the case that growth and transformation are public goods - but the public may not agree."

-Or, consider these comments made by CNN president Jeff Zucker at a dinner hosted by Credit Suisse in Toronto on Monday night. Zucker was interviewed by Tina Brown as part of her Women in the World Toronto Summit. "I think that Facebook has not been forthcoming in the

role that they played in the election and I think that their feet need to be held to the fire way more. I think it is outrageous that Facebook will not be more transparent about the advertising they took from Russia, and show those ads and release more information. The fact that they tried to bury that story in August when Congress was out of session is outrageous. ... I really do want to emphasize that Facebook's behavior in the election has NOT been transparent and this is a huge issue. I urge more folks to hold them to account."

-In some cases, it sounds as though tech is trying to get ahead of potential problems . According to comments made by News Corp. CEO Robert Thompson at the Goldman Sachs Communacopia conference Tuesday, Google may be reconsidering its "first click free" policy which prioritizes content in front of a paywall in its search results. "Google has been involved in serious negotiations with us about the future of content, about our relationship with them directly, but more importantly, I think Sundar Pichai deserves a lot of credit for taking a different approach. Because it's not just us...when you look at fake news, when you look at false metrics, when you look at faux advertising, something has to change, both from a commercial perspective, content perspective but also from a social perspective," Thompson said. "I've probably been more critical in public of Google than any person, and I want to praise Sundar for heading in the right direction. There's a lot more to negotiate, there's a long way to go, but their willingness to end "first click free" should be celebrated by all publishers

HURRICANE IRMA'S CNN BOOST: BuzzFeed News' Steven Perlberg notes how coverage of Hurricane Irma has reversed a ratings and relevance slide that had affected CNN in recent months, as more viewers turned to competitors MSNBC and Fox News for political programming. "It hasn't taken all the heat off of us, but it's definitely helped dial back the 'fake news' rhetoric from our critics," said one CNN reporter. "This is what we do," said CNN Executive Vice President Andrew Morse, who runs the network's news gathering as well as the digital business. "When something important happens in the world, people tune to CNN."

-In other Irma news, The Miami Herald notes how Florida Governor Rick Scott's tight control of information has taken on new meaning in the aftermath of the hurricane. The Trace meanwhile, tracks how news outlets that should know better, such as the BBC, spread false news about a Facebook rumor "encouraging" people to shoot their guns at the hurricane.

THE SCARAMUCCI POST? The former White House communications director shared some new social media accounts Tuesday night for something called "The Scaramucci Post." What is it? Is "The Mooch" trying to make a media play? Well, that isn't entirely clear. Scaramucci registered www.scaramuccipost.com on Aug. 22, but right now there is nothing on the site. www.thescaramuccipost.com was registered yesterday. Scaramucci is no stranger to media, having appeared for years on CNBC, Fox Business and the cable news channels. For now, we may have to wait and see what he has up his sleeves.

CLINTON'S MEDIA POSTMORTEM: There are a number of common threads that have come up in former Secretary of State Hillary Clinton's book tour. One of them: The media does not realize or accept the role it played helping to elect Donald Trump. Consider the comments Clinton made on the Pod Save America podcast : "The other side has dedicated propaganda channels, that's what I call Fox News. It has outlets like Breitbart and crazy InfoWars. In this particular election, it was aided and abetted by the Russians and the role Facebook and other platforms played. We did not understand how a reality TV campaign would so dominate the media environment."

FOX-SKY DEAL IN JEOPARDY? 21st Century Fox's deal to buy the shares of U.K. telecom giant Sky has hit a speed bump, as U.K. regulators seek a full review of the deal. While Variety spoke to analysts that suggest the review may not be enough to derail the deal, it will certainly delay it, and risks undoing it. Bloomberg Gadfly's Chris Hughes puts the odds at 50-50. Here's how Fox responded to the news.

-The letter from OfCom is worth looking at, in part because it analyzes Fox News programming, which opponents of the deal said proved that it would not be good for consumers. OfCom stressed that none of the 10 Fox News segments cited warranted further investigation. In addition to noting that Tucker Carlson, Sean Hannity and Fox & Friends are not news programs, and thus not subject to the same scrutiny news programs are, OfCom also addresses FoxNews.com's handling of the since-retracted story about DNC staffer Seth Rich.

"While Ofcom has no jurisdiction over online articles, we generally take retractions to be indicative of a commitment to accuracy and to proper behaviour, rather than the converse," OfCom wrote. "However in essence Mr Wheeler's complaint is more than that a mistake was made in reporting. He suggests that Fox News knowingly faked a news story for political purposes. If true, this would clearly be of relevance to the degree of public concern arising from a plurality issue. Whether it might also be of relevance to commitment to broadcasting standards would depend on a number of factors, including in particular the degree (if any) of knowledge and culpability within Fox News beyond the journalist concerned. If evidence of wider wrongdoing were to emerge at some future date it may be significant."

REVOLVING DOOR:

-It's official: Hope Hicks is now White House communications director, dropping the "interim" from her current title.

-Meanwhile, Mercedes Schlapp is joining the White House communications team, which means, as Jeremy Barr notes, that her Fox News contributor deal will end.

-Nina Garcia has been named editor-in-chief of Elle magazine. Garcia had been creative director of Marie Claire since 2012. She succeeds Robbie Myers, who had been at the helm of Elle since 2000.

-A number of key personnel changes at The New York Times: Alex MacCallum has been named head of new products and ventures, which will include crosswords, cooking, and other

opportunities that are slightly outside the Times' core digital experience. She had been assistant managing editor for video. Alex Rainert has been named head of product and design. Matthew Ericson and Ben French are also joining that team.

EXTRAS:

-New York Times reporters Maggie Haberman and Glenn Thrush have inked a book deal with Random House. The topic? President Trump, of course. Random House editor-in-chief Andy Ward told Joe Pompeo: "This is the story of our time and I think they're well-positioned to write it."

-ESPN reporter Jemele Hill found herself in hot water after calling President Trump a "white supremacist" on Twitter. ESPN had to release a statement saying, "The comments on Twitter from Jemele Hill regarding the President do not represent the position of ESPN. ... We have addressed this with Jemele and she recognizes her actions were inappropriate."

-HBO has renewed "Last Week Tonight" with John Oliver for three more seasons, keeping it on the channel through 2020. Each season will have 30 episodes.

-Bloomberg and Twitter will livestream Bloomberg's Global Business Forum on Sept. 20. Justin Trudeau, Emmanuel Macron, Recep Erdogan and Sergey Lavrov will be among those appearing. It will be the second event Bloomberg livestreamed on Twitter this year, Following coverage of James Comey's testimony before the Senate Intelligence Committee.

-Here's what Amazon has in store for its "Thursday Night Football" games.

-On the topic of Amazon, there's this news about the news from Recode's Peter Kafka. "Why did three sites pass on a story about an Amazon exec before it landed at The Information?"

-Two pieces of news from OZY Media: the first is a redesigned homepage. The second is the launch of a new podcast series, "The Thread."

-When Hulk Hogan is profiled for Harvey Levin's Fox News show "OBJECTified," he plans to show off a legal notepad he doodled on during the Gawker trial.

Subject: Morning Media: A Murdoch takes on Trump — A tale of three magazine covers — About that 'pivot to video'

By Alex Weprin | 08/18/2017 05:44 AM EDT

With Cristiano Lima

A MURDOCH TAKES ON TRUMP: James Murdoch, the CEO of 21st Century Fox and son of media mogul Rupert Murdoch, sent a note to friends and colleagues Thursday criticizing President Donald Trump's response to the attack and protests in Charlottesville, Va. "[W]hat we watched this last week in Charlottesville and the reaction to it by the President of the United States concern all of us as Americans and free people," Murdoch said in the email, according to Yahoo Finance. "I can't even believe I have to write this: standing up to Nazis is essential; there are no good Nazis. Or Klansmen, or terrorists. Democrats, Republicans, and others must all agree on this, and it compromises nothing for them to do so," he added, pledging $1 million to the Anti-Defamation League.

- Murdoch is the CEO of Fox News Channel's parent company, with the cable news channel's prime-time lineup being among the most friendly media outlets to Trump, even in the wake of his news conference earlier this week. James' father, Rupert, is known to be close to Trump, talking to him on a regular basis. Will James' note change that relationship, or the coverage? We'll have to see.

DESPITE TRUMP'S TOUGH TALK, AT&T-TIME WARNER MOVES ALONG: During the campaign, President Trump called it "a deal we will not approve in my administration because it's too much concentration of power in the hands of too few." Last month, The New York Times reported that administration officials were thinking of using the merger as a "point of leverage" over its cable news nemesis CNN. And yet, as The Wall Street Journal reports , the AT&T-Time Warner deal has reached a milestone that suggests it is in an advanced stage of the regulatory process, and is close to being approved. "The deal's regulatory review has hit a point where AT&T lawyers are discussing merger conditions with the Justice Department, people close to the situation said, a significant milestone that indicates the odds of approval have markedly improved."

Good morning and welcome to Morning Media! I want to make Morning Media better and more useful to you, so please send me tips, ideas and feedback! I'm on Twitter **@alexweprin** and on email at **alexweprin@gmail.com**. Morning Media is produced with help from **Cristiano Lima (clima@politico.com / @ludacristiano)**. **Archives**. **Subscribe.**

CABLE NEWS WATCH: The terror attack in Spain resulted in the cable news channels' turning their attention away from President Trump, if for a few hours. Extra live hours of news coverage were added to prime-time and post-prime-time periods, while broadcast networks like NBC broke into regular programming with special reports.

- Something else to keep an eye on: On Wednesday, MSNBC was the most-watched channel in all of cable TV among total viewers in total day. That was the first time in its history that happened. Fox News and CNN also saw strong ratings as people tuned in to make sense of the aftermath of Trump's Tuesday presser.

A TALE OF THREE MAGAZINE COVERS: Three major magazines - you know, the kind that are printed on paper - released covers this week addressing Trump's response to the Charlottesville attack and protests. The magazines - The Economist, The New Yorker and Time - share an obvious theme. Take a look at the covers here . They demonstrate the awesome power that the medium still has, with a single image able to conjure emotions ranging from anger and shock to surprise and humor (although there was nothing humorous about the three Trump covers released yesterday). No digital news format has quite the same impact or cultural cachet.

NPR's DAVID FOLKENFLIK DID A DEEP DIVE INTO THE SETH RICH CONSPIRACY, and the man behind the scenes of a controversial and since-discredited Fox News story on the former DNC staffer's murder. Ed Butowsky, an unnamed "third party" in a Fox News digital story dubiously linking Rich's death to DNC email exchanges with WikiLeaks, gave a lengthy two-and-a-half hour interview to the outlet in which he vigorously denied charges he faces in a lawsuit contending that he pushed Rich conspiracies at Fox as part of a plot to help President Trump. Butowsky rejected notions he's some sort of political operative, and claimed that when he reached out to Rich's family to discuss the case, he was "actually helping a family learn something." Read the full profile here.

- The Washington Post's Paul Farhi, meanwhile, did a deep dive of his own into CNN's retracted story about Anthony Scaramucci and Russia. That story saw three respected CNN reporters and editors, including a Pulitzer Prize winner, resign.

MIC THE LATEST PUBLISHER TO 'PIVOT TO VIDEO': Mic, the millennial-targeting digital news startup, is the latest news outlet to lay off journalists as it seeks to reinvest resources into video. According to Mic's Kelsey Sutton, 25 staffers received pink slips Thursday. The company will instead beef up its ranks of on-air correspondents, producers and other visual journalists.

- Recode's Peter Kafka has a good rundown on the "why" part of that decision, but here's something else to chew on: The numbers are not as encouraging as they look on the surface. As Kafka notes, many of these news startups cite the $70 billion TV ad market as a reason for the pivot. A tiny slice of that would be a game changer. The thing is, the overwhelming majority of that advertising pie is taken up by entertainment and sports.

- According to Pew's 2017 State of the News Media report, advertising revenue for CNN, Fox News, MSNBC, CNBC, Fox Business and Bloomberg totaled approximately $2.3 billion. The network morning and evening newscasts added another $1.2 billion to that pot. Throw in a few hundred million more for other TV news programs and the ad market these news sites are trying to steal revenue from is closer to $4 billion, not $70 billion.

- Many of these digital players, like BuzzFeed and Vice, are trying to expand their market

share with pure entertainment programming, including, yes, TV shows created for TV channels, but most of the sites "pivoting to video" will have a rough go of it unless they rethink their expectations, or their business models.

BUBBLE TEA IS THE NEW PEAS IN GUACAMOLE: The New York Times has done it again. Food lovers around the world raised their eyebrows at another article about food (we all remember what happened when the Times put peas in guacamole). This time, The Times discovered boba, or as the news outlet originally described it, "the blobs on your tea." The article gave the impression that the tapioca balls in tea were a new fad (in fact, just last year The Times called bubble tea "so 2002"). It also used language calling the tea "exotic" and "embraced in the Far East." "In retrospect, we wish we had approached the topic differently (if at all)," Times business editor Ellen Pollock wrote . "There may be a story in the expansion of bubble tea businesses in the United States, but there is no denying the drink has been around for quite a while. And we regret the impression left by some of the original language in the article, which we have revised in light of the concerns."

REVOLVING DOOR:

- A bunch of hires at The New York Times' T Magazine: Thessaly La Force joins as features director, Kurt Soller joins as articles editor, Isabel Wilkinson was promoted to digital director, Malina Joseph Gilchrist was promoted to women's style director, while Alexa Brazilian was promoted to fashion features director.

- Time Inc. named Lori Leibovich of Health. She succeeds Clare McHugh, who has been named senior director for edit operations. Leibovich will also oversee "Time Health," which the company describes as "a new company-wide initiative that draws on the full portfolio of Time Inc.'s brands."

- A revolving-door item from earlier this week had the wrong titles for two people at Elle magazine. Sally Holmes has been promoted to executive editor of Elle.com, while Gena Kaufman has been promoted to director of social media and special projects for Elle.com.

SOUNDBITE: "It hurts me that people from my neck of the woods, the Midwest, don't trust me ... I don't think it's just the Trump supporters, I think that trust in media has been eroding for a long time ... It pains me and to blame it all on Trump shows a distinct lack of courage on the part of journalists. It's partially our fault." HLN anchor Carol Costello, in an interview with The Wrap.

EXTRAS:

- Splinter News does a good job explaining why ABC's "pink slime" settlement could have a chilling effect on journalism, as subjects of stories use the court system to attempt to silence journalists. [Splinter News]

- The Poynter Institute updated its code of ethics. [Poynter]

- Hearst is launching an incubator for women-led startups. So far the company has invested $5 million in 11 companies. [WSJ]

- What leaks won't WikiLeaks chase down? Apparently negative intel on the Kremlin. [Foreign Policy]

- Sinclair has struck a deal to bring its local stations and Tennis Channel to YouTube TV, YouTube's streaming service. [Sinclair]

- Thanks to the Sinclair deal, YouTube TV is now available to 50 percent of U.S. households. [TechCrunch]

- Facebook is cracking down on clickbait video posts on your timeline. [The Verge]

- R.I.P to legendary New York photographer Michael Schwartz, who died at 73. [New York Daily News]

Subject: Morning Energy, presented by the U.S. Chamber's Global Energy Institute: Fears of humanitarian crisis in Puerto Rico as federal response ramps up — Not freaking out, yet, about Zinke's renewables comments — Pruitt's private plane rides

By Anthony Adragna | 09/27/2017 05:40 AM EDT

With help from Ben Lefebvre, Emily Holden, Alex Guillén and Darius Dixon

FEARS OF HUMANITARIAN CRISIS IN PUERTO RICO: Federal officials appeared to dramatically ramp up their response to the devastated Puerto Rico on Tuesday as the dire conditions became ever clearer. According to the Defense Department, just 44 percent of the island's residents have potable drinking water while only 11 of 69 hospitals have fuel or power. In addition, 80 percent of the island's electricity transmission system and 100 percent of the distribution system are damaged. Florida Republican Sen. Marco Rubio , who toured the island Monday, called for a "more aggressive" federal response and summed up the severity of the situation: "I'm concerned about human suffering and potential loss of life if aid doesn't reach the places it needs to reach quickly enough," he said.

President Donald Trump, who one day earlier appeared to partially blame the territory's plight on its "broken infrastructure & massive debt," touted the "amazing" response Tuesday. "We are literally unloading, on an hourly basis, water, food, supplies," he said. "And we are going to do far more than anybody else would ever be able to do. And it's being recognized as such, but it is a tough situation." Trump later convened two briefings on relief efforts, the second of which included EPA Administrator Scott Pruitt, Interior Secretary Ryan Zinke and Energy Secretary Rick Perry. EPA also approved a waiver for certain fuels on Puerto Rico on Tuesday. POLITICO's Andrew Restuccia and Louis Nelson with more here.

Both Senate Majority Leader Mitch McConnell and Speaker Paul Ryan reiterated Congress would respond with additional hurricane aid when the administration made a formal request. "I also want the people of Puerto Rico to know that they are going to get the kind of help and aid that Texas and Florida enjoyed," Ryan said. But Pro Budget and Appropriations Brief's Sarah Ferris and Jennifer Scholtes report that formal request is likely several weeks away as officials focus right now on delivering supplies rather than requesting more funds.

What about the Jones Act? The Trump administration is not waiving the Jones Act for Puerto Rico, as it did for Florida and Texas after hurricanes ravaged those states earlier this year. And Sen. John McCain wants to know why. McCain, a long-time proponent of revamping the law requiring shipments between domestic ports be carried on U.S.-flagged vessels, sent a letter to DHS urging the agency to reconsider its decision . "I am confident that repealing this law would lead to hastened recovery efforts where our country needs it most," he wrote.

Separately, Tuesday, the unlikely duo of Sens. Cory Gardner and Kamala Harris asked Perry in a letter to "work expeditiously" with utilities around the country to help get the lights back on. But Southern CEO Tom Fanning, co-chairman of the Electricity Subsector

Coordinating Council, sought to keep expectations realistic in a Tuesday statement: "Puerto Rico is facing complicated logistical challenges for life and safety that need to be stabilized before full power restoration efforts can get underway."

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the American Chemistry Council's Jon Corley was first up to name Ralph Nader as the 1977 SNL host (his opening sketch here). For today: What legendary Hollywood star was also a five-term president of the National Rifle Association? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

NOT FREAKING OUT — YET: Utility-scale solar developers and environmentalists remain hopeful BLM's ongoing leasing program will remain on track despite Zinke's comments Tuesday that large-scale solar development is a poor use of federal lands, Pro's Esther Whieldon and Eric Wolff report . "Our hope is that he was just blowing off steam, it was just a casual off the cuff conversation and that it doesn't have any material or practical implications for the permitting process for our projects," Shannon Eddy, executive director of the Large-scale Solar Association, said referring to his comments at National Clean Energy Week event in Washington.

ICYMI: During his speech, Zinke highlighted some negative environmental consequences of renewables and said fossil fuel development was the best use of public lands. "I think the biggest opportunity in solar is the roof," Zinke said. "Because when I see solar cells out on land, that land is no longer useful for anything else but energy. But there's a lot of roofs. And I think the greatest opportunity for the solar industry is look at where the roofs are." But he also didn't mention the Obama-era solar leasing program at BLM, an omission that some are taking as an encouraging sign.

BISHOP DEFENDS ZINKE'S LOYALTY COMMENT: Interior Secretary Ryan Zinke faced heated criticism Tuesday for his Monday comment that one-third of his agency's workforce is "not loyal" to the administration, but House Natural Resources Chairman Rob Bishop told reporters that guess is "probably low." Bishop added: "The assumption is, you have a whole lot of professional staff — in quotes — that stay from administration to administration. So having that [lack of loyalty] would not surprise me."

'Deeply insulting': In a joint statement, the Coalition to Protect America's National Parks, the Public Lands Foundation and the Association of Retired Fish and Wildlife Service Employees called Zinke's comments "simply ludicrous" and "deeply insulting." And top Natural Resources Democrat Raul Grijalva expressed similar outrage: "Secretary Zinke should clarify his comments and apologize to the public servants he is supposed to be leading," he said in a statement.

IT'S A SECRET: EPA has hired a Virginia contractor to build a "privacy booth for the administrator" at a cost of $24,570, according to records first uncovered by The Washington Post. As Pro's Alex Guillén reports , the booth — known formally in Washington speak as a Sensitive Compartmented Information Facility — is secured against physical and electronic eavesdropping and hacking. The agency already has such a facility for classified discussions, the newspaper reports. EPA contract records also indicate the agency spent $8,000 this month for

another firm, Fairfax-based Secure Mission Solutions, to "remove CCTV equipment to accommodate a secure phone booth for the administrator's office."

PRUITT'S PRICEY TRAVEL: Turns out it's not just $25,000 soundproof booths that Scott Pruitt has a taste for. On June 7, the EPA administrator flew from Cincinnati to New York on an Air Force jet with a cost to taxpayers of $20,000, CBS News reports. Then, on Aug. 4, Pruitt took a private plane from Denver to Durango, Colorado and back for a meeting with state officials, but only after declining to fly on Colorado Gov. John Hickenlooper's plane. A spokesman said Pruitt, a self-described "fiscal conservative," booked the plane "after his flight was significantly delayed in order to ensure that he did not miss a critical meeting," and ethics officials were consulted. But the spokesman did not respond to requests for why he used a military plane for the earlier trip or why he declined to fly with Hickenlooper, CBS reports.

A message from the U.S. Chamber's Global Energy Institute: American infrastructure needs attention, and energy infrastructure should be front and center in that discussion. Today, it is too difficult to build infrastructure, and our electricity grid and pipeline network needs investment. Without ways to move energy of all kinds, our economy will stall. Visit www.globalenergyinstitute.org for more. **

HAMM TO PRESS PERRY ON EIA ESTIMATES: Oil titan Harold Hamm, a major Trump supporter, will meet today with Energy Secretary Rick Perry to argue that EIA is missing the mark with its oil production estimates, he told POLITICO's Mike Grunwald, who tweeted a few tidbits from their conversation Tuesday. The Hamm-backed Domestic Energy Producers Alliance prepared slides outlining its case that EIA is too optimistic with its forecast of U.S. oil production growing to close to 10 million barrels a day next year. The group points out oil companies reported an overall second-quarter drop in production rates, while rig counts and well completion rates also fell — that implies activity is too slow to boost production from August's 9.2 million barrels a day. "EIA's Phantom Forecast needs huge growth to catch up to projections," DEPA argues in slides it shared with POLITICO. Hamm and the association have a vested interest in downplaying production rates — less oil coming out of the ground equals higher prices — but the EIA forecasts have been known to be wrong before. "The EIA analysts do credible, independent work. Of course, no one gets everything right 100 percent of the time," Raymond James energy analyst Pavel Molchanov told ME.

GUARDIANS OF THE ENVIRONMENT: New York Attorney General Eric Schneiderman asserted the U.S. was entering a new era of "progressive federalism" on Tuesday with a coalition of attorneys general responsible for guarding against environmental rollbacks, POLITICO New York Marie J. French reports. "With the new administration clearly in the pockets of the fossil fuel industry, the chemical industry and others, and putting people in power who deny the most basic science, it's very important to recognize the brilliance of our federal system that there is this second tier of protection at the state level," he said.

NEXT WEEK EYED FOR EPW NOMINEE HEARINGS: Senate EPW Chairman John Barrasso told reporters Tuesday he plans to hold two separate nomination hearings next week on "seven or eight" of Trump's agency nominees. The committee declined to provide further details, but the hearings would likely include four EPA and one NRC nominees who saw their

confirmation hearing postponed last week, as well as several Tennessee Valley Authority selections. Barrasso did say he planned to spread out the sessions between Wednesday and Thursday.

LOOK TO FEBRUARY IN CHALLENGE TO CHEMICAL RULE FREEZE: The legal challenge over Pruitt's decision to delay a key chemical facility safety rule until 2019 will stretch through February at least. The D.C. Circuit set a briefing schedule Tuesday beginning next month and stretching through Jan. 31, 2018.

Don't mess with Texas (counties): Harris County, Texas, has decided to sue Arkema, the owner of the Crosby chemical plant that burned in the wake of Hurricane Harvey's flooding. The county had to dedicate "literally dozens of first responders" to that event rather than helping other people, county attorney Rock Owens told the Houston Chronicle.

FUEL TRANSPORTATION SAFETY PICKS GETS HEARING: Skip Elliott, Trump's selection to run the Pipeline and Hazardous Materials Safety Administration gets a nomination hearing today at 10:30 a.m. before the Senate Commerce Committee. Also in the hot seat is Timothy Gallaudet, the administration's pick for the No. 2 position at NOAA.

CLEAN ENERGY CHAMPS NAMED: Citizens for Responsible Energy Solutions will today announce Govs. Kim Reynolds and Brian Sandoval, Reps. Mia Love and Cathy McMorris Rodgers, and Sens. Thom Tillis and Susan Collins as its 2017 clean energy champions.

SENATE PASSES BILL TO FIGHT ALGAL BLOOMS: Lawmakers cleared by unanimous consent legislation S. 1057 (115) aimed at controlling harmful algal blooms. The bill would authorize the appropriation of $110 million to NOAA over the 2019-2023 period.

MAIL CALL! PRUITT'S MEETING RECORDS SOUGHT: Rep. Frank Pallone, top Democrat on the Energy and Commerce Committee, sent a letter Tuesday to EPA's inspector general asking for a "factual record" of Pruitt's meetings that may have violated the Antideficiency Act and other anti-lobbying provisions. Of particular interest is an April meeting with the National Mining Association where Pruitt reportedly encouraged members of the group to criticize the Paris climate accord.

NEW MEXICANS: TOSS OUT INACCURATE MONUMENT REPORT: Sens. Tom Udall and Martin Heinrich, as well as Reps. Ben Ray Lujan and Michelle Lujan Grisham, sent a letter to White House Chief of Staff John Kelly on Tuesday calling on the White House to reject Zinke's report urging changes to a host of national monuments after they claimed to find a number of factual errors surrounding recommended changes to two in their state. "The public deserves better than predetermined political conclusions based on hearsay and claims that are easily disproven if the Department had taken the time to listen to and work with local communities," they wrote.

HOUSTON SUPERFUND SITE RESPONSE PROBED: Texas Democratic Rep. Gene Green, whose district took a direct hit from Hurricane Harvey, asked Pruitt in a Tuesday letter to provide a host of information concerning the agency's response to the U.S. Oil Recovery

Superfund site, which was potentially damaged in the storm. "The apparent slow response and lack of transparency from your agency is already causing harm, by fostering fear and distrust," he wrote.

ME FIRST — LOCAL OFFICIALS: NO CUTS TO EPA'S BUDGET: More than 300 local elected officials are out with a letter today urging Congress not to cut EPA's budget as it considers fiscal 2018 spending packages. "Deep budget cuts will suddenly impose significant new funding requirements — including some unfunded mandates — on states," they write. "To the extent that states cannot make up for the loss of EPA grant funds, public health will be put at risk."

GROUPS: PLEASE SPEND THAT MONEY: A group of energy efficiency organizations, companies and trade associations are asking the House and Senate to ensure funds directed to critical energy efficiency and clean energy programs are actually spent by the Trump administration while longer-term funding is negotiated. "When letters and written inquiries are not enough, we urge you to call on senior leaders to testify on the record about the status of programs and their plans to ensure their agencies are acting consistently with congressional intent," they write.

DOE IG: AGENCY SLUGGISH TO TAKE ON ADDED IT SECURITY: The Energy Department has been slow to setup multifactor logins across its computer systems, a new inspector general audit says. "Although requirements existed for more than 10 years, none of the locations reviewed had fully implemented multifactor authentication for secure access to information systems and resources," the report says, while noting that DOE had nevertheless made progress on the issue. The IG's office studied 18 federal systems and "identified weaknesses related to ensuring adequate protections over access to network and application resources" and found that information DOE reported to OMB on a 2015 "Cybersecurity Sprint" initiative was not consistent. The lack of an agency-wide multifactor authentication process exposes DOE information to "a higher than-necessary risk of compromise," the audit says. DOE concurred with the IG's five recommendations and laid out a plan to square things up over the next year.

READY TO FIGHT: The environmental justice group Green for All kicked off its fly-in last night at a dinner featuring moms from Flint, Mich., and other communities hit hard by pollution. Today they'll visit Capitol Hill to protest EPA budget cuts and urge action on climate change. Rep. Nanette Diaz Barragan, a California Democrat who sits on the House Natural Resources committee, said Republican members of the panel "won't even mention the words 'climate change,'" and she urged women in the group to run for public office.

REPORT: REVAMP OF CLEAN WATER ACT NEEDED: Today's the last day to comment on EPA's efforts to repeal the previous administration's Waters of the U.S. regulation, but the Regulatory Transparency Project, a venture of the Federalist Society, released a paper Tuesday questioning whether Congress needs to fundamentally revisit the Clean Water Act to clarify how to decide what constitutes a waters of the U.S. Read it here.

MAP ALLEGES BIG AIR POLLUTION RISKS FROM OIL, GAS PRODUCTION:

Earthworks is out this morning with an updated analysis finding 2.9 million children are at risk from toxic air pollution from active oil and gas production sites within half a mile of their schools.

****A message from the U.S. Chamber's Global Energy Institute:** Pipelines Power America. America has over 2.6 million miles of pipelines that safely deliver natural gas and petroleum products throughout our nation. It would take over 750 tanker trucks a day to transport the same amount of energy as a single pipeline. While our analysis shows that certain regions like the Northeast face a critical lack of pipeline infrastructure that is contributing to higher prices and negative economic impacts, pipeline projects are under attack across the nation. It's time to end delays and allow for energy that is essential for our daily lives to move around our nation. Find out more about how Pipelines Power America here: http://bit.ly/2wG6Ij9 **

White House weeks away from formal funding request for Puerto Rico aid, sources say
Back

By Sarah Ferris and Jennifer Scholtes | 09/26/2017 03:01 PM EDT

The White House is likely weeks away from a formal funding request for Puerto Rico, as the storm-ravaged island enters its sixth day without power, according to Trump administration and congressional sources.

Senate Minority Leader Chuck Schumer is demanding that lawmakers approve a disaster aid package by week's end to help Puerto Rico and the U.S. Virgin Islands recover from Hurricane Maria. But aides familiar with the devastation on the Caribbean islands say the government is far more focused on delivering resources right now than getting more cash from Congress.

"The thing is, funding doesn't help them. Getting people and supplies there is what needs to happen," one administration aide said Tuesday. "There's no crunch in the short term for cash."

Still handling three simultaneous hurricane relief efforts, FEMA's staff is stretched thin. But the agency's disaster relief fund is still flush after Congress provided $15 billion in disaster aid, H.R. 601 (115), earlier this month, as well as another $6.7 billion that will kick in at the start of the fiscal year Oct. 1.

Advocates argue that funding for FEMA doesn't mean Puerto Rico's government can pay its own bills, however, including its already depleted Medicaid program.

While the federal government continues to calculate a damage estimate, responders deployed to the region are focused on logistics like getting food and water to millions of people who remain without power as temperatures hit 90 degrees and humidity hovers above 70 percent.

The administration contends that much of Puerto Rico and the Virgin Islands is so damaged that officials can't even begin damage assessment, meaning the federal government may not know for weeks how many roads, buildings or power lines will need to be rebuilt.

"The issue is not paying for any of this," the administration source said. "It's like: Paying for what?"

But Democrats say the administration's response is already wholly anemic, accusing President Donald Trump of taking potshots at the ailing islanders while neglecting to deploy the full force of federal resources.

"We have the greatest military the world has ever seen," Rep. Joe Crowley (D-N.Y.), chairman

of the Democratic Caucus, told reporters on Tuesday. "We know how to invade other nations. We know how to bring that equipment in. We have paratroopers. We have sailors. We have Marines. We have men and women who would want to help their fellow countrymen in their time of need. It's time for the president to invoke that and to bring that type of response."

Trump said Tuesday that he plans to travel to Puerto Rico early next week to survey damage, more than a dozen days after Maria compounded devastation wrought by Hurricane Irma earlier this month.

The president has fielded criticism for neglecting to visit the islands as quickly as he arrived in Texas and Florida following Hurricanes Harvey and Irma. But he told reporters at the White House on Tuesday that his administration is "getting really good marks for the work we're doing" in Puerto Rico and the Virgin Islands.

Congressional Democrats have derided Trump for focusing on the NFL's national anthem controversy in the wake of the disaster and noting Puerto Rico's financial issues. "Texas & Florida are doing great but Puerto Rico, which was already suffering from broken infrastructure & massive debt, is in deep trouble," Trump tweeted late Monday.

Rep. Nydia M. Velázquez (D-N.Y.), who is the first Puerto Rican woman to be elected to Congress, said she is "offended and insulted" by the president's tweet.

"If you don't take this crisis seriously, this is going to be your Katrina," Velázquez told reporters Tuesday about Trump, suggesting the president appoint a military general to organize comprehensive emergency response.

Rep. José E. Serrano (D-N.Y.) said Tuesday that he has gotten commitments from House Appropriations Chairman Rodney Frelinghuysen (R-N.J.) and House Speaker Paul Ryan that Puerto Rico and the Virgin Islands will be "treated equally in any funding package to come.

"You can't look at this funding and say, 'Whatever is left over can go to the Virgin Islands and Puerto Rico.' No — it has to be equal to Texas, to Florida, to Louisiana, to Georgia. ..." Serrano said. "Now it's incumbent on us to stay on top of the leadership to make sure that a certain segment of the other party doesn't break this promise that the speaker and the chairman of Appropriations have put out."

Congress approved its massive hurricane relief package on Sept. 8 — six days after Harvey made landfall in Texas — yet appropriators appear weeks away from an aid request devoted to Puerto Rico.

The White House believes there is "plenty of money" for the hurricane response in the short term, an administration aide said, acknowledging that much more will be needed in the months to come.

While White House officials plan to discuss that longer-term funding strategy this week, even a back-of-the-envelope estimate will be incredibly difficult, according to one person familiar with

the damage assessment efforts.

The government officials charged with surveying the damage — including those from FEMA, the Defense Department and the Centers for Disease Control and Prevention — each have to come up with their own funding estimates. But many of the damage assessment teams are still working on recovery in states like Texas and Florida.

Heather Caygle contributed to this report.

White House denies Jones Act waiver for Puerto Rico Back

By Ben Lefebvre | 09/26/2017 02:07 PM EDT

The Trump administration will not waive a rule banning foreign vessels from delivering fuel to hurricane-ravaged Puerto Rico, the Department of Homeland Security said today.

Waiving the Jones Act would not address the lack of port space needed for vessels to deliver the fuel to the island, DHS spokesman David Lapan said. DHS consulted with other federal agencies and found that "there is sufficient numbers of U.S.-flagged vessels to move commodities to Puerto Rico," Lapan told POLITICO in an email.

"The limitation is going to be port capacity to offload and transfer cargo, not vessel availability," Lapan said. "The fuel supply challenges facing Puerto Rico are not a function of the lack of fuel being shipped to the island, but caused by the devastation to Puerto Rico's transportation networks that have prevented fuel from being transported on the island to all of the places that need it."

The Jones Act stipulates that only U.S.-flagged ships can deliver fuel to domestic ports, keeping the number of vessels available to deliver fuel. Puerto Rico is running out of fuel and other necessitates after taking a direct hit from Hurricane Maria last week.

DHS waived the rule when hurricanes ripped through Texas and Florida in recent weeks, but in those cases, the ships were necessary to replace lost fuel production after refineries were shut down during the storms, Lapan said.

WHAT'S NEXT: President Trump is scheduled to visit Puerto Rico next week.

Solar industry stays calm after Zinke says it's a bad fit for public lands Back

By Esther Whieldon and Eric Wolff | 09/26/2017 06:23 PM EDT

Renewable energy supporters are worried — but not yet panicked — after Interior Secretary Ryan Zinke slammed large-scale solar development as a poor use of federal lands.

Zinke urged solar companies to focus on smaller rooftop projects rather than sprawling installations on federal lands. But utility-scale developers and environmentalists remain hopeful that BLM's ongoing leasing program will remain on track.

"Our hope is that he was just blowing off steam, it was just a casual off the cuff conversation and that it doesn't have any material or practical implications for the permitting process for our projects," said Shannon Eddy, executive director of the Large-scale Solar Association.

Zinke's speech Tuesday at a National Clean Energy Week event in Washington offered the clearest indication to date of his preference for fossil fuel development over renewable energy.

"If you are operating on public land, extraction is going to be in the best public interest," he told the audience, which included representatives from the renewable energy, natural gas and nuclear industries.

In his speech, Zinke stressed his support for an "all of the above" approach to energy, though he focused more heavily on the negative environmental consequences of renewables than of fossil fuel development. He pointed to bird deaths or habitat loss that can be caused by wind and solar development, but said little about the air pollution or spills that can come with oil, gas or coal production. And climate change was hardly mentioned at all.

"I think the biggest opportunity in solar is the roof," Zinke said. "Because when I see solar cells out on land, that land is no longer useful for anything else but energy. But there's a lot of roofs. And I think the greatest opportunity for the solar industry is look at where the roofs are."

By the end of 2016, utility scale solar made up 70 percent of the industry's growth, according to the Solar Energy Industries Association, the largest solar trade association.

Environmentalists accused Zinke of trying to draw attention away from the harm the administration is doing to the environment by promoting fossil fuel production.

"It's a false choice to say that we can either protect our wildlife or advance renewables on public lands," said Alex Daue, assistant director for energy and climate campaign at The Wilderness Society.

Zinke did not mention the solar leasing program at BLM, which was launched during the Obama administration, an omission that some are taking as an encouraging sign. If he does not formally tell BLM field staff to slow down or turn their attention to other matters, it could lessen the

immediate effect on the environmental studies and other work happening on the ground, said Nathanael Greene, director of the Natural Resources Defense Council's renewable energy policy initiative.

Still, his general disinterest in the solar industry's priorities such as improved siting and streamlined permitting could amount to "death by neglect" for the program, he said.

Solar developers also could lose valuable federal tax incentives if BLM slow rolls its approval of their projects, Eddy noted.

Furthermore, it's unlikely that rooftop solar panels would be able to replace the potential generation available on public lands without unduly straining the electric grid, said Kim Delfino, Defenders of Wildlife California program director.

California "learned the hard way that ... we do have to have a certain amount of utility scale renewable energy as we work really hard to put in place the grid and policies to have rooftops," Delfino said in an interview Tuesday.

BLM estimated in 2012 that about 24,000 megawatts of solar panels could be installed on about 214,000 acres of federal land over a 20-year period. Under the Obama administration, BLM authorized 42 projects totaling 9,540 MW. No new leases are expected to be offered until next year at the earliest, officials have said.

Solar leasing is dwarfed by the amount of land occupied by the oil and gas industry. The oil and gas industry held 27 million acres under lease as of Sept. of last year, including 12 million acres under production, according to BLM data. And that figure is down from a peak in 1989 when the industry had 67 million acres under lease. BLM leased 62,000 acres to solar developers by October 2016.

The Interior Department and BLM did not respond to requests for comment Tuesday.

Zinke's remark may foretell yet more gloom and uncertainty for the solar industry, which already faces the prospects of tariffs on the cheap, imported solar panels that fueled its growth. Tariffs would likely jack up costs for developers and installers, leading to project slowdowns and the loss of as many as 88,000 jobs, the industry says.

The Solar Energy Industries Association, which represents both rooftop and utility-scale developers, offered an optimistic interpretation of Zinke's comments.

"The beauty of solar energy is it can be deployed in multiple ways. From rooftop panels to large scale installations owned by utilities, there is room for all solar energy and each one plays an important role in the diversification of our nation's electricity mix," SEIA CEO Abigail Ross Hopper said in a statement. "We are pleased both Sec. Zinke and [Energy Secretary Rick] Perry took part in National Clean Energy Week and we look forward to continued conversations with both of them on the ways in which solar is strengthening America."

Other proponents pointed to the wide support solar enjoys on both sides of the political aisle.

"I think there's bipartisan support for providing access to federal lands for energy development, I can't imagine it's been undermined, despite what the Secretary said today," said Todd Foley, senior vice president of policy and government affairs at the American Council on Renewable Energy. "To put it as some people do, we shouldn't be picking winners and losers."

EPA building Pruitt secure communications room Back

By Alex Guillén | 09/26/2017 03:59 PM EDT

EPA is building a special secure communications room for Administrator Scott Pruitt, according to contract records first reported today by the Washington Post.

EPA hired Richmond, Va.-based Acoustical Solutions to construct a "privacy booth for the administrator" at a cost of $24,570, according to the contract details. It is expected to be completed by Oct. 9.

The privacy booth will serve as a Sensitive Compartmented Information Facility, EPA spokeswoman Liz Bowman told the Post. SCIFs, as they are known in Washington lingo, are rooms specially secured against physical and electronic eavesdropping and hacking that are used for discussing classified issues.

EPA already has a SCIF facility used for discussing sensitive matters, the Post reported. The agency's SCIF appears to have existed for years; an agency guide on national security issues dated 2006 includes information on accessing and maintaining the agency's CIA-accredited SCIF facilities.

EPA last week said employees will have to complete new rounds of training for handling sensitive information, including classified data on critical infrastructure.

How Bannon and Pruitt boxed in Trump on climate pact Back

By Andrew Restuccia and Josh Dawsey | 05/31/2017 08:00 PM EDT

Donald Trump's chief strategist and Environmental Protection Agency administrator maneuvered

for months to get the president to exit the Paris climate accord, shrewdly playing to his populist instincts and publicly pressing the narrative that the nearly 200-nation deal was effectively dead — boxing in the president on one of his highest-profile decisions to date.

Steve Bannon and Scott Pruitt have sought to outsmart the administration's pro-Paris group of advisers, including Trump's daughter Ivanka, who were hoping the president could be swayed by a global swell of support for the deal from major corporations, U.S. allies, Al Gore and even the pope. But some of that pro-Paris sentiment wound up being surprisingly tepid, according to White House aides who had expected that European leaders would make a stronger case during Trump's trip abroad in May.

Those who want Trump to remain also faced an insurmountable hurdle: The president has long believed, rightly or wrongly, that the U.S. is getting a raw deal under the accord, and it proved nearly impossible to change his mind.

The internal reality show will culminate Thursday when Trump finally announces his decision, after a rush of leaks Wednesday from administration officials saying he was on the verge of pulling the plug on U.S. participation in history's most comprehensive global climate agreement.

"I will be announcing my decision on Paris Accord, Thursday at 3:00 P.M.," Trump tweeted Wednesday night, without revealing the outcome. "The White House Rose Garden. MAKE AMERICA GREAT AGAIN!"

Some White House aides held out the prospect that the president still might take the middle course that Ivanka Trump and others had advocated — staying in the deal while drastically scaling back the Obama administration's nonbinding carbon cleanup promises. But three White House officials said Wednesday that they expect Trump to make a clean break by withdrawing from the agreement, though they noted it's possible the president will change his mind at the last minute.

In recent months, Pruitt and Bannon made sure Trump heard from a parade of conservative leaders and Republican lawmakers who raised concerns that the deal would hobble his pro-fossil-fuel energy agenda.

"We made very much the economic message argument," said Club for Growth President David McIntosh, whose group wrote letters to the White House and spoke to senior staff. "It was bad for the U.S. economy. It would stifle economic growth and the United States should withdraw."

As the news of the impending decision spread Wednesday, White House chief of staff Reince Priebus began calling and fielding calls from lawmakers, indicating that the U.S. was unlikely to stay in the agreement, one person familiar with the conversations said.

If Trump withdraws, Paris' foes will have Pruitt and Bannon to thank.

One Republican close to the White House called it the "classic split" and said conservative activists had flooded the White House in recent weeks, after seeing increasing chatter that Trump

might stay in. This person said Bannon and Pruitt worked quietly to make sure Trump was hearing their side and touched base occasionally on political strategy to woo him.

"You had the New Yorkers against it, and all the campaign loyalists for it," this person said, referring to the push to withdraw. "When the New Yorkers get involved, it gets complicated for Trump and everyone else around him."

Pruitt and Bannon have told others repeatedly for months that Trump will pull out of the agreement, as they aggressively pushed a narrative that they hoped would prove to be true, even as White House aides continued to debate the issue.

"Some of the debate was for show to help the moderates feel like they had their say," said one person who has spoken to Pruitt. "Pruitt has believed all along that this was never in doubt."

Pruitt, who frequently attacked the EPA's regulations in court when he was Oklahoma's attorney general, used his new post as EPA administrator to orchestrate an aggressive campaign to marshal conservative opposition to the Paris agreement.

He bashed the deal during a closed-door April meeting of the National Mining Association's executive committee, telling the group that the agreement would hurt the economy. Pruitt's staff also urged lawmakers and conservative groups to publicly criticize the agreement, sources familiar with the issue told POLITICO, which had the effect of increasing public pressure on Trump.

Bannon similarly argued in meetings with Trump and his team that the president would be breaking his campaign promise to "cancel" the agreement if he decided to remain. And he argued that the accord is a bad deal for the United States because other countries aren't doing enough to curb their emissions.

Pruitt and Bannon's anti-Paris campaign was meant to counter a separate offensive by members of the administration who supported staying in the pact, including Ivanka Trump and her husband, Jared Kushner.

In recent months, Ivanka Trump set up a process in which the president would regularly hear from people who supported remaining in the agreement, according to administration officials.

The "remain" camp believed, perhaps naively, that Trump could be influenced by the support the Paris deal has received from major corporations, including Exxon Mobil, which Secretary of State Rex Tillerson led for more than a decade.

"Ivanka is doing what she can to get him to stay," one official said. "But that doesn't mean he's going to do it."

White House aides outlined a plan to remain in the agreement while weakening former President Barack Obama's pledge to cut domestic greenhouse gas emissions. They made the case that Trump could use the goodwill generated from remaining to negotiate better economic incentives

for fossil fuels, and they even won the buy-in of several coal companies that detested Obama's climate policies.

They hoped European leaders could convince Trump he would risk damaging diplomatic relations if he withdrew. Ivanka Trump also brought Gore to Trump Tower to try to sway her father's mind during the presidential transition, and Pope Francis handed the president a copy of his papal encyclical on climate change when the two men met at the Vatican last week.

Trump took calls from a parade of business leaders and foreign leaders in recent weeks, most pressing him to remain, according to a senior administration official — and the calls continued on Wednesday.

"He had tremendous pressure from international leaders, from members of his own Cabinet and advisers in the international sphere not to pull out of the accord because of the perceived loss of face," said McIntosh, the Club for Growth president.

But while the leaders of G-7 nations all pressed Trump to remain in the agreement during last week's summit in Italy, Paris supporters in the White House have privately groused that they didn't make an aggressive enough case.

European officials countered they tried not to push Trump too much during the meetings, believing that a hard sell could backfire. And they were buoyed by early signals from White House officials ahead of the summit that Trump was open to remaining.

Indeed, European officials received a series of mixed messages from Trump's team during the summit. National Economic Council Director Gary Cohn, a Paris supporter and the only U.S. official permitted to attend meetings with G-7 leaders, told reporters that Trump was "evolving" on climate change, which many interpreted to mean that he would remain.

White House officials chalked up Cohn's comments to Trump's habit of echoing the perspective of the last person he talked to. By that time, Bannon and other opponents of the agreement had returned to the United States. But Trump's decision to delay a final verdict on the agreement gave Pruitt and Bannon a final opportunity to make their case. Pruitt met with Trump to discuss Paris on Tuesday.

Most European officials were unwilling to comment about the prospect that Trump will withdraw, as they have not yet received official word from the White House and are still holding out hope that the president will change his mind.

The officials have already begun looking to other countries for support on climate change, with the European Union set to promise deeper cooperation with China. Some officials have even adopted a new informal nickname for the major remaining countries that support action on climate change: the G-6.

Some Trump administration officials were reeling on Wednesday after the news first broke that Trump was prepared to withdraw.

Trump had not officially told his entire team of senior aides he was considering leaving the agreement Wednesday when news leaked out. "Everyone assumed that's what was going to happen, but we weren't called all in and told, 'Oh, we're putting this story out today," one person said.

Having learned a lesson after Trump changed his mind about pulling out of NAFTA, administration officials cautioned against definitive reporting, warning that the president is notoriously fickle. As administration officials began tamping down reports that Trump's decision was final, White House aides were swamped with calls, emails and texts from lobbyists and diplomats seeking clarification.

Officials close to Trump sometimes leak information before it is final — hoping to back him into a corner, or believing that comments during a private meeting represent his ultimate view. White House officials put out word in April that he was pulling out of NAFTA, even though Trump had not made up his mind, and news leaked during the campaign that he would pick Mike Pence as his running mate even as he weighed other candidates.

"Sometimes people close to Trump put things into the media environment to see how he'll react to it," one adviser said. "If your idea gets good coverage, it's likely to help him decide to go with what you're saying."

One of the biggest lingering questions: If he withdraws, how will Trump do it?

He could abide by the formal procedures in the underlying text of the agreement, which mandate that a formal withdrawal will not go into effect until Nov. 4, 2020, at the earliest. Or he could pull out of the United Nations Framework Convention on Climate Change, the underlying 1992 treaty that governs the negotiations, which would allow for a speedier pullout — a far more radical step that would see the U.S. abstain from the entire climate negotiating process.

He could also declare that the agreement is a treaty, which would require a two-thirds-majority ratification vote in the Senate that would certainly fail.

Whatever he does, supporters of the climate agreement expect a harsh reaction from the United States' friends if the country pulls out.

"I think the diplomatic backlash will be worse than it was when the U.S. rejected Kyoto," said Susan Biniaz, the State Department's longtime former climate change lawyer, referring to the George W. Bush administration's decision to spurn the 1997 Kyoto climate agreement.

One former U.S. official agreed: "Will global leaders trust the U.S. to negotiate a climate treaty ever again? After Kyoto and Paris, who will trust us to keep our word as a nation? Our credibility is gone."

Summaries

ENDANGERED SPECIES
Hawaii/Critical Habitat Boundaries for Certain Plants
ENDANGERED SPECIES

Final rule of the U.S. Fish and Wildlife Service removes textual descriptions of critical habitat boundaries for certain plants in Hawaii where it has been determined that maps are sufficient for such delineation. The rule applies to designations for plants on the islands of Hawaii, Kauai, and Niihau. The rule is effective Nov. 27, 2017. Contact: Carey Galst; USFWS; 703-358-1954. Citations: 50 CFR 17.94

Regulatory Update

FOOD SAFETY
Center for Veterinary Medicine Dispute Resolution Procedures Guidance
FOOD SAFETY

Notice announces the intention of the FDA to seek OMB approval for a continuing information collection request regarding the Center for Veterinary Medicine's guidance for industry (Guidance #79) concerning the dispute resolution procedures for science-based decisions on products regulated by the agency. The guidance addresses scientific controversies involving issues of technical expertise and outlines how the agency applies existing regulations to review such disputes. Comments are due Dec. 26, 2017. Contact: Ila Mizrachi; FDA, Office of Operations; 301-796-7726; PRAStaff@fda.hhs.gov. Citations: 21 CFR 10.75

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
California/Palen Solar Photovoltaic Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the Bureau of Land Management, in cooperation with Riverside County, Calif., announces the availability of a draft supplemental environmental impact statement, environmental impact report, and draft land use plan amendment for the Palen Solar Photovoltaic Project, near Desert Center, Calif. The project, which now is proposed by EDF Renewable Energy, of San Diego, was abandoned by several previous applicants and involves the construction and operation of a 500-megawatt solar photovoltaic facility with a proposed project footprint of approximately 3,400 acres. The project also involves the construction of a 6.7-mile single circuit 230-kilovolt transmission line connecting it to the Southern California Edison Red Bluff Substation. The agency has identified the reduced footprint alternative as the preferred alternative. Comments are due Dec. 11, 2017. Contact: Mark DeMaio; BLM, Palm Springs-South Coast Field Office; 760-833-7124; mdemaio@blm.gov

82 FR 49846 (10/27/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Determination Concerning Safety and Effectiveness/Cardene SR
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a determination that Cardene SR (nicardipine HCl) extended-release capsules, 30 milligrams (mg), 45 mg, and 60mg, were not withdrawn from sale for reasons of safety or effectiveness. The determination will allow the FDA to approve abbreviated new drug applications that refer to the product if relevant legal and regulatory requirements are met. Contact: Daniel Gottlieb; FDA, Center for Drug Evaluation and Research; 301-796-6650

82 FR 49840 (10/27/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Development of Drugs for Treatment of Pediatric Gastroesophageal Reflux Disease
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a draft guidance for industry concerning development of drugs for treatment of pediatric gastroesophageal reflux disease. The guidance is intended to assist in clinical drug development and addresses clinical presentation by age and disease, study populations, endpoints, and pharmacometric issues affecting dosing. Comments are due Dec. 26, 2017. Contact: Stacy Barley; FDA, Center for Drug Evaluation and Research; 301-796-2137

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
First Responder Network Authority/East Region
GENERAL ENVIRONMENT AND SAFETY

Notice of the National Telecommunications and Information Administration, First Responder Network Authority (FirstNet), announces the availability of the final programmatic environmental impact statement for the east region of the proposed nationwide public safety broadband network. The PEIS addresses deployment and operation of the proposed broadband network in the east region consisting of Connecticut, Delaware, the District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia, and West Virginia. Once a record of decision is signed, the proposed FirstNet projects will submit site-specific environmental documentation to determine whether individual projects have been adequately evaluated in the PEIS or instead warrant a categorical exclusion, environmental assessment, or environmental impact statement. Contact: Amanda Pereira; NTIA, First Responder Network Authority, 571-665-6072

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Formal Dispute Resolution/Issues Related to Pharmaceutical Current Good Manufacturing Practice
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the FDA to seek OMB approval for a continuing information collection request concerning a guidance for industry on formal dispute resolution of scientific

and technical issues related to pharmaceutical current good manufacturing practice (CGMP). The guidance provides manufacturers of veterinary and human drugs, including human biological drug products, with information on how to resolve disputes about scientific and technical issues relating to CGMP that may arise during FDA inspections of pharmaceutical manufacturers or during the FDA's assessment of corrective actions. The guidance also describes procedures for raising disputes to the Office of Regulatory Affairs and center levels and for requesting review by the dispute resolution panel. Comments are due Dec. 26, 2017. Contact: Domini Bean; FDA, Office of Operations; 301-796-5733; PRAStaff@fda.hhs.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Louisiana, Texas/East-West Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of the environmental assessment for the East-West Project, proposed by Florida Gas Transmission Co. (FGT), of Houston. The project involves the construction and operation of approximately 25.22 miles of new lateral and connection pipeline and four new meter stations in Acadia and Calcasieu parishes in Louisiana and Jefferson, Matagorda, Orange, and Wharton counties in Texas for a new capacity of 275 million cubic feet per day on FGT's pipeline system. Comments are due Nov. 20, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlinesupport@ferc.gov

82 FR 49800 (10/27/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Oklahoma/Pensacola Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces meetings on the procedure for relicensing the Grand River Dam Authority's Pensacola Hydroelectric Project, located on the Grand River in Craig, Delaware, Mayes, and Ottawa counties in Oklahoma. The meetings will provide an overview of the integrated licensing process that will be used beginning in January 2018, the schedule for the project, and how FERC assesses information needs during the study planning process. The meetings are scheduled for Nov. 14, 2017, in Langley, Okla., and Nov. 15, 2017, in Langley and Grove, Okla. Contact: Rachel McNamara, FERC; 202-502-8340; rachel.mcnamara@ferc.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Patient-Focused Drug Development
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a workshop to discuss methodological approaches to collecting patient experience data for submission to the FDA to inform regulatory decision-making. The

workshop will be used to obtain feedback from stakeholders on considerations for standardized nomenclature and terminologies for patient-focused drug development, including methods to collect meaningful patient input throughout the drug development process and methodological considerations for data collection, reporting, management, and analysis. The workshop will inform the development of a patient-focused drug development guidance. A discussion document outlining the topic areas that will be addressed in the draft guidance will be published before the workshop. The workshop is scheduled for Dec. 18, 2017, in Silver Spring, Md. Comments are due Feb. 16, 2018. Contact: Meghana Chalasani; FDA, Center for Drug Evaluation and Research; 240-402-6525; Meghana.Chalasani@fda.hhs.gov

82 FR 49838 (10/27/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY

Prohibition on Phthalates in Toys and Child Care Articles

GENERAL ENVIRONMENT AND SAFETY

Final rule of the Consumer Product Safety Commission prohibits children's toys or child care articles containing concentrations of more than 0.1 percent of diisononyl phthalate (DINP), diisobutyl phthalate (DIBP), di-n-pentylphthalate (DPENP), di-n-hexyl phthalate (DHEXP), and dicyclohexyl phthalate (DCHP). The rule also restates the permanent prohibition on the manufacture for sale, offer for sale, distribution in commerce, or importation of children's toys or child care articles containing concentrations of more than 0.1 percent of di-(2-ethylhexyl) phthalate (DEHP), dibutyl phthalate (DBP), or benzyl butyl phthalate (BBP). The rule is effective April 25, 2018. Contact: Carol Afflerbach; CPSC, Office of Compliance and Field Operations; 301-504-7529; cafflerbach@cpsc.gov. Citations: 16 CFR 1307.1, 1307.2, 1307.3

82 FR 49938 (10/27/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY

Prohibition on Phthalates in Toys and Child Care Articles/Notice of Requirements

GENERAL ENVIRONMENT AND SAFETY

Proposed rule of the Consumer Product Safety Commission would update notice of requirements for prohibitions of children's toys and child care articles to reflect a concurrent final rule that prohibits children's toys or child care articles containing concentrations of more than 0.1 percent of specified phthalates. The rule also would implement a new test method to determine whether there are prohibited phthalates in children's toys or child care articles. The test method is substantially the same to the current test method except for revisions to reflect the updated list of phthalates in the concurrent rule. Comments are due Jan. 10, 2018. Contact: Scott Heh; CPSC, Directorate for Laboratory Sciences; 301-504-7646; sheh@cpsc.gov. Citation: 16 CFR 1112.15

82 FR 49767 (10/27/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY

West Virginia/Hawks Nest and Glen Ferris Hydroelectric Projects

GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of the final environmental assessment regarding an application by Hawks Nest Hydro LLC, of Gauley Bridge, W.Va., for the Hawks Nest and Glen Ferris hydroelectric projects on the New and Kanawha rivers in Fayette County, W.Va. The application addresses the continuation of a run-of-river operation and an increase in the minimum flow for the bypassed reach for the Hawks Nest project and the continuation of a run-of-river operation for the Glen Ferris project. The final EA concludes that relicensing the projects, with appropriate environmental protective measures, would not constitute a major federal action that would significantly affect the quality of the human environment. Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Electronic Logging Device Exemption Request/Pipe Line Contractors Association
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the FMCSA announces the denial of an application (82 FR 31796; 07/10/2017) from the Pipe Line Contractors Association, of Dallas, for an exemption for pipeline contractor vehicle drivers. The applicant requested an exemption from the installation and driver use requirements for electronic logging devices designed to record driver hours-of-service for a period of five years. The agency has determined that the applicant would not achieve a level of safety that is equivalent to, or greater than, the level that would be achieved without such exemption. Contact: Tom Yager; FMCSA, Office of Carrier, Driver and Vehicle Safety Standards; 614-942-6477; MCPSD@dot.gov. Citations: 49 CFR 395

HAZARDOUS MATERIALS TRANSPORTATION
Electronic Logging Device Exemption Request/Western Equipment Dealers Association

HAZARDOUS MATERIALS TRANSPORTATION

Notice of the Federal Motor Carrier Safety Administration announces the receipt of an application from the Western Equipment Dealers Association on behalf of several organizations for an exemption for farm, industrial, and outdoor power equipment dealers. The applicant requests an exemption from the electronic logging device requirements designed to record drivers' hours of service, allowing drivers instead to complete paper records of duty status. Comments are due Nov. 27, 2017. Contact: Tom Yager; FMCSA, Driver and Carrier Operations Division; 614-942-6477; MCPSD@dot.gov. Citations: 49 CFR 395

82 FR 49770 (10/27/2017)

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Sleeper Berth Time Pilot Program
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the Federal Motor Carrier Safety Administration announces the submission of a new information collection request to the OMB regarding a pilot program for temporary relief from sleeper berth requirements for licensed commercial drivers who regularly use a sleeper berth to accumulate their required hours of nonduty work status. The program would allow a limited number of commercial drivers to split the required 10 hours of nonduty work status. The agency is seeking to compile driver metrics and to assess safety performance and fatigue levels. The collection would include applications, questionnaires, daily field studies, weekly phone briefings, and use of instrumented vehicles concerning safety performance and fatigue levels. The agency also would compile electronic logging device data, onboard monitoring system data, roadside violation data, wrist actigraphy data, Psychomotor Vigilance Test data, subjective sleepiness ratings, and sleep logs data. Comments are due Nov. 27, 2017. Contact: Michel; FMCSA, Research Division; 202-366-4354; Nicole.michel@dot.gov. Citations: 49 CFR 395.1

Regulatory Update

OIL AND GAS INDUSTRY
Natural Gas Data Collection Program
OIL AND GAS INDUSTRY

Notice of the Department of Energy, Energy Information Administration, announces the submission of six revised information collection requests to the OMB regarding the Natural Gas Data Collection Program. The collections address the forms for the annual reporting of natural and supplemental gas supply and disposition (EIA-176), the monthly reporting of underground gas storage (EIA-191), the survey for natural gas processing plants (EIA-757), and the monthly reporting of natural gas purchases and deliveries to consumers (EIA-857). The collections also address the monthly natural gas marketer survey (EIA-910) and the weekly underground natural gas storage report (EIA-912). The revisions add questions, update response options, modify the data collected and survey schedules, and provide for respondent confidentiality. Comments are due Nov. 27, 2017. Contact: Michael Kopalek; EIA, Office of Petroleum and Biofuel Statistics; 202-586-4001; Michael.Kopalek@eia.gov

Subject: FERC declines to extend comment period on DOE pricing rule

By Darius Dixon

10/11/2017 02:33 PM EDT

FERC denied the requests today of dozens of industry organizations seeking more time to comment on the DOE's grid resiliency pricing proposal.

Energy trade groups representing the oil, natural gas, solar and wind industries, as well as several power generators likely affected by DOE's rule, had asked for 90 days to comment on the plan and 45 days for reply comments. That would push the comment deadlines into 2018. Last week, FERC said it would accept initial comments for less than a month, and today's decision stuck to that timeframe.

"Upon consideration, the motions of the Energy Industry Associations, Independent Producers, and Industrial Energy Consumers of America for extension of time to file comments are hereby denied," FERC's notice states.

On Tuesday, the National Association of Regulatory Utility Commissioners, which represents state regulators and tends to have significant influence with FERC, also requested a longer comment period, but their request wasn't cited in FERC's notice today.

WHAT'S NEXT: FERC is taking initial comments through Oct. 23 and reply comments through Nov. 7.

Today's Playbook Power Briefing presented by Chevron

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

NEWS -- NBC'S VAUGHN HILLYARD (@vaughnhillyard) -- DISASTER DECLARATION IN CALIFORNIA: "New: The Vice President, on behalf of the administration, set to make major disaster declaration of California wildfires. VP called Gov. Jerry Brown this morning & is currently at Sacramento County Office of Emergency Services. Will deliver remarks soon."

THE PRESIDENT, appearing in the Oval Office next to Henry Kissinger early this afternoon, said he has confidence in Secretary of State Rex Tillerson.

-- FROM ALEX LEARY'S POOL REPORT: "Asked if his dispute with Sen. Bob Corker will affect tax reform, POTUS said: 'I don't think so. I don't think so at all. I think we're well on our way. The people of this country want tax cuts, they want lower taxes. We're the highest taxed nation in the world. ...'"

... JULY 2016 TWEET pinned to the top of WSJ's Richard Rubin's Twitter feed: "Because this is my lot in life, I will note, again, that the US is a low-tax country."

-- TRUMP ON HIS HEALTH CARE CHANGES : "They'll be able to buy, they'll be able to cross state lines and they will get great, competitive health care and it will cost the United States nothing. Take care of a big percentage of the people we're talking about, too. With Congress the way it is, I decided to take it upon myself, so we'll be announcing that soon as far as the signing is concerned. But it's largely worked out. It's very simple in one way but very intricate in another. It will be great, great health care for many, many people."

SPEAKER PAUL RYAN is going to Puerto Rico Friday.

Good Tuesday afternoon. LOTS OF MEDIA MOVES -- MOLLY BALL is leaving the Atlantic and joining Time as national political correspondent. ... **ABBY PHILLIP** is leaving the Washington Post to join CNN as a White House correspondent. ... **BEN PERSHING** will become editor of National Journal; he was previously NJ's managing

editor. ... **GEOFF BENNETT** is leaving NPR to become an NBC News White House correspondent.

TRUMP V. MUELLER SHOWDOWN? -- "Trump urged by some to go on the attack against Mueller," by the AP's Tom LoBianco and Eric Tucker: "Even as President Donald Trump's advisers encourage him to accept the realities of special counsel Robert Mueller's probe, longtime friends and allies are pushing Trump to fight back, citing concerns that his lawyers are naive to the existential threat facing the president. Trump supporters and associates inside and outside the White House see the conciliatory path as risky to the maverick president's tenure. Instead, they want the street-fighting tweeter to criticize Mueller with abandon. ...

"In private, Trump remains relatively calm for now, but that doesn't mean he thinks the Russia probe is legitimate, and he could return to fighting Mueller at any moment, according to a group of about 15 Trump allies, advisers and former campaign aides, who spoke on condition of anonymity to speak candidly about private conversations with the White House." http://bit.ly/2xurveO

PHOTOS FROM THE CALIFORNIA FIRES -- "The Destruction From the California Fires in Photos and Maps," from NYT -- ***9 pix on one page*** http://nyti.ms/2gaRSyJ

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 6:30 a.m.: "Since Congress can't get its act together on HealthCare, I will be using the power of the pen to give great HealthCare to many people - FAST" ... **at 6:42 a.m.:** "With Jemele Hill at the mike, it is no wonder ESPN ratings have 'tanked,' in fact, tanked so badly it is the talk of the industry!" ... **at 8:13 a.m.:** "Highly respected author, Christopher Bedford, just came out with book, 'The Art of the Donald, Lessons from America's....' Really good book!" ... **at 8:50 a.m.:** "The Failing @nytimes set Liddle' Bob Corker up by recording his conversation. Was made to sound a fool, and that's what I am dealing with!"

-- NOTE: Bedford appeared on "Fox and Friends" this morning at 7:45 a.m. to promote his book -- the first that he's written. http://bit.ly/2yXmlEh ... ***$13.51 on Amazon*** http://amzn.to/2yX9JwY

TEAM TRUMP INFIGHTING -- "Steve Bannon Privately Slammed Pence VP Pick," by BuzzFeed's Joseph Bernstein and Henry Gomez: "Steve Bannon privately slammed the selection of Mike Pence as Donald Trump's running mate a month before taking over the Trump campaign, according to emails obtained by BuzzFeed News. ... On July 15, 2016, the day the Trump campaign announced that it had selected Pence, Breitbart's former technology editor Milo Yiannopoulos wrote to Bannon and Breitbart editor Alex Marlow. 'Seems like a bad pick. Should I tweet something ambivalent about him? People are telling me Trump likely didn't want this. ...What's our party line on this?'

"'This is the price we pay for cruzbots and #nevertrump movement,' Bannon responded. 'An unfortunate necessity...very. feel free to do whatever u want. we, as always, will remain above it all.' And two days later, Bannon signed off on a

Yiannopoulos column trolling the socially conservative Pence by asking him to attend a 'big gay party for Trump.' (Yiannopoulos is gay.)" http://bzfd.it/2xvuluD

HOLLYWOODLAND -- MORE WEINSTEIN ALLEGATIONS -- "From Aggressive Overtures to Sexual Assault: Harvey Weinstein's Accusers Tell Their Stories," by Ronan Farrow in The New Yorker: "In the course of a ten-month investigation, I was told by thirteen women that, between the nineteen-nineties and 2015, Weinstein sexually harassed or assaulted them, allegations that corroborate and overlap with the Times's revelations, and also include far more serious claims.

"Three women -- among them [Italian actress and director Asia] Argento and a former aspiring actress named Lucia Evans -- told me that Weinstein raped them, allegations that include Weinstein forcibly performing or receiving oral sex and forcing vaginal sex. Four women said that they experienced unwanted touching that could be classified as an assault. In an audio recording captured during a New York Police Department sting operation in 2015 and made public here for the first time, Weinstein admits to groping a Filipina-Italian model named Ambra Battilana Gutierrez, describing it as behavior he is 'used to.' Four of the women I interviewed cited encounters in which Weinstein exposed himself or masturbated in front of them." http://bit.ly/2xu8QzL

-- "Gwyneth Paltrow, Angelina Jolie and Others Say Weinstein Harassed Them," by NYT's Jodi Kantor and Rachel Abrams: "When Gwyneth Paltrow was 22 years old, she got a role that would take her from actress to star: The film producer Harvey Weinstein hired her for the lead in the Jane Austen adaptation 'Emma.' Before shooting began, he summoned her to his suite at the Peninsula Beverly Hills hotel for a work meeting that began uneventfully. It ended with Mr. Weinstein placing his hands on her and suggesting they head to the bedroom for massages, she said." http://nyti.ms/2ye5T5i

BEHIND THE CURTAIN -- "In Kim Jong Un's summer palace, fun meets guns," by Reuters Ju-min Park and James Pearson in Seoul: "In the seaside city of Wonsan, North Korean families cook up barbecues on the beach, go fishing, and eat royal jelly flavor ice cream in the summer breeze. For their leader Kim Jong Un, the resort is a summer retreat, a future temple to tourism, and a good place to test missiles. He is rebuilding the city of 360,000 people and wants to turn it into a billion-dollar tourist hotspot. At the same time, he has launched nearly 40 missiles from the area, as part of his accelerated tests of North Korea's nuclear deterrent.

"'It may sound crazy to outsiders to fire missiles from a place he wants to develop economically, but that's how Kim Jong Un runs his country,' said Lim Eul-chul, an expert on the North Korean economy at Kyungnam University in South Korea. This combination of tourism and nuclear weapons is emblematic of Kim Jong Un's strategy

for survival, say researchers and people familiar with the project." http://reut.rs/2xw2YWl

-- "Hacking North Korea is easy. Its nukes? Not so much," by Wired's Andy Greenberg: "As tensions with North Korea escalate into a full-on cold war, a cold cyberwar is playing out in tandem: Beneath the very public nuclear standoff, both the US and North Korea have privately ramped up their digital aggression, the Kim regime's hackers rampaging through networks around the globe and the US answering with its own attacks on the systems used by those hackers.

"But despite the U.S. government's dominating powers in the digital realm, security experts and former intelligence officials believe that battlefield favors North Korea. US hackers can take bites out of the edges of North Korea's infrastructure. But getting to its core-and anywhere close to disrupting or even delaying its nuclear capabilities-will be extremely difficult, they say, if not impossible." http://bit.ly/2xujUNf

CAMPAIGN STOP -- "To take back the House, Democrats 'arm the rebels' with new tools and manpower," by WaPo's Mike DeBonis: "Since February, the DCCC has hired full-time paid organizers in 38 districts focused on building relationships with the grass roots. And on Tuesday, the organization is rolling out its latest effort to connect motivated activists with the national party's resources, takeitback.com, an online 'toolbox' that aims to put potential activists in direct touch with the party operatives on the ground in battlefield districts." http://wapo.st/2xvov1R

-- HOT DOC: Rep. Sam Johnson, a Texas Republican not running for re-election, donated $100,000 from his campaign account to Southern Methodist University.

AT THE PENTAGON -- "Mattis to Generals: Start Talking to the Press," by Defense One's Kevin Baron: "On Friday, Defense Secretary Jim Mattis instructed top commanders to speak to the media more freely, Defense One has learned. The secretary is hoping to end a misperception among some senior leaders that they should keep quiet, in part because he wants them to speak up on the looming budget battle in Congress, according to a senior defense official.

"Mattis gave his guidance at Friday's closed-door Senior Leadership Conference, a Pentagon gathering of generals and admirals that includes the combatant commanders, or COCOMs, who are the senior officers in the U.S. military chain of command." http://bit.ly/2xuvdF9

SNEAK PEEK -- The newest episode of "Good Luck America," Pete Hamby's show on Snapchat, is out today. Hamby spoke to Dreamers and New York City Mayor Bill de Blasio on DACA. http://bit.ly/2xvApZj

SPOTTED: Preet Bharara at lunch today at Cafe Un Deux Trois in midtown Manhattan

TRANSITIONS -- OBAMA ALUMNI -- Keith Maley has started as director of PR at the Trust for Public Land. He previously was director of regional media in the Obama White

House.

WELCOME TO THE WORLD - OBAMA ALUMNI -- Karen Richardson, former associate director in the Obama WH office of public engagement and former deputy assistant secretary for public affairs at State, and **Judge Lamar Baker,** former Obama WH special assistant and associate counsel, who is now an associate justice of the Second District of the California Courts of Appeal, on Saturday welcomed Cady Madison Elizabeth Baker at 7.5 lbs. ***Pic*** http://bit.ly/2g96Yoz

ENGAGED -- Spencer Launer, state accounts manager at Quorum and alum of the U.S. Chamber and the offices of Sen. Maria Cantwell (D-Wash.) and Rep. Julia Brownley (D-Calif.), this weekend got engaged to **Alison Peckett,** landscape architect at LandDesign, in Pennsylvania. "While touring the famous Frank Lloyd Wright Fallingwater house, Spencer's identical twin and Alison's sister surprised the bride-to-be as Spencer proposed." ***Pic*** http://bit.ly/2gqJS9F

WEEKEND WEDDINGS -- ROMNEY ALUMNI -- Micah Spangler, deputy director of legislative affairs at the United Nations Foundation and a Romney 2012 alum, married **Jill Nguyen,** senior client strategy manager at Phone2Action, with a small group of friends at the NYC City Clerk's Office in lower Manhattan. "Chris Moody of CNN was the legal witness to the intimate affair, joined by his wife Cristi, Robbie Myers, and Broadway's Augie Haas ... The couple will be going on honeymoon in Russia starting next Monday." ***Pic*** http://bit.ly/2kCVcnR

-- Griffith Waller, a PR specialist for the City of Montgomery and a DDC Advocacy alum, got married this weekend to **Bailey McKell,** outreach coordinator at the Alabama Department of Child Abuse and Neglect Prevention, at the Avondale United Methodist Church in Birmingham, Ala. "The two met at Capitol Hill's since-shuttered Lil' Pub in 2013. At the time, Bailey was working for the D.C. Board of Education, and Mr. Waller for the Civil War Trust." ***Pic*** http://bit.ly/2yVbnPz

Subject: EPA projects fall proposal to repeal Clean Power Plan

By Alex Guillén

09/07/2017 02:59 PM EDT

EPA Administrator Scott Pruitt expects to sign the proposal to repeal the Clean Power Plan "in the fall of 2017," the agency said in a court filing today.

The filing offered no other details on the Trump administration's plan to repeal the rule, which has been under review at the White House Office of Management and Budget since June 8.

EPA added that the CPP repeal's classification as a "long term action" in the July update to the Unified Agenda was inadvertent. Environmental groups had seized on that classification, which indicates rules will not progress within the following 12 months, to argue that the D.C. Circuit Court of Appeals should issue its ruling on the Clean Power Plan rather than keep the lawsuit suspended indefinitely.

EPA said it will correct the classification error in the next edition of the Unified Agenda.

WHAT'S NEXT: The repeal proposal will most likely be released within the next few months.

Subject: Playbook Power Briefing, presented by Chevron: THE LATEST on Hurricane Harvey -- U.S. imposes sanctions on Venezuela -- COHN drafted resignation letter after Charlottesville

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Chevron

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

UPDATE ON THE HURRICANE BARRELING TOWARD TEXAS, from POLITICO's weather guru Steven Shepard -- The center of Harvey is now within 100 miles of Corpus Christi, with winds of 110 mph. Modest strengthening is possible before the center moves onshore overnight. If the center of the storm makes landfall north of Corpus Christi, that could spare the city of 326,000 the worst of the storm surge. But a wobble south could be devastating.

-- More bad news : Unlike most landfalling hurricanes in the U.S., Harvey could be a slow-motion tragedy that dominates the news for the next week. The latest forecast has the center of a tropical storm still near Houston NEXT WEDNESDAY. That's why the National Hurricane Center is calling for "catastrophic" and "life-threatening" flooding from rainfall for much of Texas (including Houston), and parts of Louisiana. They don't throw around words like that lightly; rainfall amounts could be over 30 inches, or about 9 months' worth of rain here in D.C. ... ***The latest hurricane track*** http://bit.ly/2gbo9p5 ... ***Projected rainfall*** http://bit.ly/2gcd0V2

-- @realDonaldTrump: "I have spoken w/ @GovAbbott of Texas and @LouisianaGov Edwards. Closely monitoring #HurricaneHarvey developments & here to assist as needed." ... **@ChuckGrassley:** "@realDonaldTrump #hurricane keep on top of hurricane Harvey dont mke same mistake Pres Bush made w Katrina"

ZOOM OUT: "Hurricane Harvey packs political perils for Trump," by Steve Shepard: "The stakes are high for Trump and other elected leaders, like Texas Gov. Greg Abbott. It's been nearly 12 years since a major hurricane -- one with maximum sustained winds stronger than 110 mph - made landfall in the United States. It's been nine years since Texas has seen a direct hit from a hurricane. And the storm could have national impacts, too: Much of Texas' oil and gas production is likely to be disrupted, at least in the short term and perhaps longer.

"Landfalling hurricanes have a way of dominating the news cycle . Even a president whose tweets typically send the media scrambling can be blown off cable news by live footage of reporters struggling to remain standing in tropical-storm-force

wind gusts. And after the storm passes, all attention turns to rescue and recovery efforts." http://politi.co/2w4pWBH

BREAKING -- "U.S. imposes first economic sanctions against Venezuela," by the Miami Herald's Patricia Mazzei and Franco Ordoñez: "The U.S. imposed its first economic penalties against Venezuela on Friday, hitting the South American country's financial sector in an attempt to starve President Nicolás Maduro's government of cash.

"The Trump administration banned trades of Venezuelan debt, prohibiting Maduro's government and its state-run oil company, Petróleos de Venezuela SA, from selling new bonds to Americans or in U.S. financial institutions. President Donald Trump signed an executive order approving the sanctions Thursday. 'In an effort to preserve itself, the Maduro dictatorship rewards and enriches corrupt officials in the government's security apparatus by burdening future generations of Venezuelans with massively expensive debts,' Press Secretary Sarah Huckabee Sanders said in a statement." http://hrld.us/2vnLdnc

OH BOY -- "Gary Cohn, Trump's Adviser, Said to Have Drafted Resignation Letter After Charlottesville," by NYT's Eileen Sullivan and Maggie Haberman: "The sharp critique from Mr. Trump's top economic adviser, Gary D. Cohn, came nearly two weeks after deadly violence in Charlottesville, Va., in response to a rally led by white nationalist groups. Mr. Cohn, who is Jewish, seriously considered resigning and even drafted a letter of resignation, according to two people familiar with the draft. ...

"In the days after the Charlottesville violence, Mr. Cohn's family -- including his wife -- told him he needed to think seriously about departing, according to two people briefed on the discussions. Several of his friends in the business community also urged him to step away from the administration. Mr. Cohn is a former executive at Goldman Sachs. Mr. Cohn came close to resigning, according to one of the people briefed on the discussions. He met with Mr. Trump privately at the president's golf club in New Jersey last Friday, scrapping his plans to spend the evening at his second home in the Hamptons." http://nyti.ms/2wanckR

Happy Friday. PROGRAMMING NOTE: Playbook Power Briefing will be going on recess until Sept. 5, the day after Labor Day. If the week turns intensely newsy, we'll re-evaluate. Expect your morning Playbook in your inbox every day.

THE FRIDAY CONVERSATION -- On "Washington Week," hosted by Bob Costa: WaPo's Dan Balz, Jake Sherman, AP's Julie Pace and WSJ's Nancy Youssef at 8 p.m. on PBS.

THE PRESIDENT IS BACK on the offensive against Republicans. **@realDonaldTrump** at 8:25 a.m.: "Strange statement by Bob Corker considering that he is constantly asking me whether or not he should run again in '18. Tennessee not happy!"

FROM TARA PALMERI -- "Caroline Wiles, Trump's former scheduler who had issues

with her background check in February, has been back in the White House since July 8. Her old title was deputy assistant to the president and director of scheduling. Now her new title is special assistant to the president and associate director of presidential personnel. She's based in the EEOB."

****** **A message from Chevron:** We're piloting a program that uses drones to keep an eye on Chevron wells, tanks, and pipelines-all to keep DOERS and what they're doin' safer. Watch the video: http://politi.co/2vLsVyX ******

IN FOGGY BOTTOM -- "Tillerson's Commitment to Racial Diversity Has History at Exxon," by Bloomberg's Jeff Green: "U.S. Secretary of State Rex Tillerson pledged this month to promote more people of color into leadership roles in his agency. His track record during 11 years at the helm of Exxon Mobil Corp. suggests he means it. At Exxon, people of color make up 30 percent of management and professional staff -- a stark contrast with the State Department's senior foreign service staff, which is 12 percent minority." https://bloom.bg/2gce0IB

WADING BACK IN -- "Obama makes rare endorsement in crucial St. Petersburg race," by POLITICO Florida's Marc Caputo: "Former President Barack Obama is intervening in a bellwether Florida election, endorsing St. Petersburg Mayor Rick Kriseman in the hopes of juicing Democratic turnout in Tuesday's multi-candidate race in order to force a November run-off, sources tell POLITICO. Obama's rare endorsement is crucial both for Kriseman -- who has been bleeding support from African-American voters -- and for a demoralized Florida Democratic Party that's still reeling over President Donald Trump's surprise win in November. ...

"In a draft statement obtained by POLITICO, Obama said he was endorsing Kriseman because of his policy positions. ... Whether Obama will campaign in St. Petersburg in the coming months is unclear, but Kriseman's campaign is sure to use him in paid media." http://politi.co/2waKwyR

SECOND THOUGHTS -- "NRCC chair: 'Clear' mistake by Republicans to push healthcare reform first," by Washington Examiner's Al Weaver: "Rep. Steve Stivers, R-Ohio, says it was a mistake for House Republicans to try to tackle healthcare reform first this year instead of other topics, including tax reform, and cast doubt on the idea that the Senate would be able to pass any Obamacare repeal bill this year. 'Oh, in hindsight, it's clear,' Stivers, the chairman of the National Republican Congressional Committee, told the Washington Examiner when asked if it was a mistake to attempt healthcare reform first. 'But it is what it is. You had to do them in some order. ... I would argue healthcare is pretty much...' Stivers said before catching himself. 'We're shifting focus," he added, referring to issues like tax reform and other more achievable goals.'" http://washex.am/2wbzYQ6

ANOTHER TRUMP HOTEL STORY -- "Trump Hotel at Night: Lobbyists, Cabinet Members, $60 Steaks," by NYT's Katie Rogers: "It was nearing midnight at the Trump International Hotel, and the president's son was eating macaroni and cheese.

Enveloped in the smooth tones of jazzy hotel music, soft light from a million tiny chandelier crystals and the scent of candied bacon, Eric Trump, fresh from a rally this month in West Virginia, declined a question from a reporter and instead posed one of his own.

"'Is everything perfect?' he asked, much like an attentive concierge. From the Trump family's point of view, how could it not be?" *With cameos by Anthony Scaramucci, Jill Kelley and Brad Parscale* http://nyti.ms/2wb9Wwu

MEDIAWATCH -- "Our left-right media divide told through Charlottesville," by Tyler Fisher: "Using analyses from Cortico and the Laboratory for Social Machines at the MIT Media Lab, we looked at what partisan Twitter users shared during and after the events of Charlottesville. We found a clear split in the story as told through partisan sources." http://politi.co/2ix9fKE

DESSERT -- "How Late Night With Seth Meyers became the calm in a political comedy storm," by Vox's Caroline Framke: "Just a couple of hours before taping another episode of Late Night, Seth Meyers glanced at the TV muted on his wall, with its endless breaking news scrawl that might as well have been screaming, "DOOM," and sighed. 'I thought the campaign was the World Series, and it turned out it was spring training,' he said. '[On Election Day], it was like, 'Ohh, no, the season's starting now.'" http://bit.ly/2gc6MUZ

SPOTTED : Mark Penn, Juleanna Glover and Georgetown basketball coach Patrick Ewing all having breakfast separately at the Four Seasons this morning

TRANSITIONS -- Samantha Bisogno has been hired to be the communications manager for government affairs at the Ocean Conservancy where she will start in September. She most recently was press secretary for Rep. Rick Nolan (D-Minn.).

BONUS BIRTHDAY OF THE DAY: Ronn Torossian, CEO of 5W Public Relations. **How he's celebrating:** "At home with my two daughters. They are the reason why I work so hard and they are the meaning behind everything in my life." **Read his Playbook Plus Q&A:** http://politi.co/2gcpMTI

****** **A message from Chevron:** This is a story about energy, safety, and some truly high-flyin' doin'. We're piloting a program that uses drones, HD imaging, and thermal mapping to help keep a close eye on Chevron wells, tanks, and pipelines-all to keep DOERS and what they're doin' safer. TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 11, 2017

Latest News

Judge Faults 2-1 Order As 'Shadow' Process But Queries Plaintiffs' Claims

The federal judge hearing litigation challenging President Donald Trump's executive order (EO) requiring EPA and other agencies to repeal two rules for every new measure issued appeared to criticize the measure during Aug. 10 arguments, charging it functions as a "shadow" regulatory review process that would not have a transparent effect.

Former EPA Staff Raise Early Concerns Over Drop In Enforcement Results

Former EPA officials are raising early concerns over an apparent significant drop in the number of environmental law enforcement cases and civil penalties that the Trump administration is pursuing, saying that if the initial trends continue in the coming weeks and months it would signal a massive retreat from EPA enforcement.

Sessions Urged To Expand Third-Party Ban To Block Unauthorized Payments

The free-market Competitive Enterprise Institute (CEI) is urging Attorney General Jeff Sessions to expand the reach of his controversial policy barring the use of third-party payments in settlements with EPA and other agencies to instead block any settlement that requires unauthorized spending, charging in EPA's case the practice has allowed the agency to advance a clean energy policy agenda that is not approved by Congress.

EPA Re-Opens Vehicle GHG Rule's Mid-Term Review, Expanded To MY21

EPA has formally restarted its review of Obama-era vehicle greenhouse gas standards for years just prior to 2025, issuing a long-awaited notice that expands the review to include weighing potential changes to model year 2021 standards -- as *Inside EPA* recently first reported.

After Extending CPP Suit Pause, Court Puts NSPS Case On Indefinite Hold

A federal appellate court has placed litigation over the Obama-era greenhouse gas standards for new and modified power plants -- the legal prerequisite for the Clean

Power Plan (CPP) for existing sources -- on indefinite hold, just days after the court extended for 60 days its prior order placing litigation over the CPP into abeyance.

EPA Coal Ash Permit Guide Limits States' Flexibility But Avoids New Rule

EPA's guidance for how states' coal ash permit programs should comply with the agency's ash disposal rule limits states' flexibility from the regulation's various provisions in their programs -- a potential win for environmentalists seeking strict adherence to the rule, although EPA is not codifying the guide through a new rulemaking.

Daily Feed

D.C. Circuit rejects requests for en banc review of methane NSPS suit

In an 8-3 vote, the court rejected rehearing of its ruling vacating EPA's stay of methane limits on new drilling operations.

D.C. Circuit suspends briefing in suit over CSAPR update

The U.S. Court of Appeals for the District of Columbia Circuit has granted power companies' request to postpone litigation over Obama-era revisions to the Cross-State Air Pollution rule.

Environmentalists resist EPA bid to extend landfill-methane delay case

Any extension would allow EPA the “benefit” of continuing the rule's delay, environmentalists say.

Ewire: Surprise opposition to Pruitt's climate science review

In today’s Ewire: Some conservative and industry groups are questioning whether EPA Administrator Scott Pruitt’s “red-team, blue-team” exercise is a good idea. Plus: Utah seeking $1.9 billion over Gold King Mine spill.

Senate EPW Democrats seek immediate RMP implementation

Democratic members of the Senate environment committee say immediate implementation of the Risk Management Program revisions would help save lives.

Subject: Morning Energy, presented by Chevron: Senate takes up massive disaster aid package — Pruitt science adviser directive coming — Interior political appointee lands new responsibilities

By Anthony Adragna | 10/23/2017 05:42 AM EDT

With help from Esther Whieldon, Tim Starks and Darius Dixon

CONGRESS MOVING ON DISASTER AID: The Senate takes the first procedural step today toward getting additional resources to Puerto Rico — more than a month after Hurricane Maria hit — even as 80 percent of the island remains without power and 30 percent lacks clean drinking water. The House-passed $36.5 billion disaster aid package H.R. 2266 (115) includes nearly $19 billion for FEMA while also providing a much needed cash infusion to the National Flood Insurance Program's borrowing capacity. It's expected to pass by Wednesday after Senate Majority Whip John Cornyn received a commitment that additional hurricane aid for his state of Texas would come in a subsequent bill, removing one of the largest obstacles to passage.

Calls for an emergency response CEO: Calling the long delays in restoring electricity and clean water "unconscionable," Senate Minority Leader Chuck Schumer, along with Reps. Nydia Velazquez and Jose Serrano , are asking President Donald Trump to appoint a CEO of response and recovery to help coordinate the government's response. "This person will have the ability to bring all the federal agencies together, cut red tape on the public and private side, help turn the lights back on, get clean water flowing and help bring about recovery for millions of Americans who have gone too long in some of the worst conditions," Schumer said in a statement. He called for the person to have a "direct line" to Trump.

And time is of the essence: Thousands of low-income properties across the island may no longer be able to meet legal standards for housing assistance if power cannot be restored soon, Pro Financial Services' Lorraine Woellert reports. "Due to the ongoing and unique circumstances in Puerto Rico, we're reviewing every available option to assist residents during this difficult time," HUD spokesman Brian Sullivan said.

Presidents tout fundraising: The five living former presidents announced Saturday they'd raised $31 million in private funds from over 80,000 donors to help hurricane recovery in Texas, Florida, Puerto Rico and other areas. ME will admit to having Lin-Manuel Miranda's benefit song stuck in his head.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and Andeavor's Stephen Brown was first to identify Rep. Chris Stewart as the author of Elizabeth Smart's book. For today: How many states have just one congressman? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ON TAP THIS WEEK — PRUITT'S LATEST DIRECTIVE: The timing isn't exactly clear yet, but look for EPA Administrator Scott Pruitt to issue a directive limiting scientists who

receive agency research grants from being able to serve on its various advisory boards. "If we have individuals that are on those boards that are receiving money from the agency, sometimes going back years and years to the tune of literally tens of millions of dollars, over time, that to me causes questions on the independence and the veracity of the transparency of the recommendations that are coming our way," Pruitt said in an interview posted Friday by the Heritage Foundation's Daily Signal. It's unclear if the same restrictions would apply to scientists that receive funding from industry groups regulated by EPA.

Pruitt's view on environmentalism: "True environmentalism from my perspective is using natural resources that God has blessed us with to feed the world, to power the world with the sensitivity that future generations cultivate, to harvest, to be respectful good stewards, good managers of our natural resources, to bequeath those natural resources for the next generation."

WORTH A READ: The New York Times looks at how the arrival of Nancy Beck, a former American Chemistry Council executive, at EPA has led to weaker chemical regulation that may result in the "underestimation of the potential risks to human health and the environment." Beck returned from the private sector in May after receiving an ethics waiver and began pressing right away for changes to chemical regulations long-sought by industry. "It was a clear demonstration this administration has been captured by the industry," said Elizabeth Southerland, an Office of Water employee who retired in July.

EPA's eyebrow-raising response: "No matter how much information we give you, you would never write a fair piece. The only thing inappropriate and biased is your continued fixation on writing elitist clickbait trying to attack qualified professionals committed to serving their country," Liz Bowman, a spokeswoman for the agency who worked at the American Chemistry Council before joining the administration, said in an email to the newspaper.

CLIMATE DATA PUSH GROWS: Seventeen cities around the U.S., including New Orleans, Atlanta and Boston, are now hosting climate change data that EPA has removed from its website, Chicago Mayor Rahm Emanuel announced. "While the Trump administration buries their heads deeper in the sand when it comes to climate change, local leaders from across the country continue to confront the challenge head-on," he said. Chicago wants to expand its site to include an open-sourced repository of new scientific research.

ARE YOU A YES PERSON OR A NOPR-SON? If you have any thought on the Energy Department's grid resilience pricing proposal, you're just about out of time. FERC set a deadline on initial comments for today — less than a month after the rule was filed with regulators. The deadline for reply comments is Nov. 7, two weeks from Tuesday. If you've misplaced FERC's list of questions, here it is.

Days for FERC to take a "final action": 49

MANY A TARGET: The Homeland Security Department and the FBI issued a joint warning about a sophisticated hacking campaign that has targeted the energy, nuclear, water, aviation and manufacturing sectors. The targets include both governments and other organizations. Although the alert, issued late last week, doesn't identify the nationality of the attackers, it does reflect a

Symantec report from last month where the company found similarities between those attackers and a campaign that U.S. officials tied to Russia.

"This campaign comprises two distinct categories of victims: staging and intended targets. The initial victims are peripheral organizations such as trusted third party suppliers with less secure networks," the joint DHS-FBI report states. "The threat actor uses the staging targets' networks as pivot points and malware repositories when targeting their final intended victims. The ultimate objective of the cyber threat actors is to compromise organizational networks."

** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat—buckwheat. Watch the video: http://politi.co/2gyQXsp **

TWO HOUSE BILLS OF NOTE: Lawmakers are expected to vote on two bills of interest to ME readers this week. One, H.R. 732 (115), would bar federal agencies from requiring defendants to donate money to outside groups as part of federal government settlements. The other, H.R. 469 (115) , would place various limitations on the use of federal consent decrees that frequently require new regulatory actions. The House Rules Committee meets today at 5 p.m. to consider how to structure debate on both bills.

SECOND TIME'S THE CHARM? After winning the support of Sen. Joni Ernst for Trump's pick to run the EPA air office, the Senate Environment and Public Works Committee will try again on Wednesday to move a host of nominees. On deck is the highly controversial selection of Bill Wehrum to run the air office and Michael Dourson's selection for EPA chemicals chief, as well as the less contentious picks of David Ross as head of the EPA water office, Matthew Leopold for EPA general counsel, Jeff Baran's re-nomination to the NRC and Paul Trombino's selection to be administrator of the FHWA.

CELEBRATION FROM BIOFUEL BACKERS: Pruitt's letter Thursday making major concessions on the Renewable Fuel Standard led to sighs of relief from biofuel backers but frustration from oil refiners, Pro's Eric Wolff reports. "[Pruitt] didn't kick tires on changing the RFS, he tried to take a baseball bat to the program, and the response was matching and in response to, from a magnitude perspective, to the initial foul," Brooke Coleman, head of the industry lobby group Advanced Biofuels Business Council, said.

That's not how refiners felt: "Some Midwesterners cannot accept any premise that the RFS could be improved. As a result, their overreaction included everything from holds on confirmations to even more personal threats launched at the White House and EPA," one refining source told Eric.

Help wanted: Meanwhile, Pennsylvania Gov. Tom Wolf sent Trump a letter Friday asking him to take steps to help Northeast refiners deal with the high costs associated with compliance credits, known as RINs. "I specially request that you ask Administrator Pruitt to waive the renewable volume obligation for Northeast refiners until or unless the market prices deflate," Wolf wrote.

PRUITT VISITS NEBRASKA: Continuing his state visits, Pruitt stopped by Nebraska Friday where he met with Gov. Pete Ricketts and other officials to discuss the agency's efforts to revamp the Waters of the U.S. regulation. "In his work of rolling back the old rule and writing a new one, Pruitt is returning power to the states and protecting the rights of our farm families and small business owners," Ricketts said. Afterwards, Pruitt hit up Omaha where he met with officials from railroad giant Union Pacific about the agency's agenda.

BLM ANNOUNCES SAGE GROUSE PUBLIC MEETINGS: The Bureau of Land Management will hold a series of public meetings in Idaho, Colorado, California and Oregon in November on potential changes to plans for protecting greater sage grouse habitat. The meetings will be in Idaho on Nov. 2, 6 and 7, in California on Nov. 3, in Oregon on Nov. 7, and in Colorado on Nov. 9. The sage grouse plans involve 10 Western states, so BLM may announce more meetings in the weeks ahead and it will accept emailed comments through either Nov. 27 or 15 days after the last public meeting, whichever is later. The agency created the plans in 2015 under an agreement with states in lieu of listing the bird as either endangered or threatened under the Endangered Species Act but re-opened them at Zinke's bidding.

WESTERN VALUES PROJECT SUES FOR SAGE GROUSE RECORDS: The Montana-based Western Values Project, which focuses on public land issues, is suing Interior to release copies of emails between Zinke, members of his sage grouse review team and oil and gas groups to determine the extent to which they were able to influence the agency's decision to reshape the sage grouse plans and guidance on energy development.

ME FIRST -- INTERIOR BEEFS UP BLM, BOEM SENIOR STAFF OVER NOMINEE DELAY: The Interior Department last week quietly assigned a senior political staffer to lend an extra hand overseeing the agencies that are key to carrying out the administration's energy goals until the Senate confirms Joe Balash as secretary for land and minerals management.

In Secretarial order No. 3357 dated Oct. 17, Deputy Secretary David Bernhardt said there is a "an immediate need for additional executive level supervision and direction" over the Bureau of Land Management, Bureau of Ocean Energy Management, Bureau of Safety and Environmental Enforcement and the Office of Surface Mining Reclamation and Enforcement and assigned Aurelia Skipworth, the deputy assistant secretary for fish, wildlife and parks; to help out.

Balash's nomination easily cleared the Senate Energy and Natural Resources Committee in September with a voice vote but Interior spokeswoman Heather Swift in an emailed statement accused Senate Democrats of dragging their feet on the nomination. "Rather than let that slow our progress, we are utilizing team members across the bureaus to move the ball forward for the American people," she said. In related news, Virginia Johnson, an Interior beachhead staffer and principle deputy secretary for fish wildlife and parks in July left for a job at the USO, according to her LinkedIn profile.

HANNITY V. INGRAHAM ON SOLAR TARIFFS: Whether to slap cheap imported solar equipment with tariffs has split Laura Ingraham and fellow Fox News host Sean Hannity, Pro's Eric Wolff reports. Ingraham said on her radio show Friday that "Chinese manipulation of the solar market has hurt U.S. manufacturers" and urged Trump to hit back with steep tariffs. But

Hannity has made an ad warning that Suniva and SolarWorld are trying to manipulate U.S. trade laws and pointing out that both had foreign owners. "American taxpayers should not have to bail out one foreign company so another foreign company can get a payout," he said.

NO MINCING WORDS HERE: Russian President Vladimir Putin bashed efforts by some European nations, Poland and Denmark chief among them, to block two Russian gas pipelines, POLITICO Europe's David M. Herszenhorn reports. "Attempts are being made to create obstacles in the way of our efforts to forge new energy routes - South Stream and Nord Stream - even though diversifying logistics is economically efficient, beneficial for Europe and promotes its security," Putin said in a speech at the Valdai Discussion Club.

SIGNED, SEALED, DELIVERED: The Bureau of Ocean Energy Management approved a key step of Deepwater Wind's 144-megawatt Revolution Wind project that will enable the company to collect the biological and wind performance data it needs to file a construction plan, Pro's Esther Whieldon reports. Massachusetts is slated to pick the winning contracts in July, and Deepwater Wind has said it could bring the project online by the end of 2023.

FRIESS WON'T RULE OUT BARRASSO CHALLENGE: Wealthy GOP megadonor Foster Friess tells Fox Business he won't raise money to pick off Republican incumbents, but he's not ruling out launching a bid to unseat Wyoming Sen. John Barrasso. "Better messaging, return of civility and untangling the health care logjam are my motivation; not that I am hell bent on replacing John Barrasso," he said.

Not amused: During an appearance on "Fox News Sunday," Senate Majority Leader Mitch McConnell referred to Steve Bannon and others not backing GOP incumbents as "specialists at nominating people who lose, and that isn't going to help President Trump achieve his agenda," POLITICO's Rebecca Morin reports.

Stories from POLITICO Pro

Cornyn extracts Trump pledge of Texas hurricane aid Back

By Sarah Ferris | 10/19/2017 05:47 PM EDT

The Senate's No. 2 Republican today endorsed a $36.5 billion disaster aid package, resolving one of the standoffs holding up the bill.

A spokesman for Sen. John Cornyn (R-Texas) said Cornyn will support the House-passed aid package, H.R. 2266 (115), after personal assurances from the White House that more money for Texas will be delivered next month.

"The president strongly indicated his preference that a second appropriations request, which will come in November, will include funds specifically to aid Texans recovering from Harvey," Cornyn told Texas reporters in a call.

The House package includes nearly $19 billion to replenish FEMA, largely intended for emergency efforts in Puerto Rico. It would also restore the National Flood Insurance Program's borrowing capacity to ensure all hurricane victims, including in Texas and Florida, receive timely payments.

But just two days ago, Cornyn said the package was "inadequate" for his home state, which was recently slammed by Hurricane Harvey.

Texas lawmakers in Congress have been pressured by Gov. Greg Abbott to seek more funding — and fast. After the House denied the Texas delegation's $18.7 billion request for Harvey-specific aid last week, Abbott blasted the representatives for lacking a "stiff spine."

Without a cash infusion, the National Flood Insurance Program's claims funding would run dry on Oct. 23, a FEMA spokesman told POLITICO this week.

Puerto Rico housing subsidies at risk as blackout drags on Back

By Lorraine Woellert | 10/20/2017 06:42 PM EDT

Puerto Rico could lose funding for thousands of low-income housing units if power to the island isn't restored soon.

The Department of Housing and Urban Development, which subsidizes 203 housing projects on the island, is prohibited by law from providing Section 8 assistance to buildings that aren't "decent, safe, and sanitary."

As an electrical blackout drags on a month after Hurricane Maria, it's likely that fewer properties will be able to meet that standard, and the agency is being forced to review its options.

"Due to the ongoing and unique circumstances in Puerto Rico, we're reviewing every available option to assist residents during this difficult time," HUD spokesman Brian Sullivan said in a statement. About 20,000 housing units in 203 projects on the island receive project-based subsidies to provide affordable housing.

The agency has long interpreted "decent, safe and sanitary" housing to include continuous running water and electricity. In Puerto Rico, evaluating the livability of HUD's subsidized units has been slow going, and it's too soon to know how much damage has been done.

Meanwhile, property owners and managers say they're shipping generators to the island and sending couriers armed with cash to pay for gas to keep the machines running.

The Institute of Real Estate Management, an affiliate of the National Association of Realtors, whose members manage nearly 40 percent of federally assisted housing units, is urging HUD Secretary Ben Carson to keep the subsidies flowing.

"Penalizing these properties and, more importantly, these tenants, is simply adding more hardship to this community," the group wrote in a letter to HUD. "Without the federal portion of the rent, many of these properties will simply fail, and this stock of affordable housing will be lost."

After Hurricane Katrina hit New Orleans, some subsidies to ruined housing projects were converted to rental vouchers, which were distributed to individuals in need. Many of those low-income households pulled up roots and moved away from the city. In Puerto Rico, there are far fewer, if any, places for families to go.

"It's not only an invitation for people to leave the island, it means you're going to displace that many more families," said Mike Ford, NAR's point person on Puerto Rico. "Maybe it's not what we would call safe and decent housing in Mississippi or Arkansas, but it's better to have a house with a roof over your head in a rainstorm than be outside."

Colin Wilhelm contributed to this report.

Biofuel backers claim victory in EPA battle Back

By Eric Wolff | 10/20/2017 05:37 PM EDT

Biofuels backers were breathing a sigh of relief on Friday after EPA Administrator Scott Pruitt backed away from changes to the Renewable Fuels Standard, a reversal that left oil refiners frustrated.

Pruitt acceded to demands from Sen. Joni Ernst that he publicly promise not to pursue plans to change the biofuel program rules — changes that had been sought by oil refiners who have long complained about the costs of implementing the program that many see as a giveaway to the corn states.

Pruitt's letter to Ernst, Sen. Chuck Grassley and five other Midwestern Republican senators delivered what they'd asked for: A promise not to expand the group of companies required to comply with the program, to keep the biodiesel volume requirements at levels proposed in July, to not alter the policy that strips RFS credits from exported ethanol, and to explore allowing year-round sale of gasoline with 15 percent ethanol nationwide.

The quick reversal by Pruitt — at the direction of President Donald Trump — showed the influence of the biofuel lobby, corn growers and farm-state lawmakers to scuttle changes in the decade-old policy sought by the energy industry.

"This was a basket of bad ideas for biofuels," said Brooke Coleman, head of the industry lobby group Advanced Biofuels Business Council. "And there's no way that we could have any other response than to take this approach. [Pruitt] didn't kick tires on changing the RFS, he tried to take a baseball bat to the program, and the response was matching and in response to, from a magnitude perspective, to the initial foul."

The push by the senators, as well as Midwestern governors, "made a huge difference in this matter," said Michael McAdams, head of the Advanced Biofuels Association. "In addition, the collective unity of the entire biofuels industry, including those who distribute and market these fuels, made a significant impression on the importance and support for the RFS program."

But oil refiners who have said the high cost of biofuel credits, called Renewable Identification Numbers, was costing them hundreds of millions of dollars, lamented the power of the biofuels lobby and the corn-belt lawmakers.

"The [Pruitt] letter is a result of political pressure applied by Midwestern politicians," said one

refining source. "Some Midwesterners cannot accept any premise that the RFS could be improved. As a result, their overreaction included everything from holds on confirmations to even more personal threats launched at the White House and EPA."

The unified and vociferous campaign by the biofuels industry in attacking the proposal that would have lowered biodiesel volume mandates surprised some in the refining industry, as well as the political staff in the EPA, sources tell POLITICO.

The Trump administration's embrace of the oil industry had raised refiners' hopes that it could have the best opportunity in years for significant RFS changes, and refining giant Valero Energy, along with a group of Pennsylvania companies, believed they would get relief from what they considered an onerous program.

But Grassley took to the Senate floor to blast Pruitt's biofuel plans as a "betrayal" of Trump's promises to protect ethanol, and he arranged a call with Trump and Pruitt that led to the meeting in his office with Pruitt and Ernst as well as Deb Fischer (Neb.), John Thune (S.D.), Ben Sasse (Neb.), Pat Roberts (Kan.) and Mike Rounds (S.D.). Following that meeting, Ernst demanded the public statement from Pruitt, and said she would withhold her support for Bill Wehrum, who was nominated to run the agency's air office, forcing a delay in the Environment and Public Works Committee's vote until next week.

Ernst spokeswoman Brook Hougeson told POLITICO, "Now that Sen. Ernst has received the assurances that the EPA will support the spirit and the letter of the RFS, she will support Mr. Wehrum."

Valero was disappointed its efforts to change the program had been shot down by the fierce political opposition.

"These senators have intervened in a regulatory process, and the proposals and concepts in the letter address RFS implementation problems to which these senators have offered no constructive solutions," Valero said in a statement. "The only unifying principle of their bullying opposition seems to be a desire to maintain the status quo at all costs and to protect windfall profits associated with unregulated trading of renewable identification numbers, or RINs. Their position advances neither the goals nor the efficient implementation of the RFS, and places U.S. manufacturing jobs at risk."

But in a statement, the White House made clear that Trump remained fully behind the biofuels program.

"President Donald J. Trump promised rural America that he would protect the Renewable Fuel Standard, and has never wavered from that promise," spokeswoman Kelly Love said in a statement. "The president has had constructive conversations with several key officials about the RFS over the past week, and he understands their concerns. The Trump administration will protect the RFS and ensure that our Nation's hardworking farmers continue to fuel America."

One energy executive said the biofuel backers were victorious because they were unified in their

support for the RFS, while Republicans, the oil industry, and even the refiners were not on the same page.

"The ethanol boys won this round, no doubt, but at a pretty high cost," said Stephen Brown, vice president for federal government affairs for Andeavor. "The refining industry is anything but united on the RFS beyond a sunset as individual companies have each made investments and honed mitigation strategies to comply with the statute. As those investment decisions become increasingly operationally embedded, the industry will continue to splinter on the suite of RFS issues."

But some producers are still wary of Pruitt's pledge in his Thursday letter, and they note that he promised to release a final rule in which none of the mandatory volumes will be less than he proposed in July. For some producers, those volumes were already too low.

"There's some work to do here," Coleman said. "We won't know until the rule is done. And we recognize it's an ongoing rulemaking, it's not like they're going or republish the rule, they've said what they can say. The final rule really matters."

Solar tariff fight pits Ingraham against Hannity Back

By Eric Wolff | 10/20/2017 03:53 PM EDT

Conservative talk radio host Laura Ingraham urged President Donald Trump to impose tariffs on solar equipment imports today — rebutting the argument by Fox News host Sean Hannity that such tariffs would be a bailout to two foreign-owned companies in the U.S.

"Chinese manipulation of the solar market has hurt U.S. manufacturers," Ingraham said on her show while interviewing Matt Card, an executive with Suniva, one of the companies that brought the trade case seeking tariffs on imported solar panels.

"This is where Trump fulfills his promises that he made on the campaign trail to stand up for American manufacturing by using current U.S. law that other presidents basically didn't pay that much attention to," Ingraham said.

But most of the industry opposes tariffs, and solar installers have enlisted Hannity to urge Trump not to implement trade barriers. He made an ad saying the two companies were trying to manipulate U.S. trade laws, and pointed out that both had foreign owners. "American taxpayers should not have to bail out one foreign company so another foreign company can get a payout," he says in the ad.

Suniva, which is backed by a Chinese solar company, and SolarWorld, a U.S. subsidiary of a

German company, last month won a 4-0 decision from the U.S. International Trade Commission saying that they had been harmed by cheap solar panel imports.

WHAT'S NEXT: The ITC will hold a hearing to discuss tariff options next week.

BOEM approves key step for Deepwater Wind-Tesla offshore wind project Back

By Esther Whieldon | 10/20/2017 04:17 PM EDT

The Bureau of Ocean Energy Management has approved a key step for Deepwater Wind's 144-megawatt Revolution Wind project proposed off the coast of Massachusetts and Rhode Island.

In a letter dated Oct. 12 and posted by the agency today, BOEM said it approved Deepwater's "site assessment plan" to install a meteorological buoy at the site of the project. The buoy will give the company the biological and wind performance data it needs to file a construction plan.

Deepwater has held a lease for the area since 2013 and in July announced plans with Tesla to combine the wind project with a 40 megawatt-hour onshore battery in their bid to win a long-term clean-energy contract in Massachusetts.

Deepwater late last year brought the nation's first offshore wind project online — the 30-megawatt Block Island project off the Rhode Island coast.

WHAT'S NEXT: Massachusetts is slated to pick the winning contracts in July, and Deepwater Wind has said it could bring the project online by the end of 2023.

Summaries

AIR
Air Emission Sources/Test Methods, Performance Specifications and Testing
AIR

Final rule of the EPA removes obsolete provisions concerning Performance Specification 2 for sulfur dioxide and nitrogen oxides in continuous emission monitoring systems and stationary sources. The provisions are no longer necessary due to an Aug. 30, 2016, final rule (81 FR 59800) that revised test methods, performance specifications, and testing standards for various air emission sources. The rule is effective Aug. 7, 2017. Contact: Lula Melton; EPA, Office of Air Quality Planning and Standards; 919-541-2910; melton.lula@epa.gov. Citations: 40 CFR 60, Appendix B

82 FR 36688 (08/07/2017)

Regulatory Update

AIR
Kentucky SIP/Regional Haze Progress Report
AIR

Proposed rule of the EPA would approve a revision to the Kentucky SIP regarding the state's regional haze progress report. Under the rule, the agency would approve the state's determination that the regional haze plan is adequate to meet the reasonable progress goals for the first implementation period through 2018 and does not currently require substantive revisions. Comments are due Sept. 6, 2017. Contact: Michele Notarianni; EPA Region 4, Air Planning and Implementation Branch; 404-562-9031; notarianni.michele@epa.gov. Citations: 40 CFR 51.308, 40 CFR 52

82 FR 36707 (08/07/2017)

Regulatory Update

AIR

NESHAP for Off-Site Waste and Recovery Operations

AIR

Proposed rule of the EPA would revise the NESHAP for off-site waste and recovery operations (OSWRO). The revision would remove additional monitoring requirements for equipment leaks from pressure relief devices on containers. The revision is in response to a May 16, 2016, petition (81 FR 30182) for reconsideration of a final rule (80 FR 14247; 03/18/2015) that revised the NESHAP for OSWRO based on the results of a residual risk and technology review. The agency is seeking comments concerning whether to impose frequent inspections for filled or partially filled OSWRO containers that remain on-site longer than 60 days, whether additional inspection requirements should apply to all containers or only to larger containers, and whether the agency should incorporate inspection requirements under 40 CFR 264 and 265, Subparts BB and CC for RCRA-permitted and interim status facilities. If requested by Aug. 14, 2017, a hearing will be held Aug. 22, 2017, in Washington, D.C. Comments are due Sept. 21, 2017. AIR

Test Procedure for Dedicated-Purpose Pool Pumps

AIR

Final rule of the Energy Department, Office of Energy Efficiency and Renewable Energy, establishes a test procedure for dedicated-purpose pool pumps applicable to self-priming and nonself-priming pool filter pumps, waterfall pumps, and pressure cleaner booster pumps. The rule also adds definitions, specifies a new weighted energy factor (WEF) metric to characterize energy performance, and includes a test method to determine the self-priming capability of pool filter pumps. In addition, the rule incorporates by reference the Hydraulic Institute's Standard 40.6-2014, Methods for Rotodynamic Pump Efficiency Testing; UL's Standard 1081-2014, Standard for Swimming Pool Pumps, Filters, and Chlorinators; Canadian Standards Association's Standard C747-2009, Energy Efficiency Test Methods for Small Motors; IEEE's Standard 113-1985, Test Procedures for Direct-Current Machines; IEEE's Standard 114-2010, Standard Test Procedure for Single-Phase Induction Motors; and NSF International's Standard 50-2015, Equipment for Swimming Pools, Spas, Hot Tubs, and Other Recreational Water Facilities. The test procedure does not apply to integral cartridge-filter pool pumps, integral sand-filter pool pumps, storable electric spa pumps, or rigid electric spa pumps, and the scope of energy conservation standards applicable to dedicated-purpose pool pumps will be established in a separate action. Compliance with the final rule will be mandatory for representations of WEF and other metrics addressed by the adopted test procedures made on or after Feb. 3, 2018. The rule is effective Sept. 6, 2017. Contact: Ashley Armstrong; EPA, Office of Energy Efficiency and Renewable Energy; 202-586-6590; Ashley.Armstrong@ee.doe.gov. GENERAL ENVIRONMENT AND SAFETY
Assurance Cases for Infusion Pump Manufacturers
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the withdrawal of a March 15, 2017, notice (82 FR 13817) regarding the intention to seek OMB approval for a continuing information collection request regarding safety assurance cases for infusion pump devices. The collection would have addressed requirements for infusion pump manufacturers to describe how and why their device meets FDA safety standards. The agency is withdrawing the notice because the information collected for safety assurance cases is already included in another collection. The withdrawal is effective Aug. 7, 2017. HAZARDOUS MATERIALS TRANSPORTATION
FMCSA Administrative and Rulemaking Procedure
HAZARDOUS MATERIALS TRANSPORTATION

Proposed rule of the Federal Motor Carrier Safety Administration would require use of a negotiated rulemaking or advance notice of proposed rulemaking process for all major rules regarding commercial motor vehicle safety and authorize the administrator to waive the requirement under certain circumstances. The rule would further revise the process for preparing and adopting rules by defining "petition" to include requests for a new regulation, regulatory interpretation or clarification, or determination that a regulation should be modified or eliminated. A process for filing and addressing petitions also would be established. In addition, the rule would provide that, on receipt of a comment, the comment period for direct final rules would be extended while the agency determines whether the comment qualifies as adverse. Finally, the rule would add definitions and make editorial corrections. Comments are due Oct. 6, 2017. WATER
Water Right Permitting
Montana WATER

Notice of the Department of Natural Resources and Conservation announces an extension of the comment period for a Sept. 8, 2017, proposed rule to amend regulations under ARM 36.12.101 through .1801 (nonconsecutive) and repeal regulations under ARM 37.12.106 to update water rights permitting standards and procedures. The rule adds notice requirements for temporary appropriations of water for emergency fire training and clarifies that no filing fee refunds will be authorized after the department has issued a deficiency letter to applicants. The rule also adds requirements for objections concerning adverse effects to instream flow rights for fish, wildlife, and recreation; clarifies aquifer testing requirements; and adds permit application requirements for projects in sage grouse habitats. In addition, the rule clarifies deficiency letter timelines and outcomes and acceptable surface water measurement data and removes duplicative provisions concerning testing and monitoring. Finally, the rule updates the definition of "combined appropriation" and removes the definition of "municipal use" to conform with judicial decisions. The comment period is extended to allow the Water Policy Interim Committee to review and discuss the proposal. Comments now are due Oct. 20, 2017. Subject: POLITICO's Morning Energy: Energy industry wants brakes pumped on regulatory rollbacks — Icahn out as Trump adviser — Deadline this week for Zinke's monument review

By Anthony Adragna | 08/21/2017 10:00 AM EDT

With help from Alex Guillén and Esther Whieldon

WHERE ARE THE BRAKES ON THIS ROLL BACK? Even as they're publicly touting the efforts of President Donald Trump to roll back regulations, some oil and gas companies are increasingly worried the administration may go too far, Pro's Ben Lefebvre reports . A dozen executives, lobbyists, lawyers and analysts are worried about the fallout if the rules' loosening is followed by a major disaster, and they are concerned that unscrupulous competitors could benefit from the axing of rules that their companies have already spent money to comply with. They're also uneasy with efforts to renegotiate trade deals like NAFTA or reorganize the agencies responsible for overseeing offshore drilling. "Every industry wants regulations that make sense, but you don't need to roll things back so far that it opens an opportunity for outsiders to criticize, or something bad happens and then [rulemaking] goes the other way but even further," Brian Youngberg, energy analyst at investment firm Edward Jones, tells Ben.

One example of a rule drawing too much attention from the Trump team is the Obama-era Interior Department rule tightening methane emission standards for oil and gas wells and pipelines on public lands. Trade associations American Petroleum Institute and Western Energy Alliance publicly cheered Interior Secretary Ryan Zinke's push to rewrite the rule, but behind the scenes, Exxon Mobil, BP and other large oil and gas companies considered the rule relatively minor, lobbying and industry sources said. Those companies already had the technology to comply and they planned to pay off the implementation costs through the sale of methane they captured. And others operating in Colorado already had to comply with a state rule that closely resembled the federal one.

Industry officials are scratching their heads at Interior's review of whether to combine the Bureau of Ocean Energy Management, which leases the federal Outer Continental Shelf to energy companies, with the Bureau of Safety and Environmental Enforcement, which regulates the companies' activities. "When there's - God forbid - the inevitable accident in the Gulf of Mexico, why would you want to be known as the administration that made that move?" said one lawyer representing oil and gas companies. Officials said they didn't ask for the reorganization and first heard about it when Zinke floated the idea.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and Bracewell's Frank Maisano was first out of the gate to identify Luxembourg as the world's last remaining grand duchy. ICAHN'T BELIEVE THIS IS HAPPENING: Carl Icahn's failure to rewrite biofuel rules

looks to have foreshadowed the billionaire investor's departure as an adviser to Trump, and questions about whether his effort violated ethics rules are still swirling, our Eric Wolff writes. Icahn stepped down as an unpaid Trump adviser on regulations on Friday, just ahead of EPA's rejection of the change in the Renewable Fuel Standard's "point of obligation," which could come any day.

Though the White House has insisted that Icahn only served in an informal role, Trump's move to tap him to alter regulations had raised eyebrows among ethics watchdogs since Icahn's vast holdings, from insurance to liquefied natural gas and rail cars, often put his businesses in the cross-hairs of Washington regulators.

"There was a perception of government that was not in line with ethics rules. Donald Trump came in and said the ethics rules don't apply to him. Icahn had convinced himself the same would apply to him," said Jeff Navin, a partner at Boundary Stone Partners and a former acting chief of staff at the Department of Energy under Obama.

ZINKE MONUMENT RECOMMENDATIONS DUE THIS WEEK: Zinke has until Aug. 24 to send Trump recommendations on whether to rescind or tweak more than a dozen national monuments created by former presidents, most of which are in Western states. Zinke has whittled down the list of monuments on the chopping block from 22 to 16, but he has only visited seven of those, plus one the Commerce Department is reviewing. It remains to be seen whether Zinke will recommend Trump test his authority under the Antiquities Act and rescind any of the monuments - a move that would certainly face legal challenges. Zinke in June made preliminary recommendations that Trump trim back the size of the Bears Ears National Monument in Utah.

Californians for monument visits: Ahead of Zinke's Thursday deadline for reviewing a host of national monuments designated under the Antiquities Act, a bunch of California politicians asked him to come visit the sites still under examination in their state. "We invite you once more to visit our state, meet face to face with the communities who love and protect our treasured landscapes before making a recommendation that might reduce or revoke monument status," the letter, led by Rep. Judy Chu, says.

Congressional leaders pushed, too: The chairs of the Congressional Asian Pacific American Caucus, the Congressional Black Caucus and the Congressional Hispanic Caucus sent a letter Friday to House and Senate leadership urging them to resist any legislative efforts to limit the president's ability to designate monuments under the Antiquities Act. "Any attempt to curtail the President's authority to protect these places or to remove protections already put in place by other Presidents is an attack on our shared history," Reps. Cedric Richmond, Michelle Lujan Grisham and Chu wrote.

EPA SEEKS 16-MONTH DELAY OF TEXAS HAZE DEADLINE: EPA on Friday asked a federal court in D.C. to rewrite a consent decree reached with environmental groups under the Obama administration requiring the agency to take action on Texas pollution contributing to regional haze. The court had previously given EPA until Sept. 9 to either accept a state plan or write a federal plan, but on Friday EPA asked the court to give it until Dec. 31, 2018. The

agency's filing says that since the Trump administration took office, "EPA and Texas have engaged in a productive level of dialogue that has not occurred in many years." EPA and Texas regulators have agreed on a plan to write a rule "that would be more consistent with the [Clean Air Act's] preference for cooperative federalism, and would produce a plan that more effectively addresses concerns raised by the State," the filing added.

Environmentalists have until Aug. 29 to object in court, but they made their feelings clear in a Friday evening statement blasting EPA's proposal as bad news for residents of Oklahoma who breathe in some of that Texas air. "Scott Pruitt just made it clear that he plans to abandon the residents of his home state to placate Texas polluters who don't give a second thought about Oklahoma families or its natural places," said Johnson Bridgwater, director of the Sierra Club's Oklahoma Chapter. The green groups noted that EPA was supposed to have done all this back in 2007, making the proposed delay that much more untenable.

RECORDS SOUGHT IN SAGE GROUSE REVIEW: The Western Values Project filed a FOIA request Sunday seeking copies of communications between various Interior officials participating in its sage grouse review and various energy groups, including the Western Energy Alliance, American Petroleum Institute and Petroleum Association of Wyoming. That comes as Western Values Project released a document that it said showed Zinke's early August order for his department to alter how it and states implement conservation plans for the bird was based heavily on recommendations from the Western Energy Alliance. "This is a dangerous trend that is becoming a pattern for Secretary Zinke - offer lip-service to the West while granting private industry unfettered control of our public lands," Jayson O'Neill, deputy director of the Western Values Project, said in a statement.

THERE'S A GROUP FOR EVERYTHING: Four governors on the Outer Continental Shelf Governors Coalition - Maine's Paul LePage, Mississippi's Phil Bryant, Alabama's Kay Ivey and Alaska's Bill Walker - released a letter Friday urging Zinke to include all possible areas as the agency develops its five-year offshore drilling plan. "Access to offshore energy resources will allow coastal states and communities to realize great economic opportunities," they wrote.

TRICKLE OF CHANGE ON CLIMATE? Some Republicans may be taking their first steps to distance themselves from their party's hard line on climate change, but there are doubts from some that participation in the House Climate Solutions Caucus represents anything more than political cover for endangered lawmakers, POLITICO California's David Siders reports. But Rep. Carlos Curbelo , one of the group's co-founders, said it was working on "blocking and tackling ... opposing anti-climate legislation" and already showed progress from a couple of years ago when hardly any GOP members spoke out on climate change. "I think the next phase, and hopefully we can get to that this Congress, is to turn the caucus into an ideas factory, get behind proactive legislation," the South Florida Republican said.

NEW AD AGAINST REGULATORY BILLS: Clean Air Moms Action is out with a new ad today urging Congress to oppose the Regulatory Accountability Act H.R. 5 (115) and the Regulations from the Executive in Need of Scrutiny Act H.R. 26 (115) , two measures they say would threaten environmental and public health protections. The $250,000 digital campaign will run across Missouri, Indiana, Montana, Florida and Virginia - the states of Democratic senators

that bill backers would need to get them to 60 votes in the Senate. Both bills have passed the House on largely party-line votes.

MAKE OR BREAK IN THE PEACH STATE? Three backers of the Vogtle nuclear project in Georgia - Southern Co.'s Georgia Power, Oglethorpe Power Co. and the Municipal Electric Authority of Georgia - last week asked the Energy Department for a bigger lifeline, but one state regulator was skeptical that would determine whether the project proceeds, Pro's Darius Dixon reports . "I'm not sure that the loan guarantee piece of the project equation is a make or break issue for us," Tim Echols, the vice chairman of the Georgia Public Service Commission, said by email. "The Toshiba payments are far more important." The long-delayed and over-budget project suffered the bankruptcy of its lead contractor and reactor designer Westinghouse this spring.

DOE CELEBRATES COAL EXPORT: Officials from the Energy and Commerce Departments will gather with Ukrainian Ambassador to the U.S. Valeriy Chaly today at 2 p.m. in Baltimore in recognition of the first shipment of Pennsylvania thermal coal bound for Ukraine. U.S. participants include Wells Griffith, acting assistant secretary for international affairs at DOE, and Israel Hernandez, acting under secretary of the International Trade Administration.

TRUCK LOBBY WORRIED ABOUT TRUMP EPA REOPENING PHASE 2 RULE: The American Trucking Associations is "concerned" about EPA Administrator Scott Pruitt's announcement last week that he will revisit parts of the Obama administration's Phase 2 emissions standards for heavy duty trucks. The split highlights a regulation that had largely gotten the buy-in of the trucking industry in order to avoid state-level patchwork rules. The only major legal challenge to the rule was over EPA's first-time aerodynamic rules for trailers, which is the part of the rule Pruitt plans to re-open. In a statement on Friday, ATA President and CEO Chris Spear said the industry is concerned that cracking open the federal rule for this one issue "has opened the door to California taking the lead, and a more aggressive track, in setting trailer standards." A California Air Resources Board spokesman told Trucks.com that it is "premature" to discuss whether state rules in development will break from the federal regulation.

MORE ASIAN CARP TROUBLE FOUND: It's unclear how it made its way past several electric barriers meant to keep the invasive species out, but an adult Asian carp got quite close to Lake Michigan, according to a report from a coalition of federal agencies released Friday. "Time is of the essence to both implement a permanent solution and take immediate steps to stop Asian carp from reaching our Great Lakes," Michigan Sen. Debbie Stabenow said in response.

Subject: Morning Energy: Pruitt cleared by scientific integrity panel — New front in RFS battle — What will Southern have to say about Vogtle today?

By Annie Snider | 08/02/2017 05:41 AM EDT

With help from Esther Whieldon, Alex Guillén and Darius Dixon.

PRUITT'S CLIMATE COMMENTS CLEARED BY SCIENTIFIC INTEGRITY PANEL: A panel of EPA employees has concluded that Administrator Scott Pruitt's controversial assertion that carbon dioxide is not the primary driver of climate change during a television interview in March did not violate the agency's scientific integrity policy. That policy "specifically encourages employees to express their opinion should the employee disagree with scientific data, scientific interpretations, or scientific conclusions," the panel of high-ranking EPA officials wrote, noting that Pruitt "did not suppress or alter Agency scientific findings."

Lost in the mail? The panel's conclusion was included in a letter from Thomas Sinks, director of EPA's Office of the Science Advisor, addressed to the Sierra Club, which had formally complained about Pruitt's climate comments. But the green group said Monday evening that it had not received that letter, which first appeared in conservative media outlets. For its part, EPA's press office circulated an article from the Washington Free Beacon to publicize the letter.

Elena Saxonhouse, a senior attorney with Sierra Club, said in a statement that her group was told by EPA staff that the proper process is for the complaining party to be informed first. Moreover, she added: "Pruitt's 'opinions' can have especially weighty consequences for the many scientists working below him, yet the letter treats him like any other employee."

HAPPY WEDNESDAY. I'm your guest host, Annie Snider, and I've got you for the rest of the week. The NRDC's Joan Matthews is the competition to beat, being the first to send in the correct trivia answer for a second day in a row. Benjamin Harrison, Herbert Hoover, Lyndon B. Johnson, Bill Clinton and Barack Obama were the five presidents born in August, and Warren G. Harding was the one to die this month. For today: On this day in 1939, Albert Einstein and Leo Szilard wrote to President Franklin D. Roosevelt; what did they ask him to do? Send your answers — and your tips, energy gossip and comments to asnider@politico.com or follow us on Twitter @AnnElizabeth18, @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

NUCLEAR EYES TURN TO GEORGIA: Now that the V.C. Summer nuclear project in South Carolina appears to be on its last legs after the two owners announced plans to ditch the effort, the nuclear policy universe turns its attention to Southern Co., which holds its quarterly earnings call today. Southern, through its Georgia Power unit, is the lead owner of the two-reactor Vogtle plant expansion facing a lot of the same struggles Summer did: cheap natural gas,

cost overruns, anxious investors, and the bankruptcy of their primary contractor, Westinghouse. Taxpayers also have a stake in Vogtle. The Energy Department has provided loan guarantees for $3.4 billion to Georgia Power, $3.1 billion to Oglethorpe Power Co., and $1.8 billion to the Municipal Electric Authority of Georgia. More than $5.3 billion of that money has been advanced to the firms since Feb. 2014, according to Treasury Department records. SCANA, the majority owner of the Summer project, saw its stock rise 5 percent each day since announcing plans to abandon the reactors.

But many came to Vogtle's pre-defense since Monday, including two top members of Georgia's utility regulator (its vice chairman, Tim Echols, has tweeted on the subject more than a dozen times). It goes something like this: Georgia Power has more than three times as many customers (making the cost impacts of the project lower), Vogtle is getting a $3.7 billion payout from Westinghouse parent company Toshiba ($1.5 billion more than Summer is getting), and the Georgia project has been seen as being better managed. Still, every month of indecision costs the Vogtle co-owners about $100 million. Rather than steal Southern's thunder, an Oglethorpe spokesman told ME the Vogtle co-owners are still working "to develop a detailed schedule and cost-to-complete for the project." Southern CEO Tom Fanning will hold court with investors starting at 1 p.m.

Meanwhile, in the Sunshine state nuclear critics see the South Carolina shut down as a signal that the supposed "nuclear renaissance is over, Politico Florida's Bruce Ritchie reports. Florida Power & Light Co. told the state's Public Service Commission regulators in May planning to continue its "pause" of two new nuclear units at its Turkey Point power plant south of Miami while it seeks to learn from efforts further north.

FAREWELL, DREAMS OF SUMMER RECESS: August got a whole lot sweatier when John Cornyn told reporters Tuesday that the upper chamber will, indeed, stay in session through next week, cutting its precious August recess time in half.

Minibus idling in the driveway: Majority Leader Mitch McConnell started the process to fast-track the House-passed appropriations measure funding the Defense and Energy Departments, as well as the Army Corps of Engineers, Veterans Administration and Legislative branch. But don't get your hopes up yet — leaders use the "Rule 14" process, which allows a measure to bypass committees and head straight to the floor, for dozens of bills each month that go exactly nowhere. Moreover, both McConnell spokesman Don Stewart and a Senate appropriations aide warned not to read too much into the majority leader's gesture (h/t Budget & Appropriations Brief).

But what about the noms? Odds aren't looking good for most (any?) of the energy nominees awaiting confirmation moving during that extra time either. ME caught up with Sen. Dean Heller about his hold on deputy Energy secretary nominee Dan Brouillette and the Nevada Republican said there's no deal, "just conversations and discussions." The two Republican FERC nominees also don't look like they'll be gaining any momentum before recess, in part because the White House still hasn't coughed up the Democratic nominee Trump announced in June.

When asked about the two GOP picks for the Nuclear Regulatory Commission, EPW Chairman

John Barrasso said he generally wants "every one" of the Senate's pending nominees confirmed. But Barrasso also said he hasn't talked to his ranking member, Sen. Tom Carper — which is a big red flag. Carper has been saying for months that he wants NRC Commissioner Jeff Baran, a Democrat, to get reconfirmed alongside the new commissioners, both of whom he supports. Without Carper's blessing, it's hard to see how they get into a big package that needs unanimous support.

BUT SOMEONE IS CONFIRMED: The Senate approved Lucian Niemeyer to be an Assistant Secretary of Defense for Energy, Installations and Environment Tuesday. Niemeyer, a retired Air Force lieutenant colonel, previously oversaw military installations and federal energy and environmental programs as a staffer on the Senate Armed Services Committee.

OLD PROBLEM, NEW HEADACHES: Another battle in the long-running war over the Renewable Fuel Standard may be ready to break out in the wake of last week's D.C. Circuit Court of Appeals decision voiding EPA's use of a waiver to lower the amount of ethanol that refiners had to blend into the gasoline supply in 2016, as compared with targets set by Congress more than a decade earlier.

The issue, Eric Wolff reports, is that the court offered little guidance on how to correct that problem for a year that is already in the history books, leaving EPA to decide whether to force refiners to spend up to a half a billion dollars on additional compliance credits for fuel that they've already sold, or find a way to let refiners off the hook.

The obvious solution — requiring additional Renewable Identification Numbers — has drawn protests from refiners. Instead, they argue the agency could simply rewrite the rule to reflect the actual amount of biofuels used in 2016, just as it did in previous years. But ethanol producers argue the agency should not be able to simply paper over its mistake. Here's Eric with more.

DEEPWATER, TESLA TEAM UP ON OFFSHORE WIND PROJECT: Tesla and Deepwater Wind are proposing an offshore wind project that would be paired with battery storage. The 144-megawatt "Revolution Wind" project Deepwater wants to build offshore Massachusetts would be paired with a 40 megawatt-hour battery storage system from Tesla. The companies were among dozens of wind, solar, hydropower and even high-voltage transmission line developers that last week bid for 15-year to 20-year "clean energy" contracts with utilities in Massachusetts. The commonwealth posted the bids online Tuesday. Deepwater Wind in December brought the nation's first offshore wind project online offshore of Rhode Island.

WEDNESDAY IS FOR WATER: Get ready for some Senate Energy and Natural Resources water wonkery this morning, when Arizona Republican Jeff Flake 's Water and Power subcommittee will look at how infrastructure, management and innovation can improve water security in the arid West. The hearing will set the stage for the inclusion of Western water issues in the infrastructure package some lawmakers are still holding out hope for. With Arizona's top water official testifying, the hearing could also shed light on an emerging deal between the U.S. and Mexico to share in shortage along the over-allocated Colorado River.

If you go: The hearing is at 10 a.m. in 366 Dirksen.

DEMS QUESTION ZINKE'S REVENUE GOALS: Senate Energy and Natural Resources Committee ranking Democrat Maria Cantwell and House Natural Resources Committee top Democrat Raul Grijalva in a Tuesday letter to Interior Secretary Zinke questioned whether he is keeping his pledge to ensure the American people receive their fair share when companies use public land to extract oil, gas and coal resources. The agency's "actions so far this year have served to do the exact opposite, reducing the return that taxpayers receive instead of increasing it," they wrote. Cantwell and Grijalva asked Zinke to answer a number of questions, including how his reinstated and expanded royalty policy committee would address these fiscal issues.

EPA APPROVES FLINT LOAN FORGIVENESS: The city of Flint is off the hook for $21 million in federal drinking water loans, EPA said Tuesday. The move, requested by GOP Michigan Gov. Rick Snyder, frees up more money for the city's efforts to replace lead service lines and upgrade its infrastructure in the wake of a major lead contamination crisis. "Rebuilding our nation's infrastructure is one of the President's top priorities, and EPA is especially focused on those communities, like Flint, that need it the most," EPA Administrator Scott Pruitt said in a statement.

LEGAL FILING OF THE DAY: The American Civil Liberties Union's West Virginia chapter wants to defend TV comedian John Oliver in the lawsuit over his recent segment on coal magnate Bob Murray. The ACLU's "friend of the court" brief filed on Tuesday argues that Oliver had various constitutional rights to air the segment, which among other things referred to Murray as a "geriatric Dr. Evil." Murray's suit is an attempt "to chill protected speech and silence the marketplace of ideas," the ACLU told a federal court in a brief which includes sections titled "Anyone Can Legally Say 'Eat S---, Bob!'" and "You Can't Sue People for Being Mean to You, Bob."

The group notes that while its brief "pokes fun at the absurdity of this case, the legal issues raised by it are anything but comical." (Still, the ACLU included a photo comparison between Murray and the fictional Dr. Evil on page 14.) Murray and his company are currently trying to get the case sent to a state court and secure an order stopping HBO from sharing the segment further.

GREENS CALL FOR SCRUTINY OF ENHANCED OIL RECOVERY: In a report out this morning, Clean Water Action is calling for increased environmental protections around the common practice that uses fluids or gasses to push oil to the surface. Enhanced oil recovery is regulated under a Safe Drinking Water Act program that hasn't seen its regulations updated in decades, requires little monitoring and data collection, and is targeted for a 30 percent cut under Trump's budget proposal, the report finds. It argues that it's difficult for state and federal agencies to push for stricter oversight without evidence of violations or proven cases of drinking water contamination, but that with meek budgets, these are almost impossible to collect.

MAINE LEGISLATURE VOTING ON VETOED SOLAR BILL: The Maine Legislature is slated to vote today on an override of Gov. Paul LePage's veto of L.D. 1504, a measure that would have utility regulators formulate new recommendations on the future of net metering in 2019. The bill does not stop the state from starting to phase out its net-metering program in the

meantime. The Legislature passed the measure in June with a veto-proof majority but it remains unclear whether lawmakers will hold their ground.

MOVER, SHAKER: Jamie Nolan leaves her post as communications director for DOE's SunShot Initiative today to launch her own communications consultancy focused on energy, clean tech, climate and transportation.

QUICK HITS

— Islamic State and climate change seen as world's greatest threats, poll says. New York Times.

— Tesla's longtime battery technology director leaves company. Bloomberg.

— 59,000 farmer suicides in India over 30 years may be linked to climate change, study says. Washington Post.

— Big Oil Bites the Low-Price Bullet, Wall Street Journal.

HAPPENING TODAY

10 a.m. - The Senate Energy and Natural Resources Water and Power Subcommittee holds a hearing on water security and drought preparedness, Dirksen 366.

2:30 p.m. - Citizens for Responsible Energy Solutions Forum hosts a discussion on the future of "Job Growth in the Solar Industry and Free Trade," G11 Dirksen.

Stories from POLITICO Pro

Battle lines emerging over how EPA can fix last year's ethanol mandate Back

By Eric Wolff | 08/01/2017 06:27 PM EDT

Ethanol producers and oil refiners are bracing for a future fight over problems in the past.

The dilemma fit for an episode of "Doctor Who" stems from EPA's decision to reduce the amount of ethanol that refiners had to blend into the gasoline supply in 2016, compared with targets Congress had mandated more than a decade before. The D.C. Circuit Court of Appeals last week voided EPA's use of a waiver to lower the Renewable Fuel Standard target, but it offered little guidance on how to correct that problem for a year that is already in the history books.

EPA now must decide whether to force refiners to spend up to a half-billion dollars on additional compliance credits for fuel they have already sold — or to find a way to let bygones be bygones. The Trump administration has made it a priority to reduce compliance costs for businesses, and the law provides numerous options EPA could use to effectively let refiners off the hook, though ethanol producers likely would fight any move they saw as too friendly to the oil industry.

The court's decision would bump up the requirement for blending conventional biofuel into the fuel supply in 2016 by 500 million gallons, to 15 billion gallons. Since the fuel is already blended, the agency would have to ask refiners to make up the difference by turning in Renewable Identification Numbers, the credits used to prove RFS compliance. It would take between $400 million and $500 million worth of RINs to close that gap, according to Morgan Stanley Research.

The D.C. Circuit did not set any deadline for EPA to decide what to do, and sources on both sides of the dispute agree the question of how to address the 2016 volumes may remain unresolved indefinitely. An EPA spokesman said the agency is still reviewing the case.

Rich Alonso, an attorney at Sidley Austin who represents merchant refiners, says that approach would not achieve the goals of the RFS, which Congress first enacted in 2005 and expanded in 2007 to get more corn ethanol and advanced biofuels into the gasoline supply.

"I think that would be totally unreasonable. At that point you're asking people to pay more cash. There's no relationship between more RINs and blending more ethanol," he said. "I don't expect this administration to do that. It's an option, but people relied on the 2016 volumes. Their compliance books are closed. Refineries are suffering great economic stress and harm today — to increase that stress and harm, that would push a lot of refiners to the breaking point."

Biofuel advocates said forcing refiners to comply with the higher target for 2016 would not be too painful.

"They should call in the RINs," said Brooke Coleman, executive director of the Advanced Biofuels Business Council. "There are reasonable ways to do it."

But there are plenty of easier options, Alonso argued. The simplest would be to not enforce the rule for 2016. EPA would rewrite the rule without the waiver and then let all the refiners slide.

EPA could also rewrite the rule to reflect the actual amounts of biofuel used in 2016, an approach EPA used for 2014 and 2015, when it blew past mandatory deadlines for setting volumes. The D.C. Circuit upheld the rules for those two years at the same time it remanded the 2016 volumes back to the agency. Or EPA could take advantage of administrative options, like unretiring RINs that had expired unused, handing out free RINs to allow compliance, and so on.

Frank Macchiarola, downstream director for the American Petroleum Institute, a major oil trade association, still thinks EPA could use its general waiver authority, but it should use an alternative justification. The D.C. Circuit rejected EPA's logic that it could reduce the blending

requirement because of insufficient demand, saying the waiver is intended for supply shortfalls when ethanol producers cannot meet program requirements.

But Macchiarola argues that the agency could rewrite the rule using its waiver by justifying it as preventing severe economic harm.

"The statute could not have envisioned a situation where there would be such marketplace disruption by adhering to the statutory volumes," he said.

Ethanol producers say EPA should not be able to simply paper over its mistaken use of the waiver last year.

"We are still reviewing the decision and our options, but simply ignoring the court order or papering over their obligation to revisit the 2016 RVO is not an option for EPA," Renewable Fuels Association CEO Bob Dinneen said in a statement. "It is important to note that there's only a 500 million gallon difference from EPA's 2016 RVO and what the statute required."

Dinneen said the agency had recently revised the number of 2016 RINs upward by almost 500 million gallons, so using credits to comply wouldn't be difficult. And he said the agency could allow companies to carry forward their higher obligation into future years, to ease the pain of the transition. Coleman said there's more ethanol this year and last year, so there are more RINs available for retiring.

Coleman and API's Macchiarola agree on one thing, though: EPA might not do anything for a while.

"They could put it at the end of the priority list," Macchiarola said. "They have plenty to do."

Subject: Morning Energy: Scott Pruitt's campaign in waiting? — Comments pour in on offshore drilling plan — Oregon lawmakers back Suniva solar petition

By Anthony Adragna | 08/18/2017 05:40 AM EDT

With help from Emily Holden

IS SCOTT PRUITT PLAYING THE LONG GAME? Ostensibly to gather feedback on rolling back an Obama-era water rule, EPA Administrator Scott Pruitt's 10-state trek this summer — jam-packed with local media hits — is raising eyebrows around the Beltway that the former Oklahoma attorney general is laying the groundwork for a political campaign once he leaves President Donald Trump's Cabinet, Pro's Emily Holden reports. "Whatever he may claim to be, he is a politician with campaign experience," one GOP strategist said, noting EPA likely won't be "his career culmination goal."

It's not immediately clear what office Pruitt, 49, could seek but speculation has focused on the Senate seat held by Jim Inhofe — should the 82-year old fifth-term senator decide to retire or not seek re-election in 2020. If he does seek elected office, Pruitt could be the first EPA chief to make that jump. His inner circle is dominated by key personnel with links back to Oklahoma, though state strategists say they haven't heard of any campaigns on the horizon: "I can tell you that I have not heard anybody in Oklahoma talk about a Senate run for Scott Pruitt," Oklahoma GOP political strategist Pat McFerron told Emily.

But what's clear to former Republican EPA chiefs is Pruitt has an entirely different focus than past administrators. Former George W. Bush EPA chief Christine Todd Whitman noted he's spending more time on television and away from headquarters. "You've got plenty on your plate. You really don't have a lot of time to go and do the kinds of stuff he's doing," said Whitman, a former New Jersey governor. EPA declined to comment on Pruitt's future plans but defended his trips. "Unlike the previous administration which imposed its regulatory regime from Washington, Administrator Pruitt is taking the conversations directly to the states," said EPA spokesman Jahan Wilcox.

History lesson: Former GOP-appointed EPA Administrator Bill Ruckelshaus said Pruitt "clearly has not bought into the mission of EPA," and is "more interested in reducing the regulatory impact." Though Pruitt's often compared to Anne Gorsuch, who Reagan appointed to EPA to ease environmental regulations, Ruckelshaus argued the Oklahoman might be more effective at shrinking the agency's profile than Gorsuch who didn't successfully dismantle much. "They weren't as knowledgeable about the laws...the people they brought in were not very skilled," he said. "What this administration is doing is bringing in somebody who has been suing the agency for a long time, although never very successfully." He said Pruitt and his staff, comprised of Hill staffers, are familiar enough with the statute to be "skillful at unraveling the agency's system." Ruckelshaus added that other news from the administration is distracting from Pruitt's rollbacks.

TGIF AND WE MADE IT EVERYONE! I'm your host Anthony Adragna, and the Senate

Energy Committee's Sean Solie was first to identify Kiribati as the only country in all four hemispheres (though France may as well depending on how you count its land overseas). For today: What's the world's only remaining grand duchy? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

LIFELINE SOUGHT FOR GEORGIA NUCLEAR PROJECT: Southern Co. and Oglethorpe Power Corp. are in talks with the Energy Department to potentially increase the record $8.3 billion loan guarantee for the two troubled new reactors under construction at Plant Vogtle in Georgia, Bloomberg reports. "We have filed an application to potentially increase the amount of funds available for the Vogtle project under our DOE loan guarantee agreement to keep all options open for customers," Georgia Power spokesman Jacob Hawkins told the wire service. People familiar with the discussions say the project's growing costs may mean the companies can qualify for additional government support. DOE spokeswoman Shaylyn Hynes said the agency "continues to have daily conversations with our borrowers about the status of Plant Vogtle."

LET IT (CONTINUE TO) FLOW: Both the Trump administration and the company behind the Dakota Access pipeline argued in briefs filed late Thursday the pipeline should continue to operate while the Army Corps of Engineers revisits an environmental review a federal court ruled earlier this was inadequate. Dakota Access LLC said in its brief "the extremely low likelihood of any harm if the pipeline remains operational" and the "the certain disruption should the Court order otherwise" justified keeping the project running. A federal judge back in June found the Army Corps used flawed risk and environmental justice analysis when clearing the pipeline operator to finish construction.

LET THOSE DRILLING COMMENTS FLOW: Interior officials have plenty of information — 56,000 comments — to weigh as they begin the arduous process of crafting a new five-year offshore drilling plan after Thursday's comment deadline. Some input that caught ME's eyes:

—**Virginia Gov. Terry McAuliffe** asked for his state to not be included after previously expressing openness to the idea provided the state got a cut of drilling revenues. "The program as proposed does not adequately protect Virginia's interests and we hope you will heed our request to exclude our coastal areas," he wrote.

—**Major energy associations** called the drilling plan's expansion to also include new areas in the Atlantic, Eastern Gulf of Mexico, Beaufort and Chukchi seas of Alaska and Pacific. "The decisions made now will have long-lasting impacts on U.S. energy policy," nine trade groups, including the American Petroleum Institute, National Ocean Industries Association and Independent Petroleum Association of America, wrote. "To continue our march towards greater energy independence, bold, forward-looking decisions need to be made."

—**Thirty Democratic senators, led by Oregon's Jeff Merkley,** urged Interior Secretary Ryan Zinke in a letter to maintain existing protections and exclusions in the current 2017-2022 offshore drilling plan. "We believe the existing program correctly excludes areas from the leasing program that pose significant environmental, economic, and cultural risk, as well as face

strong community opposition. We urge you to maintain the protections and exclusions outlined in the current 2017-2022 Program," they wrote.

—**More than 1,500 veterans** wrote Zinke that expanding offshore drilling was not compatible with military readiness. And a coalition of green groups, including Natural Resources Defense Council, the Sierra Club, Earthjustice, Oceana, Greenpeace and the Center for Biological Diversity, said more than 370,000 people were opposed to any drilling expansion. "There are no new facts to consider," the groups said in a statement. "The public opposes this reckless step and there is no need in the United States for the limited energy that would be produced."

TRUMP, SCOTT TALK DIKE FUNDING: Maybe not your ordinary lunch chatter, but Trump and Florida Republican Gov. Rick Scott heavily focused on the state's push to get money to repair a federally operated dike around Lake Okeechobee while breaking bread Thursday, POLITICO Florida's Matt Dixon reports. Florida wants federal money to help repair the Herbert Hoover Dike around the lake. "Governor Scott wants to do all he can to protect Florida's environment and President Trump is very supportive," Scott communications director John Tupps said in a statement.

GORE TO TRUMP: TIME TO RESIGN: Former Vice President and environmental advocate Al Gore urged Trump to quit during an interview released Thursday, POLITICO's Darren Samuelsohn reports. Asked what single piece of advice he'd give Trump, Gore told the website LADbible: "Resign."

Speaking of: Gore will keynote the National Clean Energy Summit co-hosted by former Sen. Harry Reid and Nevada Gov. Brian Sandoval on Oct. 13. "Vice President Gore is the most prominent environmental activist in the world today, and I am pleased my friend is coming to Nevada for the National Clean Energy Summit," Reid said in a statement. More on the summit here.

MAIL CALL! OREGONIANS BACK SUNIVA SOLAR TARIFF PETITION: Five Oregon Democrats, including Senate Finance ranking member Ron Wyden, sent a letter to the International Trade Commission backing "appropriate remedies" to a surge in cheap solar imports that many argue have harmed domestic manufacturers. "Should the ITC make an affirmative finding, we support recommending a remedy that will save and strengthen this important American manufacturing industry," they wrote. The ITC held a public hearing earlier this week on petitions from Suniva and SolarWorld Americas seeking steep tariffs on imported solar cells and modules.

PUMP THE BREAKS ON WOTUS REPEAL: More than 100 House Democrats are out with a letter today to Pruitt urging him to reconsider plans to revamp the Obama administration's Waters of the U.S. rule. "We would be willing to work with an administration that wants to develop thoughtful changes that maintain protections for this life-sustaining resource, but this repeal is reckless," the letter, led by Rep. Don Beyer, says.

MORE LAWMAKERS WEIGH IN ON MONUMENTS: California senior Sen. Dianne Feinstein sent Zinke a letter urging him not to alter the boundaries of the six national monuments

from her state still under review. "I encourage you to visit these remarkable places and witness firsthand their inspirational beauty and significance to our nation," she wrote, thanking Zinke for recommending no changes to the Sand to Snow National Monument on Wednesday. In addition, Rep. Martha McSally (R-Ariz.) sent a somewhat bizarre letter urging Zinke to "carefully consider" the impact of his decisions but offering no recommendations for how he should approach the three other Arizona national monuments still under review.

DOJ sued for monument records: The Western Values Project filed a lawsuit Thursday after DOJ's Office of Legal Counsel didn't respond to FOIA requests seeking records related to any efforts to legally justify a roll back of national monument designations made under the Antiquities Act. "The Trump administration is stonewalling the release of public information as they try to fabricate legal loopholes to revoke or resize national monuments," Jayson O'Neill, Western Values Project's deputy director, said in a statement. In particular, the suit seeks records from DOJ communications with Pacific Legal Foundation and American Enterprise Institute staff, as well as two specific attorneys.

SETTING THE RECORD STRAIGHT: Paul Bailey, president of the American Coalition for Clean Coal Electricity, tells ME his group's paper urging the Department of Energy to rethink parts of its draft grid study was misunderstood by some. "The way this appeared in one trade press ... it sounded like we were being critical of natural gas and that's not really the purpose of the paper or in fact the tone of it," Bailey said. "I hope they would be fair about pointing out the shortcomings of natural gas, as well as the advantages. All electricity sources have pluses and minuses." That said, Bailey said he wants staff to distinguish between reliability and resiliency and note that gas can't always make its way to power plants in emergency situations.

OKLAHOMA REP POISED FOR NASA NOMINATION: Trump is getting ready to tap Oklahoma GOP Rep. Jim Bridenstine as NASA administrator, according to multiple reports this week. Bridenstine has been the rumored selection for months. His selection would likely spell trouble for the agency's Earth science program that studies, among other things, climate change. Back in 2013, Bridenstine demanded an apology from Obama on the House floor for what he called the " gross misallocation" of taxpayer dollars into the study of climate change.

KEEP ON TRUCKIN': EPA plans to reconsider parts of the Obama administration's 2016 Phase 2 emissions rule for heavy-duty trucks, which established new standards for model years 2021-2027 of tractor-trailers, school buses, delivery vans and other large workhorse vehicles, Pro's Alex Guillén reports. The agency may revise trailer standards and a part of the rule that classifies gliders — refurbished engines installed into a new tractor chassis — as a new motor vehicle. It plans to keep separate requirements for tractor engines.

GREENS GO BIG FOR NORTHAM: Virginia's League of Conservation Voters announced Wednesday it would spend $1.1 million on a field campaign boosting Democrat Ralph Northam's bid for governor. The effort will stress door-to-door campaigning in the Richmond area and also back Mark Herring for attorney general and Justin Fairfax for lieutenant governor. "We live in an era of unprecedented attacks on the environment from the federal level and Ralph is the only candidate in this race who will stand up to this radical agenda and do the right thing for the air we breathe, water we drink, and the special places we love," Michael Town, the group's

executive director, said in a statement.

WHILE ZINKE'S AWAY: Deputy Interior Secretary David Bernhardt was in Zinke's home state of Montana Thursday "at the dedication of a new wildlife corridor" at the site of a former mine, he tweeted. Kinross Gold U.S.A., Inc., Trout Unlimited and the Rocky Mountain Elk Foundation teamed up to protect the site near Yellowstone and top politicians, including Gov. Steve Bullock, Sens. Jon Tester and Steve Daines and Rep. Greg Gianforte all attended.

HAVE A LISTEN: DOE is out with a new podcast looking at what next week's solar eclipse might mean for the electric grid. Have a listen here. And the Third Way released a short video detailing how the agency helps develop and commercialize new energy technologies.

MOVER, SHAKER: Ramsey Kropf, former deputy solicitor for Interior's water resources division, has joined Somach Simmons & Dunn as a shareholder. She'll work out of the firm's Boulder, Colo. office in its western water practice.

CONGRATS! Jeff Grappone, who works in corporate communications at Siemens USA, proposed to Amy Graham, who works in public affairs at the EPA, on Tuesday. "Jeff proposed on Siasconset Beach in Nantucket and they celebrated at dinner in town with friends before finishing the night at the Club Car's piano bar." A picture of the couple here. Is Scott Pruitt on the campaign trail? Back

By Emily Holden | 08/18/2017 05:02 AM EDT

EPA Administrator Scott Pruitt has logged thousands of miles this summer touting his plans to rewrite the Obama administration's environmental regulations — and fueling speculation that he's laying the groundwork for a political campaign once he leaves his cabinet post.

The former Oklahoma attorney general who made a name for himself by launching more than a dozen lawsuits against the Obama administration has visited 10 states in a few short weeks, hitting local media outlets along the way in a strategy that Beltway strategists say resembles more a candidate seeking political support than an EPA administrator pressing for regulatory changes.

One conservative talk radio host in Iowa even joked about Pruitt's August trip to the state. "If you're writing a book, you come to Iowa, or you must be running for the presidency," WHO-AM's Simon Conway said to Pruitt.

The trips, which have taken Pruitt mostly to Republican-led states, are ostensibly to highlight his efforts to loosen Obama-era water regulations. But he's also spending time with GOP leaders and influential industries and packing in as many media hits as possible, laying out well-rehearsed talking points to bash former President Barack Obama's EPA as part of his modern-day stump speech.

While Pruitt may be building up a national profile as he travels to 25 states, it's not clear exactly what office he may seek. Speculation has focused on the Senate seat held by Jim Inhofe — should the 82-year-old fifth-term senator decide to retire or not seek reelection in 2020.

Drew Edmondson, the former Democratic Oklahoma AG whom Pruitt defeated in 2010, said political observers in the state had expected Pruitt to run for a House seat that could be vacated by Rep. Jim Bridenstine in 2018, "as a holding place until a Senate seat came open." But insiders say he opted against that option before becoming EPA chief.

"A Senate race would fundraise in a lot of places besides Oklahoma," noted Edmondson, who is currently running for governor. "He's doing what he needs to do to keep the oil companies and gas companies liking him, so he has a source of funding should he decide to run."

Pruitt, 49, has done a good job of publicly elevating his "thankless" cabinet post, "which would lend itself to assume he has higher political aspirations," said one GOP strategist.

"Whatever he may claim to be, he is a politician with campaign experience," the source said, noting that Pruitt could jump to governor or senator since he's relatively young and EPA likely won't be "his career culmination goal."

EPA declined to comment on Pruitt's future plans, and defended his trips.

"Unlike the previous administration which imposed its regulatory regime from Washington, Administrator Pruitt is taking the conversations directly to the states," said EPA spokesman Jahan Wilcox, noting Pruitt's stop in Iowa to talk about water regulations, in Indiana to highlight a Superfund site and in Minnesota, where he was invited by Democratic Gov. Mark Dayton.

Pruitt served in the Oklahoma Senate for eight years before becoming the state's AG, where he helped build a political network through the Republican Attorneys General Association.

During his time chairing the group, it raised at least $2.2 million from energy companies, according to a POLITICO analysis, including from Koch Industries, Exxon Mobil, Chevron, Murray Energy, Cloud Peak Energy, Xcel Energy, DTE Energy, Southern Co., SolarCity and trade groups representing the coal, utility and nuclear industries.

If Pruitt does seek elected office, he could be the first EPA chief to make that jump. But former Republican-appointed agency chiefs say if he is focusing on a future campaign, environmental protection and public health will suffer.

"If you think about this as a stepping stone to some other job ... you can't do it," said Bill Ruckelshaus, who served as EPA's first administrator under President Richard Nixon and who returned to head the agency again under President Ronald Reagan.

Running the agency well means asking businesses to spend money on things that reduce their profits but that are important, Ruckelshaus said, which is "not a way to make friends.

"He clearly has not bought into the mission of EPA. It's fairly simple: Protect public health and reduce pollution that impacts the environment," he said. "He is more interested in reducing the regulatory impact."

Previous EPA leaders have frequently made trips to meet state regulators or visit regional offices, but Pruitt's visits so far skipped those or conducted them at arm's length, with staff sometimes unaware he was in the area.

EPA noted Pruitt was joined by some regional staff members while visiting Indiana, Missouri, Texas and Colorado. While he didn't go to regional offices while traveling, he "has met with every acting regional administrator, and has attended senior staff meetings where individuals from every regional office are represented," the agency official said, adding that Pruitt has also met with top health and environmental groups.

Pruitt's travel seems to have a different emphasis than former chiefs, according to former George W. Bush EPA chief Christine Todd Whitman, since he's spending more time on television and away from headquarters.

"You've got plenty on your plate. You really don't have a lot of time to go and do the kinds of stuff he's doing," said Whitman, a former New Jersey governor. Her most prominent media appearances came after the Sept. 11 terrorist attacks, during a series of anthrax attacks and when

the Columbia space shuttle crashed, she said.

Pruitt has been in local news more than two dozen times as he traveled to eight states carried by President Donald Trump and only two — Colorado and Minnesota — led by Democrats. In Colorado, he toured the site of the Gold King Mine spill, where EPA employees and contractors accidentally released toxic waste water into a river in 2015. In Minnesota, he met with Dayton, the Democratic governor who told reporters he didn't want to be "micromanaged" by a regional EPA office in Chicago.

None of Pruitt's predecessors have held elected office after running EPA. Most have gone to academia, environmental think tanks and lobbying firms, company boards or other federal government roles. And most arrived at EPA with either state environmental agency experience or science backgrounds. A few came from state legislatures, and only Whitman and Mike Leavitt, of Utah, had served as a governors.

Washington observers widely expect Pruitt to pursue a Senate seat, although there's no sign that Inhofe, a legend in Oklahoma politics, will depart. Inhofe's office pointed to a 2016 interview in which the senator said he had no plans to retire in 2020.

The Oklahoma governor's race in 2018 is already a crowded field. Pruitt could be looking to another federal post, like attorney general, or even a run on a presidential ticket, according to some. All eyes in Oklahoma are on the 2018 elections, where Republicans are vying for multiple statewide seats. Some Oklahoma political experts say Pruitt may be biding his time.

"I can tell you that I have not heard anybody in Oklahoma talk about a Senate run for Scott Pruitt," said Oklahoma GOP political strategist Pat McFerron. He said he's in touch with Pruitt's former chief of staff and campaign manager — who haven't divulged any impending political plans.

"I think it is just his style," McFerron said. "Maybe he wants to keep doors open."

McFerron added that if Inhofe decides not to run for reelection, "there's no doubt Scott Pruitt's name would be near the top of that list."

Pruitt has stacked EPA with people connected to Inhofe, who has praised the EPA chief. Chief of staff Ryan Jackson, deputy chief of staff Byron Brown and policy advisers Mandy Gunasekara and Brittany Bolen all worked under Inhofe, as did Susan Bodine, Trump's nominee for EPA enforcement chief, who is awaiting Senate confirmation.

Pruitt has also maintained key personnel with links back to Oklahoma, including three staffers from his AG office and a former campaign aide. And he hired law school friend and colleague Ken Wagner as a senior adviser and former SpiritBank executive Albert "Kell" Kelly, who had no prior experience in environmental issues, to lead his Superfund task force.

Hiring staff with campaign experience is not uncommon, but Pruitt's inner circle is dominated by them. And career employees say he is not consulting them on major decisions, relying on his

Oklahoma-rooted squad instead.

Still, Andrew Miller, a former Virginia attorney general and energy lobbyist who encouraged Pruitt to be the Republican voice against Obama's environmental regulations, said he would be "astounded" if Pruitt did run for elected office any time soon.

"This is just inside-the-Beltway gossip," Miller said. "I see him continuing at EPA as long as he wants to and certainly for the next four years."

On top of the dozens of local media appearances during his tour, Pruitt is frequently on cable news networks, especially Fox News, and his aggressive political style stands out among Trump's other cabinet secretaries who are working to unravel Obama policies.

He said in his Iowa radio interview that his state tour is meant to send the message that "EPA is not intended to be an adversary," and that he wants to empower the states to regulate themselves. But Ruckelshaus said EPA was created because states needed backup.

"Industries would threaten to leave the state if you pushed them too hard on an environmental regulation," he said.

Pruitt often uses the media exposure to criticize his own agency for its work under the previous administration.

"The last administration said, 'We're going to use regulatory power to say that certain sectors of our economy were wrong. War on coal. War on natural gas. War on fossil fuels.' Where is that in the statute?" he told Conway. "Where is it that the EPA has authority to declare war in that regard?"

He mentions Obama by name in almost every interview, often blasting his climate policies and saying EPA has overstepped its jurisdiction and the Constitution.

Contrary to most scientists, Pruitt says climate change is not an "existential threat" that will "impact our existence as a nation and as humankind.

"An existential threat is Iran. An existential threat is North Korea," he said in the same interview.

In the run-up to Trump's decision to leave the Paris climate agreement, Pruitt appeared often on TV to lobby for the U.S. to exit the deal. He's planning an official program to debate mainstream climate science, which he has suggested could be televised. That would launch him even further into the national spotlight.

Pruitt has also come under fire for spending lots of time at home in Oklahoma, which he defended as necessary for EPA business.

Court says DAPL oil can flow for now Back

By Ben Lefebvre | 06/21/2017 04:21 PM EDT

A district court judge allowed the Dakota Access pipeline to continue delivering oil for at least through the summer as the parties in a case against the pipeline operator prepare a new round of briefings.

A decision on whether Dakota Access will have to shut down its pipeline will probably take until September, said Earthjustice attorney Jan Hasselman, who represents the Standing Rock Sioux Tribe in their fight against the Dakota Access pipeline.

Judge James Boasberg of the U.S. District Court of the District of Columbia ordered the Army Corps of Engineers and Dakota Access submit new briefs by July 17 related to requests that the pipeline shut down. Plaintiffs Standing Rock Sioux and Cheyenne River Sioux tribe will respond one month later.

The tribes are contending that a spill by the pipeline, which carries crude oil from North Dakota to Gulf Coast refiners, would infringe on their religious ceremonies.

Boasberg earlier this month ordered the Army Corps of Engineers to conduct a new environmental impact statement after finding the Corps used flawed risk and environmental justice analysis when clearing the pipeline operator to finish construction.

President Donald Trump ordered the Corps to expedite approval for the pipeline as one of his first acts of office.

WHAT'S NEXT: Dakota Access and the Corps will submit briefs to the court by July 17.

Gore's advice for Trump: 'Resign' Back

By Darren Samuelsohn | 08/17/2017 06:48 PM EDT

Al Gore says it's time for President Donald Trump to leave office.

"Resign," the former Democratic vice president told the website LADbible in an interview

published Thursday. He was asked what single piece of advice he'd give Trump.

Gore, who is currently on a promotional tour for his new movie, "An Inconvenient Sequel: Truth To Power," has been highly critical of Trump in recent interviews over the president's moves to dismantle several high-profile Obama administration environmental policies.

"I thought, actually there was a chance he might come to his senses," Gore said earlier this month during an appearance on HBO's "Real Time with Bill Maher," referring to his own December visit to Trump Tower to meet with the president-elect on climate issues.

Since that pre-inauguration meeting, Trump has pulled the United States from the Paris international climate agreement and also moved to dismantle Environmental Protection Agency rules aimed at curbing greenhouse gases from power plants and automobiles.

During a July interview on NBC's "Today" show, Gore said Trump had "undermined our alliances, such as NATO."

"We've never had a president who's deliberately made decisions the effect of which is to tear down America's standing in the world," Gore said.

Gore's new film is a follow-up to his 2006 Oscar-winning original documentary, which featured the onetime Democratic presidential nominee delivering a slideshow presentation designed to raise awareness about climate change.

The White House did not immediately respond to a request for comment about Gore's advice to the president.

States, foreign governments press ITC to reject solar petition Back

By Luis Sanchez | 08/15/2017 05:48 PM EDT

Several industry leaders, state government officials and representatives of foreign governments pressed the U.S. International Trade Commission at a hearing Tuesday to reject a petition from two domestic solar manufacturers asking for steep tariffs on imported solar cells and modules.

U.S. solar manufacturer Suniva and SolarWorld Americas have asked the commission to declare that solar cell and module imports from predominantly Asian nations have caused "significant injury" to their domestic business.

"U.S. module manufacturers suffered net losses exceeding a billion dollars over a five-year period," Matthew J. McConkey, a spokesperson for Suniva, said at Tuesday's hearing. "As U.S.

demand for solar products increased from 2005 to 2016, foreign suppliers, including those from China, Korea, Canada and Malaysia, began capturing an even larger share of the U.S. market."

If the ITC agrees with the two companies that a "deluge" of solar imports had distorted the U.S. market, it could have huge impact on the renewable energy source that has grown rapidly over the past decade as costs for the panels that turn sunlight into electricity have plunged.

Chinese companies dominate the global production of solar cells and modules, and they have built extensive supply chains and manufacturing operations across Asia. President Donald Trump had often criticized China for its trade practices, and on Monday he issued an executive memorandum calling for U.S. trade officials to "consider all available options" to get China to stop coercing U.S. companies to hand over valuable technology.

Suniva, which is based in Georgia and is majority-owned by China's Shunfeng International, filed its section 201 petition with the ITC in April, just eight days after it filed for Chapter 11 bankruptcy protection. SolarWorld later joined the petition.

The commission has until Sept. 22 to make an injury determination and would submit its report on a proposed remedy to the president by Nov. 13. Trump then has until Jan. 12, 2018, to make a decision on a remedy and present his plan to Congress.

Suniva and SolarWorld are seeking an initial tariff of 40 cents per watt of capacity on all imported solar cells and a 78 cents per watt minimum price for modules, roughly twice the current domestic price for solar modules. Suniva alleges that wages for industry workers dropped by 27 percent and 1,200 U.S. manufacturing jobs were lost between 2012 and 2016 because of imports.

The two companies, the two largest surviving domestic manufacturers of solar cells and modules, are seeking the protections to keep cheaper solar modules from being sold on the U.S. market and further hurting the U.S. industry.

However, opponents of the petition said that manufacturing the equipment is only a small part of the U.S. solar industry. Out of the 260,000 people working in the U.S. solar industry, only about 38,000 people work in manufacturing.

The Solar Energy Industries Association argues that tariffs and price floors would damage the whole solar industry, eliminating 88,000 jobs.

"One out of every 50 new jobs created last year in the U.S. was a solar job. Solar is an American success story whose future remains bright," said Matthew Nicely, a spokesperson for SEIA. "Its continued success could be destroyed by the misguided actions of the two petitioners and their small group of supporters whose workers represent less than one percent of all those that work for this dynamic American industry."

Government officials from several U.S. states also expressed their opposition to the petition at Tuesday's hearing, citing potential job and investment losses.

"If this petition is granted, it may save a few hundred cell or module manufacturing jobs, but there are many thousands of good manufacturing installation jobs that will be lost," Jason Saine, a North Carolina state representative said. "A remedy will do more harm than good here with the only benefit going to a small number of companies that frankly don't deserve it."

Al Christopher, director of the Virginia Department of Mines, Minerals and Energy, said that solar projects were not just helping the economy in his state; they also act as "a vital marketing tool in attracting the growing number of companies seeking renewable energy options when deciding where to make investments."

Several representatives of foreign governments also argued the tariffs weren't justified and they urged the commission to exclude their nations from possible tariffs.

"The value of imports from Korea was quite low for most of the period investigated," Korean Minister Counsellor for Trade, Industry and Energy Chang K. Kim said. When the shipments from his country increased in 2016, the imports went to the "utility segment of the market and were part of the share the domestic industry could not supply."

Sibylle Zitko, a representative for the European Commission, went a step further, contending "'inefficiencies" and "bad investments" were more to blame for Suniva and SolarWorld's woes rather than imports.

"The criteria for the inquisition for safeguard measures are clearly not met in this case and thus the investigation should be terminated," Zitko said.

McConkey said the argument that Suniva and SolarWorld brought their financial problems on themselves was both false and offensive, and the petitioners only needed to show at Tuesday's hearing that they had suffered because of the imports. "We'll get to remedy later this fall," he said,

EPA will review parts of Phase 2 truck emissions rule Back

By Alex Guillén | 08/17/2017 04:47 PM EDT

EPA will revisit certain parts of the Obama administration's 2016 Phase 2 emissions rule for heavy-duty trucks, the agency announced today.

The rule set new standards for model years 2021-2027 of tractor-trailers, school buses, delivery vans and other large workhorse vehicles. The Truck Trailer Manufacturers Association sued to block EPA's novel aerodynamic requirements for trailers, arguing the agency cannot set vehicle

standards for a product without an actual engine.

The Trump administration is considering revisions to the trailer standards, but it will leave in place separate requirements for tractor engines.

The final 2027 trailer standards by themselves would have secured as much as a 9 percent drop in carbon dioxide emissions and fuel consumption compared to a 2017 trailer, and the separate standards for tractor engines would achieve up to 25 percent emissions reductions by 2027, according to Obama administration estimates.

EPA said it will also reconsider part of the rule that classifies gliders — refurbished engines installed into a new tractor chassis — as a new motor vehicle. House appropriators last month voted to have EPA report to Congress on the glider issue, although that language may not survive the ultimate spending package that clears Congress.

"We intend to initiate a rulemaking process that incorporates the latest technical data and is wholly consistent with our authority under the Clean Air Act," EPA Administrator Scott Pruitt said in a statement.

WHAT'S NEXT: EPA will begin a rulemaking process to revise or completely rescind those parts of the rule. The earliest compliance deadlines are in 2018. The trailer association unsuccessfully sought relief in court, but EPA may now offer administrative delays in light of its new rulemaking.

Subject: BREAKING NEWS: Moore wins Alabama GOP Senate primary

Republican challenger Roy Moore has defeated Sen. Luther Strange in Alabama's Senate primary.

Moore had 57 percent of the vote to Strange's 43 percent when the Associated Press called the GOP runoff with 43 percent of precincts reporting. Strange, who was appointed earlier this year to fill Attorney General Jeff Sessions' old seat, is the first senator to lose a primary since 2012. Moore will face Democratic nominee Doug Jones in the special general election in December.

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Radiation Control/Transportation of Radioactive Material
Colorado HAZARDOUS MATERIALS TRANSPORTATION

Final rule of the Department of Public Health and Environment, Hazardous Materials and Waste Management Division, amends regulations under 6 CCR 1007-1, Part 17, regarding the transportation of radioactive material. The rule expands exemptions for transportation of certain low-level radioactive materials, clarifies that the state is responsible for review of certain package-related quality assurance programs for use of Type B packages under a general license, and incorporates federal requirements for package quality assurance. The rule also expands recordkeeping requirements for irradiated fissile material shipments, adds package and conveyance equations used for calculating limits for mixtures or unknown quantities of radioactive materials, and revises and adds package limits for certain isotopes. In addition, the rule revises definitions and updates contact information for notifications for shipments of nuclear waste. The rule is effective Nov. 14, 2017. PESTICIDES
Administration and Enforcement of the Pesticide Applicator's Act
Colorado PESTICIDES

Final rule of the Department of Agriculture, Plant Industry Division, amends regulations under 8 CCR 1203-2 regarding the administration and enforcement of the Pesticide Applicators' Act. The rule revises criteria for determining which pesticides may be used in the cultivation of cannabis to allow for the use of unregistered pesticides only during research and demonstration activities. The rule also updates commercial applicator storage signage requirements to permit the use of other types of standardized pesticide storage signage, maintains current emergency contact information requirements and storage marking provisions, and requires any applicator who obtains a waiver of sign requirement from a local fire department to maintain a copy of that waiver in their files. In addition, the rule adds a new post-harvest potato pest control category. The rule is effective Nov. 30, 2017. Subject: Court strikes down EPA limits on HFCs

By Eric Wolff

08/08/2017 11:35 AM EDT

A federal court today struck down EPA's attempt to ban a powerful heat-trapping gas under its authority to regulate substances that deplete the ozone layer.

The D.C. Circuit said EPA could not force manufacturers that had replaced ozone-depleting chemicals with hydrofluorocarbons to stop producing them. The Obama administration in 2015 said the high global warming potential of HFCs justified removing them from a list of acceptable replacements for chlorofluorocarbons, which are being phased out to protect the ozone layer in conjunction with the 1992 Montreal Protocol.

The court, in a 2-1 decision, said EPA too broadly interpreted its authority under the Clean Air Act in trying to ban HFC production altogether. However, Judges Janice Rogers Brown and Brett Kavanaugh said EPA could still bar the use of HFCs by companies that had not yet replaced their ozone-destroying coolants and that EPA could still potentially regulate HFCs under the Toxic Substances Control Act.

Judge Robert Wilkins, an Obama appointee, dissented from the decision, saying EPA's interpretation of its authority was reasonable.

The decision is a victory for French chemical manufacturer Arkema and Mexico-based Mexichem, both of whom make HFCs. It's a blow to U.S. manufacturers of coolants who dominate the market in next-generation chemicals that have much lower global heating potential. It also raises questions about the U.S. ability to implement an amendment to the Montreal Protocol that would curtail worldwide use of HFCs.

WHAT'S NEXT: The court remanded the rule back to EPA for reconsideration.

Subject: POLITICO's Morning Score: GOP Senate outside groups raise $17 million — McConnell heads down to Dixie — 2020 Democratic primary maneuvering galore

By Kevin Robillard | 07/31/2017 10:00 AM EDT

With Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

BIG MONEY - "Senate GOP outside groups raised $17M in first half of 2017," by Campaign Pro's Kevin Robillard: "The main outside groups backing Senate Republicans have nearly $22 million combined in their bank accounts after raising $17 million in the first six months of the year. The massive war chest, raised with Senate Majority Leader Mitch McConnell's help, should aid Senate Republicans as they try to win 10 Democratic-held seats in states President Donald Trump won last November, while playing defense for Nevada Sen. Dean Heller and Arizona Sen. Jeff Flake. Senate Leadership Fund, a super PAC which regularly launches blistering attacks on Democrats in television and digital ads, raised $8.2 million and had $9.6 million on hand as of June 30. One Nation, which promotes GOP policies and Republican senators who back them, raised $8.7 million and had $7 million in its bank account. ... 'The pivotal figure in all this has been McConnell,' [SLF President Steven] Law said. 'What most of the major donors have concluded is that Mitch McConnell is the one guy who steers clear of the chaos and focuses on the Republican agenda.' This year, McConnell has traveled extensively to meet with potential donors and hear their concerns, visiting Las Vegas, Los Angeles, San Francisco, New York, Dallas, Houston, Miami and Palm Beach, Fla." **Full story.**

TWO WEEKS OUT - "McConnell wages war down South," by POLITICO's Alex Isenstadt: "The Republican leader is aiming to thwart Rep. Mo Brooks and former state Supreme Court Chief Justice Roy Moore in a special election in Alabama next month. Both men are campaigning against McConnell as a despised symbol of the establishment - and both would exacerbate his already stiff challenge wrangling his GOP Conference. ... His super PAC is set to spend much as $8 million to boost his favored candidate, recently-appointed Republican Sen. Luther Strange. McConnell has activated his sprawling donor network and pressed the White House for more resources. ... And in a highly unusual step, one of the McConnell's top political lieutenants has begun quietly advising a long-shot Republican primary candidate running for Brooks' House seat. The move is designed to get in the congressman's head and dissuade him from emptying his campaign war chest ... This past week, Brooks, a member of the conservative House Freedom Caucus, said he would not vote for McConnell as majority leader and called for him to step down after the failure of the health care bill. Moore, who rose to national fame after he refused to obey a federal order to remove a monument of the Ten Commandments from an Alabama judicial building, made his feelings clear about the leader in a lengthy fundraising appeal with the subject line, 'You & Me vs Mitch McConnell.'" **Full story.**

- FIRST IN SCORE - SLF attacks Brooks on Trump, war funding: A new ad from Senate Leadership Fund features Alabamans attacking Brooks in a series of direct-to-camera interviews. "Mo Brooks said we can't trust Donald Trump. You know what I don't trust? Career politicians like Mo Brooks," a woman says to start the ad off. The ad then pivots to Brooks' votes against continuing resolutions, with military veterans accusing Brooks of "voting to cut off funding to fight ISIS." "Mo Brooks didn't have my back, and he won't be getting my vote," one of the veterans says. **Watch the ad here.**

2020 WATCH - "How 2018 became the new 2020," by POLITICO's Gabriel Debenedetti: "Top contenders are making endorsements, picking sides in party primaries and aggressively working the fundraising circuit on behalf of 2018 candidates, all the while building their own name recognition. ... The early focus on the midterms is a marked departure from previous practice and a further acceleration of the presidential campaign cycle. Prior to the 2016 presidential primary season, for example, Hillary Clinton and Bernie Sanders largely stayed off the campaign trail and out of elections until late 2014 - roughly six months before they officially announced their campaigns. ... Booker has been especially active - his travel itinerary reads like an atlas of at-risk Democratic incumbents. He's raised money for grateful colleagues in Florida, Ohio, Indiana, Montana and Michigan, among others, according to Democrats familiar with the itinerary. ... Warren, a fundraising juggernaut, has made several California fundraising stops, including one in San Francisco where the Massachusetts senator joined Esprit founder Susie Tompkins Buell, a high-level party donor and close Clinton friend. Another gave Warren face time with Oakland Athletics part-owner Guy Saperstein, who in 2016 offered Warren $1 million to run for president." **Full story.**

- "What is John Delaney thinking?" by Campaign Pro's Kevin Robillard: " Delaney, whose district stretches from some of Maryland's wealthiest D.C. suburbs to rural counties bordering West Virginia, thinks his combination of private and public sector experience, and his faith in both, are the answer. His campaign motto, at least for now, is 'Focus on the Future.' And Delaney is planning a campaign focused on problems caused by globalization, automation and technology, issues he says are getting ignored in a hopeless national political conversation. 'You need a villain in politics,' Delaney said in an interview. 'My villain is partisan politics. It's destroying our ability to govern.'" **Full story.**

Days until the 2017 election: 99.

Days until the 2018 election: 463.

MORE 2020 WATCH - "Joe Biden still wants to be president. Can his family endure one

last campaign?," by the Washington Post's Roxane Roberts in Rehoboth Beach, Del.: "The new house is on the edge of Cape Henlopen State Park, just north of the boardwalk: three stories, six bedrooms, three fireplaces and an expansive view of the Atlantic Ocean. The new owners are Joe and Jill Biden, rich for the first time in their lives, thanks to a three-book publishing deal - two by him, one by her - that allowed them to purchase the $2 million vacation home in this beachiest of beach towns. ... Since Joe left public life in January, the Bidens have never been more public. The past six months have seen the formation of the Biden Foundation, a way for Joe and Jill to support their pet causes, and the Biden Cancer Initiative to honor Beau. The University of Pennsylvania inaugurated the Penn Biden Center for Diplomacy and Global Engagement to study international issues, and the University of Delaware the Biden Institute for domestic initiatives. Last - but not least - there's a new political action committee, American Possibilities, a vehicle for raising money for Democratic candidates. ... With Washington in chaos and the Democrats without a standard-bearer, Joe Biden is arguably the most popular former vice president in history." **Full story.**

EARLY POLLING DATA - "Poll shows Mike DeWine still up big in name ID, favorability," by Cleveland.com's Seth A. Richardson: "The poll [of the Ohio Governor's race] shared with cleveland.com was paid for by the American Freedom Builders and administered by the Washington-based Tarrance Group. The results have DeWine leading Secretary of State Jon Husted, Lt. Gov. Mary Taylor and U.S. Rep. Jim Renacci. However, DeWine's favorability slipped 10 points from a similar poll in January. DeWine's favorable-unfavorable split was 61-20. That's a dip from the January poll that showed him with a 71 percent favorable rating." **Full story.**

PAC HEAT - "Pence raises $1M for his leadership PAC," CNN's Elizabeth Landers reports: "Vice President Mike Pence raised a cool $1 million for his leadership PAC on Tuesday evening during a summer soirée in Washington, according to a source close to Pence. The source told CNN that the event attracted more than 100 lawmakers, including members of the leadership in both the House and Senate. House Speaker Paul Ryan, Senate Majority Leader Mitch McConnell and House Majority Leader Kevin McCarthy were among those who attended after a successful vote for the Republicans earlier that day on health care. The President's daughter, Ivanka Trump, made a guest appearance to introduce the vice president at the event." **Full story.**

HACK JOB - "Hackers descend on Las Vegas to expose voting machine flaws," by Kevin Collier in Las Vegas: "[Carten] Schurman, a professor of computer science at the University of Copenhagen in Denmark, used a laptop's Wi-Fi connection Friday to gain access to the type of voting machine that Fairfax County, Virginia, used until just two years ago. Nearby, other would-be hackers took turns trying to poke into a simulated election computer network resembling the one used by Cook County, Illinois. ... They were among the hundreds of cybersecurity experts who descended on 'Voting Village,' one of the most talked-about features of the annual DEF CON hacker conference. In a cramped conference room, they took turns over three days cracking into 10 examples of voting machines and voter registration systems - a reminder, they say, of the risks awaiting upcoming U.S. elections." **Full story.**

THE NEXT FIGHT - "Major GOP-aligned group pledges to spend millions on tax reform fight," by McClatchy's Katie Glueck: American Action Network "expects to spend as much as

$20 million on a pro-tax reform effort dubbed the 'Middle Class Growth Initiative,' AAN told McClatchy. The program will promote tax cuts for 'working families and small businesses,' as well as a reformed tax code "that will be simpler, fairer and pro-growth," according to the organization. As part of the effort, AAN is pledging to spend $5 million in August alone, and is kicking off the initiative with a $1 million member-specific radio ad buy slated to run in 34 congressional districts, from Rep. Carlos Curbelo's Miami-area district to Rep. Mark Meadows' North Carolina seat to Rep. David Valadao's in California's Central Valley." **Full story.**

CODA - QUOTE OF THE DAY: "They're both Catholic, but that's probably about it." - A person close to new White House chief of staff John Kelly, on his similarities with communications director Anthony Scaramucci.

Subject: BREAKING NEWS: Alexander and Murray say they've struck bipartisan Obamacare deal

Sens. Lamar Alexander and Patty Murray say they have reached an agreement on a bipartisan Obamacare deal to fund a key insurance subsidy program and provide states some flexibility around parts of the health care law.

Senators are expected to get a briefing on details at 5 p.m. today.

It would include two years of funding for Obamacare's cost-sharing program, which President Donald Trump cut last week. It also would allow states to use existing Obamacare waivers to approve insurance plans with "comparable affordability" as Obamacare plans.

"Sen. Murray and I have an agreement," Alexander said. "We're going to round up co-sponsors as best we can."

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Lapsed Tax Credits Leave Renewables Twisting in the Wind

Posted August 14, 2017, 8:01 A.M. ET

By Brian Dabbs

The Bergey Windpower Co. factory south of Oklahoma City can produce 1,500 small-scale turbines annually. But current output is only a fraction of that capacity.

So now the pioneer in the wind energy industry is bracing to pare down staff. The company's struggles are partially due to the low price of small solar modules, which are helping that industry take the renewable energy sector by storm at the expense of wind.

But a big drop in sales for Bergey is also due to tax policy.

Small wind turbine producers such as Bergey are facing dire times because Congress allowed a wind installation tax credit to lapse at the beginning of 2017, while renewing credits for solar. And the lapse isn't restricted to wind. Geothermal pumps and fuel cells industries also lost the credit, triggering huge sales hits that are putting the future of a wide range of companies and their employees at risk.

Legislative efforts to restore the credits are afoot, but Republican congressional leaders aren't homing in on them.

Now producers of these "orphan" technologies are competing with a solar industry that reaps a 30 percent incentive as a result of its tax credit. That means a $30,000 solar panel installation will cost a homeowner $21,000 in the end. A $30,000 geothermal installation will cost the homeowner the full amount, as will a $45,000 wind system.

'They're Not Buying'

So Mike Bergey, president of the Norman, Okla., company, is now peddling only a few residential turbines to deep-pocketed clients.

"Our bread and butter customers were a guy who drives a truck and his wife is a nurse—just straight middle class. They're not buying," he told Bloomberg BNA. "We saw a step change. We'd been on a slide, and then we hit a cliff."

Karl Bergey, Mike's father and a former University of Oklahoma professor who designed the Piper Cherokee aircraft, led the company to national prominence in the 1970s. Bergey Windpower took shape during the oil embargo crisis then, and also during the rise of the nuclear industry, which aimed to dominate alternative energy.

Bergey turbines boomed, but then dwindled in the 1980s after oil prices reached historic lows. Now solar modules—whose tax credits Congress extended in late 2015 in a package that omitted the orphan technologies—are posing a real threat to the Bergeys' company, its staff, and the broader small-wind industry.

Bergey's staff now numbers 28 employees, a decline from 50 in recent years.

"We'll take short-term losses to try to retain skilled staff," Mike Bergey said, while cautioning about the sustainability of that approach. "If they don't fix this tax credit, we will have to make adjustments. We will have to start cutting more people." Lloyd Ritter, a spokesman for the Distributed Wind Energy Association, said the loss of tax credits also cut sales for other small wind producers.

Disparity with Solar

Wind energy, solar and geothermal pumps reduce their owners' need to purchase electricity from the grid, and also help reduce carbon emissions driving global warming.

The three technologies compete for market share, and natural conditions traditionally play a large role in customer choice. Windier areas generate more wind energy, and sunnier areas generate more solar energy. Subsurface geology and water, as well as the actual availability of land to put a borehole in place, are factors for geothermal pumps.

Geothermal pumps heat and cool buildings by sourcing subterranean temperatures, which are typically colder in the summer and warmer in the winter than temperatures at the surface.

"In some areas, you're going to get a better return doing geothermal, and in other areas, you're going to get a better return if the homeowner is putting in small wind," J.P. Delmore, a lobbyist for the National Association of Home Builders, which supports the orphaned credits, told Bloomberg BNA. "But if you're dealing with your client you say 'Well, it makes sense for you to do geothermal, but solar would be cheaper,' most are going to say 'Let's do solar.'"

The concern, he said, is that the other technologies won't be purchased if there isn't tax parity.

Solar credits for both residential and commercial installation are in effect through 2021. Those credits award residential and commercial owners who want to install solar modules with a 30 percent credit, a rate which begins to phase out in 2019. From 2022 on, commercial credits are authorized at 10 percent.

That means those in the market right now will pay nearly a third less for a solar product but the full price for all geothermal and fuel cells, as well as residential wind. Steve Smith, the president of Enertech Inc.,—a geothermal pump producer and distributor with a 80,000-square-foot factory in Mitchell, S.D.—said that disparity is taking a hatchet to his sales.

The company sold 42 percent fewer pumps from Jan. 1 to the end of July this year compared to the same time period last year, Smith told Bloomberg BNA. That translated to 19 job cuts this year at

the Mitchell factory, leaving 33 employees—about a 37 percent reduction.

"These are real jobs here in America that are being robbed because they let solar have the tax credit and we have to compete against them," Smith said. "It seems like the craziest penalty against American workers."

Rep. Kristi Noem (R-S.D.), the state's lone House member, supports plans to reinstate the credits. A spokesman for Sen. John Thune (R-S.D.) didn't comment directly on the credits, and a spokeswoman for Mike Rounds (R-S.D.) didn't respond for comment. But Smith said Rounds personally pledged support. The two hunted together at an event during Rounds' tenure as governor.

Solar Sales Up, Firms Falter

Residential solar installations continue to surge.

A banner year in 2016 led to the installation of more than 2.6 gigawatts capacity of residential solar, as well as more than 1.6 gigawatts capacity of commercial, according to Solar Energy Industries Association and GTM Research. The 2016 spike is due to an installation rush brought on by fears that the solar credit would expire as the credit for the other technologies ultimately did, SEIA spokesman Alex Hobson told Bloomberg BNA.

The installation rate is expected to fall slightly this year but still edge out pre-2016 levels by substantial margins. The first quarter of this year featured more than 560 megawatts capacity of residential and nearly 400 megawatts capacity of commercial. Solar prices also fell by nearly 20 percent during 2016, SEIA says.

But despite the solar installation growth, U.S. companies are faltering, and in some cases going belly up. SolarWorld AG and Suniva Inc.—both of which filed for bankruptcy earlier this year—are pushing the U.S. to slap tariffs on foreign imports of solar panels to staunch the domestic bleeding.

The Energy Information Association says the U.S. imported nearly 12.8 gigawatts capacity in 2016. The U.S. agency doesn't break that number down by residential, commercial and utility services. Meanwhile, the U.S. installed roughly 14.8 gigawatts capacity in 2016—the majority of that for utilities.

Representatives from the other renewable sectors, such as Geothermal Exchange Organization President Douglas Dougherty, argue the current tax system benefits Chinese and other foreign producers of solar products over U.S. companies that produce renewable energy products that compete with solar.

Dougherty said Enertech, the South Dakota geothermal pump producer, is actually faring better than others. Residential sales across the industry are down 45 percent this year, Dougherty told Bloomberg BNA.

"You tell me what business suddenly loses 45 percent of their revenue and stays in business," he said. "You've said goodbye to the geothermal heat pump industry."

The tax disparity isn't, however, sowing discord between solar and the other renewable sectors, industry representatives said. SEIA supports the restoration of the credits for the other sectors, Hobson said.

Revival Proves Elusive

A broad range of industry associations—in addition to the wind, geothermal and other technology-specific groups—also are asking Congress to reinstate the tax credits.

The American Farm Bureau Federation is pushing an extension of the commercial wind credit because farmers often use that technology. The National Association of Home Builders wants all the credits reinstated to provide home purchasers with as many options as possible to decrease energy costs. The National Rural Electric Cooperative Association, a collection of utilities, is aiming to incorporate more options into utility portfolios.

Those groups are lining up behind two bills: H.R. 1090 in the House and S. 1409, a similar Senate bill, that would put the credits back into effect.

Led by Rep. Tom Reed (R-N.Y.), the House bill has 104 co-sponsors, including many members of the tax-writing Ways and Means Committee. Bicameral negotiators are continuing to try to get reinstatement across the finish line.

"I'm eager to see the orphan energy tax credits extended in the very near future," Sen. Charles Schumer (D-N.Y.), the minority leader, told Bloomberg BNA in a statement. "I will make every effort to see these provisions extended in a must-pass vehicle when we come back from recess."

A spokesman for House Minority Leader Nancy Pelosi (D-Calif.) said a reinstatement would most likely be attached to a near-term omnibus appropriations package or tax reform. A spokesman, Drew Hammill, said that "virtually all Democrats" support reinstatement.

But similar plans have fell through in recent months as Reed and other lawmakers tried unsuccessfully to tack reinstatement of the credits onto fiscal year 2017 funding.

A spokesman for Senate Majority Leader Mitch McConnell (R-Ky.) declined to comment to Bloomberg BNA. Spokespeople for House Majority Leader Paul Ryan (R-Wis.) also didn't respond to requests for comment.

Conservative Opposition

The revival of the credits certainly aren't cheered on by all parties.

Americans for Prosperity, Citizens Against Government Waste, and other free-market groups continue to urge opposition to the incentives, arguing against any subsidies or tax breaks for energy technologies.

"The carve-outs and the loopholes that try to pick winners and losers in the energy industry are ultimately counterproductive," Levi Russell, spokesman for Americans for Prosperity, told Bloomberg BNA. "We just don't think it's the role of the federal government to prop up industries."

Some lawmakers, such as Sen. James Lankford (R-Okla.), agree.

"Senator Lankford has a long and established history of opposing credits," D.J. Jordan, Lankford's spokesman, told Bloomberg BNA. Lankford has introduced legislation in the past to ax all renewable energy production tax credits.

As an Oklahoma senator, Lankford represents Bergey on Capitol Hill. Meanwhile, Rep. Tom Cole (R Okla.),—the House member whose district includes Norman, Oklahoma, where the company is located—signed onto the House legislation that would restore the tax incentives.

Energy Tax Package Takes Hits

A strategy to bundle the orphan revivals into a larger energy tax package has some supporters in Congress. That approach would team the orphan credits up with early renewals of a nuclear production tax credit and a credit for carbon sequestration, which involves capturing carbon dioxide emissions from a power plant and storing them permanently underground.

Sens. Lindsey Graham (R-S.C.), Tom Carper (D-Del.), and Heidi Heitkamp (D-N.D.), among other senators, have expressed interest in that strategy, as have some House members. That coalition of lawmakers, however, took a hit in recent days. On the heels of an announcement that South Carolina utilities pulled the plug on construction of two nuclear reactors at the V.C. Summer plant, Graham abandoned his support for the nuclear credit.

The strategy is based on broadening the buy-in, and the absence of the South Carolina delegation in the coalition would be a loss. But broadening that buy-in too much may also torpedo support from the environmental community.

"We absolutely support the renewable energy industry and the important effect that it has on our economy," Lukas Ross, a climate and energy campaign official at Friends of the Earth. "What we don't support is bad faith deals that involve tiny, marginal support for wind energy and other renewables in exchange for shoveling cash into the troughs of nuke and clean coal boondoggles."

Broad Tax Overhaul Murky

Republican lawmakers often argue that a comprehensive overhaul to the tax code—which is now the foremost White House priority following the collapse of healthcare legislation—replaces the need for tax carve-outs akin to the orphaned energy credits.

But a number of analysts say a tax overhaul would be a particularly difficult legislative task. And some members of the renewable industry don't see it as a lifeline.

"There's this concept that tax reform will fix our problem. Tax reform does not fix our problem," Smith, the president of Enertech, said. He added that a tax overhaul likely wouldn't trash the next five years of solar credits. Republicans have said they don't aim to reel back the energy incentives already in place.

Holding On

Representatives for the orphaned technologies are quick to say their industries are on the brink. Industry members, however, are pledging perseverance.

Bergey says his company has been in business for 40 years and aims to stay in business for another 40. The Oklahoma native also finds some levity in the doldrums.

"My wife is in healthcare, and the joke is 'all bleeding eventually stops,'" he said.

Energy Department Sued Over Grid Reliability Study Records

Posted August 14, 2017, 01:45 P.M. ET

By Rebecca Kern

The Sierra Club launched an early challenge to a highly anticipated grid reliability study, filing a lawsuit over the Energy Department's alleged failure to provide records of any communication between department officials and the power sector.

The complaint, filed Aug. 14 in the U.S. District Court for the Northern District of California Oakland Division, claims the Energy Department violated the Freedom of Information Act when it failed to respond to a May 1 FOIA request. The Energy Department was asked to provide records of any communications between department officials working on the report and outside groups representing the fossil fuel industry or grid reliability experts.

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

In April, Energy Secretary Rick Perry directed Brian McCormack, his chief of staff, to conduct a 60-day study that would "explore the critical issue central to protecting the long-term reliability of the electric grid." Perry has questioned the impact of renewable subsidies and taxes on baseload resources and whether adding more renewables would affect the grid's reliability.

The Energy Department said it would make the study public once it is completed, which was expected in July. The final version has not been released, but Bloomberg News obtained a copy of a draft version in July written by department staff, which found wind and solar power don't pose a significant threat to the reliability of the U.S. power grid.

Can Some Nebraska Farmers Kill the Keystone XL Pipeline?

Posted August 14, 2017, 11:01 A.M. ET

By Jillian Goodman

"When I first started this, it was about my house," said Shannon Graves, who owns a hardware store in Polk, Neb.—population roughly 300—and lives less than 100 yards from the proposed route of the Keystone XL pipeline. "I just wanted to protect my home."

That was six years ago. Now, Graves said, "what was once just my home is now my world that I'm standing to protect."

So last week she headed to Lincoln, the state capital, for hearings to determine whether the pipeline would serve Nebraskans' public interest, the final regulatory hurdle for the long-contentious project.

After years of protest by environmentalists, the Obama administration in 2015 rejected TransCanada's proposal for the 1,179-mile pipeline, which would deliver crude oil from the Alberta tar sands to the Gulf of Mexico. In January, President Donald Trump resurrected the project with a presidential memo and executive order.

On a national level, the pipeline has been opposed largely by environmentalists, but in Nebraska, it's been fought mainly by farmers and ranchers who fear it could erode their soil and hurt their land values. Last week, a number of them—now educated in the intricacies of property easements, eminent domain, and bitumen—testified before the state's Public Service Commission, hoping to persuade its members to reject it.

TransCanada maintains the pipeline project would be an economic boon to the state. "The public benefit for Nebraskans is quite significant," said spokesman Matthew John. "We're talking about 4,400 jobs, direct and indirect"—that is, jobs building the pipeline and jobs with other employers expected to benefit, such as local restaurants and stores—"and tens of millions of dollars in state property taxes that will be paid out throughout the life of the project. As well as the economic benefits that are generated from construction."

But Nebraskan opponents argue that the vast majority of the jobs TransCanada has said the pipeline would create are construction-related and therefore short-term; those jobs, along with such indirect benefits as greater spending in local establishments, would evaporate once the project is completed. And tax revenue, they say, would evaporate in not much longer: The taxable value of the pipeline itself will depreciate over 15 years and payments gradually dwindle to zero.

The pipeline's current proposed route would cross the farm that Art Tanderup, a retired teacher and perhaps the landowners' breakout star, owns with his wife, Helen. After the hearings finished, Tanderup said he felt he and the other landowners had gotten a chance to educate the PSC on life for Nebraska farmers. "You get big corporate people coming in—they don't know us, they don't know Nebraska," he said.

Keystone XL is meant to be an extension of an existing Keystone pipeline that runs north-south through the eastern portion of the state. TransCanada has argued that its proposed route for the XL—which would cut diagonally across the state, crossing the Ogallala Aquifer, the historic Ponca Trail of Tears, and a small portion of the fragile Sandhills region—is the safest and most environmentally friendly path. Other than an earlier route, nixed years ago under pressure by the governor and the federal government, it's also the most direct route from the Canadian tar sands to the existing pipeline junction in Steele City, Neb..

Although the landowners would prefer that the PSC reject the pipeline entirely, their lawyers argued that the more responsible route would be one that parallels the existing pipeline, creating an energy corridor that would avoid disturbing additional land. On the first day of the proceedings, under questioning by the landowners' lawyers, TransCanada's representatives acknowledged that collocating the two pipelines would mean crossing fewer miles of Nebraska farmland and that because they weren't locked into a route in South Dakota for the XL, they wouldn't need additional approval to do so.

After the hearings concluded Aug. 10 morning, a day and a half ahead of schedule, the landowners' lawyers said they were pleased with what they'd presented. "Our pitch is, look at the net benefit," attorney Brian Jorde said. "It can't be, 'Is this just the not-so-bad pipeline?' If it's not a net benefit to the state, we don't need it."

TransCanada's lawyers, James Powers and Patrick Pepper of the firm McGrath North, left shortly after the hearing without answering questions and didn't respond to a previous interview request.

PSC spokeswoman Deb Collins said in an email that commissioners could not comment given the ongoing legal proceeding. The commission has until Nov. 13 to decide.

Regardless of its decision, opponents said they still expect to wind up in court over the pipeline, perhaps in eminent-domain battles over efforts to build it on their land.

"We are exhausted," Graves said. She's been opposing the pipeline for six years now, others for even longer. But she added: "My daddy raised me to never give up. You just never give up. There's too much at stake to give up."

First Solar to Profit If Trump Slaps Tariffs on Panel Imports

Posted August 14, 2017, 01:39 P.M. ET

By Christopher Martin

First Solar Inc. is standing on the sidelines of a trade dispute that could give its products a significant leg up.

The U.S. International Trade Commission has scheduled a hearing Aug. 15 on a request by Suniva Inc. for the U.S. to impose tariffs on imported solar panels. The petition alleges that China—which accounts for more than 80 percent of global solar panel production—gives manufacturers unfair government support.

The commission is expected to make a decision next month, and a finding of harm could lead President Trump to impose duties as early as November.

The petition by Suniva, which filed for bankruptcy in April, has roiled the industry, which argues that it would drive up prices and result in the loss of an estimated 88,000 jobs, a third of the solar workforce. No U.S.-based solar manufacturers support it, according to the Washington-based Solar Energy Industries Association. Cheap panels have spurred a boom in U.S. rooftop installations, with small-scale solar generation almost doubling from 2014 to 2016, according to the Energy Information Administration.

Tempe, Arizona-based First Solar, a member of SEIA, stands to gain the most from import duties of as much as 40 cents per watt, said Jeffrey Osborne, an analyst at Cowen & Co. "Because the complaint specifically goes after silicon panels, thin-film technologies like First Solar's will be considerably cheaper in comparison," Osborne said.

First Solar's chief executive officer said on July 27 that his company isn't participating in the dispute. A spokesman for the company referred to the CEO's comments when asked for a response.

"If there is a determination of injury, a modest type of remedy will not be harmful at all to the industry and I think it'll survive and more jobs will be created," CEO Mark Widmar said on a conference call. "Hopefully what it will do is enable more manufacturing in the U.S."

A group of 16 U.S. senators and 53 House members sent letters on Aug. 11 to the head of the ITC urging it to reject the petition.

Rooftop developers like Sunrun Inc. and Vivint Solar Inc., imposing an import duty could double the amount they pay for panels, cutting into their already razor-thin margins and ultimately slowing demand. Large developers are betting that a tariff will be imposed and have begun stockpiling

inventory ahead of a decision, which has temporarily reversed the decline in prices, according to Joseph Osha, an analyst at JMP Securities LLC.

Module prices in the U.S. increased to about 43 cents a watt, up from about 33 cents before the trade case was filed, Osborne said. For now, that's helping improve margins for the world's biggest manufacturers, mainly in China, which include JA Solar Holdings Co., JinkoSolar Holding Co. and Trina Solar Ltd.

'Significant Disruption'

But once a tariff is imposed, Asian and European manufacturers will have a significant disadvantage in U.S. markets and their options to get around it are limited, Osborne said. They could build some cell and module manufacturing in the U.S., but there's little infrastructure to support their operations and the duties may only be in place while Trump is in the White House.

A tariff would also hurt San Jose, California-based SunPower Corp., the second-biggest U.S. panel maker, because the bulk of its polysilicon panels are assembled in Asia. SunPower faces a double whammy because it develops big solar farms that would cost more to build.

"It's a significant disruption," Tom Werner, SunPower's CEO, said in an interview.

A small tariff may not be as bad as the developers are making it out to be, said Osha.

"The solar installers are warning of dire consequences but another 10 cents on the panel price isn't going to be terrible," Osha said. "The market will adjust."

Fast, Dirty Natural Gas Plants Get Boost from Electric Cars

Posted August 14, 2017, 8:46 A.M. ET

By Kelly Gilblom, Weixin Zha and Mathew Carr

Britain's goodbye to fossil-fuel cars by 2040 could boost the need for dirtier natural gas-powered stations.

The government's goal to replace gasoline and diesel cars with those powered by electricity could see the construction of so-called open-cycle gas stations, said Carsten Poppinga, senior vice president of trading and origination at Statkraft AS, the Norwegian utility that operates hydro power plants and wind farms across the U.K.

Such units can keep the grid from buckling from the strain of people charging cars in peak demand periods. The catch? While the plants can start generating power almost instantly, they don't recycle waste heat, making them emit more greenhouse gases per megawatt than the combined-cycle stations that comprise the largest share of the U.K.'s daily power output.

Britain may have no choice but to use the less environmentally friendly option, though. With little spare generation capacity, the nation is vulnerable to power shortages, particularly on cold, winter days when wind and solar energy may be in short supply.

"Fundamentally there isn't as much overcapacity on the British market as in Germany," Poppinga said by phone from Dusseldorf. "You could think about building open-cycle gas power plants to increase the flexibility in the system."

Open-cycle gas generators cost less to build but have higher emissions per megawatt-hour produced than combined-cycle gas turbines. OCGTs convert about 33 percent of their fuel into power, while CCGTs manage as much as 60 percent, according to the fossil-fuel industry environment group IPIECA in London. That's still less dirty than oil, diesel or coal-fired stations, which can emit double what a gas-fired station does.

Still, the flexibility of the plants will help more intermittent renewables enter the system, bolstering the shift toward cleaner energy, according to Drax Group Plc. The utility plans four open-cycle plants in the U.K. that it calls "rapid-response gas."

Under U.K. environmental rules, the units can run a maximum of 2,250 hours, or about three months per year, a spokeswoman with the Selby, England-based company said. Drax doesn't expect to operate its plants for that long.

RWE AG's U.K. unit "has taken initial planning steps" to build a 300 megawatt open-cycle gas plant east of London in a town called Tilbury, Germany's biggest power producer said in its first-half financial statement on Aug. 11. The area previously had coal-fired and biomass power plants, though it stopped generating power in 2013. RWE is seeking to redevelop the site and also plans a 2,500 megawatt CCGT.

The challenge for the U.K. is to have enough power plant capacity to cover demand peaks until electric-car users adjust their charging habits to when consumption and prices are low.

Britain will need to add 52 terawatt-hours of power capacity between now and 2040, or 16 percent of what's available now, to meet extra demand thanks to electric vehicles, according to data from Barclays Plc and Bloomberg New Energy Finance. Some of the need for flexible power supply will be met by cables linking the U.K. to France, Norway and Belgium.

Fossil-fuel prices have rebounded in Europe as grids need the power from them to help balance supply and demand as renewable-electricity output advances. The front-month natural gas price has jumped 35 percent in the past year, while 2018 European coal is up 31 percent, according to ICE Futures Europe.

"Massive investment in flexible power generation, electricity storage and the grid itself will be necessary to keep the lights on," Johannes Wetzel, a research analyst for cross-commodity analytics at Wood Mackenzie Ltd., said in an emailed note. The electric-vehicle rule will be "a challenge for power grid stability."

FS Bioenergia's Brazil Corn Ethanol Plant Seen as First of Many

Posted August 14, 2017, 11:40 A.M. ET

By Michael Kepp

Brazil's first ethanol plant to exclusively use corn, in a country that makes nearly all of its ethanol

from sugar cane, has begun industrial-scale operations and is expected to lead to as many 10 other such nearby plants during the next decade.

The 450-million-real ($142-million), 240 million liter a year ethanol plant in Mato Grosso state had its formal opening Aug. 11. The plant's owner and operator is FS Bioenergia, a joint venture between Summit Energy, a U.S. private equity firm, and Fiagril, a Brazilian grains trader. Mato Grosso, located in western Brazil, is the center of the country's corn production.

FS Bioenergia will buy some of its corn from Fiagril. It has bought technology for the corn-based gasoline additive from the Kansas-based ICM Inc.

The plant "represents a new and alternative ethanol production pathway in Brazil," FS Bioenergia President Henrique Ubrig told Bloomberg BNA. "This alternative ethanol production pathway will lead to up to 10 corn-based ethanol plants being built in the state in the next five to 10 years."

As Matto Grosso farmers began planting a second corn harvest in recent years, they increasingly needed local buyers for excess corn from both harvests, Ubrig said. The surplus corn's price has become competitive with that of cane in the state.

Leopoldo Mendonca, secretary of economic development in Mato Grosso state, told Bloomberg BNA Aug. 11, that the state's two annual corn harvests allow corn-based ethanol plants to run 12 months a year, while cane-based ethanol plants can operate only eight months a year.

"This advantage [over cane-based ethanol plants], plus the competitive prices of corn and cane in the state, should lead to more corn-based ethanol plants being built here, Mendonca said.

Brazil has four "flex" plants that produce ethanol from both sugarcane and corn. Three are in Mato Grosso and one is in neighboring Goias state, Glauber Silveira, vice president of the Association of Soy & Corn Producers in Mato Grosso State, told Bloomberg BNA.

Brazil is starting to produce ethanol from corn at a time when U.S. corn-based ethanol exports to Brazil are skyrocketing. Ethanol imports to Brazil, nearly all coming from the U.S., grew fourfold in the first months of 2017, according to the Brazilian Sugarcane Industry Association, the country's main producers' group.

Administrator Scott Pruitt Statement on President Trump's Tax Reform Proposal

WASHINGTON (August 30, 2017) -- U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt today released the following statement on President Trump's tax reform proposal:

"President Trump is leading the fight for tax reform that will benefit all Americans. At EPA, we have worked to promote regulatory certainty that will help create jobs and produce a cleaner environment. This goes hand in hand with the President's plan to create a tax system that will provide clarity and restore fairness for a more prosperous America."

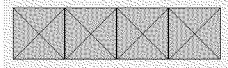
EPA DEPUTY NOMINATION MOVES TO SENATE FOR FULL CONSIDERATION

WASHINGTON – (November 29, 2017) Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt applauded the U.S. Senate Environment and Public Works (EPW) Committee's vote advancing Andrew Wheeler, nominee to be EPA deputy administrator. Wheeler's nomination now moves to the Senate for full consideration, along with four other EPA nominees. Administrator Scott Pruitt released the following statement following this vote:

"Andrew is an environmental policy expert with deep understanding of EPA issues. I look forward to his consideration before the Senate and his confirmation in the near future. I know Andrew will help us advance the President's Agenda, with his thoughtful and collaborative leadership at EPA."

More quotes of approval for Andrew Wheeler:

U.S. Senator James Inhofe: "I am pleased that President Trump has nominated Andrew Wheeler to serve as deputy administrator at the EPA. There is no one more qualified than Andrew to help Scott Pruitt restore EPA to its proper size and scope. When he served as my staff director of the Environment and Public Works Committee, he provided me with invaluable guidance, and in turn became a close friend. I am confident he will serve the American people and President Trump with exceptional skill in this position, and I look forward to ensuring his swift confirmation."



U.S. Congressman Bill Johnson: "Andrew Wheeler will do a fine job at EPA, helping to ensure the agency's mission of protecting the environment is maintained without the EPA becoming an unnecessary impediment to responsible energy exploration and job creation."

U.S. Congressman David B. McKinley: "With extensive experience working on Capitol Hill, in the Executive branch, and in the private sector, Andrew Wheeler is eminently qualified and a great pick to serve as Deputy Administrator of the EPA. There are few people in Washington who have the same depth of knowledge and experience on energy and environment issues. I look forward to continuing working with Andrew once he is confirmed in his new role."

Former U.S. Senator Joe Lieberman: "Andrew was Republican staff director during part of the time I was on the Senate Environment Committee. We worked together on some issues and disagreed on others. He conducted himself in a fair and professional manner. I hope his nomination will receive similarly fair consideration by the Senate."

Jay Timmons, President and CEO, National Association of Manufacturers: "Andrew's significant experience on Capitol Hill, and his extensive background working on environmental and natural resource policy makes him an outstanding choice to join the leadership at the EPA. Manufacturers have welcomed Administrator Pruitt's efforts to bring balance to rulemaking at the agency and focus on the EPA's core mission. We're confident Andrew will help advance that mission and ensure that our country can achieve the dual goals of responsible environmental stewardship and strong economic growth."

Subject: Morning Media: The art of the dodge -- Bannon, Breitbart lines blur -- Millennials pay for old media -- Can Newseum survive? -- BuzzFeed goes Hollywood

By Michael Calderone | 10/23/2017 05:38 AM EDT

PRESIDENT TRUMP FINALLY FOUND A NEWS MEDIA POLL HE LIKES. For the second time in five days, the president tweeted Sunday the results of a POLITICO/Morning Consult poll indicating that 46 percent of voters believe the bogus claim that the news media fabricates stories about him. Not only aren't reporters making up stories (as I wrote Thursday), but they also regularly give the White House and federal agencies the opportunity to respond to legitimate questions prior to publication -- and are rebuffed.

-- Sunday's New York Times provided a good case study in how the Trump administration will dismiss an entire line of inquiry rather than address specific points of concern before the news is out (and can even be dubbed "fake"). Pulitzer Prize-winning investigative reporter Eric Lipton tried for months to get the EPA to respond to dozens of questions for his Sunday front page story on an industry insider-turned-top-EPA-official helping to rewrite environmental rules that benefit chemical companies. Lipton said he "did want to hear their views" and "was disappointed" to only get the following terse response.

-- "No matter how much information we give you, you would never write a fair piece," EPA spokeswoman Liz Bowman told him in an email. "The only thing inappropriate and biased is your continued fixation on writing elitist clickbait trying to attack qualified professionals committed to serving their country."

-- A similar situation played out in the pages of The Times Magazine, with contributor Jason Zengerle describing having "provided a detailed list of questions" to the White House about Secretary of State Rex Tillerson's relationship with Trump. The response he received: "The president has assembled the most talented Cabinet in history and everyone continues to be dedicated towards advancing the president's America First agenda. Anything to the contrary is simply false and comes from unnamed sources who are either out of the loop or unwilling to turn the country around."

Good morning and welcome to Morning Media. I'm not going to dismiss your good faith questions, so hit me up at mcalderone@politico.com and @mlcalderone. Daniel Lippman contributed to the newsletter. Archives. Subscribe.

TUNE-IN: Sgt. La David Johnson's wife speaks exclusively today on ABC's "Good Morning America." And O'Reilly accuser Juliet Huddy sits down with NBC's Megyn Kelly for an exclusive interview at 9 a.m.

STOP BY: I'll be moderating a Politico panel at 8:30 a.m. Wednesday at Union Station Columbus Club on "The Media and Polarization: Golden Age or End of an Era? The panelists are **Rick Edmonds**, Media Business Analyst, Poynter Institute; **Amy Mitchell**, Director of

Journalism Research, Pew Research Center: **Amanda Terkel**, Washington Bureau Chief, HuffPost; and **Neil Patel**, publisher of The Daily Caller. RSVP here and also let me know if you have questions you'd like to hear.

LINE BLURS BETWEEN BANNON'S PLANS AND BREITBART: USA Today's Eliza Collins looks at how Bannon's electoral goals and Breitbart's coverage converge. Specifically, she describes a meeting at the "Breitbart Embassy" involving former Congressman Michael Grimm, aide Michael Caputo, Bannon and Washington editor Matt Boyle.

"**Caputo said Boyle was behaving** in the meeting as a reporter who had been invited to observe rather than participate," she wrote. But Boyle got more involved as it progressed, Caputo recalled: "It seemed to me like he gained interest and he said, 'Look, this is something that fits into our editorial direction. How can we work together?'"

FOX STAFFERS 'DREADING' WORKING FOR LAURA INGRAHAM, The Daily Beast's Lachlan Markay and Asawin Suebsaeng report: "According to numerous sources, Ingraham has been, occasionally, a verbally abusive boss, who will not hesitate to scream at employees if something goes awry. Two former employees of her radio show recounted to The Daily Beast separate instances of Ingraham hurling objects at staff members in displeasure."

-- Fox News knocked the Daily Beast story as "a transparent, predictable and sexist attack from a left-wing website run by a CNN political analyst whose mandate it is to troll Fox News for traffic purposes on a daily basis" and questioned Sam Stein, the site's political editor an MSNBC contributor, editing it.

BILL O'REILLY SETTLED $32 MILLION HARASSMENT CLAIM: The Times' Emily Steel and Michael Schmidt, whose revelations about O'Reilly's secret settlements to women in April led to the Fox New star's downfall, with another shocker this past weekend: Longtime network analyst Lis Weihl alleged "repeated harassment, a nonconsensual sexual relationship and the sending of gay pornography and other sexually explicit material to her."

-- And yet the Murdochs, who knew about the January settlement, and were claiming at the time to be cleaning up Fox News following the ouster of Roger Ailes, gave O'Reilly a new contract the following month. This latest story could further complicate parent company 21st Century Fox's $15 billion takeover of Sky broadcasting in the U.K. given that regulators take into consideration whether the Murdochs' management is "fit and proper."

Sound Bites:

"Nobody pays $32M for false allegations - nobody." [Gretchen Carlson]

"Wondering how many ppl won't even see today's NYT O'Reilly report because they only watch Fox News, listen to talk radio, read Breitbart." [Oliver Darcy]

"White privilege is Bill O'Reilly getting re-signed after paying $32M while Colin Kaepernick, who protested for justice, remains jobless." [Touré]

SCOTTIE NELL HUGHES SAYS SHE'S BEEN SHUNNED BY CONSERVATIVE MEDIA since alleging in a lawsuit that she was raped by Fox Business host Charles Payne, who was suspended but returned to the air after a network investigation. "Hughes, on the other hand, claims that she has been blackballed - not only from Fox but other media outlets," writes The Washington Post's Margaret Sullivan. "That happened, she alleges, after she ended the relationship and word of her complaint came to Fox's attention; tabloid stories and leaked emails hurt her reputation and vastly limited her opportunities even before she filed suit. Now a once-promising career, she says, is in ruins."

FACT-CHECKERS MAKE THEIR CASE IN RED STATES: The Washington Post's Paul Farhi hit the last stop on PolitiFact's tour to explain what they do. "In Charleston, [West Virginia] the library crowd - generally older, largely white - seems to want to know what's wrong with America's politics and the media that covers it," Farhi writes. "There are questions about 'fake news,' the influence of billionaire donors on campaign rhetoric, the overuse of anonymous sources in news stories, and about whether, just maybe, it might be time to start licensing journalists to separate the pros from the poseurs."

-- That final suggestion may see practical, but giving the government the power to determine who can question public officials would be a threat to the free press.

MEANWHILE, AUTHOR MARTIN AMIS LEFT NEW YORK to visit a Trump rally for a new Esquire piece up today. "The audience in Youngstown was human; but the humans had surrendered their individuality to the crowd," he wrote. "So it is hard to say what kind of animal they had reduced themselves to. A millipedal hydra, perhaps - and the size of a leviathan. And at the direction of its tamer, this colossal beast performed its party tricks, its chants, its boos and hisses, its cheers and whoop."

"YOUNG SUBSCRIBERS FLOCK TO OLD MEDIA," by POLITICO's Jason Schwartz: "Millennials are subscribing to legacy news publications in record numbers - and at a growth rate, data suggests, far outpacing any other age group. Since November's election, the New Yorker, for instance, has seen its number of new millennial subscribers more than double from over the same period a year earlier. According to the magazine's figures, it has 106 percent more new subscribers in the 18-34 age range and 129 percent more from 25-34."

BUZZFEED GOES HOLLYWOOD: The Times' Sydney Ember reports: "BuzzFeed started its motion picture arm in 2014. Initially, the division specialized in creating clickable video content, racking up an estimated three billion views a month. But over the last year BuzzFeed Motion Pictures has expanded its purview. These days [motion pictures head Matthew] Henick and his team of 42 people concentrate their energies on mining BuzzFeed articles, lists and video shorts for ideas that may be spun into feature-length movies or television series."

CAN THE NEWSEUM SURVIVE? The Times Sopan Deb reports: "The Newseum has run up deficits every year since it opened a grand new home in 2008. Though it attracts a respectable number of visitors (820,000 expected this year) who pay top dollar ($24.95 for adults) in a city filled with free museums, the institution is simply not taking in enough money to cover its bills.

It still owes roughly $300 million on its new building, and the interest rates on the loans spiked last year."

JIMMY CARTER, MEDIA CRITIC: The 93-year-old former president, who would still like help broker peace with North Korea, weighed in on press coverage with The Times' Maureen Dowd: "I think the media have been harder on Trump than any other president certainly that I've known about. I think they feel free to claim that Trump is mentally deranged and everything else without hesitation."

SARAH SANDERS SEEMS TO AGREE: The White House press secretary spoke to Bush press secretary Dana Perino on Fox News Sunday: "I do think there is a heightened tension certainly between this administration and the press. ... I think you can see that in the coverage. I mean I've been around press and working politics my entire life, and I've never experienced the level of kind of hostility that I think we see day to day."

MONTANA REPUBLICAN ADVOCATES VIOLENCE AGAINST JOURNALIST: Karen Marshall, vice-president of programs for Gallatin County Republican Women, said she would have shot Guardian reporter Ben Jacobs, who was assaulted by Montana Congressman Greg Gianforte for asking him a question. Marshall made the comment on the Voice of Montana radio program, according to The Guardian.

-- The Gianforte incident was one of several physical attacks on journalists in May and occurred as Republican politicians seemed increasingly emboldened to bash the press and "joke" about violence, as I wrote at the time.

EX-POLITICO REPORTER DANIEL LIBIT is living in Chicago, but his sights are set on New Mexico. The Times' Marc Tracy writes on Libit's aggressive coverage of the University of New Mexico's athletic program: "To read his work was to see a gleeful spirit of muckraking, a fondness for 10,000-word posts and a penchant for grandstanding about his legal battles (he has filed two lawsuits seeking records)."

-- "I freely grant the strangeness of what I'm doing," Libit, 34, said in an interview last month in the apartment he shares with his wife overlooking the Chicago River. "I'm in Chicago, and I'm writing about a team that people shouldn't nationally care about."

EXTRAS:

-- Right-wing blogger and filmmaker Mike Cernovich has published some names from the "Sh--ty Media Men" list of anonymous allegations.

-- Newsweek's Alexander Nazaryan rips James O'Keefe's investigation into the New York Times.

-- Watch: Brian Stelter shows how the Trump White House responds to media scrutiny.

-- The Ringer's Bryan Curtis writes on Jemele Hill's return today to ESPN's airwaves.

-- NBA writers weigh in on covering a new season.

KICKER:

"Jann is the spirit of [Rolling Stone], but what they will be buying is not the spirit. They're going to be buying the brand. On some level that's kind of sad, and I hope that Jann does find somebody who's willing to keep up the spirit that he started. But it's hard for me to imagine who that would be and why they would bother to do that because it's always been about Jann's social calendar. It's about his world. His worldview, his cosmology, and you can't buy that."- *Jann Wenner biographer Joe Hagan on the iconic magazine up for sale.*

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 7, 2017

Latest News

Court Ruling Expands CWA Liability For Coal Ash Leaks To Groundwater

A federal district judge has backed environmentalists' claims that leaks from a coal ash disposal site in Tennessee violate the Clean Water Act (CWA) and ordered the Tennessee Valley Authority (TVA) to take the costly step of excavating ash stored at the site to remedy the problem – expanding a string of novel cases backing CWA liability for ash leaks to groundwater.

After Controversy, Congress Limits EPA Power On Small Refiner RFS Waivers

Congress in its final fiscal year 2017 spending law restricted EPA's discretion in granting waivers to small refiners from the renewable fuel standard (RFS) following a long-running controversy, language that may have allowed Administrator Scott Pruitt to overcome legal objections and grant some waivers that EPA and the Energy Department (DOE) staff had initially recommended against because they did not comply with requirements in place at the time.

Emboldened Environmentalists Seek Vacatur Of Landfill Methane Rule Delay

Environmental groups are asking a federal appeals court to overturn what they say is another unlawful effort by EPA to pause a climate change rule, this time targeting Administrator Scott Pruitt's suspension of Obama-era limits on emissions of the potent greenhouse gas methane from landfills.

5th Circuit Weighs Authority To Hear Suit Over SO2 NAAQS Designations

The U.S. Court of Appeals for the 5th Circuit is weighing whether it has authority to hear a challenge by Texas and electric utility Luminant to EPA's designation of certain areas of the Lone Star State as violating federal sulfur dioxide (SO2) standards, weeks after the 7th Circuit said such challenges should be heard in the D.C. Circuit.

EPA Defends CWA Permit Limits By Citing Deference To Agency Science

EPA is urging the U.S. Court of Appeals for the 1st Circuit to grant broad deference to

the agency's decisions crafting Clean Water Act (CWA) discharge permits, countering a Massachusetts city's suit that says regulators should face a high bar to show a clear relationship between poor water quality and the releases they seek to limit.

Survey Shows EPA Moving Ahead With Potential Refinery ELG Revisions

EPA is moving ahead with the Obama administration's plan to study oil refineries' wastewater discharges to inform a possible rulemaking to strengthen the 1985 effluent limitation guideline (ELG) for the sector, a blow to industry hopes that the Trump administration would drop the plan even though EPA is not committing to an ELG update.

High Court Fight Over CWA Rule Litigation Venue Could Also Affect JDs

The pending Supreme Court case over whether challenges to rules defining Clean Water Act (CWA) jurisdiction should first be heard in appellate or district court could not only affect cases over rules on the law's scope but also suits over site-specific jurisdictional determinations (JDs) that regulators issue finding a waterbody might be covered by the CWA.

Daily Feed

Alumni group launches job center for exiting EPA employees

“We are not encouraging our former colleagues at EPA to leave,” a top official said. “However, if they do decide to leave, or have that decision forced on them, we want to help them find another good job.”

EPA backs Sierra Club's Title V objections

A Sierra Club attorney says Pruitt's decision is not a surprise because “the law and the regulations are so clear . . . I don't think they really had any other choice.”

Opinion: A pessimistic view on Trump's federalism

“Striking the right balance between federal and state power requires careful attention to context and the costs and benefits of decentralization,” says Micheal Livermore, an associate professor of law at the University of Virginia.

D.C. Circuit sets argument in coal ash rule challenge

The appeals court will hear argument Oct. 17, which could be the Trump administration's first chance to weigh in on the substance of the Obama-era ash disposal rule.

Ewire: Is ozone reversal strike two in Pruitt's deregulatory agenda?

Is EPA Administrator Scott Pruitt's sudden decision to designate areas attainment

with Obama-era ozone standards this October the latest setback in his efforts to roll back the previous administration's policies?

Environmentalists seek bolstered injection rules for EOR

"EOR technologies and the dangers they pose to the environment are largely unknown to the public. EOR presents real threats to drinking water, yet oversight of these practices has lagged," their report says.

HAZARDOUS WASTE MANAGEMENT
Hazardous Waste Permit Review, Determination Timetables, Fees
Kentucky HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department for Environmental Protection, Division of Waste Management, amends regulations under 401 KAR 39:120 to establish timetables for the review and determination of hazardous waste permit applications and the fee schedule for hazardous waste management. The rule, which is part of a consolidation of hazardous waste regulations, adds filing, modification, and annual registration fees for certain applicants and permitholders. The rule also provides that the agency will refund certain fees if it fails to provide a written determination of receipt of a generator's request to treat hazardous waste on-site within 60 days. A hearing is scheduled for Aug. 24, 2017, in Frankfort. Comments are due Aug. 31, 2017. Contact: Louanna Aldridge; DEP; 502-782-6538; Louanna.Aldridge@ky.gov

RADIATION
TENORM Radiation Protection Standards in Oil and Gas Development
Kentucky RADIATION

Proposed rule of the Cabinet for Health and Family Services, Department of Public Health, adopts regulations under 902 KAR 100:180 to establish radiation protection standards for the possession, use, transport, transfer, and disposal of technologically enhanced naturally occurring radioactive material (TENORM) concerning oil and gas development. The rule specifies applicability to activities related to TENORM with an activity concentration greater than 5 picocuries per gram of combined radium-226 and radium-228. The rule also establishes requirements for sample collection and analysis, transporting TENORM waste for management or disposal, recordkeeping, and the disposal of waste. In addition, the rule addresses requirements for material or real property containing TENORM, worker training and safety, violations, exemptions, and definitions. A hearing is scheduled for Aug. 21, 2017, in Frankfort. Comments are due Aug. 31, 2017. Contact: Tricia Orme; CHFS, Office of Legal Services; 502-564-7905; tricia.orme@ky.gov

Alaska

AIR
Fairbanks North Star Borough Nonattainment Area
Alaska AIR

Notice of the Department of Environmental Conservation announces the cancellation of two hearings on a July 19, 2017, proposed rule to amend regulations under 18 AAC 50.075, .077, and .990; adopt regulations under 18 AAC 50.079; and repeal and readopt regulations under 18 AAC 50.030 regarding air quality improvement in the Fairbanks North Star Borough (FNSB) nonattainment area. The rule incorporates local ordinances enacted by the FNSB Assembly and revisions to the state air quality control plan. The rule also establishes nonattainment area permit requirements and visible emissions standards, deletes obsolete language, and adds definitions. In addition, the rule addresses heating device test methods and requirements for wood-fired and coal-fired heating devices. The two hearings, scheduled for Aug. 18, 2017, in Anchorage and Juneau, have been canceled because a hearing request was not received. Two additional hearings are still scheduled for Aug. 18, 2017, in Fairbanks. Contact: Cindy Heil; DEC, Division of Air Quality; 907-269-7579; dec.air.comment@alaska.gov

EHS State Regulatory Alert

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: POLITICO
Sent: Fri 10/13/2017 5:18:52 PM
Subject: BREAKING NEWS: Trump says he will not certify Iran's compliance with nuclear deal

President Donald Trump announced Friday that he will decertify Iran's compliance with the landmark 2015 nuclear deal, throwing the Obama-era agreement into doubt but stopping short of calling on Congress to reimpose nuclear sanctions on the Islamic Republic.

"History has shown that the longer we ignore a threat, the more dangerous that threat becomes," Trump said. "We will not continue down a path whose predictable conclusion is more violence, more terror and the very real threat of Iran's nuclear breakout."

The plan outlined by Trump on Friday strikes a blow against the Iran deal without outright killing it, punting the agreement's future to Congress, while imposing fresh sanctions on Iran's Revolutionary Guard Corps over its alleged support for terrorist groups.

Subject: POLITICO's Morning Score: Trump's loyalty put to test in GOP primaries — Committee fundraising totals — Trump approval in mid-30s in key Midwest states

By Elena Schneider | 08/21/2017 10:00 AM EDT

With Scott Bland, Kevin Robillard and Daniel Strauss

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

WITH HIM OR AGAINST HIM - "Republicans' primary litmus test: Trump loyalty," by Campaign Pro's Kevin Robillard: "Taxes, spending and even health care have taken a back seat to the most potent new litmus test in Republican primaries: allegiance to President Donald Trump. Even as the president spars with members of his own party and his approval rating has plummeted to historic lows, Republican Senate campaigns across the country are preparing to use instances of disloyalty to Trump to bludgeon primary opponents who've gotten on the wrong side of the president. Loyalty to Trump has quickly become the most potent issue within the Republican base, according to a dozen candidates and strategists immersed in 2018 races. It has already put Sens. Jeff Flake and Dean Heller under pressure in their states, sparked bickering between GOP candidates in two of Republicans' top 2018 targets, Indiana and West Virginia, and sunk one candidate running for Alabama's open Senate seat." **Full story.**

CASH RACE - FIRST IN SCORE - DSCC raises $3.5 million in July: The Democratic Senatorial Campaign Committee raised $3.5 million in July and has $18.5 million on hand. "Our generous supporters are doing everything they can to make sure we stop their harmful agenda - and that includes making sure Democrats have the resources to fight back next fall," DSCC executive director Mindy Myers said.

- DCCC tops NRCC fundraising totals in July: The DCCC brought in $6.2 million to the NRCC's $3.8 million during July, per FEC filings. But the NRCC has more cash on hand with just under $35 million, while the DCCC has nearly $23 million.

- "RNC raises millions more than DNC in July," via The Hill's Ben Kamisar: "The Republican National Committee expanded its massive fundraising lead over the Democratic National Committee in July as the Democrats posted their worst July haul in a decade. The DNC raised just $3.8 million in July, compared to the $10.2 million raised by the RNC in the same month. While the GOP has no debt, the DNC added slightly to its debt in July, which now sits at $3.4 million." **Full story.**

- "Vice President Mike Pence is heading to California to raise money with Kevin McCarthy," via The Los Angeles Times. Full story.

EARLY POLLING DATA - GOP poll shows Missouri Republicans want competition for Hawley: A poll of Missouri GOP primary voters found 55 percent want Attorney General Josh Hawley to run against Democratic Sen. Claire McCaskill, and 45 percent don't. Even if he does, 72 percent would like him to face competition in the primary and about 50 percent believe he would be vulnerable to political attacks focused on him using his position as attorney general as a stepping stone. JTD Strategies conducted the poll of 1,022 likely GOP primary voters, which has a margin of error of plus or minus 3.1 percentage points. **Full results here.**

BATTLEGROUND: MIDWEST - Trump approval in mid-30s in NBC/Marist polls of Michigan, Pennsylvania, Wisconsin: President Donald Trump's approval is well underwater in three key battleground states with Senate and governor's races in 2018. Trump's approval stands at 36/55 among registered voters in Michigan, 35/54 in Pennsylvania and 34/56 in Wisconsin. Trump also has a net negative approval among non-college whites in the polls of Michigan and Wisconsin, though he is slightly above-water (44/42) among that group in Pennsylvania.

- Democrats have early double-digit leads on the generic congressional ballot in all three states. They lead Republicans 48-35 in Michigan, 47-37 in Pennsylvania and 46-38 in Wisconsin. **The splits among college/non-college whites** are enormous in Pennsylvania and Wisconsin. In Pennsylvania, where Democrats are attacking GOP-held seats in the Philadelphia suburbs, white college grads say they want a Democratic Congress 55 percent to 35 percent. But Republicans also hope to target Democratic Rep. Matt Cartwright in the working-class 17th District, and non-college Pennsylvania whites want GOP control, 45 percent to 37 percent. **See the poll results here.**

Days until the 2017 election: 78.

Days until the 2018 election: 442.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

FIRST IN SCORE - American Action Network airs ads on tax reform: American Action Network is airing ads on CNN and releasing a mobile billboard ahead of Speaker Paul Ryan's live town hall Monday night to promote the "need for meaningful tax reform that will lower rates for working families and small businesses," per a statement from the group. **Watch the national cable ad here.**

NEW THIS MORNING - WEB WARS - Clean Air Moms Action hits five states with digital buy: The environmental group is up with a $250,000 digital ad buy targeting five states to urge Congress not to support the Regulatory Accountability Act (RAA) and the Regulations from the Executive in Need of Scrutiny Act (REINS) Act, "two bills that threaten life-saving consumer protections that keep our air and water clean, our food and workplaces safe and our

families healthy," per a statement from the group. The ad will air in Missouri, Indiana, Montana, Florida and Virginia. **Watch the ad here.**

ALABAMA RUNOFF POLL - Moore leads Strange: A new JMC Analytics poll released Sunday found former Alabama Judge Roy Moore leading Sen. Luther Strange in the Republican primary runoff for Senate. Fifty-one percent of respondents said they would vote for Moore if the election were held today, while 32 percent said they would vote for Strange. Another 17 percent said they were undecided. See the full results **here**.

CHARLOTTESVILLE FALLOUT - "Charlottesville and Trump's Response Reshape Virginia Gubernatorial Race," by The New York Times' Jonathan Martin: " ... The gubernatorial race in this swing state was already set to be the next big test of the nation's politics, its results inevitably to be read as a harbinger for the 2018 midterm elections and President Trump's fate. But the events last weekend in one of its historical centers - in the city that Thomas Jefferson called home and on the university campus that he designed and founded - ensure that the nation's highest-profile campaign this fall will also be fought in part along the highly combustible lines of racial politics." **Full story.**

SCOTUS WATCH - Texas appeals redistricting ruling, legislature will not redraw maps: Texas Attorney General Ken Paxton on Friday started the appeal process of the U.S. district court ruling that overturned two of the state's congressional districts. In **the filing** , the state asked for a temporary reprieve from redrawing its maps and said that Gov. Greg Abbott will not call a special legislative session to redistrict. The district court denied the motion to stay and asked the parties to the suit to start the process of submitting new maps for consideration. Next up we'll see if the Supreme Court decides to hear the appeal - and whether it stops the redrawing process in the meantime.

- MEANWHILE - Former assistant U.S. attorney Jay Hulings is the second major Dem to jump into GOP Rep. Will Hurd's TX-23, via the San Antonio Express-News: Hulings is the son of two CIA agents, "whose prosecutorial résumé includes the recent Crystal City corruption case that resulted in the convictions of former City Manager James Jonas and former Mayor Ricardo Lopez. ... Hulings is also a friend and former law-school classmate of Julián and Joaquin Castro, and his political team will basically be the Castro campaign team." He joins a Democratic primary with Gina Ortiz Jones, a former intelligence officer who launched her campaign earlier this month. **Full story.**

2018 WATCH - "Republican strategist has new Idaho political funding group" by the Associated Press' Kimberlee Kruesi: "A top Republican strategist and fundraiser has quietly launched a new political action committee in Idaho, but he is not revealing which candidate or measure will receive his support in the 2018 election, according to documents filed with secretary of state's office. GOP operative Carl Forti filed the paperwork to create Building Idaho's Future, Inc. on Aug. 8. The group has not yet had to submit a campaign disclosure report, meaning there is no information that has been made public about the group's donors or contributions. ... In Idaho, political committees must file documents with the state so they can start collecting contributions and and spend money but are not required in those documents to identify specifically who or what they support." **Full story.**

- "Kansas lawmaker Jim Ward announces gubernatorial run," by the Associated Press: "A top Democratic legislator, House Minority Leader Jim Ward, announced Saturday that he is joining a crowded field of candidates seeking to replace Republican Gov. Sam Brownback. Ward, an attorney from Wichita, has been an outspoken opponent of Brownback's agenda, particularly tax cuts pushed by the governor." **Full story.**

- "McCaskill reaching out to rural Missouri ahead of election," by The Associated Press's Summer Ballentine: "Democratic Sen. Claire McCaskill is spending the August recess trekking through Republican strongholds in rural Missouri as she gears up for what's expected to be a fierce battle for a third term. Missouri has shifted even further to the right since the former state auditor joined the Senate in 2007. Republicans haven't lost a statewide race since 2012 when McCaskill won her second term, and they haven't lost a presidential race for more than two decades." **Full story.**

TREND WATCH - "More GOP lawmakers bucking their party on climate change," by POLITICO California's David Siders: "While President Donald Trump continues to dismantle Obama-era climate policies, an unlikely surge of Republican lawmakers has begun taking steps to distance themselves from the GOP's hard line on climate change. The House Climate Solutions Caucus, a bipartisan backwater when it formed early last year, has more than tripled in size since January, driven in part by Trump's decision in June to withdraw the United States from the Paris climate accord. And last month, 46 Republicans joined Democrats to defeat an amendment to the annual defense authorization bill that would have deleted a requirement that the Defense Department prepare for the effects of climate change. The willingness of some Republicans to buck their party on climate change could help burnish their moderate credentials ahead of the 2018 elections." **Full story.**

STATE BY STATE - Club for Growth launches new Senate super PACs: "Two GOP donors have poured money into the Club for Growth's new state-specific federal super PAC in Ohio, part of a new campaign finance strategy the Republican group plans to replicate around the country in 2018. CFG Action Ohio filed its second campaign finance report Friday, showing a $250,000 donation from Republican megadonor Richard Uihlein. The group has almost $490,000 on hand after raising another quarter-million dollars from Missouri Republican donor David Humphreys in June." **Full story.**

- "After decisive role in 2016 election, pressure's on Nevada Latino voters to stay engaged in 2018," by The Nevada Independent's Michelle Rindels and Luz Gray: "It translates to 'If we don't vote, we're going to lose. If we keep losing, those that will be left on the corners are those that we love most in the world.' And it's a sentiment that's especially meaningful for Nevada's Hispanic voters, who are credited with putting now-Sen. Catherine Cortez Masto and Hillary Clinton over the top in 2016 but are projected to stay home at a higher rate during a sleepier midterm." **Full story.**

ADMINISTRATION SPEED READ - "White House Bracing for an Angry Reception in Phoenix," by The New York Times' Noah Weiland and Maggie Haberman: "Officials in the White House and in Arizona are bracing for a furious reception to President Trump's campaign

rally in Phoenix this week, amid the fallout from his comments faulting "both sides" for racially charged violence in Charlottesville, Va. Of particular concern for some officials is the prospect that Mr. Trump may be planning to announce a pardon for Joe Arpaio, the former sheriff of Maricopa County, Ariz., who became an avatar for hard-line policies with his roundups of undocumented immigrants. Some of Mr. Trump's advisers worry that a pardon could deepen the racial wounds exposed in the last week and compound the president's political problems." **Full story.**

CODA - QUOTE OF THE DAY: "I don't have any plans to do anything like that. I'm rooting for him to get it together." - Ohio Gov. John Kasich on a possible 2020 GOP primary challenge to Trump, POLITICO reported.

Subject: POLITICO's Morning Score: Blackburn jumps into Tennessee Senate race — Murphy resigns from Congress — Republicans weigh backing new ad disclosures

By Maggie Severns | 10/06/2017 10:00 AM EDT

With Zach Montellaro, Elena Schneider and Kevin Robillard

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

Morning Score will not publish on Monday, Oct. 9. Our next Morning Score newsletter will publish on Tuesday, Oct. 10. Please continue to follow Campaign Pro issues here.

YOUR TENNESSEE FRONTRUNNER - "Blackburn enters Tennessee Senate race, as Haslam passes," by Kevin Robillard: "Tennessee GOP Rep. Marsha Blackburn announced she would run for Senate on Thursday, the same day her biggest potential primary challenger, Gov. Bill Haslam, opted out of the contest. In her announcement video , Blackburn takes aim at the upper chamber she hopes to join and boasts about her conservative credentials. She says the Senate Republican majority's failure to repeal Obamacare is a 'disgrace' and calls the Senate 'dysfunctional' and 'enough to drive you nuts.'" **Full story.**

- The New York Times' Jonathan Martin and Alex Burns: "A battery of Republican senators had telephoned Tennessee's governor, Mr. Haslam, a popular and wealthy establishment figure, and invoked Mr. Moore's primary election victory to argue that the identity of the party was on the line, according to a Republican official familiar with the line of argument. Mr. Corker and Senator Lamar Alexander of Tennessee led the charge. ... In a sign of their determination to retain the seat, establishment-aligned Tennessee Republicans immediately began trumpeting R. Brad Martin, a former state legislator and onetime chief executive of Saks as a potential candidate." **Full story.**

- Club for Growth endorses Mark Green: The Club for Growth immediately endorsed state Sen. Mark Green to replace Blackburn after she announced her Senate bid.

SPECIAL ELECTION SIREN - "Tim Murphy resigns from Congress," via POLITICO's Rachael Bade and Jake Sherman: "Rep. Tim Murphy (R-Pa.), the embattled anti-abortion lawmaker who allegedly encouraged his lover to terminate a pregnancy, on Thursday announced his plan to resign from office later this month - just a day after announcing his plan to retire following the 2018 election."

- Here's what's next: "In Pennsylvania special elections, the state central committees for both parties select primary nominees, rather than through a primary vote. ... Two Republican candidates announced their bids on Thursday - state Sen. Guy Reschenthaler, a former judge and

Iraq War veteran, and state Sen. Kim Ward. Local operatives also named state Rep. Rick Saccone, who's currently running for the U.S. Senate, as another potential candidate. Three Democrats were already vying to take on Murphy before he resigned, including Pam Iovino, a veteran who picked up an endorsement from VoteVets on Wednesday. But Democratic operatives said they expect more candidates to jump in, naming Matt Smith, president of the Greater Pittsburgh Chamber of Commerce, state Rep. Dan Miller and Westmoreland County Commissioner Ted Kopas." **Full story.**

HARD TARGET - Swing Left targets Ryan's district: The progressive fundraising organization Swing Left will target House Speaker Paul Ryan's district in 2018 and raise money for whichever Democratic candidate wins the nomination to take on Ryan. Hosts of the progressive podcast Pod Save America announced the move on Thursday night during a live taping. Swing Left has raised over $1.8 million for Democratic challengers this year.

- The DCCC's first ad campaign targets Ryan, too: "Paul Ryan and Washington Republicans," the ad says, "it's the same thing every time." The six-figure ad buy will run on MSNBC and CNN nationally, along with a three-week radio ad campaign in 11 to battleground districts, including those of: Reps. French Hill (AR-02), Martha McSally (AZ-02), Jeff Denham (CA-10), David Valadao (CA-21), Brian Mast (FL-18), Mike Bost (IL-12), Kevin Yoder (KS-03), Andy Barr (KY-06), Bruce Poliquin (ME-02), Don Bacon (NE-02) and Will Hurd (TX-23). Watch the ad here. **Full story.**

FULL DISCLOSURE - "Lawmakers weigh pushing Facebook, Twitter to share who buys political ads," by POLITICO's Elana Schor, Kyle Cheney and Ashley Gold: "Republicans in Congress are weighing joining with Democrats to demand greater transparency for political ads on Facebook and Twitter, as both parties look for ways to prevent a 2018 repeat of Russia's election meddling last year. ... though Republicans have historically opposed regulating political speech, some now appear open to new rules amid pressure to act against Russian influence before the 2018 midterms. Sens. Susan Collins (R-Maine) and James Lankford (R-Okla.), who both sit on the intelligence committee where Warner is the top Democrat, said in interviews this week that they're looking at the proposal he and Klobuchar have crafted." **Full story.**

Days until the 2017 election: 32.

Days until the 2018 election: 396.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin, @danielstrauss4 and @maggieseverns.

Q3 FUNDRAISING - VA-SEN: Democratic Sen. Tim Kaine raised $1.8 million in the third quarter and has a whopping $8.4 million on hand.

IL-06: Democrat Kelly Mazeski announced raising $415,000 in the third quarter and has over $325,000 on hand for the crowded primary to face GOP Rep. Peter Roskam.

- KS-02: Democrat Paul Davis announced raising over $400,000 for his run for the open Republican-held seat.

- NY-01: Democrat Perry Gershon raised $500,000 since launching his campaign, but did not release his cash on hand total.

- NY-19: Democrat Antonio Delgado announced raising $400,000 for his run against GOP Rep. John J. Faso.

BIG VIRGINIA NUMBERS - A new poll from the Washington Post/Schar School gives Democrat Ralph Northam a sizable lead over Republican Ed Gillespie in the run for governor. Northam is up 53 percent to 40 percent, with Libertarian Cliff Hyra pulling 4 percent. The poll was in the field from Sept. 28 through Oct. 2, with a margin of error of 3.5 percentage points. **More numbers.**

-The Republican Governors Association released a memo disputing the survey: The memo, written by OnMessage's Wes Anderson and Kayla Dunlap, notes the Post's survey missed the gubernatorial race in 2013. It also questions the number of Democrats included in the survey and argues the number of voters interviewed by cell phone is too high. "For these reasons, we believe this survey has failed to meet many of the standards required to be considered an accurate survey and should be taken with a pound of salt, maybe even more," the duo writes. **Read the full memo here.**

BANNON'S NEXT PROJECT - "Ex-convict Michael Grimm: Steve Bannon is 'very excited' to get me re-elected to Congress," by Newsweek's Celeste Katz: "Michael Grimm is dead certain of these things: He didn't deserve that prison time. He can recapture his old seat representing New York in Congress. And he'll get back to Washington with the enthusiastic support of one Mr. Steve Bannon. 'We're definitely going to work together. ... And I can say that Steve Bannon was very excited about it,' Grimm told Newsweek in an exclusive interview after his Wednesday sitdown on Capitol Hill with the former chief strategist to President Donald Trump." **Full story.**

BUT WAIT, THERE'S MORE - "Top GOP Senate recruit courts Bannon after threat," by POLITICO's Kevin Robillard and yours truly: "The Republican establishment pick to take on Democratic Sen. Claire McCaskill quietly reached out to former White House chief strategist Steve Bannon last week - the latest step taken by concerned Republicans to counter Bannon's threats to wreak havoc across the Senate landscape in 2018.

"Two Republican sources said Attorney General Josh Hawley, a soft-spoken 37-year-old with an Ivy League pedigree who is expected to officially announce a run soon, called Bannon late last week. ... On the call, Hawley reminded Bannon of their mutual friends, including the Mercer megadonor family, which bankrolls much of Bannon's political work. Hawley met with Robert Mercer last fall when he was running for attorney general, one Republican close to Hawley

said." **Full story.**

AD BREAK - The American Action Network is launching a $2 million buy on tax reform in California, North Carolina and Florida, per McClatchy's Katie Glueck.

FROM THE FEC FILES - Clyburn amends campaign reports to the tune of $300K: South Carolina Democratic Rep. Jim Clyburn's campaign recently refiled several years' worth of FEC reports after finding they overstated Clyburn's campaign balance by, as of the most recent filing, $342,904. The campaign committee told the FEC the balance listed with the FEC had been off since 2009.

- Defending Main Street brings in $300,000: The moderate Defending Main Street super PAC reported raising $300,000 in September, in the form of three $100,000 contributions from PACs associated with the Air Line Pilots Association, the International Union of Operating Engineers and the United Brotherhood of Carpenters and Joiners.

ICYMI - "A New Pro-Trump Super PAC Takes Aim at the Republican Establishment," via The Atlantic's Rosie Gray: "A group of pro-Trump media figures are launching a super PAC aimed at making an impact in the 2018 midterms. Jeff Giesea, Mike Cernovich, and Jack Posobiec, organizers of the 'Deploraball' party to celebrate President Trump's inauguration earlier this year, are behind the super PAC, which is being called #Rev18. The trio plans to back anti-establishment primary challengers in the midterms." **Full story.**

- Tennessee Rep. Craig Fitzhugh announces gov. run: Fitzhugh, a Democrat, released a video announcing his run for governor on Thursday. "This is the field I played on in high school, in West Tennessee," Fitzhugh says in the ad. "It was one of the first integrated teams in the South. To me, it just felt right to be playing alongside the kids I grew up with."

QUOTE OF THE DAY: "We look forward to seeing how national Democrats can spin yet another special election loss into a so-called 'moral victory,'" NRCC chairman Steve Stivers said in a statement about the forthcoming special election to replace departing Rep. Tim Murphy.

Subject: POLITICO's Morning Score: Debate night in Virginia — RNC paid hundreds of thousands in Trump family legal bills — DCCC targets Yoder in radio, digital ads

By Elena Schneider | 09/20/2017 10:00 AM EDT

With Zach Montellaro, Maggie Severns and Kevin Robillard

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

DEBATE NIGHT - "Few fireworks in gentlemanly Virginia gubernatorial debate," by Campaign Pro's Kevin Robillard: "With pressure building in a tight race, Virginia's leading gubernatorial candidates eschewed face-to-face political combat in their debate Tuesday night. Instead, their gentlemanly exchange contained few personal attacks and plenty of policy contrast on economic development, health care and immigration. Democratic Lt. Gov. Ralph Northam and Ed Gillespie, former chairman of the RNC, debated with few fireworks. Neither man deployed his most potent attacks against the other, and both ducked and dodged on some hot-button issues. There was no defining moment to be found. ...At one point during the debate, Gillespie appeared to announce his opposition to a legislative proposal from Sens. Lindsey Graham (R-S.C.) and Bill Cassidy (R-La.) to repeal Obamacare and replace it with state block grants. But post-debate, he said he hadn't read the legislation and wasn't able to take a position for or against it." **Full story.**

- **ANOTHER ONE** - **Fox News poll shows close race:** A Fox News poll released shortly before the debate, the fifth poll of the contest released in the past two days, gave Northam a 42 percent to 38 percent lead over Gillespie among registered voters. Among likely voters, Northam earned 42 percent to Gillespie's 41 percent. This poll follows a University of Mary Washington poll giving Northam a 5-point lead, polls from Suffolk University and Mason-Dixon showing a virtual tie, and a Quinnipiac University poll showing Northam with a 10-point lead. **Full results.**

- RGA gives Gillespie campaign another $1M: "The Republican Governors Association is donating another $1 million to the party's gubernatorial candidate in Virginia, former RNC Chair Ed Gillespie ...The RGA has now spent more than $4 million on the race." **Full story.**

SCHEDULING UPDATE - "Trump's Alabama rally to support Strange to be held Friday," by Louis Nelson: "Trump had announced earlier this week that he would campaign for Strange (R-Ala.) in Huntsville, Alabama, on Saturday, writing on Twitter that "Big Luther' is a great guy who gets things done!' Strange's campaign announced Monday afternoon that the rally featuring Trump would in fact take place at 7 p.m. Friday.Neither the White House nor a spokesman for Strange immediately responded to emails asking why the event had been moved up a day. **Full story.**

FIRST IN SCORE - New PAC to knock doors for Flake: A new super PAC called the Arizona Goldwater Tradition PAC hopes to raise and spend $2.9 million leading up to the Arizona Senate primary aiding embattled GOP Sen. Jeff Flake. The PAC, which registered with the FEC on Wednesday, is chaired by Arizona attorney Tim LaSota and was set up with help from GOP consultant Chuck Warren. It has hired multiple fundraisers including former Rubio fundraiser Carmen Miller Spence, Warren said. Arizona Goldwater Tradition PAC will focus on canvassing. "We want to have very well-educated teams of people talking to their neighbors, Republican voters and fiscally conservative independents" about Flake's conservative voting record, Warren said. "We're going out to have conversations with people. We're confident that if people know his voting record, they will not question Jeff Flake's conservative values."

DESSERT - "Read the 2013 Obama sketch cut from the Emmys," by POLITICO's Edward-Isaac Dovere: "Sean Spicer made it to the Emmys. Barack Obama was nixed. The former White House press secretary's surprise, controversial cameo at the Emmys on Sunday dredged up four-year-old bitter feelings among Obama White House staffers of a 2013 sketch that was stopped from going on the air, but that would have promoted Obamacare sign-ups just as the law was going into effect. A script was written . Segments with Tony Goldwyn, who plays President Fitzgerald Grant on "Scandal," and Jay Pharaoh, who was then playing Obama on "Saturday Night Live," were recorded. Some of those involved say Obama may have even shot his part himself." **Full story.**

PUBLIC HEARING - "Burr: Facebook to testify publicly on Russian electoral disruption," by POLITICO's Elana Schor: "The Senate Intelligence Committee chairman said today that he expects Facebook officials to appear at a public hearing examining its role in Russian efforts to influence the 2016 election. The social networking giant is under intense scrutiny for its involvement in Russian meddling during last year's presidential campaign and acknowledged earlier this month that it accepted about $150,000 in political ad spending from entities potentially linked to Russia." **Full story.**

Days until the 2017 election: 48.

Days until the 2018 election: 412.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin, @danielstrauss4 and @maggieseverns.

AIR WAR - Save My Care launches TV blitz: The progressive group is out with a six-figure TV ad buy to urge Alaska Lisa Murkowski, Maine Sen. Susan Collins and West Virginia Sen. Shelley Moore Capito to vote against the Graham-Cassidy health care repeal bill. One ad says that "partisan politicians are at it again ... pressuring [Murkowski] to cave." **Watch the Alaska ad here. Watch the Maine ad here. Watch the West Virginia ad here.**

- DCCC launches digital ads against Rep. Yoder: The DCCC is targeting Kansas Rep. Kevin Yoder with radio and digital ads for "his vote against disaster relief funds for victims of Hurricanes Harvey and Irma," per a statement from the group. The 60-second radio ad calls the funding vote "one of those rare times when something actually got done in Washington, but our congressman, Kevin Yoder, voted no." **Listen to the ad now.**

SEEKING WRITERS - "GOP governors launch 'news' site critics call propaganda," by AP's Bill Barrow: "The Republican Governors Association has quietly launched an online publication that looks like a media outlet and is branded as such on social media. The Free Telegraph blares headlines about the virtues of GOP governors, while framing Democrats negatively. It asks readers to sign up for breaking news alerts. It launched in the summer bearing no acknowledgement that it was a product of an official party committee whose sole purpose is to get more Republicans elected. Only after The Associated Press inquired about the site last week was a disclosure added to The Free Telegraph's pages identifying the publication's partisan source." **Full story.**

HEARD ON THE HILL - Democratic lawmakers to push FEC: Democratic House and Senate lawmakers plan to send a letter to the FEC today urging the commission to "consider new rules that would prevent foreigners from using online advertising platforms like Facebook and Twitter to influence voters," CNN's Dylan Byers reports. Additionally, Sen. Mark Warner (D-Va.) is considering legislation that would place new disclaimers on advertisements. The new efforts from lawmakers come on the heels of Facebook announcing it had told $100,000 worth of ads to Russian nationals during the 2016 elections.

SPECIAL GUEST - "Obama to host an event for New Jersey governor candidate," by The Hill's Amie Parnes: "Former President Obama will host an event this fall for Phil Murphy, the Democrat running for governor of New Jersey, Democratic sources say. Murphy served as U.S. ambassador to Germany from 2009 to 2013 under Obama. He also worked for more than two decades at Goldman Sachs. It's one of several events Obama is expected to attend in the coming weeks as he seeks to lend his star power to Democrats across the country." **Full story.**

- RGA launches first television ad in New Jersey: "The Republican Governors Association is airing a television ad in the New Jersey governor's race, its first foray into a contest most believe Republicans have little chance of winning. The 15-second ad attacks Democrat Phil Murphy, a former ambassador and Goldman Sachs executive, for wanting to raise taxes." **Full story.**

GOOD FRIEND TO HAVE - "Republican Andy Ogles' bid for Bob Corker's U.S. Senate seat to get $4 million assist from Lee Beaman," by The Tennessean's Joel Ebert: "Nashville businessman and Republican donor Lee Beaman said Tuesday he plans to raise $4 million to assist with Andy Ogles' run for the U.S. Senate seat held by Bob Corker. 'There are donors who are already anxious to get involved in this race and our plan is to raise and spend $4 million over the next 13 months to provide President Trump with an ally in the U.S. Senate that he will be able to depend upon,' Beaman said in a news release sent by the Ogles campaign." **Full story.**

CASH RACE - RNC raised $7.3M in August: The Republican National Committee raised $7.3 million during the month of August, the committee said today, bringing its total fundraising

for the year up to $93.3 million. The RNC ended August with $45.8 million cash on hand, the committee said. Its August fundraising total is slightly more than the $6.7 million the RNC raised during August of 2013, the last off-year leading up to a midterm election. Then, the committee finished August with $12.5 million cash on hand." **Full story.**

- "RNC says it has spent over $400,000 on Trump family's legal bills," by POLITICO's Nolan D. McCaskill: "The RNC has spent nearly a quarter-million dollars on President Donald Trump's legal bills, an RNC official confirmed today. Reuters reported that Trump was using funds from the RNC and his reelection campaign to pay for lawyers amid FBI and congressional probes into Russian meddling in the 2016 presidential election, including possible collusion between Trump associates and Moscow." **Full story.**

RETIREMENT WATCH - "Sources: Trump encouraged Corker to run for Senate again," by AP's Erik Schelzig: "President Donald Trump is encouraging Sen. Bob Corker of Tennessee to run for another term, according to two people familiar with a meeting between the two Republicans at the White House last week. The Friday meeting was the first between Corker and Trump since they clashed over the president's comments about a violent white supremacist rally in Virginia last month." **Full story.**

PRIMARY CONCERNS - Vukmir names Walker campaign chair to steering committee: Wisconsin State Sen. Leah Vukmir laid out the steering committee for her U.S. Senate bid to challenge Democratic Sen. Tammy Baldwin last night. One name to jump out: former Bradley Foundation president Michael Grebe, who chaired Wisconsin Gov. Scott Walker's presidential campaign in 2016.

FROM THE COURTROOM - "Menendez legal team gets a victory on evidence," by POLITICO New Jersey's Matt Friedman: "Sen. Robert Menendez (D-N.J.) won a legal skirmish with prosecutors on Tuesday, when a judge said he would allow Menendez's legal team to tell jurors about official actions the senator took to help people other than his co-defendant, Salomon Melgen. ...Attorneys for Menendez, a Democrat, plan to introduce evidence showing he has helped many constituents with visa and other issues during his 11 years in the Senate - the same types of acts he's alleged to have done for Melgen and his foreign girlfriends, in exchange for Melgen providing lavish vacations, private jet flights and hundreds of thousands of dollars in political contributions." **Full story.**

TRANSITIONS - DLCC names communications director: The Democratic Legislative Campaign Committee has hired Mara Sloan as communications director. Sloan previously worked for Sens. Bob Menendez and Bill Nelson.

- Hatch challenger hires campaign manager: Jenny Wilson, the Democratic Salt Lake City Councilmember challenging Utah Sen. Orrin Hatch, has hired Democratic operative Scott Hogan to manage her campaign. Hogan most recently worked for former Labor Secretary Tom Perez's successful DNC chair campaign.

ADMINISTRATION SPEED READ - "Price's private-jet travel breaks precedent," by POLITICO's Dan Diamond and Rachana Pradhan: "In a sharp departure from his

predecessors, Health and Human Services Secretary Tom Price last week took private jets on five separate flights for official business, at a cost of tens of thousands of dollars more than commercial travel. The secretary's five flights, which were scheduled between Sept. 13 and Sept. 15, took him to a resort in Maine where he participated in a Q&A discussion with a health care industry CEO, and to community health centers in New Hampshire and Pennsylvania, according to internal HHS documents. The travel by corporate-style jet comes at a time when other members of the Trump administration are under fire for travel expenditures, and breaks with the practices of Obama-era Secretaries Sylvia Matthews Burwell and Kathleen Sebelius, who flew commercially while in the continental United States." **Full story.**

QUOTE OF THE DAY: "I think a lot of people would roll their eyes or raise their eyebrows at it. ... But I'm here to win." - Tyler Ruzich, a Shawnee Mission North student, launched a campaign for the Republican nomination for Kansas governor, The Kansas City Star reported.

Subject: First Move: EPA Not Holding Nose on Animal Waste • Zinke Deputy On Regs • ExxonMobil's Chemical Offer

What you need to know to start your day.

EPA Not Holding Nose on Animal Waste • Zinke Deputy On Regs • ExxonMobil's Chemical Offer

By Chuck McCutcheon

Cows, pigs, chickens, and other farm animals generate lots of waste—so much, in fact, that it can greatly befoul air quality. Now the EPA wants to help farmers deal with the related paperwork.

The agency has put out materials it hopes can guide farmers through complying with a deadline next month to start reporting releases of hazardous air emissions from animal waste that are over the allowed limits in federal law, Abby Smith reports.

Hogs on a farm in Elma, Iowa.
Photo by Scott Olson/Getty Images

Farmers say they need all the help they can get on something so technical.

"The average farmer isn't a chemical engineer. There's going to be a tremendous learning curve," says Michael Formica, assistant vice president of domestic policy and counsel for the National Pork Producers Council.

Interior Secretary Ryan Zinke has often vowed to streamline regulations governing energy development on federal lands. One of his newest point people on the issue says he's looking at a variety of changes to bring it about.

The changes that David Bernhardt, Interior's deputy secretary, is contemplating are intended to shorten the time and trouble for everyone involved in the approval process for drilling and mining. That audience includes the Interior staff consumed with sizing up the litany of proposals to meet President Trump's goal of expanded U.S. energy production.

Bernhardt, a longtime natural resource attorney, knows that Interior risks losing a lot of court cases when environmentalists, states, and others sue the feds over violations of the National Environmental Policy Act and other laws. He tells Alan Kovski, who's writing about his interview with Bernhardt, that he thinks he's helping

his agency succeed at its efforts to be careful.

"I am pretty confident that our track record will be as good, if not better, than our predecessor's track record," Bernhardt says.

Exxon Mobil is urging the EPA to work with it and other chemical manufacturers, along with other industries, to learn how—and at what levels—people are exposed to chemicals.

The agency, when it reviews chemicals' risks, traditionally has been starved of information on people's exposures to chemicals. But an amended chemicals law now puts a premium on the agency having that kind of data as it weighs regulations to restrict chemical uses, Pat Rizzuto explains in a story out later this morning.

Without good exposure data, the agency makes assumptions about the extent to which people are exposed. Whether subsequent regulations are too restrictive—limiting chemical sales and use—or too lax—which could put people at risk—often hinges on debates over these assumptions.

Other Stories We're Covering

- Rebecca Kern and Bloomberg News reporters are expected to sit down today for an interview with FERC Chairman Neil Chatterjee. They will ask how his agency plans to address all of the comments about the Energy Department's grid proposal in a relatively short time.
- State solid waste management officials are wrapping up a meeting in Arlington, Va., and the EPA will discuss how to assess urban sites contaminated with lead. Sylvia Carignan is covering.
- Murray Energy Corp.'s CEO will have to tell miners that they can go to federal regulators about safety conditions without first notifying management, a mine regulatory panel says.
- Reducing byproduct fish and other creatures caught during commercial fishing for a different species is a focus of a U.N. wildlife summit wrapping up in Manila. Adam Allington is tracking.
- One of Scott Pruitt's loyal Senate allies wants to stop a vote on a Democratic FERC member to try to win floor votes on EPA nominees who face Democrats' opposition.

Quote of the Day

"No one entity has all the information. We really need to work together."
—Rosemary Zaleski, who heads the chemical exposure division at Exxon Biomedical Sciences Inc., discussing the company's desire to help the EPA on chemical risks.

Today's Events

- **9:30 a.m. • Water** • A House infrastructure committee's water resources panel holds webcasted roundtable in Miami on improving ports, dams, and other water-related infrastructure. David Schultz is monitoring.
- **3 p.m. • Climate Change** • George Washington University hosts "climathon" seeking technology-based solutions on addressing climate change.
- **4 p.m. • Alaska** • Alaska Center for Climate Assessment & Policy holds webinar on state's climate conditions.
- **All Day • Women's Convention** • NRDC Action Fund and other groups sponsor convention in Detroit addressing how women are affected by, and can change policies on, drinking water safety, as well as other issues.

Around the Web

- A new video game promotes attacks on oil pipelines, the game's critics say, demanding that the university whose professor developed it pull the plug.
- People who study wildfires say new thinking about them—such as regarding them as inevitable natural disasters comparable to earthquakes—will help with preparedness.
- Energy alliance launches initiative to halve transportation energy use by 2050.
- Maryland's water quality monitoring data indicates the best year on record since 2012.
- Democratic senators ask EPA: Show us the math that led you to propose rescinding the Clean Power Plan.

Subject: POLITICO's Morning Transportation, presented by the Association of American Railroads: Shuster interested in Armed Services chairmanship — Spending bills hang in the balance — Latta wants DHS action on car attacks

By Tanya Snyder and Brianna Gurciullo | 11/06/2017 10:00 AM EDT

With help from Stephanie Beasley

SHUSTER STAYING: While other soon-to-be term-limited House committee chairmen are planning to retire come 2019, Rep. Bill Shuster (R-Pa.) says he doesn't want to join them. "My intention is to stick around," Shuster recently told The Hill. "I've got some other opportunities. I'm pretty senior on the Armed Services Committee." He added that Chairman Mac Thornberry (R-Texas) "has another term, but I'm on the top prong there, and I've demonstrated that I can get things done." Shuster became the Transportation Committee's chairman in 2013 and will have to give up the gavel in January 2019. At least two committee members - Highways and Transit Subcommittee Chairman Sam Graves (R-Mo.) and Railroads Subcommittee Chairman Jeff Denham (R-Calif.) - are looking to succeed Shuster.

IT'S MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Tanya has her bike helmet on and is ready to roll, so be sure to send her your tips, well wishes and random thoughts: tsnyder@politico.com or @TSnyderDC.

"Sailing away beyond the reach of anyone / Far beyond the dreams of everyone / High from the heavens / I can't see the pain / Does anybody care?"

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

THIS WEEK:

Tuesday - The Atlantic holds a series of discussions on artificial intelligence, self-driving cars and virtual reality. The Atlantic Council's Cyber Statecraft Initiative releases a report on "the critical cybersecurity challenges facing the aviation industry."

Wednesday - FAA Administrator Michael Huerta speaks at the National Air Transportation Association's Aviation Business Roundtable. The Design-Build Conference and Expo begins in Philadelphia. The Senate Commerce Committee marks up Bruce Landsberg's nomination to be a member of NTSB, Ray Martinez's nomination to be FMCSA administrator, Diana Furchtgott-Roth's nomination to be assistant secretary of transportation for research and technology and former Rep. Lynn Westmoreland's nomination to be a member of Amtrak's board. The Senate Environment and Public Works Committee holds a hearing on Kathleen Hartnett White's nomination to the Council on Environmental Quality.

WAIT THERE'S MORE! Also on Wednesday, the Senate Homeland Security and Governmental Affairs Committee holds a hearing on Kirstjen Nielsen's nomination to be Homeland Security secretary. The House Homeland Security Committee holds a hearing on TSA with Administrator David Pekoske. Before the hearing, Pekoske and DHS Inspector General John Roth will give members of the panel a classified briefing on the IG's most recent audit of TSA screenings, Steph scooped for Pros.

Thursday - Securing America's Future Energy holds a conversation on "the regulatory measures that should be taken to enable a safer and more efficient trucking future." The Information Technology & Innovation Foundation holds a talk about "how best to strike a balance between maintenance and innovation in future U.S. infrastructure investments." The Senate Homeland Security and Governmental Affairs Committee marks up Nielsen's nomination.

CLOSING TIME: Anyone who's been watching the countdown at the bottom of MT knows there's barely a month left before government appropriations expire - and "spending leaders have barely begun negotiating a compromise that could mark the toughest political wrangling of Donald Trump's presidency so far," report Sarah Ferris and Jennifer Scholtes. There's talk of pushing the Dec. 8 deadline until sometime in February. But if they try, defense hawks are sure to raise a stink about it. "If we go to another CR, we're going to be unable to defend ourselves," Rep. John Carter (R-Texas), who chairs the House spending panel in charge of homeland security, told POLITICO on Friday.

MUDDY WATERS: Top Republicans and Democrats on the House Transportation Committee want the GAO to keep close tabs on DOT's future INFRA grant decisions, following an agency report showing DOT hadn't provided clear rationale for its selection of 18 highway and freight projects from a pool of 218 applicants last year. Though the awards were made under the Obama administration, GAO noted that DOT's application review process remains opaque under the Trump administration. DOT agreed with the report's recommendations and said it would work to establish an evaluation plan and document key decisions made on applications for fiscal 2018. Pros can get all the details here.

LATTA WANTS ACTION ON CAR ATTACKS: Rep. Bob Latta (R-Ohio) has introduced a measure (H.R. 4227 (115)) that would require DHS to take a deeper look at vehicular terrorism threats. The bill would give the department six months to examine its efforts to prevent vehicle attacks and submit recommendations to Congress. Latta joins a chorus of lawmakers pressing for federal action on vehicular terrorism in the wake of last week's truck-ramming attack in New York City. DHS has largely deferred to the FBI and local law enforcement to investigate the incident, but Latta said the department should take more steps to prevent such attacks. "DHS needs to take appropriate actions to prevent these assaults on innocent lives," he said in a statement.

HEADS UP: Amendments won't be offered on the floor when the House considers its tax bill (H.R. 1 (115)), Ways and Means Chairman Kevin Brady (R-Texas) told POLITICO Playbook. "The work will be done in the committee and before we take it to the Rules Committee and later in conference," Brady said. More here. Related, House Speaker Paul Ryan said on Fox News Sunday that he feels "very good" about the chances of getting the tax bill passed through the

House before Thanksgiving.

** **A message from Association of American Railroads**: Moving 54 tons of goods annually for every American takes a lot of muscle, and a lot teamwork. See how intermodal has turned trucks and trains from competitors into collaborators while delivering for U.S. industry and consumers. http://bit.ly/2itLz6q **

FLY-IN: The North Dakota Motor Carriers Association is meeting with lawmakers Tuesday, Wednesday and Thursday to push for the Republican tax bill as well as funding for infrastructure upgrades. "It is the 41st American Trucking Associations state affiliate to conduct an annual fly-in this year," ATA's Jeremy Kirkpatrick told MT.

MT MAILBAG: Twenty-two organizations, ranging from the National Stone, Sand and Gravel Association to the Reason Foundation and from AASHTO to ASCE signed on to a letter urging members of the Ways and Means Committee to retain the federal tax exemption for private activity bonds, which the tax bill would eliminate. "This provision severely conflicts with the need to deploy all types of funding sources for transportation infrastructure improvements, including private capital," they wrote. "Ultimately, it would raise costs for most such projects, regardless of how they are financed." ... Kurt Nagle, president and CEO of the American Association of Port Authorities, also wrote to Ways and Means Committee leaders to advocate for protecting PABs, designating Harbor Maintenance Trust Fund spending as mandatory and funding infrastructure improvements.

FMCS-ADIOS: FMCSA's deputy administrator, Daphne Jefferson, has retired, Brianna reported for Pros on Friday. Cathy Gautreaux, most recently the Louisiana Motor Transport Association's executive director, is likely to succeed her, Transport Topics reports.

ICYMI: Senate Majority Leader Mitch McConnell (R-Ky.) filed cloture last week on Derek Kan's nomination to be under secretary of transportation for policy. Kan's nomination was approved by committee back in June. But Democratic senators hindered his confirmation in August over concerns about the Gateway Program. Kan was a general manager at Lyft and previously a policy adviser to McConnell. He has been a "senior advisor" at DOT since June, according to his LinkedIn.

ARRIVALS AND DEPARTURES: Michael Bilello is TSA's new assistant administrator for public affairs. He was most recently CEO and founder of Centurion Strategies and previously worked as a public affairs and media relations officer for the Marine Corps.

THE AUTOBAHN:

- "GOP tax bill has transportation advocates scrambling." The Hill.

- Average price per gallon up 17 cents in Los Angeles since 12-cent gas tax took effect. ABC7.

- "Trump to Japan: Make more cars in the U.S." POLITICO.

- Arrested Saudi investor prince owned 'sizable' stake in Lyft. The New York Times.

- "Electric-vehicle tax-credit proposal slows Tesla, Detroit." The Wall Street Journal.

- "USDOT preparing sweeping AV policy update, 3.0, including trucks and buses." Eno Transportation Weekly.

- "Japanese firms say U.S. NAFTA proposals would be harmful." POLITICO Pro Trade.

- "BMW recalling 1 million vehicles in North America." Reuters.

- "Russian airspace to remain open to Dutch airlines." POLITICO Europe.

THE COUNTDOWN: DOT appropriations run out in 33 days. The FAA reauthorization expires in 146 days. Highway and transit policy is up for renewal in 1,060 days.

** **A message from Association of American Railroads**: America's 21st century economy rides on the back of a modern intermodal freight rail network. Railroads are leveraging their unique shipping capabilities to meet growing demand for freight movement while supporting a trucking industry undergoing transformation. Read the full story of these two unlikely partners - and their impact on the American economy. http://bit.ly/2itMnIu **

Subject: POLITICO's Morning Energy: Energy issues the Senate might handle this month — Public weighs in on EPA delay of power plant discharge rule — Efficiency groups want Congress to be clear about Trump program spending

By Alex Guillén | 07/31/2017 10:00 AM EDT

With help from Darius Dixon, Annie Snider and Esther Whieldon

AUGUST: O-SENATE COUNTY: Senators are back in town this week rather than kicking off their traditional August recess, but with the GOP's health care repeal effort underwater (for now, anyway) there may be an opportunity for lawmakers to get something done on energy - which, almost unbelievably, is often a less contentious issue these days. Here's a look at energy issues on the Senate's backburner that might get renewed attention soon.

Energy bill: Senate Energy and Natural Resources Chairwoman Lisa Murkowski said earlier this month that she would push to get the bipartisan energy bill, S. 1460 (115), onto the floor in these extra weeks. It's largely the same as a version that passed the Senate overwhelmingly last year, and would offer the chamber an opportunity to do something concrete. However, Majority Leader Mitch McConnell may not have much interest in moving Murkowski's bill after she helped tank the GOP's Obamacare repeal efforts last week.

Appropriations: The last of the four major energy appropriations bills - the Senate's Interior-EPA package, overseen by Murkowski - has yet to be released. If it follows the recent tradition of Senate leniency on EPA spending, the agency would find itself in line for even fewer cuts than under the House version (which wielded the ax must less sharply than President Donald Trump's proposal). However, eyeballs will definitely be scouring the Interior side to find out whether Murkowski includes any payback against Secretary Ryan Zinke, who infamously tried to turn up the heat on her last week about her Obamacare stance.

Hearings: The Senate Environment and Public Works Committee has an oversight hearing on EPA's Superfund program scheduled for Tuesday morning. Witnesses are Steven Nadeau of the law firm Honigman Miller Schwartz and Cohn; Jeffery Steers, director for regional operations for the Virginia Department of Environmental Quality; and independent consultant Katherine Probst, who recently wrote a paper on Superfund's accomplishments and challenges.

HOW MANY NOMINATIONS PASS GO? Shortly after Friday's collapse of the latest Obamacare repeal effort, Senate Minority Leader Chuck Schumer said "a whole lot" of nominees may begin marching through the upper chamber. Plenty of energy nominees are hoping to get off the bench and into the game, including Trump's picks for EPA, the Nuclear Regulatory Commission, FERC and the Energy Department, who have already gotten committee approvals. As far as Senate politics go, there are two tracks of nominees: standalone picks, such as deputy Energy secretary nominee Dan Brouillette, and those who can be sewn into bipartisan packages, like the FERC hopefuls.

Much of the energy world has been waiting for Trump's FERC nominees to be confirmed, given the agency's months of paralysis. But don't expect too much movement there until the White House formally sends the nomination of Democratic pick Rich Glick to the Senate. Glick's nomination was announced June 28 but not much else has happened since, except Trump's plans to nominate Kevin McIntyre for agency chair. That has left GOP picks Neil Chatterjee and Rob Powelson on ice. At this point, even if the Glick and McIntyre paperwork came over today, there wouldn't be enough time for Murkowski to shuffle them through her committee before the Senate's abbreviated recess kicks off. A big question mark still hangs over Brouillette, who was approved by the energy panel on June 6. He's not a particularly controversial figure, but Sen. Dean Heller has had a hold on his nomination and it's unclear how or when that will be resolved.

More than 50 people are waiting for floor time, including NRC nominees Annie Caputo and David Wright and EPA enforcement pick Susan Bodine, and many may be good candidates for getting quietly approved in the final minutes before the Senate goes on recess.

HAPPY MONDAY AND GOODBYE TO JULY. I'm your special guest host Alex Guillén, and while I am one of the last people on Earth not watching "Game of Thrones," I can report that the pop-up bar on Seventh Street makes some tasty cocktails (especially the What Is Dead May Never Die). Marni Salmon of the Pew Charitable Trusts was first on Friday to identify James Madison as the shortest president, at a petite 5 feet 4 inches. Today's trivia: Trump, at 6 feet 2, is tied for fourth tallest president with five of his predecessors. Name all five. Send your tips, energy gossip and comments to aguillen@politico.com . Or follow us on Twitter @alexcguillen, @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ZINKE, PERRY RETURN FOR CABINET MEETING: Interior Secretary Ryan Zinke and Energy Secretary Rick Perry have canceled travel plans in order to attend a quickly organized Cabinet meeting at 10 a.m. Zinke is wrapping up a trip out West and had to pull out of several meetings on Nevada monuments, and Perry has postponed a trip to visit DOE's Portsmouth Gaseous Diffusion Plant in Piketon, Ohio. It was not immediately clear last night whether EPA Administrator Scott Pruitt will attend, but ME thinks it's a good bet. The agenda seems likely to include Obamacare repeal (which now enjoys a starring role for Zinke) and the shake-up at the White House's top echelons.

Less likely to rate Cabinet attention today is Zinke's monument review. He was in Nevada on Sunday to tour Gold Butte National Monument and Basin and Range National Monument. Zinke told reporters that he hadn't made any decision about downsizing the two monuments, both of which were created last year, according to the Associated Press.

The nuclear angle: The Basin and Range monument has been of particular interest to people on both sides of the debate over the Yucca Mountain nuclear waste project, and axing or altering the monument could remove a significant hurdle for those hoping to build the site. Obama's vast 2015 monument designation was made in an area where a proposed rail link to Yucca was eventually supposed to go.

MY INTERIOR SECRETARY HAS A FIRST NAME, IT'S R-Y-A-N: Zinke (a noted hot dog aficionado) posted a Twitter photo in front of the Oscar Mayer Wienermobile on Sunday. He

gave the vehicle two thumbs up. That followed a Saturday horseback ride with New Mexico Sens. Tom Udall and Martin Heinrich through BLM-owned Sabinoso Wilderness.

ELGs - TELL ME ABOUT IT: EPA staffers are poised for an earful today as community activists from around the country head to the agency for a hearing on EPA's proposed delay of new standards for toxic water discharges from power plants. But first, environmental leaders from Illinois to New Mexico to Tennessee, along with the Sierra Club and Waterkeeper Alliance, will hold a presser this morning before marching to the public meeting.

EPA Administrator Scott Pruitt moved in April to reconsider the 2015 rule, following industry requests, and in May proposed delaying compliance deadlines during that reconsideration. The rule, which is the first update in more than three decades to limits on discharges of metals like mercury, lead and arsenic into waterways, has been cast by industry and Pruitt as part of a war on coal.

EFFICIENCY GROUPS URGE CONGRESS TO BE SPECIFIC ON SPENDING INSTRUCTIONS: A coalition of energy and water efficiency groups, including the Alliance to Save Energy and the U.S. Green Building Council, wants Congress to be crystal clear in how it wants money spent on energy efficiency programs and projects during fiscal year 2018. In a letter to key lawmakers, the groups say they are "increasingly concerned" that a continuing resolution or omnibus bill could give the Trump administration the discretion "to suspend or discontinue programs, activities, or projects in the absence of clear direction from Congress." Specific programs they are concerned about include Energy Star and WaterSense at EPA, both targeted for cutting under the White House's budget. The groups said any spending bill should include instructions for the Trump administration to continue those programs specifically, and they suggested ways for lawmakers to keep more detailed track of how agencies spend the money.

USDA CHIEF SCIENTIST PICK SKILLED AT INFLUENCING POTUS: Helena Bottemiller Evich from Pro Agriculture has a timely profile on Sam Clovis, Trump's choice for the Agriculture Department's chief scientist post. Clovis doesn't appear to have the scientific credentials required of the job - and the ag sector is OK with that. "Back in April, when Trump was on the verge of withdrawing the U.S. from NAFTA, it was widely reported that Agriculture Secretary Sonny Perdue helped walk the president away from the ledge by showing up at an Oval Office meeting with a map of the U.S. that pointed out areas that would be most harmed by an abrupt withdrawal - many of them counties and states that voted for Trump, and many of them rural," Helena writes. "It was actually Clovis who prepped Perdue for the meeting and Clovis who suggested the secretary take along the map to drive home his point in a visual, high-impact way, multiple sources with knowledge of the exchange said."

SAGE GROUSE RECOMMENDATIONS DEADLINE AHEAD: The team of Interior political and career staff assigned to review the agency's land-use conservation plans for sage grouse in Western states has until Sunday to send Zinke their recommendations, which may include ways to reduce barriers to fossil fuel development. Given that the deadline lands on a Sunday, the team is likely to submit the report before the end of this week.

NEXT STEP IN TRUMP ATTEMPT TO END CLIMATE SUIT: The 9th U.S. Circuit Court of Appeals on Friday said the Trump administration's request to stop a trial over the federal government's culpability for climate change "raises issues that warrant an answer." A three-judge panel, which earlier this week paused the lower court's ongoing trial preparation, said in a two-page order that the children and young adults who are suing the federal government in an Oregon federal court have 30 days to reply to the Trump administration's complaint. This appeals could decide whether the kids' climate lawsuit gets to trial at all. More here.

WHAT EPA WANTS YOU TO READ: EPA's press office on Sunday sent out a release touting an editorial in the Tulsa World yawning over last week's news that Pruitt frequently returned to Oklahoma throughout the spring.

- House Energy and Commerce Committee Democrats on Friday asked EPA's inspector general to review Pruitt's travel. At least one environmental groups has already made such a request to the IG.

QUICK HITS

From: Anna Palmer Jake Sherman Daniel Lippman
Sent: Wed 10/11/2017 5:40:24 PM
Subject: Playbook Power Briefing, presented by Chevron: TRUMP threatens NBC News 'license' -- SCOOP: KIRSTJEN NIELSEN expected to be named DHS secretary -- MCCONNELL wants to end Senate judiciary blue slips -- STEPHEN STRASBURG starting tonight

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Chevron

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Wednesday afternoon. TEXAS DEMOCRAT INTRODUCES IMPEACHMENT RESOLUTION -- TEXAS DEMOCRATIC REP. AL GREEN has noticed a resolution on the House floor to **IMPEACH** President Donald Trump. **THE HOUSE** will likely be forced to take action on this resolution at some point, but not today. If and when it does vote, the GOP-controlled chamber will likely table the resolution, which will put the issue to rest. **BUT, BUT, BUT ...** Green -- who represents the Houston area -- has opened a new front in the Democrat-versus-Trump war.

BUZZ -- MITCH MCCONNELL and **DONALD TRUMP** are scheduled to have dinner next week, according to multiple sources familiar with the plan. Trump has been warring recently with Sen. Bob Corker (R-Tenn.), a Senate committee chair and ally of McConnell's.

GOOD NEWS, WASHINGTON ... MAYBE?: The Nationals have named Stephen Strasburg the starter for tonight's must-win game against the Chicago Cubs, per WaPo's Chelsea Janes. First pitch is at 4:08 p.m. After last night's drama, we're not convinced of anything until the pitcher takes the mound.

A REAL HEADLINE IN AMERICA IN 2017: "Trump Threatens NBC's TV Licenses After Report That He Wanted More Nukes," by Bloomberg's Alex Wayne and Todd Shields: https://bloom.bg/2gvpVPa

-- THE TWEETS: @realDonaldTrump at 9:45 a.m.: "Fake @NBCNews made up a story that I wanted a 'tenfold' increase in our U.S. nuclear arsenal. Pure fiction, made up to demean. NBC = CNN!" ... **at 9:55 a.m.:** "With all of the Fake News coming out of NBC and the Networks, at what point is it appropriate to challenge their License? Bad for country!"

-- THE REALITY -- @joshgerstein: "They don't really have licenses. Their owned/operated stations do. And their affiliates, but other companies own those ... Also as w/equal time rules, GOP led charge for FCC to back off rigorous look at whether

stations operate in 'public interest'".

THIS IS A BIG DEAL... GOODBYE BLUE SLIPS -- The Weekly Standard's **FRED BARNES** talking to **MITCH MCCONNELL:** "No longer will 'blue slips' be allowed to deny a nominee a Senate Judiciary Committee hearing and vote on confirmation. In the past, senators have sometimes barred a nominee from their state by refusing to return their slip to the committee, thus preventing a hearing and confirmation.

"'The majority' -- that is, Republicans -- will treat a blue slip 'as simply notification of how you're going to vote, not as an opportunity to blackball,' McConnell told me. The use of blue slips, he noted, is not a Senate rule and has 'been honored in the breach over the years.' Now it won't be honored at all." http://tws.io/2xy9P1K

-- JUDICIARY CHAIR CHUCK GRASSLEY'S RESPONSE, per a spokesman: "The chairman of the Judiciary Committee will determine how to apply the blue slip courtesy for federal judicial nominees, as has always been the practice. Over the years, chairmen have applied the courtesy differently, but the spirit of consultation has always remained." ***More from Burgess Everett and Seung Min Kim*** http://politi.co/2zgBTEi

SCOOP -- "Trump expected to name Kelly's White House deputy as DHS secretary," by Eliana Johnson, Andrew Restuccia and Daniel Lippman: "President Donald Trump is expected to nominate Kirstjen Nielsen to run the Department of Homeland Security, possibly as soon as Wednesday, according to two administration officials and three outside advisers familiar with the process. Nielsen served as White House chief of staff John Kelly's chief of staff during his time as DHS secretary and moved with him to the West Wing as his principal deputy chief of staff when he was appointed in July, leaving the cabinet post vacant. ...

"People familiar with the search cautioned that, as with everything in the Trump White House, nothing is final until publicly announced. Nielsen, 45, is a cybersecurity expert and an attorney with an extensive background in homeland security, including stints at the Transportation Security Administration and on the White House Homeland Security Council under President George W. Bush." http://politi.co/2zg4JV6

THE LATEST ON RUSSIA -- "Nunes signs off on new subpoenas to firm behind Trump-Russia dossier," by CNN's Evan Perez, Manu Raju and Jeremy Herb: "The chairman of the House intelligence committee has issued subpoenas to the partners who run Fusion GPS, the research firm that produced the dossier of memos on alleged Russian efforts to aid the Trump campaign, according to sources briefed on the matter. The subpoenas -- signed by California Republican Rep. Devin Nunes -- were issued Oct. 4, demanding documents and testimony later this month and early November.

"Earlier this year, Nunes announced that he was stepping aside from directing the committee's Russia inquiry after he became the subject of an ethics investigation into his handling of classified information. But more recently, he has made clear that he is still playing an influential role, despite announcing that he had delegated authority on the

Russia matter to Republican Rep. Mike Conaway of Texas.

"A source familiar with the matter told CNN that all Russia-related subpoenas have been approved by Conaway, and Conaway confirmed to CNN Monday he asked for the most recent subpoenas. ... A Democratic committee source said 'the subpoenas were issued unilaterally by the majority, without the minority's agreement and despite good faith engagement thus far by the witnesses on the potential terms for voluntary cooperation.'" http://cnn.it/2xxpgHE

****** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat- buckwheat. Watch the video: http://politi.co/2y5XNvF ******

IMPORTANT STORY -- "Desperate calls to save those trapped by fire, but emergency alert system failed many," by LA Times' Paige St. John, Dakota Smith, Hailey Branson-Potts and Joy Resmovits: "The distress calls crackled over the Napa County sheriff's dispatch radio in a rapid staccato late Sunday as flames sped toward residents on Atlas Peak Road. 'Parents trapped in garage,' an officer called in to the central dispatcher. Then: 'The fire is moving quickly through here.' Two minutes later, the dispatcher sent someone to another house on the same road: 'Two people trapped.' A minute passed, then a call to still another house: 'An elderly lady trapped.'" http://lat.ms/2wNEEuN

PUERTO RICO UPDATE -- "Puerto Rico's Health Care Is in Dire Condition, Three Weeks After Maria," by NYT's Frances Robles: "Harry Figueroa, a teacher who went a week without the oxygen that helped him breathe, died here last week at 58. His body went unrefrigerated for so long that the funeral director could not embalm his badly decomposed corpse. ... 'Because of the electricity situation, a lot of people died, and are still dying,' said Mr. Figueroa's daughter, Lisandra, 30. 'You can't get sick now.'"

"Nearly three weeks after Hurricane Maria tore through Puerto Rico, many sick people across the island remain in mortal peril. The government's announcements each morning about the recovery effort are often upbeat, but beyond them are hidden emergencies. Seriously ill dialysis patients across Puerto Rico have seen their treatment hours reduced by 25 percent because the centers still lack a steady supply of diesel to run their generators. Less than half of Puerto Rico's medical employees have reported to work in the weeks since the storm, federal health officials said." http://nyti.ms/2zfwRro

INTERESTING PERK -- "An old-school pharmacy hand-delivers drugs to Congress, a little-known perk for the powerful," by Stat's Erin Mershon: "Nearly every day for at least two decades pharmaceutical drugs have been brought by the carload to the Capitol -- an arrangement so under the radar that even pharmacy lobbyists who regularly pitch Congress on their industry aren't aware of it.

"The deliveries arrive at the secretive Office of the Attending Physician, an elaborate medical clinic where Navy doctors triage medical emergencies and provide basic health

care for lawmakers who pay an annual fee of just over $600. Every one comes from Washington's oldest community pharmacy, Grubb's. ... 'At first it's cool, and then you realize, I'm filling some drugs that are for some pretty serious health problems as well. And these are the people that are running the country,' [Grubb's owner Mike] Kim said, listing treatments for conditions like diabetes and Alzheimer's." http://bit.ly/2xyFmR6

SPY VS. SPY -- "China grabbed American as spy wars flare," by Ali Watkins: "It was January 2016. The U.S. official had been working out of the American consulate in the central Chinese metropolis of more than 10 million. He may not have seen the plainclothes Chinese security services coming before they jumped him. In seconds he was grabbed off the Chengdu street and thrown into a waiting van.

"The Chinese officials drove their captive -- whom they believed to be a CIA officer -- to a security facility where he was interrogated for hours, and, according to one U.S. official, filmed confessing to unspecified acts of treachery on behalf of the U.S. government.

"It wasn't until the early morning hours of the following day that other U.S. officials -- who were not immediately informed by their Chinese counterparts of the consular official's capture -- arrived to rescue him. He was eventually released back to their custody and soon evacuated from the country." http://politi.co/2zhOPcW

FOR YOUR RADAR -- "Game of Drones: U.S. poised to boost unmanned aircraft exports," by Reuters' Matt Spetalnick and Mike Stone: "The Trump administration is nearing completion of new "Buy American" rules to make it easier to sell U.S.-made military drones overseas and compete against fast-growing Chinese and Israeli rivals, senior U.S. officials said. ... [T]he U.S. administration is pressing ahead with its revamp of drone export policy under heavy pressure from American manufacturers and in defiance of human rights advocates who warn of the risk of fueling instability in hot spots including the Middle East and South Asia." http://reut.rs/2kHCRGc

PRICE'S (TEMPORARY) REPLACEMENT -- "Trump taps Eric Hargan as acting HHS secretary," by Dan Diamond: http://politi.co/2zfQvU4

CAMPAIGN STOPS -- "Pledge to Impeach Trump, a Key Donor Demands of Democrats," by NYT's Alex Burns: "One of the Democratic Party's most prominent financial backers is demanding that lawmakers and candidates on the left support removing President Trump from office, putting pressure on Democrats to make Mr. Trump's ouster a defining issue in the 2018 midterm elections.

"Tom Steyer, a billionaire California investor who spent more than $91 million supporting Democrats in the 2016 elections, issued the demand to his party in a letter on Wednesday. In his message, Mr. Steyer described Mr. Trump as a 'clear and present danger to the republic' and called on Democrats to pledge that they would seek to remove him from office if they take control of Congress next year. ... The letter, which was sent to Democratic congressional offices and the party's House and Senate

campaign committees, and shared with The New York Times by an aide to Mr. Steyer, represents a significant boost to efforts on the left to make impeachment a mainstream political consideration." http://nyti.ms/2zgknjw ... *The letter* http://bit.ly/2zfuWTM

-- "Undisclosed deal guaranteed Roy Moore $180,000 a year for part-time work at charity," by WaPo's Shawn Boburg and Robert O'Harrow Jr.: http://wapo.st/2zeyENn

HMM... -- "Fed Economists' Stakes in Forecasting Firm Spur an Internal Probe," by WSJ's Katy Burne: "The Federal Reserve's internal watchdog is probing a group of Fed economists who also own shares in a U.K. economic-forecasting company, a person familiar with the matter said. At issue is whether the economists' ownership stakes in the private firm could have created a conflict of interest. The inquiry, by the Fed's Office of Inspector General, centers on four economists who also have owned shares in London-based Now-Casting Economics Ltd. ... The inquiry is at a preliminary stage." http://on.wsj.com/2zfzWro

THE PARTY OF BANNON -- "Republicans nationwide begin to chase Steve Bannon's endorsement," by McClatchy's Katie Glueck: "It's not just the Senate -- Bannon is backing Michael Grimm, the ex-GOP congressman who was jailed for felony tax fraud and is now seeking his old Staten Island House seat again. Bannon recently spent time with a Pennsylvania gubernatorial candidate, Scott Wagner, who appeared with him at a conservative gathering in St. Louis and talked up spending 'two hours on the plane with Steve Bannon. I was pretty emboldened before, but I can tell you right now I'm like 500 percent more emboldened.'

"'And in a sign of just how far-reaching Bannon's influence is perceived to be among conservative candidates, multiple House -- and even statehouse -- hopefuls are also seeking to wrangle Bannon's support, looking for introductions and tracking him down at events." http://bit.ly/2xz81Ww

PLAYBOOK METRO SECTION -- "Michelin Releases Its 2018 Bib Gourmand List for DC: Per usual, there are some head-scratchers on the guide's 'cheap eats' list," by the Washingtonian's Ann Limpert: http://bit.ly/2zfrEjk

MEDIAWATCH -- HOT JOB -- The New York Times is hiring for a one year residency for a reporter to "tell image-driven stories focusing on subcultures" like "punk rappers in Seattle, Bachata performers in Vietnam, vintage Ralph Lauren collectors in Brooklyn and motocross racers in Jamaica." http://bit.ly/2zg1mNX

-- Alex Miehls started last week as an associate producer for Fox News' "The Story with Martha MacCallum." He was previously deputy press secretary for the House Oversight Committee and press secretary for Rep. George Holding (R-N.C.).

TRANSITIONS -- Beth Lynk has been promoted to assistant director of federal advocacy communications for Planned Parenthood Federation of America and Planned Parenthood Action Fund. She was previously state policy press officer.

WEEKEND WEDDING -- Morgan Wilson, senior legislative associate at the National Governors Association, and **Tom Sisk,** an official at DoD, were married this weekend in the bride's hometown, Birmingham, Alabama, at Avondale United Methodist Church followed by a reception at Avondale Brewing Company. *Pic* http://bit.ly/2y2jM7c

Subject: Pruitt to limit science advisers who have received grant money

By Alex Guillén

10/17/2017 02:14 PM EDT

EPA Administrator Scott Pruitt today questioned whether scientists who received agency research grants in the past should be allowed to serve on its various advisory boards, and said he would issue an order limiting their roles.

Speaking at a Heritage Foundation event, Pruitt said that he is concerned about the recommendations coming from advisers who have received "sometimes tens of millions" of dollars in research grants from EPA.

"If we have individuals that are on those boards receiving money from the agency — sometimes going back years and years to the tune of literally tens of millions of dollars over time — that to me causes question on the independence and the veracity and the transparency of those recommendations that are coming our way," he said.

"Next week I'm going to issue a directive that addresses that ... to ensure the independence and transparency and objectivity with respect to the scientific advice that we're getting at the agency," he added.

Pruitt did not specify whether his order would simply impose restrictions or outright ban any scientist who has received grant money.

The move is likely to cause further uproar from Pruitt's critics, particularly since many established and reputable scientists have received a research grant from EPA in the past. EPA ethics rules prohibit board members from having a current grant.

House Republicans have unsuccessfully pushed legislation in recent years that would bar grant recipients from serving on EPA's boards.

Subject: BREAKING NEWS: Senate passes hurricane aid, government funding package

The Senate on Thursday passed legislation, 80-17, that would temporarily lift the nation's debt ceiling and fund the government, while delivering the first installment of emergency aid for victims of Hurricane Harvey.

The massive fiscal package was the result of a surprise mid-week deal between President Trump and congressional leaders. Trump could sign the bill as early as Friday. The agreement ends the threat of a government shutdown and a default on the national debt at the end of September, but just for three months. Congress now faces a Dec. 8 deadline to strike another deal to avert those fiscal cliffs.

Lapsed Tax Credits Leave Renewables Twisting in the Wind

Posted August 14, 2017, 8:01 A.M. ET

By Brian Dabbs

The Bergey Windpower Co. factory south of Oklahoma City can produce 1,500 small-scale turbines annually. But current output is only a fraction of that capacity.

So now the pioneer in the wind energy industry is bracing to pare down staff. The company's struggles are partially due to the low price of small solar modules, which are helping that industry take the renewable energy sector by storm at the expense of wind.

But a big drop in sales for Bergey is also due to tax policy.

Small wind turbine producers such as Bergey are facing dire times because Congress allowed a wind installation tax credit to lapse at the beginning of 2017, while renewing credits for solar. And the lapse isn't restricted to wind. Geothermal pumps and fuel cells industries also lost the credit, triggering huge sales hits that are putting the future of a wide range of companies and their employees at risk.

Legislative efforts to restore the credits are afoot, but Republican congressional leaders aren't homing in on them.

Now producers of these "orphan" technologies are competing with a solar industry that reaps a 30 percent incentive as a result of its tax credit. That means a $30,000 solar panel installation will cost a homeowner $21,000 in the end. A $30,000 geothermal installation will cost the homeowner the full amount, as will a $45,000 wind system.

'They're Not Buying'

So Mike Bergey, president of the Norman, Okla., company, is now peddling only a few residential turbines to deep-pocketed clients.

"Our bread and butter customers were a guy who drives a truck and his wife is a nurse—just straight middle class. They're not buying," he told Bloomberg BNA. "We saw a step change. We'd been on a slide, and then we hit a cliff."

Karl Bergey, Mike's father and a former University of Oklahoma professor who designed the Piper Cherokee aircraft, led the company to national prominence in the 1970s. Bergey Windpower took shape during the oil embargo crisis then, and also during the rise of the nuclear industry, which aimed to dominate alternative energy.

Bergey turbines boomed, but then dwindled in the 1980s after oil prices reached historic lows. Now solar modules—whose tax credits Congress extended in late 2015 in a package that omitted the orphan technologies—are posing a real threat to the Bergeys' company, its staff, and the broader small-wind industry.

Bergey's staff now numbers 28 employees, a decline from 50 in recent years.

"We'll take short-term losses to try to retain skilled staff," Mike Bergey said, while cautioning about the sustainability of that approach. "If they don't fix this tax credit, we will have to make adjustments. We will have to start cutting more people." Lloyd Ritter, a spokesman for the Distributed Wind Energy Association, said the loss of tax credits also cut sales for other small wind producers.

Disparity with Solar

Wind energy, solar and geothermal pumps reduce their owners' need to purchase electricity from the grid, and also help reduce carbon emissions driving global warming.

The three technologies compete for market share, and natural conditions traditionally play a large role in customer choice. Windier areas generate more wind energy, and sunnier areas generate more solar energy. Subsurface geology and water, as well as the actual availability of land to put a borehole in place, are factors for geothermal pumps.

Geothermal pumps heat and cool buildings by sourcing subterranean temperatures, which are typically colder in the summer and warmer in the winter than temperatures at the surface.

"In some areas, you're going to get a better return doing geothermal, and in other areas, you're going to get a better return if the homeowner is putting in small wind," J.P. Delmore, a lobbyist for the National Association of Home Builders, which supports the orphaned credits, told Bloomberg BNA. "But if you're dealing with your client you say 'Well, it makes sense for you to do geothermal, but solar would be cheaper,' most are going to say 'Let's do solar.'"

The concern, he said, is that the other technologies won't be purchased if there isn't tax parity.

Solar credits for both residential and commercial installation are in effect through 2021. Those credits award residential and commercial owners who want to install solar modules with a 30 percent credit, a rate which begins to phase out in 2019. From 2022 on, commercial credits are authorized at 10 percent.

That means those in the market right now will pay nearly a third less for a solar product but the full price for all geothermal and fuel cells, as well as residential wind. Steve Smith, the president of Enertech Inc.,—a geothermal pump producer and distributor with a 80,000-square-foot factory in

Mitchell, S.D.—said that disparity is taking a hatchet to his sales.

The company sold 42 percent fewer pumps from Jan. 1 to the end of July this year compared to the same time period last year, Smith told Bloomberg BNA. That translated to 19 job cuts this year at the Mitchell factory, leaving 33 employees—about a 37 percent reduction.

"These are real jobs here in America that are being robbed because they let solar have the tax credit and we have to compete against them," Smith said. "It seems like the craziest penalty against American workers."

Rep. Kristi Noem (R-S.D.), the state's lone House member, supports plans to reinstate the credits. A spokesman for Sen. John Thune (R-S.D.) didn't comment directly on the credits, and a spokeswoman for Mike Rounds (R-S.D.) didn't respond for comment. But Smith said Rounds personally pledged support. The two hunted together at an event during Rounds' tenure as governor.

Solar Sales Up, Firms Falter

Residential solar installations continue to surge.

A banner year in 2016 led to the installation of more than 2.6 gigawatts capacity of residential solar, as well as more than 1.6 gigawatts capacity of commercial, according to Solar Energy Industries Association and GTM Research. The 2016 spike is due to an installation rush brought on by fears that the solar credit would expire as the credit for the other technologies ultimately did, SEIA spokesman Alex Hobson told Bloomberg BNA.

The installation rate is expected to fall slightly this year but still edge out pre-2016 levels by substantial margins. The first quarter of this year featured more than 560 megawatts capacity of residential and nearly 400 megawatts capacity of commercial. Solar prices also fell by nearly 20 percent during 2016, SEIA says.

But despite the solar installation growth, U.S. companies are faltering, and in some cases going belly up. SolarWorld AG and Suniva Inc.—both of which filed for bankruptcy earlier this year—are pushing the U.S. to slap tariffs on foreign imports of solar panels to staunch the domestic bleeding.

The Energy Information Association says the U.S. imported nearly 12.8 gigawatts capacity in 2016. The U.S. agency doesn't break that number down by residential, commercial and utility services. Meanwhile, the U.S. installed roughly 14.8 gigawatts capacity in 2016—the majority of that for utilities.

Representatives from the other renewable sectors, such as Geothermal Exchange Organization President Douglas Dougherty, argue the current tax system benefits Chinese and other foreign producers of solar products over U.S. companies that produce renewable energy products that compete with solar.

Dougherty said Enertech, the South Dakota geothermal pump producer, is actually faring better than others. Residential sales across the industry are down 45 percent this year, Dougherty told Bloomberg BNA.

"You tell me what business suddenly loses 45 percent of their revenue and stays in business," he said. "You've said goodbye to the geothermal heat pump industry."

The tax disparity isn't, however, sowing discord between solar and the other renewable sectors, industry representatives said. SEIA supports the restoration of the credits for the other sectors, Hobson said.

Revival Proves Elusive

A broad range of industry associations—in addition to the wind, geothermal and other technology-specific groups—also are asking Congress to reinstate the tax credits.

The American Farm Bureau Federation is pushing an extension of the commercial wind credit because farmers often use that technology. The National Association of Home Builders wants all the credits reinstated to provide home purchasers with as many options as possible to decrease energy costs. The National Rural Electric Cooperative Association, a collection of utilities, is aiming to incorporate more options into utility portfolios.

Those groups are lining up behind two bills: H.R. 1090 in the House and S. 1409, a similar Senate bill, that would put the credits back into effect.

Led by Rep. Tom Reed (R-N.Y.), the House bill has 104 co-sponsors, including many members of the tax-writing Ways and Means Committee. Bicameral negotiators are continuing to try to get reinstatement across the finish line.

"I'm eager to see the orphan energy tax credits extended in the very near future," Sen. Charles Schumer (D-N.Y.), the minority leader, told Bloomberg BNA in a statement. "I will make every effort to see these provisions extended in a must-pass vehicle when we come back from recess."

A spokesman for House Minority Leader Nancy Pelosi (D-Calif.) said a reinstatement would most likely be attached to a near-term omnibus appropriations package or tax reform. A spokesman, Drew Hammill, said that "virtually all Democrats" support reinstatement.

But similar plans have fell through in recent months as Reed and other lawmakers tried unsuccessfully to tack reinstatement of the credits onto fiscal year 2017 funding.

A spokesman for Senate Majority Leader Mitch McConnell (R-Ky.) declined to comment to Bloomberg BNA. Spokespeople for House Majority Leader Paul Ryan (R-Wis.) also didn't respond to requests for comment.

Conservative Opposition

The revival of the credits certainly aren't cheered on by all parties.

Americans for Prosperity, Citizens Against Government Waste, and other free-market groups continue to urge opposition to the incentives, arguing against any subsidies or tax breaks for energy technologies.

"The carve-outs and the loopholes that try to pick winners and losers in the energy industry are ultimately counterproductive," Levi Russell, spokesman for Americans for Prosperity, told Bloomberg BNA. "We just don't think it's the role of the federal government to prop up industries."

Some lawmakers, such as Sen. James Lankford (R-Okla.), agree.

"Senator Lankford has a long and established history of opposing credits," D.J. Jordan, Lankford's spokesman, told Bloomberg BNA. Lankford has introduced legislation in the past to ax all renewable energy production tax credits.

As an Oklahoma senator, Lankford represents Bergey on Capitol Hill. Meanwhile, Rep. Tom Cole (R Okla.),—the House member whose district includes Norman, Oklahoma, where the company is located—signed onto the House legislation that would restore the tax incentives.

Energy Tax Package Takes Hits

A strategy to bundle the orphan revivals into a larger energy tax package has some supporters in Congress. That approach would team the orphan credits up with early renewals of a nuclear production tax credit and a credit for carbon sequestration, which involves capturing carbon dioxide emissions from a power plant and storing them permanently underground.

Sens. Lindsey Graham (R-S.C.), Tom Carper (D-Del.), and Heidi Heitkamp (D-N.D.), among other senators, have expressed interest in that strategy, as have some House members. That coalition of lawmakers, however, took a hit in recent days. On the heels of an announcement that South Carolina utilities pulled the plug on construction of two nuclear reactors at the V.C. Summer plant, Graham abandoned his support for the nuclear credit.

The strategy is based on broadening the buy-in, and the absence of the South Carolina delegation in the coalition would be a loss. But broadening that buy-in too much may also torpedo support from the environmental community.

"We absolutely support the renewable energy industry and the important effect that it has on our economy," Lukas Ross, a climate and energy campaign official at Friends of the Earth. "What we don't support is bad faith deals that involve tiny, marginal support for wind energy and other renewables in exchange for shoveling cash into the troughs of nuke and clean coal boondoggles."

Broad Tax Overhaul Murky

Republican lawmakers often argue that a comprehensive overhaul to the tax code—which is now the foremost White House priority following the collapse of healthcare legislation—replaces the need for tax carve-outs akin to the orphaned energy credits.

But a number of analysts say a tax overhaul would be a particularly difficult legislative task. And some members of the renewable industry don't see it as a lifeline.

"There's this concept that tax reform will fix our problem. Tax reform does not fix our problem," Smith, the president of Enertech, said. He added that a tax overhaul likely wouldn't trash the next five years of solar credits. Republicans have said they don't aim to reel back the energy incentives already in place.

Holding On

Representatives for the orphaned technologies are quick to say their industries are on the brink. Industry members, however, are pledging perseverance.

Bergey says his company has been in business for 40 years and aims to stay in business for

another 40. The Oklahoma native also finds some levity in the doldrums.

"My wife is in healthcare, and the joke is 'all bleeding eventually stops,'" he said.

EPA's Pesticide Industry Fee Accounting Has 'Weakness': Audit

Posted August 14, 2017, 02:15 P.M. ET

By Tiffany Stecker

The EPA can't be certain how much money is in its pesticide registration coffers, and that concerns the agency's watchdog.

The Environmental Protection Agency's inspector general was unable to properly account for the amount of money—a combination of pesticide industry fees and congressional appropriations—that was collected in fiscal year 2016 because of a "material weakness" that caused the agency to lose track of spending from the fund.

By paying a large part of employees' paychecks with congressional appropriations—which unlike industry fees, expire at the end of a fiscal year—the EPA "lost the audit trail" to show how much of the payroll expenses were paid for by taxpayers, the IG said in a report Aug. 14.

As a result, the inspector general was unable to complete its regular audit of the fund and couldn't determine whether any adjustments were necessary relating to payroll.

Pesticide manufacturers pay fees to the Pesticides Reregistration and Expedited Processing Fund to help move along the process of reviewing insecticides, weedkillers, disinfectants, and other products for risk to health and the environment. Manufacturers currently contribute up to $27.8 million in maintenance fees to uphold the registrations of their pesticides.

The industry is set to pay 12 percent more in registration fees if the Pesticide Registration Improvement Act is reauthorized this fall.

EPA Working to Fix Accounting

The EPA is in the process of correcting the weaknesses, the report stated.

Pesticide manufacturer Bayer CropScience has been tracking the issues with the pesticide fund, according to Charlotte Sanson, the company's U.S. head of regulatory affairs.

"We understand that EPA has updated their accounting systems to address this problem and have confidence that the agency has taken the necessary steps to ensure financial accountability," Sanson told Bloomberg BNA in an email.

The IG released two similar reports in July that addressed fiscal year 2014 and 2015 funding, in which it found that the EPA is sitting on almost $16 million in unobligated pesticide industry fees.

The trade association CropLife America, which represents pesticide manufacturers, told Bloomberg BNA that it is still reviewing the report.

Energy Department Sued Over Grid Reliability Study Records

Posted August 14, 2017, 01:45 P.M. ET

By Rebecca Kern

The Sierra Club launched an early challenge to a highly anticipated grid reliability study, filing a lawsuit over the Energy Department's alleged failure to provide records of any communication between department officials and the power sector.

The complaint, filed Aug. 14 in the U.S. District Court for the Northern District of California Oakland Division, claims the Energy Department violated the Freedom of Information Act when it failed to respond to a May 1 FOIA request. The Energy Department was asked to provide records of any communications between department officials working on the report and outside groups representing the fossil fuel industry or grid reliability experts.

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

In April, Energy Secretary Rick Perry directed Brian McCormack, his chief of staff, to conduct a 60-day study that would "explore the critical issue central to protecting the long-term reliability of the electric grid." Perry has questioned the impact of renewable subsidies and taxes on baseload resources and whether adding more renewables would affect the grid's reliability.

The Energy Department said it would make the study public once it is completed, which was expected in July. The final version has not been released, but Bloomberg News obtained a copy of a draft version in July written by department staff, which found wind and solar power don't pose a significant threat to the reliability of the U.S. power grid.

First Solar to Profit If Trump Slaps Tariffs on Panel Imports

Posted August 14, 2017, 01:39 P.M. ET

By Christopher Martin

First Solar Inc. is standing on the sidelines of a trade dispute that could give its products a significant leg up.

The U.S. International Trade Commission has scheduled a hearing Aug. 15 on a request by Suniva Inc. for the U.S. to impose tariffs on imported solar panels. The petition alleges that China—which accounts for more than 80 percent of global solar panel production—gives manufacturers unfair government support.

The commission is expected to make a decision next month, and a finding of harm could lead President Trump to impose duties as early as November.

The petition by Suniva, which filed for bankruptcy in April, has roiled the industry, which argues that it would drive up prices and result in the loss of an estimated 88,000 jobs, a third of the solar workforce. No U.S.-based solar manufacturers support it, according to the Washington-based Solar Energy Industries Association. Cheap panels have spurred a boom in U.S. rooftop installations, with small-scale solar generation almost doubling from 2014 to 2016, according to the Energy

Information Administration.

Tempe, Arizona-based First Solar, a member of SEIA, stands to gain the most from import duties of as much as 40 cents per watt, said Jeffrey Osborne, an analyst at Cowen & Co. "Because the complaint specifically goes after silicon panels, thin-film technologies like First Solar's will be considerably cheaper in comparison," Osborne said.

First Solar's chief executive officer said on July 27 that his company isn't participating in the dispute. A spokesman for the company referred to the CEO's comments when asked for a response.

"If there is a determination of injury, a modest type of remedy will not be harmful at all to the industry and I think it'll survive and more jobs will be created," CEO Mark Widmar said on a conference call. "Hopefully what it will do is enable more manufacturing in the U.S."

A group of 16 U.S. senators and 53 House members sent letters on Aug. 11 to the head of the ITC urging it to reject the petition.

Rooftop developers like Sunrun Inc. and Vivint Solar Inc., imposing an import duty could double the amount they pay for panels, cutting into their already razor-thin margins and ultimately slowing demand. Large developers are betting that a tariff will be imposed and have begun stockpiling inventory ahead of a decision, which has temporarily reversed the decline in prices, according to Joseph Osha, an analyst at JMP Securities LLC.

Module prices in the U.S. increased to about 43 cents a watt, up from about 33 cents before the trade case was filed, Osborne said. For now, that's helping improve margins for the world's biggest manufacturers, mainly in China, which include JA Solar Holdings Co., JinkoSolar Holding Co. and Trina Solar Ltd.

'Significant Disruption'

But once a tariff is imposed, Asian and European manufacturers will have a significant disadvantage in U.S. markets and their options to get around it are limited, Osborne said. They could build some cell and module manufacturing in the U.S., but there's little infrastructure to support their operations and the duties may only be in place while Trump is in the White House.

A tariff would also hurt San Jose, California-based SunPower Corp., the second-biggest U.S. panel maker, because the bulk of its polysilicon panels are assembled in Asia. SunPower faces a double whammy because it develops big solar farms that would cost more to build.

"It's a significant disruption," Tom Werner, SunPower's CEO, said in an interview.

A small tariff may not be as bad as the developers are making it out to be, said Osha.

"The solar installers are warning of dire consequences but another 10 cents on the panel price isn't going to be terrible," Osha said. "The market will adjust."

FS Bioenergia's Brazil Corn Ethanol Plant Seen as First of Many

Posted August 14, 2017, 11:40 A.M. ET

By Michael Kepp

Brazil's first ethanol plant to exclusively use corn, in a country that makes nearly all of its ethanol from sugar cane, has begun industrial-scale operations and is expected to lead to as many 10 other such nearby plants during the next decade.

The 450-million-real ($142-million), 240 million liter a year ethanol plant in Mato Grosso state had its formal opening Aug. 11. The plant's owner and operator is FS Bioenergia, a joint venture between Summit Energy, a U.S. private equity firm, and Fiagril, a Brazilian grains trader. Mato Grosso, located in western Brazil, is the center of the country's corn production.

FS Bioenergia will buy some of its corn from Fiagril. It has bought technology for the corn-based gasoline additive from the Kansas-based ICM Inc.

The plant "represents a new and alternative ethanol production pathway in Brazil," FS Bioenergia President Henrique Ubrig told Bloomberg BNA. "This alternative ethanol production pathway will lead to up to 10 corn-based ethanol plants being built in the state in the next five to 10 years."

As Matto Grosso farmers began planting a second corn harvest in recent years, they increasingly needed local buyers for excess corn from both harvests, Ubrig said. The surplus corn's price has become competitive with that of cane in the state.

Leopoldo Mendonca, secretary of economic development in Mato Grosso state, told Bloomberg BNA Aug. 11, that the state's two annual corn harvests allow corn-based ethanol plants to run 12 months a year, while cane-based ethanol plants can operate only eight months a year.

"This advantage [over cane-based ethanol plants], plus the competitive prices of corn and cane in the state, should lead to more corn-based ethanol plants being built here, Mendonca said.

Brazil has four "flex" plants that produce ethanol from both sugarcane and corn. Three are in Mato Grosso and one is in neighboring Goias state, Glauber Silveira, vice president of the Association of Soy & Corn Producers in Mato Grosso State, told Bloomberg BNA.

Brazil is starting to produce ethanol from corn at a time when U.S. corn-based ethanol exports to Brazil are skyrocketing. Ethanol imports to Brazil, nearly all coming from the U.S., grew fourfold in the first months of 2017, according to the Brazilian Sugarcane Industry Association, the country's main producers' group.

Can Some Nebraska Farmers Kill the Keystone XL Pipeline?

Posted August 14, 2017, 11:01 A.M. ET

By Jillian Goodman

"When I first started this, it was about my house," said Shannon Graves, who owns a hardware store in Polk, Neb.—population roughly 300—and lives less than 100 yards from the proposed route of the Keystone XL pipeline. "I just wanted to protect my home."

That was six years ago. Now, Graves said, "what was once just my home is now my world that I'm standing to protect."

So last week she headed to Lincoln, the state capital, for hearings to determine whether the pipeline would serve Nebraskans' public interest, the final regulatory hurdle for the long-contentious project.

After years of protest by environmentalists, the Obama administration in 2015 rejected TransCanada's proposal for the 1,179-mile pipeline, which would deliver crude oil from the Alberta tar sands to the Gulf of Mexico. In January, President Donald Trump resurrected the project with a presidential memo and executive order.

On a national level, the pipeline has been opposed largely by environmentalists, but in Nebraska, it's been fought mainly by farmers and ranchers who fear it could erode their soil and hurt their land values. Last week, a number of them—now educated in the intricacies of property easements, eminent domain, and bitumen—testified before the state's Public Service Commission, hoping to persuade its members to reject it.

TransCanada maintains the pipeline project would be an economic boon to the state. "The public benefit for Nebraskans is quite significant," said spokesman Matthew John. "We're talking about 4,400 jobs, direct and indirect"—that is, jobs building the pipeline and jobs with other employers expected to benefit, such as local restaurants and stores—"and tens of millions of dollars in state property taxes that will be paid out throughout the life of the project. As well as the economic benefits that are generated from construction."

But Nebraskan opponents argue that the vast majority of the jobs TransCanada has said the pipeline would create are construction-related and therefore short-term; those jobs, along with such indirect benefits as greater spending in local establishments, would evaporate once the project is completed. And tax revenue, they say, would evaporate in not much longer: The taxable value of the pipeline itself will depreciate over 15 years and payments gradually dwindle to zero.

The pipeline's current proposed route would cross the farm that Art Tanderup, a retired teacher and perhaps the landowners' breakout star, owns with his wife, Helen. After the hearings finished, Tanderup said he felt he and the other landowners had gotten a chance to educate the PSC on life for Nebraska farmers. "You get big corporate people coming in—they don't know us, they don't know Nebraska," he said.

Keystone XL is meant to be an extension of an existing Keystone pipeline that runs north-south through the eastern portion of the state. TransCanada has argued that its proposed route for the XL—which would cut diagonally across the state, crossing the Ogallala Aquifer, the historic Ponca Trail of Tears, and a small portion of the fragile Sandhills region—is the safest and most environmentally friendly path. Other than an earlier route, nixed years ago under pressure by the governor and the federal government, it's also the most direct route from the Canadian tar sands to the existing pipeline junction in Steele City, Neb..

Although the landowners would prefer that the PSC reject the pipeline entirely, their lawyers argued that the more responsible route would be one that parallels the existing pipeline, creating an energy corridor that would avoid disturbing additional land. On the first day of the proceedings, under questioning by the landowners' lawyers, TransCanada's representatives acknowledged that collocating the two pipelines would mean crossing fewer miles of Nebraska farmland and that because they weren't locked into a route in South Dakota for the XL, they wouldn't need additional approval to do so.

After the hearings concluded Aug. 10 morning, a day and a half ahead of schedule, the landowners' lawyers said they were pleased with what they'd presented. "Our pitch is, look at the net benefit,"

attorney Brian Jorde said. "It can't be, 'Is this just the not-so-bad pipeline?' If it's not a net benefit to the state, we don't need it."

TransCanada's lawyers, James Powers and Patrick Pepper of the firm McGrath North, left shortly after the hearing without answering questions and didn't respond to a previous interview request.

PSC spokeswoman Deb Collins said in an email that commissioners could not comment given the ongoing legal proceeding. The commission has until Nov. 13 to decide.

Regardless of its decision, opponents said they still expect to wind up in court over the pipeline, perhaps in eminent-domain battles over efforts to build it on their land.

"We are exhausted," Graves said. She's been opposing the pipeline for six years now, others for even longer. But she added: "My daddy raised me to never give up. You just never give up. There's too much at stake to give up."

Fast, Dirty Natural Gas Plants Get Boost from Electric Cars

Posted August 14, 2017, 8:46 A.M. ET

By Kelly Gilblom, Weixin Zha and Mathew Carr

Britain's goodbye to fossil-fuel cars by 2040 could boost the need for dirtier natural gas-powered stations.

The government's goal to replace gasoline and diesel cars with those powered by electricity could see the construction of so-called open-cycle gas stations, said Carsten Poppinga, senior vice president of trading and origination at Statkraft AS, the Norwegian utility that operates hydro power plants and wind farms across the U.K.

Such units can keep the grid from buckling from the strain of people charging cars in peak demand periods. The catch? While the plants can start generating power almost instantly, they don't recycle waste heat, making them emit more greenhouse gases per megawatt than the combined-cycle stations that comprise the largest share of the U.K.'s daily power output.

Britain may have no choice but to use the less environmentally friendly option, though. With little spare generation capacity, the nation is vulnerable to power shortages, particularly on cold, winter days when wind and solar energy may be in short supply.

"Fundamentally there isn't as much overcapacity on the British market as in Germany," Poppinga said by phone from Dusseldorf. "You could think about building open-cycle gas power plants to increase the flexibility in the system."

Open-cycle gas generators cost less to build but have higher emissions per megawatt-hour produced than combined-cycle gas turbines. OCGTs convert about 33 percent of their fuel into power, while CCGTs manage as much as 60 percent, according to the fossil-fuel industry environment group IPIECA in London. That's still less dirty than oil, diesel or coal-fired stations, which can emit double what a gas-fired station does.

Still, the flexibility of the plants will help more intermittent renewables enter the system, bolstering the shift toward cleaner energy, according to Drax Group Plc. The utility plans four open-cycle plants in the U.K. that it calls "rapid-response gas."

Under U.K. environmental rules, the units can run a maximum of 2,250 hours, or about three months per year, a spokeswoman with the Selby, England-based company said. Drax doesn't expect to operate its plants for that long.

RWE AG's U.K. unit "has taken initial planning steps" to build a 300 megawatt open-cycle gas plant east of London in a town called Tilbury, Germany's biggest power producer said in its first-half financial statement on Aug. 11. The area previously had coal-fired and biomass power plants, though it stopped generating power in 2013. RWE is seeking to redevelop the site and also plans a 2,500 megawatt CCGT.

The challenge for the U.K. is to have enough power plant capacity to cover demand peaks until electric-car users adjust their charging habits to when consumption and prices are low.

Britain will need to add 52 terawatt-hours of power capacity between now and 2040, or 16 percent of what's available now, to meet extra demand thanks to electric vehicles, according to data from Barclays Plc and Bloomberg New Energy Finance. Some of the need for flexible power supply will be met by cables linking the U.K. to France, Norway and Belgium.

Fossil-fuel prices have rebounded in Europe as grids need the power from them to help balance supply and demand as renewable-electricity output advances. The front-month natural gas price has jumped 35 percent in the past year, while 2018 European coal is up 31 percent, according to ICE Futures Europe.

"Massive investment in flexible power generation, electricity storage and the grid itself will be necessary to keep the lights on," Johannes Wetzel, a research analyst for cross-commodity analytics at Wood Mackenzie Ltd., said in an emailed note. The electric-vehicle rule will be "a challenge for power grid stability."

Subject: Former N.C. regulator quits state agency after being named to EPA panel

By Alex Guillén

11/29/2017 01:10 PM EDT

Donald van der Vaart, the former North Carolina environmental regulator once under consideration for a top post in President Donald Trump's EPA, has resigned from the state Department of Environmental Quality, the News & Observer reports.

Van der Vaart was recently named to a spot on EPA's Science Advisory Board, irking state Democratic leaders who complained he had not informed them before the appointment, and they said he did not speak for the state. He was recently placed on paid leave over conduct concerns.

Van der Vaart, who has a doctorate in chemical engineering from the University of Cambridge, demoted himself to a position from which he could not be removed for political reasons following Democrat Roy Cooper's win in last year.

In a resignation letter published by the newspaper, van der Vaart, a career DEQ official, said it was always his plan to return to a division leader role after running the agency.

He also complained that Cooper's administration "is moving to stifle my contributions to scientific and legal discourse in professional journals. This is deeply troubling." Van der Vaart published a piece in September calling for repeal of a key EPA pollution permitting program known as "Prevention of Significant Deterioration."

And he wrote that he "did not think that any reasonable person" would have anticipated DEQ's negative reaction to his SAB appointment.

WHAT'S NEXT: EPA did not immediately return questions about whether van der Vaart remains on the SAB or whether the agency will review his membership. He is currently listed as representing the "NC State Government."

Subject: BREAKING NEWS: Judge issues gag order in Manafort, Gates case

The federal judge overseeing the criminal case against former Trump campaign chairman Paul Manafort and his associate Rick Gates has issued a gag order limiting comments to the media and the public by lawyers, defendants and witnesses in the case.

U.S. District Court Judge Amy Berman Jackson's directive Wednesday doesn't ban such statements outright, but prohibits any remarks that "pose a substantial likelihood of material prejudice to this case."

At a hearing last week, Jackson urged lawyers to make their arguments in court and "not on the courthouse steps." She also appeared to criticize a statement one of Manafort's lawyers made outside court calling the charges against his client "ridiculous."

Jackson offered both defendants and the government a chance to weigh in about the order before she issued it. No one did.

Subject: CEO Report: Tax reform time — Stopgap spending plan a good bet — Key health insurance deadlines — Federal Reserve tea leaves

View online version

08/07/2017 07:00 AM EDT

By SARA SMITH (ssmith@politico.com)

Welcome to the August edition of the CEO Report, POLITICO Pro's high-level outlook on the policy issues driving the month ... and beyond.

Stay tuned for action on tax reform: The success of Republican tax reform efforts hinges on what gets done during the dog days of summer. Republican lawmakers, business groups, conservative activists and President Donald Trump himself are fanning out across the country to build public support, notes Pro Tax Editor Toby Eckert. So far, that support has been tepid, at best, with polls showing voters have higher priorities. Members of the House, where tax bills originate, returned to their districts armed with talking points about the need for tax reform, while groups including the Business Roundtable, the American Action Network and Americans for Prosperity are running ads and getting their supporters out to members' town halls.

The end game is to deliver legislation to Trump's desk before year's end. The White House has laid out an ambitious timeline: committee votes on a bill in September, House action in October, Senate approval in November. That leaves no margin for error, and there are at least two big obstacles standing in the way of fast action — the need to raise the federal debt ceiling and pass a spending bill, neither of which will be easy. Moreover, important details such as setting tax rates, whether and how to fund the costs of reform, and which deductions to get rid of and which to keep, are still being sorted out. So for the hearings the White House envisions in September to mean anything, administration officials and congressional negotiators will have to make a lot of headway in August.

BUDGET & APPROPRIATIONS

Stopgap spending plan a good bet: While the House and Senate are on recess for the rest of the month, leaders are still working on a plan to avert a government shutdown and a catastrophic debt default before the fiscal year ends. The Sept. 30 deadline is still weeks away, but Republicans are eager to settle on a strategy before lawmakers return after Labor Day with just 12 workdays left before that reckoning. Even if they beat the buzzer this time and prevent a funding lapse, leaders are already

resigned to the idea of another short-term extension of current funding levels to buy more time. And if past go-rounds are prologue, it could be well into 2018 before federal agencies get updated funding.

Debt Ceiling Deadline: Looking for the path of least resistance on raising the debt ceiling, the Trump administration has stepped up its campaign this month for a "clean" increase in the nation's borrowing limit, hoping to avoid tricky negotiations with fiscal hard-liners on attaching spending cuts or other changes. GOP leaders in both chambers have reluctantly agreed to the plan, which is sure to enrage conservatives. Even so, leaders will have to deal with additional demands that could hamper their effort to raise the debt limit before the Sept. 29 deadline Treasury Secretary Steven Mnuchin has set. — *Jennifer Scholtes*

HEALTH CARE

After Obamacare repeal fails, all eyes are on insurance markets: A frustrated Trump has increasingly threatened to pull funding for a key Obamacare subsidy, but his advisers so far have talked him out of a move that could send the individual insurance markets into a tailspin. He faces two key deadlines in the next few weeks: whether to keep paying insurers the subsidy next month and whether to defend the payments in federal court. Meanwhile, insurers in most states must file final 2018 rates by Aug. 21 amid uncertainty about the future of Obamacare subsidies and whether Republican lawmakers will now drop their years-long assault on the health care law and focus on repairing it. Many insurers planning major rate hikes have partially attributed the increases they're seeking to uncertainty around repeal efforts in Washington. — *Jason Millman*

FINANCIAL SERVICES

FOMC to offer guidance on balance sheet, rates: The Federal Reserve's top policymaking body will release the minutes from its July meeting on Aug. 16. The central bank is likely to give clearer signals on the timing for its plan to start shrinking its massive balance sheet and its next rate hike, which could come as early as September. Both moves are likely to roil the financial markets if the Fed miscalculates on the timing.

IEX in SEC docket again: IEX rocked the financial world by winning SEC approval last year to operate a new stock exchange to compete with the two giants of the business, the New York Stock Exchange and Nasdaq. Now, the hard-charging startup, whose business model is designed to thwart the high-frequency traders that dominate the market, is back before the commission. This month, public comments are due to the SEC on a proposal to exempt certain IEX-listed securities from state law registration requirements, putting the upstart exchange on a par with its bigger rivals. IEX, hated by

other stock trading venues for disrupting the equities market, needs the commission's approval by October.

CFTC reviews swaps reporting: Comments are also due to the Commodity Futures Trading Commission on the agency's effort to update the reporting requirements for swaps, as part of a plan to complete an overhaul by 2019. The CFTC says the goal of the review is to get accurate and complete data on swaps transactions while streamlining reporting. Derivatives trading helped fuel the 2008 financial crisis, prompting Congress to assign the CFTC to create strict rules for the market. The request for comment to revise some of those rules stems from new CFTC Chairman Christopher Giancarlo's proposed swaps reporting reforms announced on July 10.

Trump appointees report for duty: A raft of fresh faces will get to work this month at agencies that are critical for the financial markets. Before leaving for summer break, the Senate confirmed a batch of nominees for top posts at the Treasury Department and the CFTC. They included David Malpass, who will become Treasury undersecretary for international affairs. At the CFTC, Giancarlo was confirmed as chairman after serving in an acting capacity following Trump's election. The CFTC will gain two new commissioners, Brian Quintenz and Rostin "Russ" Behnam, bringing it close to full capacity for the first time in years. — *Mark McQuillan*

DEFENSE

NDAA on hold with McCain sidelined: Senate Armed Services Chairman John McCain, who is undergoing chemotherapy and radiation treatment for brain cancer back home in Arizona, plans to return to Washington in September, but his absence pushes back debate on the National Defense Authorization Act. Senate leaders from both parties were ready to fast-track the defense policy bill after a failed vote on Republican health care legislation, but the move was blocked by Sen. Rand Paul (R-Ky.) in an attempt to secure votes on amendments that would bar indefinite detention and repeal the 2002 Iraq War authorization.

Appropriations also up in the air: The Senate Appropriations Committee still has not taken up defense spending. Senate Majority Leader Mitch McConnell (R-Ky.) began a fast-track process to bring a House-passed package of national security spending bills to the floor, but senators didn't vote on the legislation before adjourning for recess. That measure is unlikely to garner enough Democratic support to overcome a likely filibuster. Without a full-year defense spending bill and a bipartisan agreement to lift defense budget caps, a continuing resolution will likely be needed to avert a government shutdown.

Senate breaks nominee logjam: The Senate substantially reduced a backlog of civilian Pentagon nominees before leaving for recess. Eight senior nominees were confirmed, including Navy Secretary Richard Spencer and the Pentagon's new top

acquisitions official, Ellen Lord. The Senate also confirmed dozens of military nominations, including Air Force Gen. Paul Selva to serve a second term as vice chairman of the Joint Chiefs of Staff. — *Connor O'Brien*

TRADE

It's Trump time on NAFTA: President Donald Trump promised voters during the campaign he'd renegotiate trade deals to make sure American workers aren't getting squeezed. His best chance to make good on that pledge before the midterm elections starts Aug. 16, when senior-level negotiators from the U.S., Mexico and Canada get down to the business of updating NAFTA. Washington is the setting for the five-day first round. Major points to be discussed include ways to reduce the U.S. trade deficit and steps to strengthen labor and environmental provisions in the agreement, which took effect in 1994. Here's a look at the Trump administration's goals.

What say Ottawa? Canada and Mexico didn't want to reopen the deal — Trump did. The first glimpse of Mexico's negotiating priorities arrived last week, but the Canadians have played it close to the vest. Look for Ottawa to provide a better sense of its objectives when Canadian Foreign Minister Chrystia Freeland addresses Parliament's trade committee on Aug. 14. Canada's NAFTA priorities, based on some of the country's long-held interests, are likely to include greater access to U.S. government procurement markets and greater mobility for professionals across the United States' northern border.

No time like the present: While the schedule of subsequent negotiating rounds remains in flux, officials from all three countries continue to push to conclude talks by late this year or early next. High-level officials in both Canada and the U.S. have cast doubt on negotiators' ability to reach that goal, but Mexico is pushing for everything to be done before its presidential election in mid-2018.

Will Trump zing Beijing? A planned rollout of Trump's trade action against Beijing — targeting what the administration views as Chinese violations of U.S. intellectual property rights and forced technology transfer — was delayed late last week. The White House is still expected to go live with it this week.

The plan, sources told POLITICO, is for Trump to direct U.S. Trade Representative Robert Lighthizer to launch an investigation under Section 301 of the Trade Act of 1974. The investigation could examine China's controversial cybersecurity regulations, which companies have complained may force them to hand over valuable security software for inspection. Ordering the probe would ramp up trade tensions between Washington and Beijing, and could trigger a trade war. It would be a lengthy process that could extend into all aspects of Chinese industrial policies and also could result in unilateral U.S. trade sanctions.

Trump holding his trade horses: Two much-hyped Commerce Department reports examining whether to restrict steel and aluminum imports on national security grounds have been bottled up in an internal review. They had been expected by the end of June. Most manufacturers in both industries welcome import restrictions, which could come in the form of tariffs, quotas or a combination of the two. But U.S. companies that remain dependent on imports warn that such limits would hurt American jobs. Detractors fear that restrictions could lead other countries to retaliate, setting off a trade war. Also MIA is a report examining the causes of significant bilateral trade deficits. It also had been expected by the end of June. It is expected to identify to what degree the U.S. trade gaps are caused by discriminatory barriers like tariffs, dumping or intellectual property theft.

A KORUS showdown: Outside of Washington, August could bring a formal meeting with trade officials in Seoul to discuss the U.S.-Korea Free Trade Agreement. The Trump administration has requested it be reviewed. It took effect just five years ago. While Lighthizer requested that a meeting of the joint committee take place in Washington before mid-August, South Korea is pushing instead for a meeting in Seoul focused on examining the bilateral trade deficit and its causes before any changes are made to the deal. — *Megan Cassella*

DATAPOINT

More on U.S.-China trade policy: The president has said he thinks China is not doing enough to stop North Korea from building a nuclear weapon that could strike U.S. soil — and he has complained, in public and private, that China engages in unfair trade practices. The Trump administration is considering changes to the U.S.-China trade relationship, and his top advisers are discussing options that could include trade restrictions and economic sanctions. — *Cristina Rivero*

CYBERSECURITY

DHS enters key cyber phase: The government's main cybersecurity department is without a permanent leader for at least the next few weeks, leaving it in a position of uncertainty at a critical time for DHS.

The department is just starting to formalize tentative partnerships with state-level election officials to help secure the 2018 elections. In recent weeks, DHS finalized an

outline for coordinating with election officials as part of the department's work implementing the "critical infrastructure" tag placed on election systems in January.

And the DHS cyber wing is also on the precipice of a potential major reorganization. In late July, the House Homeland Security Committee approved a proposal to rebrand the National Protection and Programs Directorate as the Cybersecurity and Infrastructure Security Agency. The move would elevate and restructure the office to better reflect its cyber work. Meanwhile, one name familiar to cyber watchers has been floated as the next DHS head — House Homeland Security Committee Chairman Michael McCaul (R-Texas). As co-chairman of the Congressional Cybersecurity Caucus, McCaul has backed numerous high-profile cyber bills over the years and is a chief architect of the plan to reorganize DHS's cyber agency.

An eye on Russia: America's relationships with two main digital adversaries — Russia and China — appear headed toward new lows in the coming weeks. Congress recently pushed through a bill to further sanction Russia for its digital interference during the 2016 election. Trump opposed the measure — accusing lawmakers of unconstitutionally tying his hands on foreign policy — but signed the bill when it became clear Congress could easily override a veto. Moscow reacted angrily, kicking 755 U.S. diplomatic staffers out of Russia.

When Congress returns: Lawmakers left town with a number of unfinished cyber-related issues still on the table. When Congress returns in early September, the Senate is slated to finish up work on the annual defense authorization bill, which would fully fund the Trump administration's $647 million request for U.S. Cyber Command. Lawmakers will also start to grapple with legislation to renew Section 702 of the Foreign Intelligence Surveillance Act, which authorizes tools used to collect the digital chatter of foreign targets. Intelligence leaders insist they can't lose these powers, which sunset at the end of the year. But lawmakers appear to be moving toward a reauthorization measure that would inject more provisions meant to better protect the privacy of Americans whose information is incidentally collected under the programs. — *Cory Bennett*

EDUCATION

States submitting ESSA plans: The Education Department is working to review and approve new plans drafted by states under the Every Student Succeeds Act, the federal education law that replaced No Child Left Behind in 2015. The plans detail how states will hold schools and districts accountable for the performance of all students, with a particular focus on low-income and minority students. Sixteen states and D.C. submitted their plans for federal approval this spring, and the rest intend to do so next month. The Education Department has been working quickly to provide states with feedback, and the agency has come under fire for being confusing, inconsistent or heavy-handed in its approach. At the same time, Education Secretary Betsy DeVos has emphasized

flexibility for states, stressing that her agency will only review plans to ensure they gel with federal law. One state, Delaware, has been approved so far. And the Education Department this month will work to approve more plans on a rolling basis. — *Caitlin Emma*

ENERGY

Revived methane rule may not last long: EPA has reinstated a rule to limit methane emissions from future oil and gas wells after losing to environmentalists in court, but Administrator Scott Pruitt is moving quickly to put it back on ice. The D.C. Circuit overturned Pruitt's 90-day stay of the rule's central requirements on leak detection and ordered EPA to put them back into effect starting July 31. That may speed up Pruitt's work to finalize a two-year stay that would free oil and gas companies from the regulation through 2019. Public comments on that proposal are due Aug. 9, and EPA is expected to finalize the delay no later than September.

Power plant rule pending: Timing is murkier around the rest of EPA's rollback agenda, the centerpiece of which is repealing the Clean Power Plan. The Trump administration's first formal regulatory agenda offered no target date to complete that rule, leading environmentalists to ask the D.C. Circuit to issue its ruling in a case argued last year over the rule. Expect to see the court respond to that request later this month.

FERC gets to work: Two of Trump's picks for the Federal Energy Regulatory Commission were confirmed by the Senate last week. Adding Republicans Neil Chatterjee and Rob Powelson to the commission finally brings an end to FERC's six-month stretch without a quorum. August is normally a slow month for the agency, but after the long paralysis, expect the new commissioners to build their staffs and wade into a long list of interstate natural gas pipeline projects; oil, gas and electric rate cases; and enforcement probes. The next two FERC nominees, Democrat Rich Glick and GOP Chairman-to-be Kevin McIntyre, will have a Senate hearing Sept. 7.

Perry gets a wingman: The Senate also confirmed Deputy Energy Secretary Dan Brouillette, who is taking his second tour through the agency. We may see more activity out of DOE as Brouillette settles in to help out Energy Secretary Rick Perry. — *Darius Dixon and Alex Guillén*

EMPLOYMENT & IMMIGRATION

DHS shuffle: The president's decision to appoint Homeland Security Secretary John Kelly as White House chief of staff was based largely on Kelly's track record at the department, including a dramatic drop in border arrests, increased interior enforcement and heightened visa screening. But what happens to the department now that he's

gone?

Elaine Duke — an accomplished and respected technocrat — replaced Kelly as acting secretary. The leading contender for permanent replacement is McCaul, who in addition to his cybersecurity efforts also recently introduced a border security bill. That measure would authorize $10 billion over four years to place some combination of wall, fence, technology and aerial surveillance along the Mexican border. But McCaul will face opposition from the most vehement immigration hawks, whose candidate is Kansas Secretary of State Kris Kobach. He is a co-author of Arizona's highly restrictive 2010 immigration law, S.B. 1070, much of which was ruled unconstitutional by the U.S. Supreme Court. Kobach is also vice chairman of Trump's controversial commission on alleged voter fraud. He advised Trump on immigration during the campaign and met with him after the election to discuss Cabinet positions.

But Kobach is considered a less likely choice, given his lack of experience with the department and the hackles he'd likely raise among Democrats and pro-immigration Republicans. — *Ted Hesson*

TECHNOLOGY

Anti-sex-trafficking push may snag free speech: Tech companies and their trade groups are up in arms about a bill intended to crack down on websites — namely Backpage.com — that advertise sex trafficking. Websites such as Facebook, Twitter and Reddit, where users post content, and sites such as Airbnb, where users post reviews, have used a provision in U.S. law to avoid legal liability for posts that may be offensive or extremist. They fear that the bill, sponsored by Sens. Rob Portman (R-Ohio) and Richard Blumenthal (D-Conn.), would ensnare their legal protections under Section 230 of the Communications Decency Act as well as targeting bad actors. The Internet Association, an influential tech trade association whose members include Google and Facebook, immediately spoke out against the bill.

Opponents have the support of Sen. Ron Wyden (D-Ore.), who helped write the original law. Portman says his language is tailored so it wouldn't pick up websites that depend on the liability protection as it targets those that facilitate sex trafficking. A similar bill was introduced in the House in April by Rep. Ann Wagner (R-Mo.) On the other side of the debate, the National Center for Missing and Exploited Children and some anti-trafficking and law enforcement groups have thrown their support behind Portman's bill.

Redl confirmation not ready: The Senate Commerce Committee approved a slew of telecommunications-related nominees but left one behind. David Redl, a former congressional staffer who is Trump's nominee to head the Commerce Department's National Telecommunications and Information Administration, is still waiting for committee approval so his nomination can proceed. Redl ran into resistance from Sen. Ted Cruz (R-Texas), who dislikes Redl's statements on the transition that moved

internet governance from the U.S. to an international body last year.

TRANSPORTATION

Recess, but no break: FAA reauthorization bills pending in both chambers have been punted to September, with Congress in recess through August. The FAA's authority to collect and spend the taxes that fuel the aviation system will expire Sept. 30, leaving a tight deadline for enacting something into law. While John Thune, the Senate Commerce chairman, and his House counterpart Bill Shuster (R-Pa.) have refused to discuss an extension of current law past Sept. 30, it's all but assured that one will be necessary. Meanwhile, Shuster and his allies will be using the August break to continue trying to win over lawmakers to a beleaguered proposal to shift air traffic control to a nonprofit body. When the House left for recess, Schuster was still short of votes to bring his FAA bill to the floor. — *Kathy Wolfe*

AGRICULTURE

Scanning the farm bill horizon: Conventional wisdom holds that House and Senate Agriculture committee leaders would get down to the business of drafting the farm bill early next year. The current iteration expires next fall. But committee leaders got out of the blocks early, with both panels holding a series of listening sessions across the country, and they're aligned on wrapping up the legislation on an expedited timeline. House Agriculture Chairman Mike Conaway (R-Texas) told attendees during a field hearing in Texas on July 31 that his panel will start drafting the measure "over the next eight weeks or so," with the goal of bringing it to the House floor for a vote by the end of the year. Earlier, Senate Agriculture Chairman Pat Roberts (R-Kan.) signaled a similar intent when he urged the Senate majority leader, during a July 25 hearing, to take up the bill on the Senate floor this year. "The sooner the better," Mitch McConnell replied.

Great expectations: Getting a farm bill through the House and Senate this year won't be easy. The current version was enacted in February 2014 after three years of debate. The committees are barely a few months into preparations — and the 115th Congress has a whole lot going on off the farm. Big-ticket objectives that could lay waste to Conaway and Roberts' best-laid plans include raising the debt limit, approving appropriations bills and adopting a budget resolution to clear the way to tax reform. — *Catherine Boudreau*

EHEALTH

Changes ahead: The eHealth agenda for August is all about gearing up for change.

ONC and CMS are awaiting final comments on Medicare payment rules and their intricate health IT requirements, and ONC is plunging into the interoperability morass, seeking comments on its framework for information exchange and holding a two-day meeting for use of health IT.

We're also awaiting the final makeup of the new, 26-member Health IT Advisory Committee. The 21st Century Cures biomedical innovation bill established the committee to provide expert advice to ONC and HHS on how to proceed with such nerdy but important health care chores as interoperability, the usability of electronic health records and information blocking.

We may also see the first announcements for participation in FDA's digital health pilot program, which is set to begin Sept. 1. — *David Pittman*

Thank you for checking out our latest CEO Report. We'll be covering all these topics minute to minute on POLITICO Pro. We'd love your comments and suggestions at CEOReport@politico.com.

Summaries

AIR
Alaska SIP/2008 Lead NAAQS Infrastructure Requirements
AIR

Final rule of the EPA approves revisions to the Alaska SIP regarding infrastructure requirements for the 2008 lead NAAQS. The rule does not address infrastructure elements related to nonattainment new source review, nonattainment planning requirements, or certain interstate transport requirements previously approved in an Aug. 4, 2014, final rule (79 FR 45103). The rule is effective Sept. 11, 2017. Contact: Kristin Hall; EPA Region 10, Office of Air and Waste; 206-553-6357; hall.kristin@epa.gov. Citations: 40 CFR 52.70

82 FR 37307 (08/10/2017)

Regulatory Update

AIR
Designations for the 2015 Ozone National Ambient Air Quality Standards
AIR

Notice of the EPA announces the withdrawal of the one-year extension, until Oct. 1, 2018, of the deadline for the agency to issue initial area designations for the 2015 ozone NAAQS, which were established in an Oct. 26, 2015, final rule (80 FR 65292). The agency extended the deadline in a June 28, 2017, notice (82 FR 29246) to allow additional time to evaluate issues related to the standards. The EPA now intends to reassess whether there are areas with underlying technical issues, whether there are state designation recommendations that the agency intends to modify, and whether for any area there is insufficient information to make a designation. The EPA administrator may still determine that an extension of time to complete designations is necessary, but the original statutory deadline of Oct. 1, 2017, to make area designations is now applicable. Contact: Carla Oldham; EPA, Office of Air Quality Planning and Standards; 919-541-3347; oldham.carla@epa.gov. Citations: 40 CFR 81

82 FR 37318 (08/10/2017)

Regulatory Update

AIR
District of Columbia SIP/Regional Haze
AIR

Final rule of the EPA approves a revision to the District of Columbia SIP for regional haze. The revision includes a five-year progress report towards reasonable progress goals for regional haze and a determination of adequacy of the existing regional haze SIP. The rule is effective Sept. 11, 2017. Contact: Sara Calcinore; EPA Region 3; 215-814-2043; calcinore.sara@epa.gov. Citations: 40 CFR 52.470

82 FR 37305 (08/10/2017)

Regulatory Update

AIR
Florida SIP/2010 NO2 NAAQS Infrastructure Requirements
AIR

Direct final rule of the EPA approves revisions to the Florida SIP concerning the infrastructure requirements for the 2010 one-hour nitrogen dioxide (NO2) NAAQS. The revision addresses monitoring and data system requirements. The rule is effective Oct. 10, 2017, unless adverse comments are received by Sept. 11, 2017. Contact: Andres Febres; EPA Region 4, Air, Pesticides, and Toxics Management Division; 404-562-8966; febres-martinez.andres@epa.gov. Citations: 40 CFR 52.520

Regulatory Update

AIR
Florida SIP/2010 NO2 NAAQS Infrastructure Requirements
AIR

Proposed rule of the EPA would approve revisions to the Florida SIP concerning the infrastructure requirements for the 2010 one-hour nitrogen dioxide (NO2) NAAQS. The revision addresses monitoring and data system requirements. A concurrent direct final rule adopts the revisions, effective Oct. 10, 2017. Comments are due Sept. 11, 2017. Contact: Andres Febres; EPA Region 4, Air, Pesticides, and Toxics Management Division; 404-562-8966; febres-martinez.andres@epa.gov. Citations: 40 CFR 52.520

82 FR 37378 (08/10/2017)

Regulatory Update

AIR
Florida SIP/Air Permitting, Compliance Assurance Program
AIR

Proposed rule of the EPA would approve portions of revisions to the Florida SIP that update non-Title V air permitting and compliance assurance program requirements. The revisions add 17 air general permits available to owners or operators of air emission sources as long as certain requirements are satisfied. The revisions also address new source preconstruction permitting requirements, stationary source control strategy programs, and emissions monitoring at stationary sources. In addition, the revisions add a definition of North American Industry Classification System, address public notice requirements, update test methods, and remove references to ozone nonattainment areas and an outdated form. Comments are due Sept. 11, 2017. Contact: Michele Notarianni; EPA Region 4, Air Planning and Implementation Branch; 404-562-9031; notarianni.michele@epa.gov. Citations: 40 CFR 51.160 through 51.164, 52

82 FR 37379 (08/10/2017)

Regulatory Update

AIR
Florida SIP/Interstate Transport Infrastructure Requirements
AIR

Proposed rule of the EPA would approve revisions to the Florida SIP concerning the infrastructure requirements for the 2010 one-hour nitrogen dioxide (NO2) NAAQS. The revision addresses interstate transport requirements to prevent contribution to nonattainment by or interference with maintenance in another state (prongs 1 and 2). Comments are due Sept. 11, 2017. Contact: Andres Febres; EPA Region 4, Air, Pesticides, and Toxics Management Division; 404-562-8966; febres-martinez.andres@epa.gov. Citations: 40 CFR 52.520

82 FR 37384 (08/10/2017)

Regulatory Update

AIR
Kentucky SIP/Jefferson County RACT Requirements
AIR

Proposed rule of the EPA would approve revisions to the Jefferson County portion of the Kentucky SIP regarding reasonably available control technology (RACT) for two major sources of nitrogen oxides (NOx). The revisions address standards of performance for graphic arts facilities using rotogravure or flexographic printing and changes to the Texas Gas Transmission NOx RACT plan. The revisions also remove the volatile organic compound bubble rule for the General Electric plant in Louisville and address changes to the Louisville Medical Steam Plant NOx RACT. Comments are due Sept. 11, 2017. Contact: Joel Huey; EPA Region 4, Pesticides and Toxics Management Division; 404-562-9104; huey.joel@epa.gov. Citations: 40 CFR 52

82 FR 37375 (08/10/2017)

Regulatory Update

AIR
New Jersey SIP/Source-Specific Emissions Limitations
AIR

Final rule of the EPA approves revisions to the New Jersey SIP for ozone. The revisions consist of source-specific reasonably available control technology determinations for controlling nitrogen oxides for four water bath heaters for the Transcontinental Gas Pipeline Corp., LNG Station 240, in Carlstadt, and for two boilers for the Joint Base McGuire-Dix-Lakehurst in Lakehurst. The revisions also include limits on fuel use and total number of hours of operation at Transcontinental's LNG Station 240 and limits on fuel use resulting in a reduction in natural gas use at Joint Base McGuire-Dix-Lakehurst. The rule is effective Sept. 11, 2017. Contact: Anthony Gardella; EPA Region 2, Air Programs Branch; 212-637-4249; gardella.anthony@epa.gov. Citations: 40 CFR 52.1570

82 FR 37308 (08/10/2017)

Regulatory Update

AIR
North Carolina SIP/Interstate Transport Good Neighbor Provision
AIR

Proposed rule of the EPA would approve revisions to the North Carolina SIP regarding the good neighbor provisions of the 2008 eight-hour ozone NAAQS. The agency proposes to determine that the SIP contains adequate provisions to prohibit emissions within the state from contributing significantly to nonattainment or interfering with maintenance of the 2008 eight-hour ozone NAAQS in any other state and that the SIP meets the requirements of prongs 1 and 2. Comments are due Sept. 11, 2017. Contact: Ashten Bailey; EPA Region 4, Air Planning and Implementation Branch; 404-562-9164; bailey.ashten@epa.gov. Citations: 40 CFR 52

Regulatory Update

AIR
Pennsylvania SIP/Allegheny County Open Burning Standards
AIR

Direct final rule of the EPA approves revisions to the Allegheny County portion of the Pennsylvania SIP concerning open burning. The revisions clarify and codify provisions concerning materials that may be burned; the size of burn piles; setback requirements; use of chimneas, fire pits, and outdoor fireplaces; and burning restrictions on air quality action days. The rule is effective Nov. 8, 2017, unless adverse comments are received by Sept. 11, 2017. Contact: Gregory Beacoat; EPA Region 3; 215-814-2036; becoat.gregory@epa.gov. Citations: 40 CFR 52.2020

Regulatory Update

AIR
South Carolina SIP/Prevention of Significant Deterioration, Nonattainment NSR
AIR

Direct final rule of the EPA approves portions of revisions to the South Carolina SIP concerning prevention of significant deterioration (PSD) and nonattainment new source review (NSR) permitting. The revisions update the definition of "major stationary source" to include thresholds that correspond to precursors of ozone in serious and extreme ozone nonattainment areas. The revisions also remove "particulate matter (PM) emissions" and "PM" from the definition of "regulated NSR pollutant" and expand the definitions of "baseline actual emission" and "projected actual emission" to include emissions associated with malfunctions in determining PSD and nonattainment NSR applicability. In addition, the revisions update internal references. The rule is effective Oct. 10, 2017, unless adverse comments are received by Sept. 11, 2017. Contact: Brad Akers; EPA Region 4, Air, Pesticides, and Toxics Management Division; 404-562-9089; akers.brad@epa.gov. Citations: 40 CFR 52.2120

82 FR 37378 (08/10/2017)

Regulatory Update

AIR
South Carolina SIP/State Trading Programs
AIR

Proposed rule of the EPA would approve a revision to the South Carolina SIP concerning the Cross-State Air Pollution Rule (CSAPR). The revision replaces federal implementation plan requirements for large electricity generating units (EGUs) to participate in the federal trading program for annual emissions of nitrogen oxides (NOx) and in one of two federal trading programs for sulfur dioxide (SO2) with a substantively identical requirement for such EGUs to join a new state trading program for NOx and SO2. The revision also eliminates the FIP emission standards addressing interstate transport requirements for the 1997 fine particulate matter NAAQS. Comments are due Sept. 11, 2017. Contact: Ashten Bailey; EPA Region 4, Air, Pesticides, and Toxics Management Division; 404-562-9164; bailey.ashten@epa.gov. Citations: 40 CFR 52

Regulatory Update

ENDANGERED SPECIES
Texas Hornshell Endangered Listing
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service reopens the comment period for an Aug. 10, 2016, proposed rule (81 FR 52796) that would list the Texas hornshell, a freshwater mussel species from New Mexico, Texas, and Mexico, as an endangered species. The agency also extends the final listing determination to Feb. 10, 2018, to obtain clarifying information to resolve a significant disagreement on the interpretation of limited surveys and the current conservation status of the species in Mexico. Comments now are due Sept. 11, 2017. Contact: Chuck Ardizzone; USFWS, Texas Coastal Ecological Services Field Office; 281-286-8282. Citations: 50 CFR 17

Regulatory Update

ENDANGERED SPECIES
Washington State/Marine Mammals Incidental Take
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of a request from the Washington State Department of Transportation for authorization to take five species of marine mammals incidental to scour repair activities at the US 101/Chehalis River Bridge in Aberdeen, Wash. The authorization would allow take in the form of Level B harassment of the California sea lion, gray whale, harbor porpoise, harbor seal, and Steller sea lion over 12 days between July 16 and Sept. 30, 2018. Comments are due Sept. 11, 2017. Contact: Shane Guan; NMFS, Office of Protected Resources; 301-427-8401

GENERAL ENVIRONMENT AND SAFETY
Arizona/Nogales Interconnection Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the Energy Department announces the receipt of amendments to an application from Nogales Transmission LLC, of Dallas, for a presidential permit to construct, operate, maintain, and connect an electric transmission line between the U.S. and Mexico. The Nogales Interconnection Project includes an approximately five-mile long overhead transmission system originating in Nogales, Ariz., and crossing the U.S.-Mexico border with a total power transmission capacity of up to 300 megawatts. The amendments would relocate the international border crossing 25 feet east and connect the project to the UNS Electric Inc. transmission system at the proposed Gateway Substation rather than the existing Valencia Substation. The agency has prepared a draft environmental assessment for the project. Comments or motions to intervene are due Sept. 11, 2017. Contact: Christopher Lawrence; DOE, Office of Electricity Delivery and Energy Reliability; 202-586-5260; Christopher.Lawrence@hq.doe.gov

GENERAL ENVIRONMENT AND SAFETY
South Atlantic Region Snapper-Grouper Fishery Management Plan
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the National Marine Fisheries Service, in collaboration with the South Atlantic Fishery Management Council, to prepare a draft environmental assessment regarding a proposed amendment to the snapper-grouper fishery for the South Atlantic region fishery management plan (Amendment 43). The agency has decided to reduce the scope of Amendment 43 from that proposed in a Jan. 6, 2017, notice of intent to prepare a draft environmental impact statement (82 FR 1720). The current proposal would only revise the process for determining the commercial and recreational annual catch limits for red snapper, with the goal of implementing the new limits in July 2018. A hearing will be held during the council's meeting scheduled for Sept. 11-15, 2017, in Charleston, S.C. Comments are requested, but a due date is not specified. GENERAL ENVIRONMENT AND SAFETY
Texas/Stratton Ridge Expansion Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the schedule of environmental review for the Stratton Ridge Expansion Project in Brazoria, Chambers, Lavaca, San Jacinto, Shelby, and Waller counties in Texas. The project, proposed by Texas Eastern Transmission LP and Brazoria Interconnector Gas Pipeline LLC, both of Houston, involves the construction and operation of facilities to create 322,000 dekatherms per day of firm transportation capacity to deliver natural gas from multiple receipt points on Texas Eastern's interstate pipeline system to a delivery point on Brazoria Pipeline's intrastate pipeline system. The issuance of the environmental assessment is scheduled for Oct. 5, 2017, and the 90-day federal authorization decision is due Jan. 3, 2018. Contact: FERC, Office of External Affairs; 866-208-3676; FercOnlineSupport@ferc.gov

GENERAL ENVIRONMENT AND SAFETY
Tobacco Products Subject to FDA Authority
GENERAL ENVIRONMENT AND SAFETY

Notice of the Food and Drug Administration announces the availability of the second edition of a guidance for industry (82 FR 22338; 05/15/2017) concerning the three-month extension of certain tobacco product compliance deadlines relating to the May 10, 2016, final deeming rule (81 FR 28974). The rule extends the agency's existing authority over conventional tobacco products to currently marketed products, including electronic nicotine delivery systems, cigars, pipe and waterpipe tobacco, gels and dissolvable nicotine products, and to future tobacco products not currently marketed. The rule also prohibits the sale of "covered tobacco products" to individuals under the age of 18 and requires the display of health warnings on cigarette tobacco, roll-your own tobacco, and covered tobacco product packages and in advertisements. The second edition further extends certain compliance dates for the final deeming rule. Comments may be submitted at any time. GENERAL ENVIRONMENT AND SAFETY
West Virginia/Rover Pipeline Project
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of FERC to prepare an environmental assessment for the proposed amendment to an application submitted by Rover Pipeline LLC, of Houston, for the Rover Pipeline Project in Marshall County, W.Va. The project would involve construction and operation of facilities at the previously approved and under construction Majorsville Compressor Station. A third 3,550 horsepower natural gas compressor unit would be installed at the compressor station, and new equipment would be run at the Majorsvillle Meter Station, which would bring the station to a total of 10,650 horsepower. The proposed facilities also would

increase the point capacity of the stations to 400 million cubic feet per day. Comments are due Sept. 4, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlinesupport@ferc.gov

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

White House Denies Murray Coal Exemption, Despite Trump Promises

Posted August 22, 2017, 01:55 P.M. ET

By Rebecca Kern and Stephen Lee

The White House has denied requests to issue an emergency order to keep Murray Energy Corp. coal mines and FirstEnergy Corp. coal plants operating and the companies out of bankruptcy, despite President Donald Trump's promises to back the requests.

Murray Energy and FirstEnergy's executives met with Trump in late July and early August to ask the administration to provide an emergency order to keep the facilities open—an order the companies said is needed to help them avoid bankruptcy.

They claim their bankruptcies would endanger electric grid reliability, so the emergency order is warranted, according to Aug. 4 and Aug. 18 letters from Murray Energy to the White House and the Energy Department. The letters were obtained by the Associated Press and posted online. Murray Energy declined to comment to Bloomberg BNA.

Murray CEO Robert Murray said in the letter that FirstEnergy is "on the verge of bankruptcy" and if the company declares bankruptcy it would be forced to close the coal-fired power plants. FirstEnergy's bankruptcy would "force" Murray Energy into immediate bankruptcy, leading to 150,000 direct and indirect Murray Energy coal-mining job losses in West Virginia, Pennsylvania, Ohio, Kentucky, Illinois and Utah, according to the letters.

Jennifer Young, a spokeswoman for FirstEnergy, told Bloomberg BNA that the company still hasn't heard anything official from the Trump administration. FirstEnergy operates coal plants in Ohio, Pennsylvania, and West Virginia.

"We've spoken to federal officials on numerous occasions about the importance of baseload plants and the need for action to preserve those assets," Young said. "For FirstEnergy Solutions, which is the competitive side of our business that owns the power plants, bankruptcy could be a possibility."

The decision not to issue an emergency order appears in direct conflict with White House statements and action the Trump administration has taken in the past to support coal-mining jobs, including repealing the Clean Power Plan and removing the U.S. from the Paris Climate Agreement.

A White House spokeswoman told Bloomberg BNA Aug. 22 that they denied issuing an emergency order under the Federal Power Act because the companies' request "at this time is not an appropriate use of this authority."

Section 202(c) of the Federal Power Act allows the Energy Department secretary in a state of emergency to "require temporary connections of facilities, and generation, delivery, interchange, or transmission of electricity as the secretary determines will best meet the emergency and serve the public interest."

The Trump administration has used the emergency order under the Federal Power Act twice in the past seven months for a state-owned dam in Oklahoma and two Dominion Energy Virginia coal plants in Yorktown, Va. The Obama administration never used the emergency exemption. It was previously used during the 2000 California energy crisis and after Hurricane Katrina in 2005.

The Energy Department has yet to respond to Bloomberg BNA's request for comment.

Power Plant Emissions Should Be Part of Pipeline Review: Court

Posted August 22, 2017, 12:35 P.M. ET

By Chris Marr

Carbon emissions from gas-burning power plants should have been considered in federal regulators' review of a Florida natural gas pipeline, a federal appeals court ruled today.

A group of connected pipeline projects, including the 515-mile Sabal Trail, will need an updated environmental impact review by the Federal Energy Regulatory Commission following the U.S. Court of Appeals for the District of Columbia Circuit's decision. The Sabal Trail went into full commercial service in early July, carrying natural gas from an Alabama terminal through southern Georgia and to Florida power plants owned by NextEra Energy and Duke Energy. NextEra and Duke are also co-owners of the pipeline, along with Spectra Energy.

A three-judge panel agreed with the Sierra Club and two riverkeeper groups that argued FERC's original review of the project didn't adequately consider its climate change impacts. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, the majority owner of Bloomberg L.P., an affiliate of Bloomberg BNA.

The pipeline will let Florida power companies burn more natural gas instead of pursuing renewable energy alternatives, the plaintiffs said in their court filings.

"We conclude that at a minimum, FERC should have estimated the amount of power-plant carbon emissions that the pipelines will make possible," Judge Thomas B. Griffith wrote in today's opinion. The court remanded the case to FERC for preparation of a new environmental impact statement.

The opinion marks a departure from three recent rulings by the same court against the Sierra Club, in which the group contested federal approvals of liquefied natural gas facility projects. The judge noted a difference in those cases—that the LNG facilities' natural gas exports would be beyond FERC's regulatory authority and therefore beyond the scope of its consideration for environmental review.

"Here, FERC is not so limited," Griffith wrote. "Congress broadly instructed the agency to consider

'the public convenience and necessity' when evaluating applications to construct and operate interstate pipelines."

Colorado Governor Orders Pipeline Rule Update After Fatal Accidents

Posted August 22, 2017, 02:29 P.M. ET

By Tripp Baltz

Colorado Gov. John Hickenlooper (D) Aug. 22 directed the state's Oil and Gas Conservation Commission to upgrade its rules on inspection and pressure-testing of natural gas flow lines, one of a series of steps he has taken to improve safety following two deadly accidents. Hickenlooper announced in all seven steps the state will take involving the oil and gas industry. In April, two men were killed when a leaking flow line connected to a natural gas well owned by Anadarko Petroleum Co. caused a house to explode near Firestone, Colo. In May, a worker was killed and three others were seriously injured in an explosion caused by a buildup of combustible products in a trench being dug between oil storage tanks at an Anadarko site.

The direction to the OGCC involves rules for natural gas flow lines connecting wellheads to production facilities. The governor also called for an enhancement of the "8-1-1" system, where people can call to learn the location of underground pipelines before digging. Hickenlooper directed the commission to develop rules similar to those contained in a notice to oil and gas operators he ordered sent out following the Firestone explosion. The notice required companies to identify, inspect, and pressure-test all flowlines within 1,000 feet of homes and other occupied buildings. That process resulted in the testing of 120,000 flow lines at 23,000 different well sites across the state, he said.

Energy Transfer Suit Claims Greenpeace Incites Eco-Terrorism

Posted August 22, 2017, 03:11 P.M. ET

By Andrew Harris and Tim Loh

Energy Transfer Partners LP accused Greenpeace International, Earth First! and other groups of inciting terrorist acts and vandalism to generate publicity and raise money for their causes while hampering the ability of the Dakota Access pipeline majority owner to raise money for projects.

Energy Transfer is the second company to attack Greenpeace and its allies in court for engaging in what the firms claim is a racketeering scheme far beyond ordinary environmental advocacy (Energy Transfer Equity, L.P. v. Greenpeace Int'l, D.N.D., No. 1:17-cv-173, 8/22/17).

Resolute Forest Products Inc. made similar allegations over Greenpeace's campaign against logging in a May 2016 RICO lawsuit. Both companies are represented by Kasowitz Benson Torres LLP, a New York-based law firm whose managing partner Marc Kasowitz is President Donald Trump's attorney.

Greenpeace said the lawsuit won't stop its mission of "protecting the environment and standing in solidarity with vulnerable communities around the world."

The construction of the Dakota Access Pipeline, running from western North Dakota to southern Illinois, sparked months of protests last year and clashes between environmentalists and police drew international attention. The pipeline went into service June 1 following the construction of a

final link under a part of Lake Oahe near the Standing Rock Indian Reservation.

Greenpeace led a corrupt environmentalist organization, Energy Transfer claimed in the lawsuit, an enterprise that "cynically planted radical, violent eco-terrorists on the ground amongst the protesters, and directly funded their operations and publicly urged their supporters to do the same."

Negative publicity generated by the demonstrations caused Energy Transfer to lose "many hundreds of millions of dollars," and damaged its ability to raise money from capital markets, according to the complaint, filed Aug. 22 in Bismark, N.D.

Energy Transfer is seeking unspecified monetary damages, which would be tripled under U.S. racketeering laws, as well as a court order barring the groups from further protests and an order for the groups to return money to donors.

"Under the 'Greenpeace Model,' raising money and the network's profile is the primary objective, not saving the environment," Energy Transfer said. "'Issues are selected according to which ones will generate maximum publicity and donations, irrespective of the environmental merits."

Greenpeace said it hasn't yet received the lawsuit.

"We will comment in more detail at the appropriate time, but rest assured we will fully defend ourselves against legal attacks on our existence," Greenpeace spokesman Travis Nichols said.

The environmentalists' campaigns are based on fabricated evidence and witness accounts to deceive the public, Energy Transfer said.

The criminal enterprise, through Earth First! and Red Warrior Camp, funded and incited acts of terrorism in violation of the U.S. Patriot Act, Energy Transfer claimed. That included attempts and actual destruction of an energy facility and arson on government property, the company said.

Those acts, according to the lawsuit, including the burning of construction equipment and use of blowtorches to cut holes in parts of the pipeline. Had oil been flowing when the sabotage occurred, the pipeline might have exploded, endangering human lives and resulting in an environmental disaster, Energy Transfer said.

Among the other groups being sued by Energy Transfer is BankTrack, a Dutch not-for-profit group that raises money for non-governmental organizations.

The Dakota Access pipeline project spurred legal challenges from Native American tribes, principally the Standing Rock Sioux, objecting to the pipeline's path across man-made Lake Oahe. Energy Transfer intervened in that action on the side of the U.S. Army Corps of Engineers.

In June, a Washington federal court judge, having rejected earlier entreaties to block the project, said the Corps hadn't adequately considered the impacts of a potential spill from the line on fishing, hunting and "environmental justice, or the degree to which the pipeline's effects are likely to be highly controversial," and ordered it to reconsider those factors.

The Resolute Forest lawsuit is pending in federal court in San Francisco.

Energy Transfer Told to Revise Rover Gas Line Drill Plans

Posted August 22, 2017, 01:23 P.M. ET

By Catherine Traywick

Energy Transfer Partners must submit revised horizontal directional drilling plans for the Rover natural gas pipeline along with other information before FERC will allow the company to resume drilling in certain areas, the agency said in an Aug. 22 filing.

Energy Transfer will have to provide names, contact information, and qualifications for all drilling inspectors, specialists and engineers, the Federal Energy Regulatory Commission said in the filing. FERC said it also would require weekly horizontal directional drilling monitoring reports from the company.

The company submitted a revised drilling plan Aug. 4, incorporating recommendations for third-party review. FERC halted horizontal drilling on certain segments of the pipeline following a 50,000-barrel spill of diesel-tainted drilling fluid.

Supplying Lithium Gets Trickier as Electric Revolution Looms

Posted August 22, 2017, 11:09 A.M. ET

By Laura Millan Lombrana and Jonathan Gilbert

Hidden within the salt flats high in the Andes mountains of South America are vast deposits of the lithium that Elon Musk may need for his electric-car revolution. But extracting the mineral from brine ponds created by Orocobre Ltd. has proved more difficult than expected.

Bad weather and pump glitches meant production at the Olaroz facility in northern Argentina was 21 percent below Orocobre's initial target in the year through June. While things are getting back on track, Chief Executive Officer Richard Seville says the company "either underestimated the complexity or overestimated our capability."

Producers everywhere have struggled to keep up with demand as electric cars went from almost no sales a decade ago to more than half a million vehicles last year. The battery in a Model S from Musk's Tesla Inc. uses about 45 kilograms (100 pounds) of lithium carbonate. More mines are planned, but difficulties at Olaroz—the first new South American lithium mine in two decades—are limiting funding for new ventures in Argentina, home to the world's third-largest reserves.

"The uncertainty on the supply side is driving prices up and making investors nervous," said Daniela Desormeaux, CEO of Santiago-based lithium consulting firm SignumBOX. "We need a new project entering the market every year to satisfy growing demand. If that doesn't happen, the market will be tight."

Australia is the biggest lithium producer, though Chile and Argentina account for 67 percent of global reserves, according to the U.S. Geological Survey.

Extracting lithium from the salt flats that dot the arid northern regions of the South American

countries is a lot easier and cheaper than digging underground for metals like copper. Producers just pump the brine solution into evaporation ponds, harvesting the mineral once the moisture is gone.

Orocobre's experience in Argentina shows the process isn't without its challenges, especially for a newcomer.

The Brisbane, Australia-based company initially forecast production at 15,000 metric tons for the year through June. That was cut to 12,000-12,500 tons. And the final tally ended up at 11,862. Unusually cold and overcast weather slowed evaporation and restricted transport of supplies, while pumping glitches meant there wasn't always enough brine in the right places. Since then, Orocobre has invested in improving pumping from one pond to the next, just in time for the key evaporation period, Seville said in an interview last week.

The company's shares have retreated 30 percent this year after doubling in price last year.

"Lithium production isn't easy," Juan Esteban Fuentes, CRU Group's head of South America, said in an interview in Santiago. "It requires high technical and chemical knowledge. Clearly there will be more disruptions, to the extent that there are miners entering the market that have never extracted lithium and do not have that technical knowledge."

Rising demand for lithium used in a new breed of lightweight, rechargeable batteries caught producers of the mineral off guard. Tesla's gigafactory in Nevada aims to manufacture about 500,000 car batteries a year by 2018. The soft, silver-white metal is also used in cell phones.

Prices of lithium carbonate, the primary base-chemical produced by the industry, more than doubled in the five years to 2016, according to UBS Group AG. The material advanced about 5 percent to average $14,250 a ton in July from June, according to Benchmark Mineral.

With demand expected to keep rising as electric cars gain a bigger share of the global auto fleet, Argentina and Chile are attracting interest from mining companies because it costs about $2,000 to $3,800 a ton to extract lithium from brine, compared with $4,000 to $6,000 a ton in Australia, where lithium is mined from rock.

Still, most projects are expected to struggle to get off the ground.

Of the 39 lithium ventures tracked by CRU, only four have firm commitments, and all of those are in China, adding about 24,000 tons of annual supply. Another 10 projects representing 400,000 tons are rated "probable"—in Canada, Chile, China, Mexico, Argentina and Australia—but probably only about 30 percent will make it into production, CRU said.

Orocobre's teething problems are being closely watched by investors, who are becoming more reluctant to fund projects by new entrants in Argentina, said Gabriel Rubacha, head of South American operations at Lithium Americas Corp.

Lithium Americas is developing a project in Jujuy province with industry veteran Soc. Quimica & Minera de Chile SA, a partnership that was essential in securing the $174 million needed to get started. "Most lithium projects in Argentina fail because they can't close financing," Rubacha said. "We are totally relying on SQM's expertise."

Santiago-based SQM is investing in Argentina after Chile's government moved to withdraw its

license to exploit one of the world's largest deposits. That withdrawal is subject to an arbitration process between the company and state development agency Corfo that may be concluded this year, according to Corfo.

Expansions by established producers including China's Tianqi Lithium Corp. and North Carolina's Albemarle Corp. probably will leave a small global surplus by year end, but supply disruptions could put the market back into deficit, CRU's Fuentes said. If annual demand for Tesla's Model 3 reaches 700,000 units, as Musk says could happen, the industry will need additional supplies from lithium newcomers.

While Chilean copper giant Codelco is looking to enter the lithium business via a partnership at its Maricunga tenements, the project will require deals with some of the salt flat's 40 land owners to make the operation large enough to be profitable.

Chile deems lithium to be "strategic," which means would-be producers need authorization from the Nuclear Energy Commission and operating conditions are set directly with the government on a case-by-case basis. Wealth Minerals Ltd. estimates it will take seven years to set up an operation in Chile.

"But we have a window of only 25 years to develop these projects because prices can fall again as soon as a replacement to lithium appears," Marcelo Awad, Wealth's Chile manager, said in an interview in Santiago.

China's Top Wind Utility Lifts Profit With Policy Help

Posted August 22, 2017, 10:30 A.M. ET

By Bloomberg News

China Longyuan Power Group Corp., the nation's biggest developer and operator of wind farms, said government-led efforts to boost clean energy consumption supported higher first-half profit.

Net income in the six months ending June 30 rose 6 percent to 2.42 billion yuan ($363 million), according to a statement to the Hong Kong stock exchange on Tuesday. In China, "the newly installed capacity for hydropower, wind power and solar power recorded year-on-year increase, while the newly installed capacity for coal power and nuclear power decreased year-on-year," according to the statement.

The result shows how policy support is aiding Chinese wind power. The government has called for grid operators to buy more clean energy while restricting new wind farms in regions where turbines have been turned off because of weak demand. Those measures reduced wasted power curtailed from grids struggling to absorb the influx of renewables.

Wind power output rose 0.5 percent in the first half, covering about 5 percent of China's total electricity generation, according to Longyuan. The company's wind generation rose 11 percent during the period, trailing a 14 percent rise in coal generation, it said last month. Output from other renewable energy sources fell 7 percent.

Idle Power

Guangdong, Ningxia and Guangxi accounted for the biggest increase in wind power production, according to Longyuan.

The amount of idled wind power in China dropped about 28 percent in the first half, according to data from the National Energy Administration, the agency charged with coordinating the nation's energy policy. A total of 23.5 billion kilowatt-hours of wind power was wasted in the first six months, down 9.1 billion kilowatt-hours from a year earlier, the NEA said last month.

"We see the remaining growth in power output as being due mainly to improved curtailment," Vincent Yu, a Shanghai-based analyst at SWS Research Co., wrote in a July 28 note.

Brazil's Utility Giant Soars as Government Plans Privatization

Posted August 22, 2017, 10:46 A.M. ET

By Vanessa Dezem and Julia Leite

Brazil's troubled state-run utility Eletrobras jumped the most in almost two decades on a government proposal to privatize the company amid the country's deep fiscal crisis.

The government could raise as much as 20 billion reais ($6.31 billion) by shedding its controlling 67 percent stake in Latin America's largest power company, according to Deputy Energy Minister Paulo Pedrosa. The government will remain as a shareholder and maintain power to veto management decisions, the ministry said in an emailed statement.

"The state is not able to contribute to Eletrobras," Pedrosa said. "The idea is to modernize the sector. We have the proposal sewn up with the federal government."

Voting shares surged as much as 35 percent in Sao Paulo trading, the biggest intraday jump since January 1999, as analysts from Santander to Safra said the unexpected proposal could unlock value for shareholders and make the company more efficient. However, details on the plan are still unknown and the outcome could be "tricky" to foresee, Safra analyst Kaique Vasconcellos wrote in a note to clients.

The finance ministry's executive secretary, Eduardo Guardia, told reporters Aug. 22 that the government had not yet defined a model for the sale. The country's nuclear power plants would not be sold, authorities said during the press conference.

Other state-run companies including Petrobras and Banco do Brasil also rose Aug. 22, leading the advance in Brazil's Ibovespa gauge along with Eletrobras.

Political Uncertainty

Despite investors' positive initial reaction, a successful sale will largely hinge on Congress approval of a new regulatory framework the government is drafting, a process that could take months. The proposal seeks to undo interventionist policies created under former leaders Luiz Inacio Lula da

Silva and Dilma Rousseff.

In addition, political uncertainty may continue to weigh on Brazil's business climate. Many investors have remained on the sidelines during the political turmoil that resulted in one president impeached, another charged with corruption and dozens of executives and politicians imprisoned over a massive scheme of kickbacks that originated at state-run oil company Petrobras. Widespread disillusionment with political parties has boosted the chances of an outsider winning next year's presidential race, opinion polls show.

Beleaguered President Michel Temer, who has battled corruption charges, has committed to a 2018 fiscal goal that hinges on Congress passing measures to generate 18 billion reais ($5.7 billion) in much-needed revenue. The government is said to be mulling a portfolio of 58 privatizations which would be announced Aug. 23, newspaper O Globo reported without revealing how it obtained the information.

Brazil will aim for a budget gap before interest payments of 159 billion reais in both 2017 and 2018, Finance Minister Henrique Meirelles announced in a press conference Aug. 15. Previously, the government's deficit targets were 139 billion reais for this year and 129 billion reais for the next.

Change of Route

The company's net debt reached 23.4 billion reais ($7.3 billion) in June, topping Fitch Ratings' rankings on debt raisers in Latin America, according to a report dated August 16. The company is also the region's third biggest cash bleeder, with an estimated $987 million decline in free cash flow.

"Despite all the effort, the debts and burdens of the past have increased and require a change of route to not jeopardize the future of the company," the ministry said in the statement. "The way out is to seek resources in the capital market, attracting new investors and partners."

—With assistance from Eduardo Thomson.

Summaries

AIR
Alabama SIP/Volatile Organic Compounds, Particulate Emissions
AIR

Direct final rule of the EPA approves revisions to the Alabama SIP that modify the definition of "volatile organic compounds" by adding tertiary butyl acetate and 1,1,2,2-tetrafluoro-1-(2,2,2-trifluoroethoxyl) ethane to the list of negligibly reactive compounds. The revisions also remove recordkeeping, emissions reporting, photochemical dispersion modeling, and inventory requirements for tertiary butyl acetate. In addition, the revisions remove particulate emission and opacity limits for wood waste boilers in Talladega County because no such sources exist in the county. The rule is effective Oct. 16, 2017, unless adverse comments are received by Sept. 15, 2017. Contact: Richard Wong; EPA Region 4, Air Planning and Implementation Branch; 404-562-8726; wong.richard@epa.gov. Citations: 40 CFR 52.50

Regulatory Update

AIR
Georgia SIP/Cross-State Air Pollution Rule
AIR

Proposed rule of the EPA would approve portions of a revision to the Georgia SIP that establish Cross-State Air Pollution Rule (CSAPR) state trading programs for annual nitrogen oxides, annual sulfur dioxide, and ozone season NOx emissions. The revision replaces the federal implementation (FIP) requirement for large electric-generating units (EGUs) to participate in the corresponding CSAPR federal trading programs. The rule would eliminate the obligation of state EGUs under CSAPR FIPs addressing interstate transport requirements for the 1997 annual and 2006 24-hour fine particulate matter NAAQS and the 1997 eight-hour ozone NAAQS. Comments are due Sept. 15, 2017. Contact: Ashten Bailey; EPA Region 4, Air, Pesticides, and Toxics Management Division; 404-562-9164; bailey.ashten@epa.gov. Citations: 40 CFR 52

Regulatory Update

AIR
South Carolina SIP/VOC and NOx Standards
AIR

Proposed rule of the EPA would approve revisions to the South Carolina SIP regarding standards for volatile organic compounds and nitrogen oxides emissions from process industries. The revisions clarify the applicability of standard requirements for new sources and the exemption of combustion control devices. The revisions also modify the number of hours of operation for testing and maintenance for exempted emergency generators. The EPA is not taking action on certain revisions associated with permit requirements, process industries emissions, definitions, source tests, air pollution episodes, nonattainment new source review, and control of fugitive particulate matter. A concurrent direct final rule adopts the provisions, effective Oct. 16, 2017. Comments are due Sept. 15, 2017. Contact: Brad Akers; EPA Region 4, Air Planning and Implementation Branch; 404-562-9089; akers.brad@epa.gov. Citations: 40 CFR 52.2120

ENDANGERED SPECIES
Alaska/Marine Mammal Incidental Take
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the issuance of an incidental harassment authorization to Quintillion Subsea Operations LLC, of Anchorage, Alaska, to take small numbers of 13 species of marine mammals incidental to subsea cable-laying and maintenance activities in the Beaufort, Bering, and Chukchi seas. The authorization allows take in the form of level B harassment during the completion of installation of a 47-mile Oliktok branch cable, system testing, branching unit burial, and operations and maintenance of any areas that do not meet testing requirements. The authorization also establishes mitigation, monitoring, and reporting requirements. NMFS has determined that the issuance of the authorization for Quintillion's 2017 activities falls within the scope of the 2016 environmental assessment for the project and that issuance of the authorization would not result in significant adverse effects on the human environment. The authorization is valid July 1, 2017, through Nov. 15, 2017. Contact: Shane Guan; NMFS, Office of Protected Resources; 301-427-8401

GENERAL ENVIRONMENT AND SAFETY
Electric Emergency Incident and Disturbance Report
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the Energy Information Administration to seek OMB approval for a revised information collection request concerning the electric emergency incident and disturbance report (Form OE-417). The Energy Department uses the form to monitor emergencies and significant incidents that affect electric power systems. The information collected allows the agency to conduct post-incident reviews examining significant interruptions of electric power or

threats to the national electric system. Revisions to the form include incorporation of nine questions that are or will be included in the North American Electric Reliability Corp. EOP-004 reliability standard event reporting form, thus requiring entities to only submit Form OE-417. The form also includes a revised data protection policy for information currently protected from public release to clarify which information will or will not be disclosed. Comments are due Oct. 16, 2017. Contact: Matthew Tarduogno; Energy Department; 202-586-2982; matthew.tardugono@hq.doe.gov

Energy and Climate Report

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: Morning Energy
Sent: Fri 10/6/2017 2:05:08 PM
Subject: POLITICO's Morning Energy, presented by Chevron: Changing the math on the Clean Power Plan — Perry's eagerly anticipated hearing next week — DOE, PHMSA picks confirmed

By Anthony Adragna | 10/06/2017 10:00 AM EDT

With help from Eric Wolff and Darius Dixon

Morning Energy will not publish on Monday, Oct. 9. Our next Morning Energy newsletter will publish on Tuesday, Oct. 10. Please continue to follow Pro Energy issues here.

CHANGING THE MATH ON CLIMATE CHANGE: In a move that will set the tone for the Trump administration's legal and political battles over climate regulation, EPA plans to consider fundamentally altering the benefits it associates with the Clean Power Plan in an upcoming proposal to rescind the Obama-era emissions reduction rule, Pro's Emily Holden reports , citing multiple sources familiar with recent drafts. Taken together, the changes will eliminate tens of billions of dollars in the Clean Power Plan's benefits that could be used to bolster EPA Administrator Scott Pruitt's legal argument for pulling back the regulation.

Among the changes, President Donald Trump's EPA will dramatically alter its use of the social cost of carbon by no longer considering any social or economic benefits the rule creates outside the United States and counting far fewer of the health benefits that might have come from reducing air pollutants. Obama's regulators accounted for the fact that levels of sulfur dioxide, nitrogen dioxide and particulate matter would decline along with the greenhouse gases, but the Trump proposal won't count any of those additional reductions if pollutant levels were already at levels deemed safe by the agency in other regulations.

Proponents of the Obama regulation argue Pruitt's EPA is relying on fuzzy math and ignoring the fact utilities are transitioning to cleaner energy sources faster than anticipated. Janet McCabe, who led EPA's air office under Obama, said Trump's team seems to be ignoring the fact that many states are already on track to hit the rule's targets ahead of schedule. "Every other story is about how costs are coming down, about how emissions are reducing, about how power companies are making choices to close their coal plants or run them less because they're so expensive," she said. And David Doniger, climate director for the Natural Resources Defense Council, said "the courts are going to look very, very hard at this kind of cooking of the books."

EPA spokeswoman Liz Bowman's response: "While it appears you are writing a piece based on rumors about CPP, the facts are that the Obama administration's estimates and analysis of costs and benefits was, in multiple areas, highly uncertain and/or controversial."

TGIF ONE AND ALL! I'm your host Anthony Adragna, and Craig Meyers was first up to identify Reps. Debbie Dingell and Doris Matsui as the two current lawmakers who replaced their spouses in their congressional seats. For today: Who is the first participant in the U.S. Senate Youth Program to be elected to the body? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and

@POLITICOPro.

GET YOUR POPCORN READY! Energy Secretary Rick Perry should expect a bevy of tough questions in his first appearance before the House Energy and Commerce Subcommittee on Energy next Thursday. Chief among them will be his effort to quickly push through new FERC rules benefitting coal and nuclear plants that has united the oil, gas, wind and solar industries - along with consumer groups - against him. Look for Democrats to push Perry on his use of non-commercial aircraft as secretary, in light of reports he chartered a private plane one day before HHS Secretary Tom Price resigned. More information on the Oct. 12 hearing here.

He may not enjoy a home field advantage: Fellow Texans are usually quite chummy with their former governor but the FERC grid proposal might have them peppering Perry with non-softballs. Rep. Pete Olson said Perry had grabbed "the tiger by the tail" and predicted it would be a "big" area of discussion from both parties. "I'm concerned because it appears to be picking winners and losers," he told reporters. "Every time we do that, it hurts the consumer."

But first: Perry is scheduled to speak this morning at a Veterans in Energy forum in Arlington, Va. this morning.

DOE, PHMSA PICKS CONFIRMED: Before heading out on a 10-day recess, the Senate confirmed by voice vote Howard "Skip" Elliott to run the Pipeline and Hazardous Materials Safety Administration and Bruce Walker to lead DOE's electricity delivery and energy reliability office. Lawmakers also cleared Timothy Gallaudet's nomination as No. 2 at NOAA by voice vote and passed a resolution declaring Thursday "Energy Efficiency Day."

Not in the cards: Confirmation of FERC chairman nominee Kevin McIntyre and Democratic commissioner pick Rich Glick. Senate Energy and Natural Resources Chairman Lisa Murkowski asked unanimous consent to approve the selections, but an unidentified senator objected. Murkowski, who has been pushing to get FERC to full complement this week, said on the floor she was "disappointed" after the objection.

HELP THAT MESS IN TEXAS: Gov. Greg Abbott, Sens. John Cornyn and Ted Cruz and all but three of Texas' House members requested $18.7 billion in disaster funding be included in the next Appropriations package as the state continues its recovery from Hurricane Harvey. "We all recognize that the funding already appropriated is a small fraction of the federal resources needed to help rebuild Texas," they wrote.

Not so fast? House Majority Leader Kevin McCarthy indicated Thursday his chamber would take up the White House's $29 billion disaster aid request next week but Republican Study Chairman Mark Walker said his influential bloc might oppose the package without corresponding spending cuts, Pro's Budget & Appropriations Brief's Sarah Ferris reports.

Seems unnecessary: The Trump administration removed information about the status of drinking water and electricity access on Puerto Rico from FEMA's site, The Washington Post reports. Government figures show 9.2 percent of the island now has electricity and 54.2 percent of people have potable drinking water. Meanwhile, Flint Mayor Karen Weaver released a letter

of support Thursday to San Juan Mayor Carmen Yulin Cruz sent earlier in the week.

Over in Florida, lawmakers are looking at potential ways to alleviate fuel shortages in the aftermath of hurricanes, but POLITICO Florida's Bruce Ritchie reports solutions may be elusive. That isn't stopping Democratic Sen. Bill Nelson, who filed legislation Thursday requiring DOE to create a gas supply reserve that would hold at least 1 million barrels of oil in two separate locations, Bruce and Sergio Bustos report.

Veep alert! Vice President Mike Pence is visiting the U.S. Virgin Islands and Puerto Rico today for an update on Hurricane Maria recovery efforts.

BETTER LATE THAN NEVER? As POLITICO reported was likely way back in March, the White House formally selected Faegre Baker Daniels attorney Andrew Wheeler to serve as No. 2 at EPA, Pro's Alex Guillén reports. Wheeler, a former staffer to Sen. Jim Inhofe and the EPW Committee, was formerly a registered lobbyist for coal producer Murray Energy but deregistered in an Aug. 11 filing. Hopefully, he'll keep participating in ME's trivia!

REPORT: ENERGY-RELATED CO2 EMISSIONS DOWN: Energy-related emissions of carbon dioxide fell 1.7 percent in 2016 - that's 89 million metric tons, according to an Energy Information Administration report out Thursday. Emissions have declined in six of the past 10 years and energy-related ones are down 14 percent from 2005 levels. Transportation-related carbon emissions rose in 2016, though emissions from the industrial, commercial and sectors were all down. Natural gas emissions surpassed those from coal in 2016, though the report notes "natural gas produces more energy for the same amount of emissions as coal."

** **A message from Chevron**: We're piloting a program that uses drones to keep an eye on Chevron wells, tanks, and pipelines-all to keep DOERS and what they're doin' safer. Watch the video: http://politi.co/2xO60oe **

LAWSUIT THREATENED OVER MISSED OZONE DEADLINE: A group of 14 state attorneys general threatened to sue EPA for missing an Oct. 1 deadline to decide which parts of the U.S. do or do not meet the 2015 ozone standard. They join a coalition of environmental groups, which vowed to sue Pruitt earlier this week.

TAX OVERHAUL: BIOFUELS PRODUCERS LIKE THE PASSTHROUGH TAX BREAKS: Like everyone, ethanol producers await the details of Republican tax overhaul plans, but they see at least one feature they like: the tax cut on passthrough businesses. The principles in the "Big Six" tax overhaul call for a reduction in the tax rate from 36.9 percent to 25 percent on taxes paid by businesses run by sole proprietors, partnerships, and "S Corps", commonly called "passthrough" businesses. "That's how our plants are mostly organized, we see this as potential positive for our members," said John Fuhrer, senior director for government affairs for Growth Energy, an ethanol producers group.

FERC EYES NEW ENFORCEMENT CHIEF: Two sources with knowledge of the plans tell Pro's Darius Dixon and Esther Whieldon that Skadden attorney John Shepherd Jr. is expected to become FERC's next enforcement chief. According to Shepherd's bio, his practice focuses on

market design, market power and market manipulation issues in the energy and natural gas markets. The timing of the announcement is not certain.

GRIFFITH STEPPING INTO MURPHY'S E&C SLOT: With embattled Rep. Tim Murphy opting Thursday to resign from Congress later this month, an Energy and Commerce aide tells ME Virginia Rep. Morgan Griffith is expected to become chairman of the panel's Oversight and Investigations Subcommittee.

ASSUME E15 BILL DEAD (FOR NOW): Both Senate EPW Chairman John Barrasso and bill sponsor Deb Fischer now say a measure S. 517 (115) that would allow year-round sales of higher blends of ethanol won't even get a committee vote this year, Pro's Eric Wolff reports. Even with five committee members as co-sponsors, there wasn't sufficient support among panel members and a flurry of amendments threatened to go after bedrock environmental laws. "I think what happened [was] it looked like we were really going to do this. So we loaded the box up with every Clean Air Act amendment we could think of," a refining industry source who opposed the bill told Eric.

MAIL CALL! GOP URGES DOI LEAK PROBE! House Natural Resources Chairman Rob Bishop and Oversight Subcommittee Chairman Bruce Westerman sent a letter Thursday requesting a briefing and copies of written policies concerning unauthorized leaks at Interior. They point to four leaks over the past several months with documents not yet finalized. "Improper disclosure of internal agency information, however, both classified and nonclassified, is an unacceptable practice," they wrote. "It is vital that those responsible for unauthorized releases are held accountable."

TWO THUMBS UP! Sen. Bill Cassidy, Barrasso and Murkowski wrote a letter Thursday to Perry to voice support for a proposed rule that would speed approvals of small-scale liquefied natural gas exports. DOE formally proposed the regulation on Sept. 1 and the comment period ends Oct. 16.

ANOTHER PRUITT PROBE PURSUED: Three senior House Energy and Commerce Democrats - Frank Pallone, Paul Tonko and Diana DeGette - asked EPA's inspector general in a Thursday letter to investigate Pruitt's installation of a $25,000 "privacy cube" in his office. "[Americans] have a right to know if Administrator Pruitt is wasting taxpayer money on duplicative and unnecessary purchases for his office," they wrote.

HEARING ON FEDERAL STAFFING SOUGHT: All House Oversight Democrats asked for a hearing to be scheduled on Trump administration efforts to downsize the federal workforce. Read it here.

KELLOGG VP SEEKING UPTON'S SEAT: Democrat George Franklin, a vice president at Kellogg announced Thursday he'll seek Energy and Commerce Energy Subcommittee Chairman Fred Upton's congressional seat, WWMT reports. It remains unclear, of course, whether the incumbent Upton will seek reelection to the House, run for Senate or retire.

RECORDS SOUGHT FOR PERRY'S TRUMP HOTEL SPEECH: Citizens for

Responsibility and Ethics in Washington filed a FOIA request seeking all records and requests for reimbursement stemming from Perry's speech to the National Mining Association at the Trump Hotel earlier this week. Copy here.

MUSK'S BIG IDEA: Elon Musk is open to helping rebuild Puerto Rico's electric grid. "The Tesla team has done this for many smaller islands around the world, but there is no scalability limit, so it can be done for Puerto Rico too. Such a decision would be in the hands of the PR govt, PUC, any commercial stakeholders and, most importantly, the people of PR," he tweeted Thursday. Gov. Ricardo Rossello responded on Twitter "let's talk" and said Puerto Rico could be Musk's "flagship project"

ANTI-PIPELINE AD LAUNCHED IN VIRGINIA: The Southern Environmental Law Center launched a $200,000, three-week television ad campaign in Virginia opposing the Atlantic Coast Pipeline being pushed by Dominion Energy.

HUNDREDS SEEK WILDFIRE FIX: More than 200 groups asked congressional leadership to enact "a comprehensive solution to the wildfire suppression funding issue that addresses the borrowing issue and the erosion of budgets due to increasing wildfire suppression costs." They voiced support for bipartisan House H.R. 2862 (115) and Senate S. 1842 (115) bills.

CONTACT: press@epa.gov

HOUSTON AREA SUPERFUND SITES OPENED TO NEWS OUTLETS TODAY;

TCEQ/EPA UPDATED LOCAL, NATIONAL LEADERS ON HEALTH, ENVIRONMENTAL EFFECTS OF HARVEY

DALLAS (September 4, 2017) – ABC, CBS, CNBC, CNN, & Bloomberg news crews joined TCEQ and EPA technical staff on site at Superfund sites around Houston today. The TV crews, following all health and safety requirements of site managers, shadowed the work of TCEQ and EPA technical experts on the ground at three Superfund sites: U.S. Oil Recovery, Highlands Acid Pits and the San Jacinto Waste Pits.

Crews were able to take videos, photographs and talk directly with technical staff and subject matter experts on the ground. Boats were on the water determining impacts at the temporary armored cap in the San Jacinto River, to provide access to the crews.

"The TCEQ is working closely with the EPA and local officials to assess the status of Superfund sites in the affected area. We will continue this as sites are safely accessible," said TCEQ Chairman Bryan Shaw.

“We are working directly with those responsible for the on-going cleanup of Superfund sites to ensure that we have the most up-to-date information about health and environmental risks to the community from the effects of hurricane Harvey, especially at Superfund sites affected by the storm,” said EPA Region 6 Acting Regional Administrator Sam Coleman.

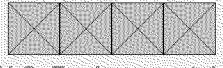
In addition to taking news crews on site today, EPA Acting Regional Administrator Sam Coleman and TCEQ Chairman Bryan Shaw provided an update of their joint efforts to assess the health and environmental impacts of Hurricane Harvey to a local, state and federal officials. The discussion with local officials included: Harris County Judge Ed Emmett, Executive Director of the Harris County Flood Control District (HCFCD) Russ Poppe, Harris County Engineer and Director of Public Infrastructure John Blount and Dr. Umair Shah from the Harris County Public Health Department.

National participants included: officials and experts from the Federal Emergency Management Agency (FEMA), the U.S. Army Corps of Engineers (USACE) and the United States Department of Housing and Urban Development (HUD). Together, they provided updates to and answered questions from U.S. Senator John Cornyn, U.S. House of Representative Majority Leader Kevin McCarthy, U.S. Congressman Randy Weber and other government officials at the Harris County Emergency Operations Center in Houston.

Additionally, Houston Mayor Sylvester Turner and the city's leaders were briefed by EPA and TCEQ senior leadership on multiple issues, including the status of the Superfund sites in and around the Houston area.

As of Sunday, September 3rd, EPA staff was imbedded in Mayor Turner's office to provide continued communication among local, state and federal officials. EPA and TCEQ remain in constant communication with Governor Abbott's office.

In addition, TCEQ and EPA toxicologists and technical experts are on the ground and in the air collecting real-time air monitoring and water quality data. That information is being analyzed by experts now and will be provided to the public as soon as it is available. We encourage the community to continue to follow the expert safety advice of local officials



EPA Region 6 Acting Regional Administrator Sam Coleman updates the media on EPA response to Superfund sites affected by Hurricane Harvey

Briefing with local, state and national leaders in Houston

TCEQ Chairman Bryan Shaw meets with U.S. Senator John Cornyn at the Harris Co. Emergency Operations Center.

TCEQ Chairman Bryan Shaw and EPA Acting Regional Administrator for Region 6 Sam Coleman address the media at the San Jacinto Superfund site.

Subject: POLITICO's Morning Transportation, presented by Auto Alliance: The FAA extension waiting game — How do you solve a problem like TSA staffing? — Country roads, take me home

By Brianna Gurciullo | 09/20/2017 10:00 AM EDT

With help from Stephanie Beasley, Tanya Snyder, Lauren Gardner and Daniel Lippman

THE WAITING GAME: House lawmakers have yet to give any clues about when they might introduce an FAA extension bill, but given that the agency's authority is set to expire at the end of the month, it will have to happen very soon, Sen. John Thune (R-S.D.) said Tuesday. "Well, they have to do it next week, if we're going to get this done by the 30th, right?" the Senate Commerce chairman said. Thune reiterated that senators would like to see a six-month extension and encouraged the House to "keep it clean." However, when asked if he thought House members might add unrelated measures to the bill, he said that "obviously with a tax title it presents a vehicle and an opportunity."

HOW DO YOU SOLVE A PROBLEM LIKE TSA STAFFING? Airports are getting antsy over TSA's staffing policies, with the aviation director of one major airport calling the agency's approach "broken." "As we start to see improvements in the customer experience ... TSA pulls down staff," said Brent Cagle of Charlotte Douglas International Airport. As Steph reports for Pros, some airports are turning to new technology to make up for fewer bodies. But TSA hasn't promoted that technology for use across the country, which makes other airports slower to try it. Meanwhile, Airports Council International says more federal funding is the best long-term fix to the agency's staffing problems. Check out the full story here.

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Be sure to send tips, feedback and lyrics my way: bgurciullo@politico.com or @brigurciullo.

"I was riding shotgun / With my hair undone / In the front seat of his car / He's got a one-hand feel / On the steering wheel / The other on my heart."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

COUNTRY ROADS, TAKE ME HOME: An impressive lineup of automotive star power is heading to West Virginia today for a forum on self-driving cars hosted by Rep. David McKinley (R-W.Va.). McKinley was one the more skeptical members of the Energy and Commerce Committee when it came to driverless car safety and pushed for what he called "independent verification and validation" - more or less the "premarket approval" concept that makes industry recoil. Thanks to McKinley's efforts, the final House bill, H.R. 3388 (115), includes a mandate for a new Highly Automated Vehicle Advisory Council to study the issue of IV&V, as well as the testing and deployment of self-driving cars in rural areas.

Who's going? Bigwigs from General Motors, Toyota, Tesla, Uber and Ford will be there, plus academics, lawyers and more. You can watch the morning and afternoon sessions via livestream, or if you happen to find yourself in Morgantown, you can attend in person.

TAKING EXCEPTION WITH EXEMPTIONS: The RAND Corporation has issued a challenge to lawmakers who have asked how many Federal Motor Vehicle Safety Standards exemptions should be offered to automakers but haven't asked whether that's a sensible way to ensure driverless car safety. In a new report , RAND says the House bill's attempt to exempt vehicles from some standards while still maintaining safety doesn't make sense. RAND asks: How can you evaluate a driverless car using traditional methods that only look at hardware and not software?

RAND's idea: Loosen the focus on FMVSS and think about performance-based benchmarks for safety. As automakers show they're meeting those benchmarks - through a more demanding process than what's laid out in the House bill - exemptions can be allowed and, eventually, the cap can be lifted and FMVSS can be rewritten. The authors leave open the possibility that independent certification may be needed - a proposal McKinley would surely like, but not so much the auto world.

PREPARING FOR MARIA: Following on Sen. Bill Nelson's call for airlines to cap ticket prices ahead of Hurricane Maria's rampage through the Caribbean, several U.S. carriers disclosed their plans Tuesday for managing fares, adding capacity and handling other fees. Lauren has the details on the initial information the Florida Democrat's office provided about American and United (both of which are setting ceilings for fares).

Not to be outdone: Delta has temporarily capped main cabin fares for nonstop, one-way tickets from certain Caribbean destinations, including San Juan. The airline waived fees for bags and pets for passengers flying from the region, as well as change fees for certain dates for customers flying from San Juan, St. Maarten, St. Thomas, and Turks and Caicos. It also added flights for residents and tourists looking to leave Puerto Rico ahead of the storm.

** **A message from Auto Alliance**: Federal action is needed for self-driving cars. Learn More **

SENATE PASSES MAHAN AIRLINE SURVEILLANCE MEASURE: The Senate passed an annual defense policy bill, H.R. 2810 (115), on Monday night with an amendment that would crack down on Iran's Mahan Air. The measure was co-sponsored by Sen. John Cornyn (R-Texas), who has accused the airline of aiding terrorist groups like the Islamic Revolutionary Guard Corps. Among other items, the measure would require DHS to establish a list of all airports where Mahan operates and make recommendations for increasing security at those facilities.

While we're at it: Cornyn also echoed President Donald Trump's call for the United States to take stronger actions to prevent terrorism in the wake of last week's subway bombing in London. He urged senators to reauthorize surveillance programs included in the Foreign Intelligence Surveillance Act. "As President Trump said last week, in this era in which attacks like London

are the new normal, we have to be proactive," Cornyn said on the floor Tuesday.

DAMAGE CONTROL: After a series of wildfires, Oregon can now access $1 million in emergency funding from the Federal Highway Administration to start fixing bridges and roads, the agency said Tuesday.

IT'S ON(LINE): The U.S. Travel Association has a new website dedicated to Open Skies. The group compiled letters from other trade associations, consumers, businesses and government officials about the issue. Pros know well that U.S. Travel opposes American Airlines, United Airlines and Delta Air Lines when it comes to the debate over alleged breaches of the Open Skies deals between the United States and the United Arab Emirates and Qatar.

A NEW CHAIRMAN FOR ARTBA: Matt Cummings, an executive vice president at AECOM, is now the American Road & Transportation Builders Association's chairman. Cummings wants ARTBA to keep concentrating on "ensuring a long-term Highway Trust Fund fix," urge the enactment of a federal infrastructure package and longer term FAA bill, and start a "Transportation Construction Safety Center," among other goals, according to a release from the group.

MEANWHILE AT ACI-NA: Candace McGraw is taking Bill Vanecek's place as chair of Airports Council International-North America. McGraw is the Cincinnati/Northern Kentucky International Airport's chief executive.

FLYING HIGHER: Vaughn Jennings at Airlines for America was promoted from managing director for government and regulatory communications to vice president for communications, our friends at POLITICO Influence report.

SO LONG AND THANKS FOR ALL THE FLIGHTS: Susan McDermott, DOT's deputy assistant secretary for aviation and international affairs, will retire at the end of the year. McDermott previously worked at the Civil Aeronautics Board.

OTHER FOLKS SHIFTING GEARS: Tyler Houlton, Americans for Prosperity's former director of federal affairs, is now serving as deputy press secretary at DHS, our friends at POLITICO Playbook report. ... Max Fenkell left Ford, where he held the title of legislative analyst/coordinator, to be a legislative assistant to Rep. Mark Sanford (R-S.C.), a member of the Transportation Committee. Fenkell began his new gig this week. ... Chris Marchand was named Jaguar Land Rover's vice president of government and industry relations for the Americas. Marchand is currently executive vice president of operations. ... Eric Fanning, who was secretary of the U.S. Army during the Obama administration, will be the Aerospace Industries Association's president and CEO starting Jan. 1, Greg Hellman reports for Pro Defense. ... Sally Veith, previously the director of government affairs for Delta and, before that, Northwest Airlines, is the Air Medical Operators Association's new executive director.

THE AUTOBAHN:

- "International tourism to the U.S. declined in early 2017." The New York Times.

- "Touch screens in cockpits would improve airliner safety, research shows." The Wall Street Journal.

- "Price's private-jet travel breaks precedent." POLITICO.

- "Officials fault charter bus industry after fatal Queens crash." The New York Times.

- "Cyber attack, hurricane weigh on FedEx quarterly profit." Reuters.

- "What if an Irma-like hurricane hit the New York City metro area?" Bloomberg.

- "You can now earn a degree in 'self-driving cars' courtesy of Lyft and Udacity." The Verge.

- "Dockless bike-share companies race to Washington." The Washington Post.

- "Lawmakers subpoena New Jersey Transit over rail-safety project." Bloomberg.

- "Fliers may soon board more international flights with a picture rather than a passport." USA Today.

THE COUNTDOWN: DOT appropriations run out in 80 days. The FAA reauthorization expires in 11 days. Highway and transit policy is up for renewal in 1,107 days.

** **A message from Auto Alliance**: Automakers have a vision for transforming mobility: save lives with automated vehicles. Learn More **

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

October 27, 2017

Latest News

Region 4's Glenn Pledges EJ Support During Review Of Agency 'Practices'

Trey Glenn, EPA's new Region 4 administrator, is vowing to maintain a "robust" environmental justice (EJ) program despite the agency's proposal to eliminate funding for its equity program, touting EJ efforts even as he plans a sweeping review of the region's "business practices" that could be a prelude to major changes in how it operates.

Environmentalists Cite TSCA Rule Changes In Bid To Maintain Fluoride Suit

Environmentalists are urging a federal court to allow their suit against EPA over its denial of their petition to ban drinking water fluoridation to continue, arguing among other things that the agency's changes to the final framework rules implementing the 2016 statutory reform of the Toxic Substances Control Act (TSCA) bolster their case.

Internal Memos Show EPA Offices' Fears Over Narrowed Trump TSCA Rule

A series of recently released internal EPA memos underscore significant environmental and legal concerns officials in the agency's water and enforcement offices have with the toxics office's controversial changes to narrow the range of chemical uses the agency will consider when assessing and regulating substances under the new toxics law.

New York's Lawsuit Threat Asks EPA To Issue Ozone FIPs For Five States

New York is threatening to sue EPA unless the agency swiftly develops federal implementation plans (FIPs) imposing ozone-reduction mandates on five upwind states to curb interstate emissions transport, but the Trump EPA's focus on boosting states' role in environmental protection suggests it is unlikely to grant such a request.

Trump EPA Faulted For Narrow Benefit Tallies Of Targeted Obama Rules

The Trump EPA is attracting a barrage of criticism for narrowing or omitting analysis of potential health or other lost benefits from its proposed repeals of Obama administration rules, with critics arguing the agency's methods often ignore

established or peer-reviewed approaches used to account for the costs and benefits of environmental regulations.

EPA Floats 'Interim' Guide To Implement AFO Air Reporting Legal Mandate

EPA is floating an "interim" guidance for steps animal feeding operations (AFOs) can take to comply with a looming Nov. 15 deadline to begin reporting their emissions of hazardous substances under environmental laws, after a federal appeals court scrapped a reporting waiver the agency had issued for the facilities.

Daily Feed

Democrats seek documents backing EPA cost analysis of CPP repeal

Nearly two dozen Democratic senators accuse EPA of using "mathematical sleights of hand to overstate the costs of industry compliance with the [Clean Power Plan] and under-state the benefits that will be lost" from repealing it.

Environmentalists urge 4th Circuit to uphold CWA ash ruling

Environmentalists say there is no proof of the dire consequences that utilities say will ensue if a ruling is left to stand subjecting coal ash disposal to Clean Water Act discharge permits.

States cite Hurricane Harvey in opposing RMP delay

Democratic attorneys general say injuries to first responders after a chemical facility fire sparked by hurricane flood waters undercuts the Trump administration's delay of the Obama EPA's RMP rule.

EPA softens POTW air toxics rule from Obama-era proposal

The Trump EPA in its final wastewater treatment works air toxics rule review drops Obama-era proposed changes that industry said would have been confusing and onerous.

D.C. Circuit rejects EPA bid to delay brick MACT argument

Oral argument in litigation over the Obama-era brick sector air toxics rule will proceed as planned Nov. 9 after judges rejected EPA's request to postpone the case.

Chemical industry asks court to broaden DSW ruling

Industry petitioners are asking a federal appeals court to broaden a July ruling that vacated aspects of the Obama-era Definition of Solid Waste rule.

Subject: POLITICO's Morning Energy: Pruitt's new TSCA plan burns greens — Conservatives attack to defend Ex-Im pick — Dominion v. Kaine challenger

By Darius Dixon | 08/08/2017 10:00 AM EDT

With help from Ben Lefebvre and Matt Daily

EPA GOES NARROW WITH NEW TSCA POLICY: EPA says a new plan to evaluate the the safety of chemicals will ease the path for bringing new substances to market and increase transparency, Annie Snider reports . But environmentalists contend the plan will undermine critical safety measures that were included in last year's landmark bipartisan chemicals law overhaul. The 'operating principles' announced Monday will limit EPA's evaluation of new chemicals to solely the "intended uses" that the manufacturer identifies in its initial notice to the agency, Annie writes. If the agency decides that intended use is safe, the chemical could go on the market, even if EPA experts have concerns about other potential uses. Those concerns would be addressed through a later rulemaking, the agency said. Administrator Scott Pruitt said EPA "can either be a roadblock to new products, or it can be supporter of innovation and ever-improving chemical safety."

This is not the TSCA we were looking for: The the American Chemistry Council praised the move, but greens complained it's a major shift from the approach embraced by lawmakers when they updated the Toxic Substances Control Act, the country's primary chemical safety law, which pushed for chemicals to be evaluated as a whole for their safety, rather than breaking evaluations down into individual uses. "What your body cares about is not, 'How much was I exposed to by that use versus another use.' It's how much was I exposed to in totality," said Richard Denison, a lead senior scientist at the Environmental Defense Fund.

Annie adds: Internal documents obtained by POLITICO showed that career staffers disagreed with similar changes made to final rules governing existing chemicals last month that also focus on the intended uses, which were made after the Trump administration put a former top expert for the chemical industry's top lobbying group in charge of TSCA implementation.

BRING ON TUESDAY! I'm your guest host, Darius Dixon. David Brown at Exelon was the first to name Frank Oppenheimer as the Manhattan Project physicist I was referring to who later founded the Exploratorium in San Francisco. That said, a lot of you, beginning with reader Craig Meyers, mentioned the Bradbury Science Museum in Los Alamos, N.M. That museum was founded by Robert Krohn, a Manhattan Project scientist. The more you know! Today's trivia: The U.S. Fermi award is one of the most prestigious for scientists, but in the first 20 years, its monetary prize was cut in half. That happened after who won it? And bonus points for naming the first person to get the skimpier check.

Send your guesses, tips, energy gossip and comments to Esther Whieldon, who will get you through the week, at ewhieldon@politico.com. Follow us on Twitter @esthernow, @aadragna, @Morning_Energy and @POLITICOPro.

CLIMATE REPORT LEAKS: In a bid to prevent the Trump administration from sitting on a new assessment of the impacts of climate change, sources have leaked to The New York Times a report from scientists at 13 federal agencies that says temperatures in recent decades are rising because of human activity. "It directly contradicts claims by President Trump and members of his cabinet who say that the human contribution to climate change is uncertain, and the ability to predict the effects are limited." One government scientist who worked on the document, part of the National Climate Assessment mandated by Congress, told the paper that he and others were concerned that the Trump administration may try to suppress it.

What we'll be comparing to the final version: The Times says the report finds it "extremely likely" that more than half of the global mean temperature increase since 1951 can be linked to human influence. The National Academy of Sciences has already gone over the report but several agencies have until Aug. 13 to approve it.

OPEC TRIES TO PLUG THE LEAKS: Washington may have gone quiet for August, but the oil industry is not exactly in a position to rest on its laurels. NYMEX crude oil futures turned sideways in the past few days after popping above $50 a barrel last week, and there seems to be little momentum to move back above that psychological barrier unless OPEC members, who are finishing a two-day meeting today in Abu Dhabi today, can crack down on the cheating among cartel members who are overproducing on their output quotas. Oil bulls are also hoping Russia steps forward to deepen its cuts, but as oil prices rise, the temptation for oil-producing OPEC nations to sell some extra supplies grows. A survey by Platts showed that OPEC nations were exporting more than 900,000 barrels per day above its agreed ceiling last month, hitting the highest production level of the year at 32.82 million bpd. Much of that is coming from Libya and Nigeria, which are not subject to the cartel's output cuts agreed to in November, but OPEC members have pledged to keep their current cuts in place in to March 2018 - and compliance among the cartel members tends to decline over time.

ANOTHER LOG ON THE EX-IM FIRE: Just when it didn't seem like the fight over former Rep. Scott Garrett's nomination to head the Export-Import Bank couldn't get any more heated, conservative groups lit a torch on Monday. In a letter to Senate Banking Chairman Mike Crapo, the leadership of organizations including the Club for Growth, Heritage Action for America and FreedomWorks denounced business groups that have been urging the White House to drop Garrett, Pro Financial Services' Zachary Warmbrodt reports . In fact, they plan to oppose any appointments to the agency's board if Garrett's name does not move forward. "We're extremely hopeful that President Trump will ignore the special interests that are so desperate for their Export-Import Bank gravy train to continue," they said in the letter.

THE TRIAL OF THE RECESS: Since Congress has skipped town for the rest of August, you'll have more time to watch the week-long hearings on the Keystone XL oil pipeline taking place at the Lincoln Marriott Cornhusker Hotel in Nebraska. The Nebraska Public Service Commission is taking testimony from TransCanada executives, local landowners and others on the potential impact of the project's proposed route through the state.

Most of Monday was taken up with lawyer Dave Domina, who represents the landowners in the

state and quizzed TransCanada execs on issues like the web of companies that own a piece of Keystone XL, how far below waterways the pipeline will be laid, and easements. Domina also asked TransCanada Pipelines Limited President Tony Palmer whether the company will decide later this year whether to actually build the pipeline. "Sir, we hope to do so," Palmer replied. The hearings start at 10 a.m. Eastern Time. Nebraska regulators are scheduled to rule on the route proposal by the end of this year. Just last month, TransCanada suggested that it may not build the project.

STATES PREP FOR ECLIPSE: California produces more solar power than any other state in the union, so when the total solar eclipse cruises across North America on Aug. 21, grid operators there say they expect to draw about 6,000 megawatts from other sources to cover the losses. The Golden State has a solar capacity of about 10,000 megawatts, which the state's ISO says can sometime cover 40 percent of its electricity demand. California has preparing for the eclipse for more than a year, the grid operator said. The path of the eclipse will affect 17 utility-scale solar PV generators, mostly in eastern Oregon, according to the Energy Information Administration. Meanwhile, hundreds of plants totaling about 4,000 MW of solar capacity - largely in North Carolina and Georgia - will be at least 90 percent obscured, the EIA said. The next solar eclipse isn't expected to cross the continent until 2024.

DOMINION OPENLY FEUDS WITH KAINE CHALLENGER: "Why is Corey Stewart putting politics over people?" reads a Dominion ad in several Prince William County, Virginia, newspapers. The Washington Post reports that the ad is meant to highlight the role Prince William Board of County Supervisors Chairman Corey Stewart, a Republican challenging Sen. Tim Kaine next year, had in blocking an alternative route for a controversial power line through a wetlands, leading to the plan to run it through a historic black community. The ad continues: "The residents of Carver Road should look no further than Corey Stewart for the reason their community was selected."

Stewart, who failed to win the GOP gubernatorial primary earlier this year, is relishing the battle: "It's bringing in people and donors who otherwise wouldn't support a Republican candidate," he said.

STATE LAWMAKERS PRESS DOE, CONGRESS ON EFFICIENCY RULES: The Energy Department's efficiency rulemaking operation got a big endorsement from state capitols on Monday. As part of its legislative summit this week in Boston, the National Conference of State Legislatures approved a resolution (it starts on page 42) urging Congress to "fully fund" DOE's efficiency standards program. It also urges Congress and DOE to stick to its so-called look-back schedule, which requires the agency to revisit each of its efficiency standards every six years to see if they can be tightened. We're told that Vermont state Rep. Curt McCormack sponsored the resolution.

DEMS PRESS FOR WAYS TO DECARBONIZE THE OCEANS: Sens. Sheldon Whitehouse and Heidi Heitkamp have asked the National Academy of Sciences to investigate ways of extracting carbon dioxide from ocean water. As carbon dioxide builds up in the atmosphere, greater amounts get infused into the planet's waters, a driver of ocean acidification. "As the committee on Developing a Research Agenda for Carbon Dioxide Removal and Reliable

Sequestration continues to develop your Carbon Dioxide Removal (CDR) report, we request that you consider expanding your focus to include ocean carbon capture technologies and processes," the two lawmakers wrote.

BENNET BILL TO DIVERSIFY 'COAL COMMUNITIES': Before skipping town last week, **Democratic** Colorado Sen. Michael Bennet introduced a bill aimed at promoting investment and business in areas that have lost jobs in the coal industry. The measure would designate 90 counties as "coal communities," including six in his home state, and create hiring credits, tax incentives and training grants.

QUICK HITS

- Here's how Carl Icahn's bet on Donald Trump went terribly wrong. CNBC.

- California pension fund divests from coal as industry rebounds. The Sacramento Bee.

- U.S. federal department is censoring use of term 'climate change,' emails reveal. The Guardian.

- Iowa Gov. Kim Reynolds: The red state with an energy blueprint. The Hill.

THAT'S ALL FOR ME!

Cloudy with a high of 81.

Subject: POLITICO's Morning Transportation: It's the DHS shuffle — Teach me how to shruggie — 'The incredible shrinking airline seat'

By Stephanie Beasley and Lauren Gardner | 07/31/2017 10:01 AM EDT

With help from Brianna Gurciullo

IT'S THE DHS SHUFFLE: A new day is dawning at DHS, where Elaine Duke is stepping in as acting secretary to replace John Kelly, who will be sworn in as White House chief of staff today. After President Donald Trump fired off a surprise tweet Friday announcing that Reince Priebus was out and Kelly was in, Kelly issued a statement saying he was "honored" to take over the position. The move reflects an increasing level of trust between Trump and the retired Marine general, who has become a "kindred spirit," several sources told POLITICO. But suddenly yanking Kelly away from DHS while the department is grappling with emerging threats to airplanes and visa security could create chaos.

And the beat goes on: Duke will now be in charge of overseeing the department at a critical moment when DHS is working to tighten security at airports around the globe, Stephanie Beasley reports. Airlines have fewer than three months to complete an enhanced security plan at 280 airports with flights to the United States. However, airline and airport officials are already familiar with Duke, a former deputy assistant administrator for acquisition at TSA. So it's possible the change in leadership might not create major waves.

On your mark, get set: Still, lawmakers in both chambers are urging Trump against leaving DHS' top spot vacant for too long. Some of the names being floated by White House and former DHS officials as possible replacements include House Homeland Security Committee Chairman Mike McCaul (R-Texas), ICE Acting Director Thomas Homan and Kansas Secretary of State Kris Kobach. McCaul has been a big supporter of Kelly's efforts to tighten aviation and visa security, and Kelly has praised McCaul for pushing a DHS reauthorization bill through the House. "I look forward to continuing to work closely with [Kelly] to combat the most crucial homeland security challenges facing America," McCaul said in a statement.

TEACH ME HOW TO SHRUGGIE: The House has 12 legislative days to reauthorize the FAA and fund the government - not to mention re-up the national flood insurance program and CHIP funding - when lawmakers return in September from the summer recess. How is it all going to get done? ¯_(???)_/¯

The tank's on E: The needle is moving closer and closer toward extension territory, no matter what air traffic control overhaul proponents say publicly. Even if each chamber were to miraculously pull itself up by bootstraps and pass its own FAA bill, that leaves next to no time for any sort of deal to be hashed out. And the jury's still out on whether House Transportation Chairman Bill Shuster's bill (H.R. 2997 (115)), which includes a controversial air traffic control overhaul, will even make it to the floor - it's going to be a long five weeks, aviation fans. When asked how he's persuading members to change their votes from nos to yeses, Shuster said by

"talking to them, explaining the bill ... moving a lot of people the right way."

HAPPY MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Brianna is back at it with Steph (don't worry, Lauren will still pop in, plus she's so easy to find!), so please send along tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo and sbeasley@politico.com or @Steph_Beasley.

"In the back of a Volvo car/Sample/Hold over/Pay up sign up LA"

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

'THE INCREDIBLE SHRINKING AIRLINE SEAT': Want an FAA tidbit that isn't tied to the soap opera that is the reauthorization bill debate? A federal appellate court ruled Friday that FAA didn't do an adequate job backing up why it rejected a petition for a rulemaking on airplane seat size and pitch, Mary Lee reports for Pros. A nonprofit group focused on airline passengers' rights argued that shrinking seat size and spacing poses a threat when flyers must evacuate a plane, as well as when it comes to health concerns like deep vein thrombosis. Regulators maintained that risks for the blood clot condition were minimal, and that the existing regime for studying the safety of seat size still works.

FAA-ke news? The U.S. Court of Appeals for the D.C. Circuit took FAA to task for offering a "vacuous" justification for its denial of Flyers Rights' original petition, but the decision doesn't order the agency to write a rule giving everyone more legroom and cushier seats. FAA can still deny the rulemaking request, but it has to back it up with more evidence the public can see, the court said. "While we do not require much of the agency at this juncture, we do require something," the opinion stated.

Maybe, just maybe: Remember that the Senate's FAA bill (S. 1405 (115)) would require FAA to evaluate the minimum seat pitch on planes while considering passengers with disabilities and flyers' safety.

IF I COULD TURN BACK TIME: Did you ever line up to board your flight only to look down at your ticket and realize you wanted an aisle seat, not a window seat? Delta says it's working on a tool that could fix that for you. The airline kicked off a three-month pilot program at Atlanta's Hartsfield-Jackson airport that, among other things, will give gate agents handheld devices that allow them to change seats and check bag statuses. The second phase of the pilot will also integrate biometric boarding technology currently being tested at Reagan National Airport. "Developing and testing these innovations is an important part of our ongoing effort to improve the customer travel experience," said Gil West, Delta's chief operating officer. Delta has also been collaborating with CBP to test biometric identification technology at Hartsfield.

GIVE ME MY MONEY: Starting this week Wells Fargo will begin repaying customers who it was surreptitiously charging for auto insurance.The bank issued a statement late last week saying it would refund more than 570,000 auto loan customers who were unaware that they were also

being charged for auto insurance that many did not need. The bank will make a total of $80 million in payments - $64 million in cash and $16 million in account adjustments, USA Today reported. Wells Fargo, which has previously been fined for insurance fraud, made the announcement after The New York Times reported the bank had charged more than 800,000 car loan customers for auto insurance without their knowledge.

MT MAILBAG: The Surface Transportation Board fired off a letter to CSX CEO Hunter Harrison last week to put in writing concerns about service issues on the freight line that have arisen since it instituted operational changes earlier this year. The board said it's received "informal complaints" from shippers that have seen transit times balloon and general service inconsistencies. STB said it has been made aware of "delays resulting from CSX congestion in critical gateways," including New Orleans. The railroad loudly protested a recent report to Congress advocating for Amtrak service to return to the Gulf Coast, arguing that it needs billions of dollars' worth of infrastructure improvements to be able to accommodate passenger trains along its tracks.

THE AUTOBAHN:

- "Ford to repair U.S. police vehicles after carbon monoxide concerns." Reuters.

- "More New Yorkers Opting for Life in the Bike Lane." The New York Times.

- "Uber and Lyft are outpacing taxis among business travelers." Los Angeles Times.

- "Three years after opening, the Silver Line struggles to attract riders." The Washington Post.

- "Incoming Homeland Security secretary has served 3 presidents." The Associated Press.

- "Unions Urge Slow-Down as Self-Driving Car Laws Pick Up Speed." Bloomberg.

THE COUNTDOWN: DOT appropriations run out in 61 days. The FAA reauthorization expires in 61 days. Highway and transit policy is up for renewal in 1,157 days.

Subject: BREAKING NEWS: Senate passes hurricane aid, government funding package

The Senate on Thursday passed legislation that would temporarily lift the nation's debt ceiling and fund the government, while delivering the first installment of emergency aid for victims of Hurricane Harvey.

The massive fiscal package was the result of a surprise mid-week deal between President Trump and congressional leaders. Trump could sign the bill as early as Friday. The agreement ends the threat of a government shutdown and a default on the national debt at the end of September, but just for three months. Congress now faces a Dec. 8 deadline to strike another deal to avert those fiscal cliffs.

Subject: SPECIAL August Energy Update: Solar Trade Case Hearing Set for Tomorrow

Friends,

Not the full update today, but just a quick note to remind you of tomorrow's U.S. International Trade Commission hearing on the solar trade petition. But before we get to that, it was 14 years ago today, just after 4:10 p.m. that the Northeast suffered its most significant blackout in a generation. The blackout affected an estimated 10 million people in Ontario and 45 million people in eight U.S. states.

Back to the action…The ITC holds its public hearing tomorrow looking at the injury phase of the 201 trade petition filed by Suniva which aims to impose tariffs that place the recent success of the entire solar industry and its workforce at risk. Late last week, we saw Congress weigh in urging ITC to oppose the tariff petition. And tomorrow, just before and after the hearing, hundreds of solar workers from all over the country, including California, Maryland, North Carolina, New Jersey, New York, Florida, Minnesota, Massachusetts, Rhode Island, Pennsylvania and Virginia, will converge in Washington to explain the personal impact this case could have on their livelihoods.

We have a **full report/primer below with details, schedule, timing, on-the-record comments and background.** And speaking of blackouts, remember next Monday, a large swath of the country will focus on the upcoming solar eclipse, which occurs on August 21st. Lots of great coverage, but here is how you will want to view the eclipse.

Finally remember next week, the American Chemical Society holds its 254th annual national meeting during the entire week and will feature tons of events on really complex STEM issues, as well as highlight many important and innovative technological advances. One of the ACS presentations will feature our friends at ISCA Tech, which we will discuss more in the future.

I will be at the ITC tomorrow. Please call with questions.

Best,

Frank Maisano

(202) 828-5864

c. (202) 997-5932

THE BIG EVENT

Solar ITC Hearing Set for Tomorrow – The U.S. International Trade Commission (ITC) holds its public hearing tomorrow looking at the injury phase of the 201 trade petition filed by Suniva which aims to impose tariffs that place the recent success of the entire solar industry and its workforce at risk.

IF YOU GO: The hearing starts at 9:30 a.m. at ITC, 500 E Street, SW. Media must register in advance with PA officer Peg O'Laughlin (202-205-1819)

SEIA: Trade Case Petitioners Brought Collapse of Businesses on Themselves – Suniva and SolarWorld have failed to show that a rising level of imports caused them serious injury and left them unable to compete in the U.S. market, the Solar Energy Industries Association (SEIA) and others stated in pre-hearing written arguments to ITC. In an executive summary of its remarks, SEIA points out that the petitioners were unable to produce the needed solar modules to succeed in the ever-changing solar markets. Utility-scale projects use 72-cell modules, which neither Suniva nor SolarWorld could produce in the quantities demanded by the booming U.S. marketplace. Therefore, imports of solar cells and modules were pulled into the U.S. utility market by increased demand that could not be met domestically.

Congress Weighs In Support of Solar Industry – A bipartisan group of 16 senators and 53 members of the House of Representatives sent open letters to ITC Chairman Rhonda Schmidtlein urging it to reject a petition that would slap tariffs on imported solar panels and cells. "Solar companies in our states believe the requested trade protection would double the price of solar

panels," the Senate letter to the ITC said. "Increasing costs will stop solar growth dead in its tracks, threatening tens of thousands of American workers in the solar industry and jeopardizing billions of dollars in investment in communities across the country." Lawmakers who led the letter effort to the ITC include: Senators Thom Tillis (R-NC) and Martin Heinrich (D-NM) and Representatives Mark Sanford (R-SC), Mike Thompson (D-CA), Pat Meehan (R-PA) and Matt Cartwright (D-PA).

Coalition Calls for End of Bad Case – The Energy Trade Action Coalition (ETAC) urged ITC to end the Section 201 trade case on imported solar components that currently is threatening the U.S. solar industry. ETAC is a group of companies, associations and organizations who joined together to oppose the trade petition. ETAC spokesman Paul Nathanson said the Section 201 petition is not designed to protect or grow solar jobs in the U.S., but an attempt by two companies that made poor business decisions to recover lost funds for their own financial gain at the expense of the rest of the solar industry. Nathanson: "As the solar industry continues to grow and compete with other energy traditional and renewable energy sources, now is not the time to undercut its momentum by doubling the price of solar panels for consumers. This is why ETAC members, which includes utilities, power co-ops, retailers and other large commercial users, are so active in making their voices heard to prevent these unwarranted tariffs." ETAC works to raise awareness of the importance of maintaining access to globally priced products to support American energy industry competitiveness, sustain tens of thousands of good-paying American manufacturing jobs and preserve the principles of free and fair trade in a global marketplace.

Conservative Groups Supporting Solar Industry View – Most free trade advocates have strongly supported the solar industry's position on this trade petition. Here are several key quotes from conservative groups:

"Tariffs meant to protect one industry can, and often do, have significant damaging effects on other domestic industries. Imposing tariffs under Section 201, as Suniva and SolarWorld request, would be a step backward by adding another layer of federal subsidies which is something the Heritage Foundation opposes in all instances."

Tori K. Whiting, Research Associate at The Heritage Foundation.

"Voluntary free trade is always a good thing. And it's a good thing for every consumer; not just a few individuals or companies. The solar case is an example of the worst kind of trade protectionism. We're delighted to stand for freedom and free markets."

Eli Lehrer, president of the R Street Institute.

"Our country's trade laws were set up to facilitate and promote an even playing field, not provide shelter to those unable to compete."

Karla Jones, Director of the Federalism and International Relations Task Force at American Legislative Exchange Council (ALEC).

"The Section 201 solar industry trade case will undermine one of the fastest growing All of the Above Energy jobs sectors in states across the country, solar energy installation. We must avoid rewarding this opportunistic use of U.S. trade laws."

Sarah E. Hunt, Director of the Center for Innovation and Technology at ALEC.

Electrical Workers, Contractors See Petition as Trouble – The National Electrical Contractors Association fears that its work force, many of them union workers, will be hurt by the trade petition and the potential loss of jobs. James Willson, head of the LA County Chapter of NECA said they strongly oppose the proposed tariffs and minimum prices on imported CSPV cells and modules being considered by the ITC. Willson: "In our area (Los Angeles County) over the past 5 years, we have averaged over 1,000 electricians installing utility scale and roof top solar systems. These are good middle class jobs which promote apprenticeship, community based hiring, and veterans. This proposed tariff would increase solar costs 90-110% and if implemented would make America the highest-priced solar country and decimate the market – likely bringing a halt to utility scale solar. This extreme tariff would have such a negative impact not only in our jurisdiction but throughout the country."

Retailers Urge Rejection of Petition – The National Retail Federation said the trade petition would harm businesses and large-scale, commercial users of solar. "A growing number of retailers are relying on solar to meet their energy needs," said NRF VP Jon Gold. "Our members' use of solar as an energy source is a direct result of the solar industry's ability to compete with other sources of energy by providing cost-competitive power generation on an increasingly large scale. This misguided 201 trade petition would punish our members for being innovative and significantly raising their costs. The U.S. International Trade Commission should find no injury and terminate this investigation as soon as possible."

Utilities Long-Term Planning Hurt by Petition – Utilities have also expressed real concerns that the trade Petition will undermine their ability to affordable use solar to meet customer demand and state renewable requirements. Scott Segal, Director of the Electric Reliability Coordinating Council said utilities and public power have increasingly diversified their

portfolios for a variety of strategic reasons over the last several years. Segal: "This means that power companies have developed solar projects or have purchased solar-generated power or both. As a rule, power companies plan on a 20 year cycle and depend on predictable cost structures, particularly for solar developments. Inappropriate imposition of trade remedies on solar technology can fundamentally change the landscape for renewables without any consequent societal benefits. ERCC members include Ameren, DTE Energy, Duke, Salt River Project, Southern Company and Vistra.

Venture Capitalists Worry About Capital Investments – Chris Diaz head of Seminole Financial Services, which funds energy projects including solar projects, sees tariffs as a step that could undermine current capital investments. Diaz: "The solar industry is a strong sector for capital investment right now because of its competitiveness in the marketplace. Billions of dollars are flowing into projects that are leading to good-paying jobs, new economic opportunities, technological advancement and much-needed revenue for communities -- all-the-while meeting increasing consumer demand for cleaner energy. This tariff petition and the resulting direct increase in the cost of doing business in the solar industry, threatens that competitiveness. It undermines the certainty of current investments in the solar industry and puts almost all future investments at significant risk."

Other Key Quotes:

"As one of the most experienced solar installers in the U.S., Borrego Solar strongly disputes Suniva and SolarWorld's claims before the ITC. These companies' financial troubles are largely self-inflicted, and their failure to compete with manufacturers in both the U.S. and the rest of the world should not be used as an excuse to set the American clean energy industry back precisely when the need to increase our domestic clean energy supply is greatest."

– Mike Hall, CEO, Borrego Solar Systems, Inc.

"The Suniva/Solar World bailout request will cause rooftop solar installation costs to sky rocket. Many Florida residents choose to install solar panels on their roofs to save money on their electric bills and to protect the environment. The requested bailout will make it harder for consumers to afford solar. Retirees will be hit the hardest."

– Tory Perfetti, Florida Director of Conservatives for Energy Freedom.

"There are over 200,000 good, high paying jobs in solar right now, and that number is growing quickly. Protectionist trade barriers will not make American solar manufacturing more competitive, but absolutely will kill the good jobs that exist by pricing many customers out of the market."

– Anthony Fotopoulos, Co-Founder of Keystone Power Holdings

The Background

The case – Filed by two heavily indebted solar companies, the 201 trade petition asks the Trump Administration to impose a drastic mix of tariffs and a floor price on imports of solar cells and modules that would double the price of solar equipment and damage the U.S. solar industry.

Remedy – The Section 201 "Petition for Global Safeguard Relief – Crystalline Silicon Photovoltaic Cells and Modules" seeks a tariff of 40 cents per watt on all foreign-made solar cells and a floor price of 78 cents per watt on all foreign-made panels, doubling the price for the basic ingredients of the broader U.S. solar industry.

The Cost to the Solar Industry – The $23 billion U.S. solar industry employs 260,000 American workers in good-paying jobs across the country. If successful, the protectionist initiative would slash demand for new projects and make solar less competitive with other sources of power, decimating one of America's most promising high-tech growth industries. A recent study showed that an estimated 88,000 jobs, about one-third of the current American solar workforce, would be lost if trade protections proposed in the petition are granted.

Timing – The International Trade Commission (ITC) is currently conducting a review to determine whether there is evidence of injury, of which this hearing is a part of – which is expected to be completed by September 22. If the ITC decides in favor of the petitioners, it must recommend specific trade barriers to President Trump by November 13. The president then has 60 days to act on the recommendation.

ON THE SCHEDULE FOR AUGUST

-

Trade petition Hearing Set – The US International Trade Commission will hold its first hearing on the injury phase of the Solar 201 trade petition filed by Suniva on August 15th beginning at 9:30 a.m. at the USITC in Washington, DC. In the event that the Commission makes an affirmative injury determination or is equally divided on the question of injury in this investigation, a second hearing on the question of remedy will be held beginning at 9:30 a.m. on October 3rd.

USEA Forum to Look at Energy-Water Nexus – The US Energy Association will host a forum on Tuesday August 15th at 10:00 a.m. featuring Verdant Power looking at the water-energy nexus. According to DOE's "The Water Energy Nexus: Challenges and Opportunities" report, several trends are increasing urgency to address the water-energy nexus in an integrated and proactive way: climate change, which is affecting precipitation and temperature patterns throughout the world; population growth and regional migration trends that are likely to increase, which complicate management of energy and water systems; new technologies in energy and water domains that shift water-energy demands; and developments in policies that are introducing additional incentives and challenges for decision making. Verdant Power is addressing the water-energy nexus in an integrated and proactive way resulting from its successful R&D efforts at the company's Roosevelt Island Tidal Energy (RITE) Project in New York City's East River - the world's first grid-connected array of marine renewable energy (MRE) turbines systems. Verdant Power's Trey Taylor will look at their holistic, strategic approach in helping build sustainable communities through MRE-based integrated energy and hybrid power systems, microgrids, and water management.

WCEE Forum To Discuss FERC Issues – On Friday at Noon, the Women's Council on Energy and the Environment will hold another Lunch & Learn presentation by Emma Nicholson, Ph.D., a WCEE member and economist at the Federal Energy Regulatory Commission's (FERC) Office of Energy Policy and Innovation. Nicholson will explain what capacity is, the role it plays in reliability, and how capacity markets in FERC-jurisdictional wholesale electricity markets work.

ACS to Host National Meeting, Innovative Technologies Event – The American Chemical Society hosts its 254th national meeting and expo on August 20th through 24th in DC at the Walter Washington Convention Center focusing on chemistry's impact on the global economy. The week will be filled with more science and chemistry events than anyone could ever want. They will also honor innovative technologies toward the end of the conference and we will have more Information about that closer to the event.

USEA Forum to Look at So Korea Carbon Capture – Next Monday at 12:30 p.m., the US

Energy Association holds a briefing to discuss the current status of carbon capture, utilization and sequestration technology R&D in South Korea. The presentation involves CCUS related R&D budget investments (in terms of scale, allocation and portfolio), main R&D projects, and international cooperation activities. Furthermore, the implementation status of carbon capture, storage, utilization and EOR projects which are operated by institutions and electric power companies will be provided. The speaker will be Sean Sangjoo Baek of the Korea Institute of Energy Technology Evaluation and Planning.

IN THE FUTURE

McIntyre, Glick Head to Confirmation Hearing – The Senate Energy Committee will hold a confirmation hearing on Thursday at 10:00 a.m. for Rich Glick and Kevin McIntyre to join FERC.

Platts Forum to Look at Pipeline Issues – Platts will hold its 12th annual conference in Houston at the Houstonian on September 7th and 8th looking at pipeline development and expansion. During the conference, my colleague George Felcyn and our friend George Stark of Cabot will be featured on a panel on building pipeline support from the grassroots. This workshop will focus on ways for pipeline companies to build public support, shape media coverage, influence regulators and successfully see their planned projects through to completion.

TX Renewable Summit Set – On September 18th – 20th, the Texas Renewable Energy Summit will be held in Austin at Omni Southpark. The summit will offer the latest insights into the market and hear from key players about the key trends impacting renewable energy project development, finance and investment in Texas. The falling price of solar panels is driving a surge in interest by public utilities and corporate customers in contracting for solar power, while a huge queue of wind projects is forming. As much as 16 GW of new wind and solar projects could come to fruition in Texas. However, development and financing challenges must be surmounted to assure project success and bankability. Large quantities of solar may drive the dispatch curve and market prices in unpredictable directions.

Ideas Conference Set – *The Atlantic* and the Aspen Institute holds its 9th annual Washington Ideas conference on September 26-28. "Washington Ideas" convenes the nation's leaders in politics, business, health, science, technology, arts, culture and journalism for three days of can't miss conversation and connections. In the heart of the nation's capital, we will tackle the most consequential issues facing the country and the world.

Coal Event to Hear from Alpha CEO – The 40th annual Coal Marketing Days forum will be held on September 26-27 at the Omni William Penn Hotel in Pittsburgh. The event hosts a variety of coal suppliers and buyers, coal transport companies, and industry-wide analysts who exchange in-depth knowledge on the current state of the global and domestic coal-producing markets and focuses on the current trends and challenges shaping the business. Alpha Natural Resources CEO David Stetson is the keynote

EEI Comms Conference Set – Our friends at EEI hold their annual Communicators Conference On Monday October 2 and Tuesday October 3rd in Washington. Utility Communicators from across the Country will be in town to discuss policy and best practice issues, among other items.

SEJ Set for Pittsburgh – Speaking of Pittsburgh, SEJ's 27th annual conference is set for October 4-8 in Steel City.

Vets in Energy Forum Set – Veterans In Energy will hold a forum on October 5th through 7th at NRECA in Arlington. VIE provide transition, retention and professional development support to the growing population of military veterans who have chosen energy careers. Speakers will include Chris Hale of GI Jobs and Gen. John Allen, former Dep Commander of US Central Command.

Renewable Tour Set for October Shenandoah Fall – JMU's Center for Wind Energy joins the nonprofit American Solar Energy Society (ASES) and hundreds of solar-savvy installers and grassroots organizations throughout America to showcase thousands of solar-powered homes, schools and businesses in Virginia and across North America -- for the 22nd Annual National Solar Tour, the world's largest grassroots solar event. The ASES National Solar Tour shows families and businesses real-life examples of how their neighbors are harnessing free energy from the sun to generate electricity, warm and cool their homes, heat water and slash monthly utility bills.

Subject: Duckworth calls for criminal probe of Icahn's RFS dealings

By Eric Wolff

08/30/2017 02:55 PM EDT

Sen. Tammy Duckworth (D-Ill.) asked the FBI to launch a criminal investigation today into whether Carl Icahn violated conflict of interest laws with his efforts to alter the Renewable Fuel Standard.

"Mr. Icahn appears to have abused his role as a special advisor to the President of the United States on issues relating to regulatory reform by participating personally and substantially, through recommendation and the rendering of advice, on a government matter that directly affects his own financial interests," Duckworth wrote in a letter to the agency.

Senate Democrats have written letters seeking information about Icahn's actions on the RFS, but Duckworth's letter is the first to call for a criminal investigation. Democrats have previously called on the White House and the EPA to provide information about Icahn's role, and they have asked the Securities and Exchange Commission, Commodities Futures Trading Commission and EPA to conduct investigations.

Icahn held the title of special adviser to the president until he gave it up earlier this month. Duckworth cites media reports that Icahn used his position to pressure outside groups to support changes to the RFS that would benefit his refining company CVR Energy. That move, she says, would put him in violation of federal ethics laws.

Driving the Day

Good Sunday morning. HAPPY 31st ANNIVERSARY -- Ronald Reagan signed the Tax Reform Act of 1986 31 years ago today.

COMING UP THIS WEEK -- PRESIDENT TRUMP is going to Capitol Hill on Tuesday to attend the Senate Republican policy lunch. Needless to say, with all that's going on in the Capitol, this will be quite the moment for the president and Senate Republicans. **ALSO THIS WEEK:** The president is meeting with Singapore Prime Minister Lee Hsien Loong on Monday.

SPOTTED at Masseria last night: Singapore Prime Minister Lee Hsien Loong and K.T. McFarland with "a massive security detail," per our tipster.

-- @elizabethjdias: "Spotted: PM of Singapore @leehsienloong enjoying the brunch scene and snapping pics @UnionMarketDC. (He didn't recognize @ZekeJMiller & me)" http://bit.ly/2gyvxeG "He ate brunch at Bidwell, with his entire entourage, and then took photos of several diners on his way out."

ALSO THIS WEEK -- @angelurena: "President @BillClinton will join @PhilMurphyNJ on Tuesday for a GOTV canvass kickoff at the IBEW 164 hall in Paramus, NJ."

TRUMP'S SUNDAY -- "POTUS emerged from the White House at 9:38 am ET wearing a red hat, a white polo and dark pants to go to an undisclosed location but pool would note that today - at a crisp, clear 55 degrees and expected to get warmer - is a perfect day for golf. The motorcade is en route," per pooler BuzzFeed's Adrian Carrasquillo.

MAUREEN DOWD in **PLAINS, GEORGIA: "Jimmy Carter Lusts for a Trump**

Posting": "Most people would run away screaming at the thought of working for a boss who humiliates subordinates in public, throttles them in private, demands constant flattery, spends all day watching cable TV and behaves in a wildly unpredictable way. And yet, there is someone who is eager to work for President Trump. Curious, but it's a Democrat. And even curiouser, it's a fellow member of the presidents club. And curiousest, it's someone whom Trump has disparaged on Twitter as one of the worst presidents in history. ...

"So is it time for another Carter diplomatic mission, and would he do it for Trump, his polar opposite in so many ways? 'I would go, yes,' he said, wearing a big 'JC' belt buckle and sipping coffee in his ranch house, which is chockablock with Carter family paintings and with furniture he made himself, including his four-poster bed. Rosalynn sits nearby, chiming in slyly at moments." http://nyti.ms/2yJO7aE

USA TODAY OP-ED: "President Trump: With tax reform we can make it morning in America again" https://usat.ly/2yFigWd

SCOOP - BRITTANY BRAMELL TO CIA - Bramell -- an Uber, Sen. Lindsey Graham (S.C.) and former Speaker John Boehner (R-Ohio) alum -- is working in public affairs for CIA Director Mike Pompeo. She was most recently assistant administrator for public affairs at TSA.

STORY OF THE DAY -- "O'Reilly Settled New Harassment Claims, Then Fox Renewed His Contract," by NYT's Emily Steel and Mike Schmidt: "Last January, six months after Fox News ousted its chairman amid a sexual harassment scandal, the network's top-rated host at the time, Bill O'Reilly, struck a $32 million agreement with a longtime network analyst to settle new sexual harassment allegations, according to two people briefed on the matter - an extraordinarily large amount for such cases. Although the deal has not been previously made public, the network's parent company, 21st Century Fox, acknowledges that it was aware of the woman's complaints about Mr. O'Reilly. They included allegations of repeated harassment, a nonconsensual sexual relationship and the sending of gay pornography and other sexually explicit material to her ...

"It was at least the sixth agreement - and by far the largest - made by either Mr. O'Reilly or the company to settle harassment allegations against him. Despite that record, 21st Century Fox began contract negotiations with Mr. O'Reilly, and in February granted him a four-year extension that paid $25 million a year. ... In response to questions about why he sent sexually explicit material to Ms. Wiehl, Mr. O'Reilly said that during his time at the network, he had been sent threatening messages almost every day, including some that had obscene material. To deal with this problem, Mr. O'Reilly said, he set up a system in which the material would be forwarded to his lawyers so they could evaluate whether he needed to take any legal action. Mr. O'Reilly said Ms. Wiehl was among those lawyers." http://nyti.ms/2zEeWLb

-- BuzzFeed's @juliareinstein: "Bill O'Reilly's spokesperson says the NYT 'maliciously

smeared' O'Reilly to embarrass him and 'keep him from competing in the marketplace'".

THE BIG QUESTION -- "Can Trump stay on track on tax reform?," by Bernie Becker and Aaron Lorenzo: "Congressional Republicans are readying themselves for a new obstacle on tax reform: President Donald Trump and his penchant for disruptions. There's no doubt that Trump badly wants a tax deal, and he appears very willing to travel the country in support of one. But the GOP lawmakers that are crafting the tax measure are also bracing themselves for the president to potentially disturb their negotiations at any moment, as he has done throughout his nine months in office and this week on a bipartisan Senate agreement to shore up Obamacare insurance markets.

"'Sure, it's going to come,' said Sen. Bob Corker (R-Tenn.), who's been the target of his share of tweets from the president. Sen. Lamar Alexander (R-Tenn.), who brokered the health agreement that Trump has shifted between criticizing and praising, added that he had already told the president that his staying on track on tax reform could be key to getting a landmark achievement. 'If the president of the United States focuses on one thing, with everything he's got, for as long it takes, he can usually get what he wants,' Alexander said.

"Republicans believe everything is falling into place for the first major tax overhaul since 1986. They control Congress and the White House, members are motivated to notch a big legislative victory they can campaign on in 2018 and they are on the cusp of a bicameral budget agreement that would allow them to fully concentrate on a tax package instead of the Senate passing a budget.

"But there are already signs that Trump could waver if a tax bill proposes to cut tax incentives in exchange for lower rates, a difficult process that could end up raising taxes on various industries or groups of taxpayers. The president was reportedly not happy that the GOP proposal to end the deduction for state and local taxes, a benefit largely used by upper-income taxpayers, would also hurt some in the middle class." http://politi.co/2h0qEIC

DAY SEVEN -- @realDonaldTrump at 8:02 a.m.: "Wacky Congresswoman Wilson is the gift that keeps on giving for the Republican Party, a disaster for Dems. You watch her in action & vote R!"

HOW WE GOT HERE -- "The cascade of missteps that turned one White House error into a messy week," by WaPo's Phil Bump: http://wapo.st/2hWVGR9

-- MIAMI HERALD: "Amid political controversy, hundreds attend as Miami Gardens soldier is laid to rest," by Elizabeth Koh: "Sgt. La David Johnson was a family man first and foremost, and on Saturday that was how the Miami Gardens soldier was remembered before he was laid to rest. ...

"The controversy over Trump's words were still fresh when people gathered in the rows of Christ The Rock Church for the second day in a row to honor Johnson. But

there was no mention of the president from any of the speakers, including U.S. Rep. Frederica Wilson, D-Miami Gardens, who made the condolence call public. Instead, she focused on Johnson and the composure of his widow, Myeshia, who Wilson said had moved the nation to tears when she greeted her husband's remains at Miami International Airport on Tuesday.

"'**His vow of courage and patriotism will be remembered** for generations to come,' she said. There was only one nod to the circumstances of Johnson's death, in an opening prayer that asked for 'clarity for the circumstances surrounding his death.' Wilson, who has sparred publicly with the president since the call was reported, was among several local and federal officials who attended the service, including Cooper City Mayor Greg Ross, Miami-Dade commissioners Barbara Jordan and José Diaz, and U.S. Sen. Marco Rubio." http://hrld.us/2yGJNbN

****** **A message from JPMorgan Chase & Co.: What's the Word** It's been more than 30 years since we reformed our tax code, putting good jobs and higher wages at risk. In fact, 90% of CEOs believe that inaction by lawmakers could slow hiring and wage growth. Learn more about what tax reform could mean for American workers: http://politi.co/2gBVNBD ******

BEHIND THE SCENES -- "Donald Trump Is Rush-Shipping Condolences to Military Families," by The Atlantic's Lena Felton and Taylor Hosking: "Timothy Eckels Sr. hadn't heard anything from President Trump since his son Timothy Eckels Jr. was killed after a collision involving the USS John S. McCain on August 21. But then, on October 20, two days into the controversy over the president's handling of a condolence call with an American soldier's widow, Eckels Sr. received a United Parcel Service package dated October 18 with a letter from the White House. 'Honestly, I feel the letter is reactionary to the media storm brewing over how these things have been handled,' Eckels told The Atlantic." http://theatln.tc/2yGDtB6

ON RUSSIA - "Trump pledges at least $430,000 of his own money to help cover aides' legal costs related to Russia probes," by WaPo's John Wagner: "President Trump plans to spend at least $430,000 of his personal funds to help cover the mounting legal costs incurred by White House staff and campaign aides related to the ongoing investigations of Russian meddling in last year's election, a White House official said. The Washington Post reported last month that the [RNC] had spent roughly that amount to pay lawyers representing Trump and his eldest son, Donald Trump Jr., in the multiple investigations. The White House official said Trump's pledge is not meant as a reimbursement to the RNC, but that it does not preclude Trump from doing that at a later time or for increasing the amount available for his aides." http://wapo.st/2isb77Z

WAPO's ASHLEY PARKER and **PHIL RUCKER --** "In one of his many private chats with Fox News personality Sean Hannity, Trump recently asked, 'Is Steve [Bannon] still with me?' according to two people familiar with the conversation." http://wapo.st/2gYmvF1

NYT'S SHERYL STOLBERG -- "McCain in Twilight: An Unfettered Voice Against Trumpism": "'Even if John were not ill, with his experience and age, there is a part of you that I think begins to focus on your legacy,' said former Vice President Joseph R. Biden Jr., a close friend of Mr. McCain's. But with cancer, Mr. Biden said, 'he's in the fight of his life, and he knows it.' Having won re-election last year, Mr. McCain was already free to speak his mind. Were he to run again in 2022, he would be 86, and friends say that his 2016 campaign was almost certainly his last. But colleagues see a shift since his diagnosis. 'Do I hear in his voice a little bit more expression of grander ideals? I do,' said Senator Bob Corker, Republican of Tennessee. 'With all that's happened to him, and the knowledge of where he is, I sense a little bit more of that." http://nyti.ms/2yGt8VE

NYT, A1 -- JEREMY PETERS in Laurel, Mississippi: **"Conservatives, With Bannon's Help, Look for Revenge in Mississippi"** http://nyti.ms/2h05c6x

-- "Bannon expands his target list into North Carolina," by McClatchy's Katie Glueck and Brian Murphy. http://bit.ly/2xe0OGT

PETE WEHNER in the NYT, "Going Against the Republican Herd": "Many Republican voters have, at least for now, jettisoned traditional conservatism in favor of the Trump-Bannon brand of ethnonationalism. They have turned inward instead of outward, they have embraced white identity politics as a matter of course and they have developed a disdain for the hard, intricate work of governing. ... There is a nihilistic strain coursing through the veins of a significant number of people on the American right. They delight in Mr. Trump's effort to annihilate truth and peddle conspiracy theories, and they draw energy and purpose from the unsettling effect he has on the nation as a whole." http://nyti.ms/2xdnCqj

GABE DEBENEDETTI and **ISAAC DOVERE** in Las Vegas: **"DNC reeling financially after brutal 2016":** "The [DNC] is reeling, facing a turnaround that's proving a much bigger lift than anyone expected as it struggles to raise enough money to cover its basic promises. Many donors are refusing to write checks. And on-the-ground operatives worry they won't have the resources to build the infrastructure they need to compete effectively in next year's midterms and in the run-up to 2020. ...

"'Donors, small and large, are so over the party,' said Nebraska party chair Jane Kleeb, summing up the problem facing DNC chairman Tom Perez and his counterparts in the states. Kleeb, who is working on grassroots fundraising efforts for the committee, said she believes the money will come eventually. 'Everybody thinks that some magic three-page document and some magic tagline is going to turn everything around for us,' she added. 'But this is very typical work.'" http://politi.co/2zsauhH

ABOUT LAST NIGHT -- "Former presidents call for unity at hurricane aid concert," by AP's Will Weissert in Austin: "The five living former presidents put aside politics and appeared together for the first time since 2013 at a concert on Saturday to raise money for victims of devastating hurricanes in Texas, Florida, Louisiana, Puerto Rico and the

U.S. Virgin Islands. Democrats Barack Obama, Bill Clinton and Jimmy Carter and Republicans George H.W. and George W. Bush gathered in College Station, Texas, home of Texas A&M University, to try to unite the country after the storms. ...

"Grammy award winner Lady Gaga made a surprise appearance at the concert that also featured country music band Alabama, Rock & Roll Hall of Famer 'Soul Man' Sam Moore, gospel legend Yolanda Adams and Texas musicians Lyle Lovett and Robert Earl Keen. The appeal backed by the ex-presidents has raised $31 million since it began on Sept. 7 ... President Donald Trump offered a video greeting that avoided his past criticism of the former presidents and called them 'some of America's finest public servants.'" http://bit.ly/2yZBskP ... ***Trump's video message to the crowd*** http://bit.ly/2zFXAh6

INSTAPIC DU JOUR -- Pierce Bush (@pdiddyman): "Family pic with all living former US Presidents #oneAmerica" http://bit.ly/2zsMwCV

-- IN THE AIR: Here is a Dassault Falcon 900 that flew from DCA to College Station, Texas yesterday, then onto Dallas. http://bit.ly/2zu6bCJ

FOR YOUR RADAR -- "U.S.-allied force takes Syria's largest oil field from IS," by AP's Sarah El Deeb in Beirut: "The U.S.-led coalition said allied fighters captured Syria's largest oil field from the Islamic State group on Sunday, marking a major advance against the extremists in an area coveted by pro-government forces. With IS in retreat, the Kurdish-led Syrian Democratic Forces and the Syrian government have been in a race to secure parts of the oil-rich Deir el-Zour province along the border with Iraq." http://bit.ly/2yKjbHh

-- AP at 8:44 a.m.: "JOHANNESBURG (AP) - Head of World Health Organization withdraws appointment of Zimbabwe President Robert Mugabe as a goodwill ambassador." ***The WHO statement*** http://bit.ly/2xW4wJH

SUNDAY BEST --

-- JOHN DICKERSON speaks with **OMB DIRECTOR MICK MULVANEY** on **"CBS' FACE THE NATION": MULVANEY:** "Well, you're not giving up entirely on spending. It's just you have to sit there and go, 'Okay, there's two parts to this equation.' There isn't the political will on the hill right now to--" **DICKERSON:** "Why not? You're in charge. Republicans are in charge. They've run on this for so long. Why no will?" **MULVANEY:** "It's difficult I think to cut spending in Washington. It really, really is."

-- DANA BASH spoke to **SENATE MAJORITY LEADER MITCH MCCONNELL** on **CNN'S "STATE OF THE UNION": BASH:** "What do you make of Bannon recruiting candidates with the explicit goal, sir, of taking you out as leader?" **MCCONNELL:** "Well, you know, this element has been out there for a while. They cost us five Senate seats in 2010 and 2012 by nominating people who couldn't win in November. In order for the president's agenda to advance, we have to be able to elect people who support the

agenda. And so these interparty skirmishes are all about whether or not we can nominate a candidate who can win in November."

-- DANA PERINO spoke to **SARAH HUCKABEE SANDERS** on **"FOX NEWS SUNDAY": PERINO:** "Recently in the Atlantic Magazine, Glenn Thrush said he thought the administration's apparent tension with the press was overstated. Would you agree?" **SANDERS:** "No. I know Glenn well, but I think that there's always going to be tension between whatever administration is in place at that time with the White House press corps. But I do think there is a heightened tension certainly between this administration and the press. ... I think you can see that in the coverage. I mean I've been around press and working politics my entire life, and I've never experienced the level of kind of hostility that I think we see day to day."

-- DAVID PETRAEUS to **MARTHA RADDATZ** on **ABC'S "THIS WEEK":** "Arguably, the most important threat the United States faces is not that of Russia, Iran, North Korea, or even Chinese competition, or ISIS, it's parochialism here at home, especially in this city, which is preventing us from resolving issues that could allow us to capitalize on extraordinary opportunities."

-- ON NBC'S "MEET THE PRESS," TRUMP'S GOLF BUDDY: SEN. LINDSAY GRAHAM (R-S.C.): "I think that the Trump administration is slow when it comes to Russia. They have a blind spot on Russia I still can't figure out."

PHOTO DU JOUR: Former presidents Barack Obama, Bill Clinton, George W. Bush, George H.W. Bush and Jimmy Carter gather on stage during a hurricanes relief concert in College Station, Texas on Oct. 21. | LM Otero/AP Photo

TRUMP'S WASHINGTON -- "Trump Pick, an Industry Insider, Shapes Rules on Toxic Chemicals," by NYT's Eric Lipton: "For years, the Environmental Protection Agency has struggled to prevent an ingredient once used in stain-resistant carpets and nonstick pans from contaminating drinking water. The chemical, perfluorooctanoic acid, or PFOA, has been linked to kidney cancer, birth defects, immune system disorders and other serious health problems. So scientists and administrators in the E.P.A.'s Office of Water were alarmed in late May when a top Trump administration appointee insisted upon the rewriting of a rule to make it harder to track the health consequences of the chemical, and therefore regulate it.

"The revision was among more than a dozen demanded by the appointee, Nancy B. Beck, after she joined the E.P.A.'s toxic chemical unit in May as a top deputy. For the previous five years, she had been an executive at the American Chemistry Council, the

chemical industry's main trade association." http://nyti.ms/2gt0Wvl

NEW -- "NAACP names new leader for more active future," by AP's Jesse J. Holland: "Derrick Johnson, 49, of Jackson, Mississippi, was hired as the NAACP's 19th president and CEO after having served as interim leader since July and previously as vice chairman of the NAACP board of directors. Johnson, in an interview with The Associated Press, said the NAACP will be much more politically active in the coming years and will alter its nonprofit status so it can more effectively lobby for its members' positions." http://bit.ly/2yK1Y0n

****** **A message from JPMorgan Chase & Co.: What's in it for me?** America's tax system is outdated and complex, and it's putting American jobs and wages at risk. But that doesn't mean there isn't cause for optimism - according to a Business Roundtable CEO survey, tax reform would prompt more than 75% of business leaders to increase investment and expand hiring. And it's not just important in the boardroom. As JPMorgan Chase Chairman and CEO Jamie Dimon said, "Under our current system, workers bear up to 75% of the corporate tax burden through lower wages. I believe that tax reform should go further than that to boost wages. It should also be used to do more for lower- and middle-income workers by expanding programs such as the earned income tax credit, which already lifts more than 7.3 million workers out of poverty." Learn more about what tax reform can mean to the American economy and the American worker: http://politi.co/2wSCuu0 ******

SPORTS BLINK -- DANIEL LIBIT PROFILE - "The Blogger Who Became One University's Scold," by NYT's Marc Tracy: "Last January, a website called NM Fishbowl published the explosive results of a public-records request for anonymous exit interviews of athletes at the University of New Mexico. Lobos players, who compete mainly in the Division I Mountain West Conference, said that sports had held them back in their studies. Coaches had mocked female athletes' weights, they said, and the athletic department provided unsafe transportation to events for lower-profile teams. ... [T]he site ... is based in Chicago, not New Mexico, and staffed by one writer: Daniel Libit, a former political reporter." http://nyti.ms/2yGqdfA ... ***Libit - "The Petty Politics of Loboland"*** http://bit.ly/2wAL9n3

CHRIS FRATES interviews Oscar-nominated "American Sniper" screenwriter Jason Hall about his new film "Thank You for Your Service," which is about a group of combat vets' struggles to integrate back into the civilian world. Frates also talks to Center for American Progress President Neera Tanden on "Politics Inside Out with Chris Frates." The show airs Sunday at 1 p.m. and Monday at 2 p.m. on SiriusXM channel 124. ***The film's trailer*** http://bit.ly/2yAq660 ... ***Clips for Playbookers -- Hall on the importance of bringing combat veterans' inner life to the screen:*** https://goo.gl/7oL1gX ... ***Tanden says facts still matter in the age of Trump:*** https://goo.gl/37hQzY ... ***How growing up on welfare shaped her politics:*** https://goo.gl/EjVPBZ

BONUS GREAT WEEKEND READS, curated by Daniel Lippman:

--"The Secretive Family Making Billions from the Opioid Crisis," by Christopher Glazek in Esquire - per TheBrowser.com's description: "The [Sackler] family's leaders have pulled off three of the great marketing triumphs of the modern era: The first is selling OxyContin; the second is promoting the Sackler name; and the third is ensuring that, as far as the public is aware, the first and the second have nothing to do with one another." http://bit.ly/2yDv935

--"A New Book About Formative Literary Friendships," by Ann Hulbert in November's Atlantic, reviewing "A Secret Sisterhood: The Literary Friendships of Jane Austen, Charlotte Brontë, George Eliot, and Virginia Woolf," by Emily Midorikawa and Emma Claire Sweeney: "Who would have guessed that George Eliot, in replying to Harriet Beecher Stowe's very first letter to her, frankly confessed her 'paralyzing despondency' about her own work?" http://theatln.tc/2hXQKeL ... ***$18.36 on Amazon*** http://amzn.to/2yGsLu2

--"Joni Mitchell: Fear of a Female Genius," by Lindsay Zoladz in The Ringer: "One of the greatest living artists in popular music still isn't properly recognized. Joni transcends gender, genre, and time. Here's why." http://bit.ly/2xVewhH

--"North Korea's Deadly Dictator" -- PBS Frontline: "Who killed Kim Jong-un's half brother, Kim Jong-nam, and what does the murder reveal about the North Korean leader and his regime?" http://to.pbs.org/2xWVex5

--"Off the African coast, a new tool in the fight against climate change: drones," by CBS News' Jacqueline Alemany: http://cbsn.ws/2xW79Lu

--"The Electronic Computers, Part 2: Colossus" - Creatures of Thought: "In 1938 the head of the British Secret Intelligence Service quietly bought up a sixty acre estate fifty miles from London. ... The estate, known as Bletchley Park, became the center of Britain's code-breaking effort during World War II. It is perhaps the only place in the world that is famous for cryptography." http://bit.ly/2yi2Wxm

--"Double Exposure: Jean-Pierre Melville," by Adrien Bosc in Tablet Magazine: "The ambiguities and darkness of Nazi-occupied France propelled him to flee his country, take a new name, fight in the Resistance, and then invent film noir. But the past continued to haunt him." http://bit.ly/2yKfy47

--"The Making and Unmaking of Iggy Azalea," by Clover Hope in Jezebel: "[H]er fast-track American success story [has] turned into a cautionary tale. Iggy became a punchline and went from being hailed as a white rap savior-a potential salve in the lineage of bad white rappers-to, three years later, being a digital-era Vanilla Ice, reduced to a viral talking point." http://bit.ly/2xtkHwh

--"Welcoming Our New Robot Overlords," by Sheelah Kolhatkar in The New Yorker: "Once, robots assisted human workers. Now it's the other way around." http://bit.ly/2yY38pV

--"The Tubbs fire: How its deadly march from Calistoga to Santa Rosa unfolded," by the Santa Rosa Press Democrat's Julie Johnson: http://bit.ly/2yH7XCV

--"The Only Person Who Knew Both Kennedy and His Killer," by John Meroney in Nov. 2013 in the Atlantic: "While in the Soviet Union, Priscilla Johnson McMillan met a young American in her hotel who was trying to defect. His name was Lee Harvey Oswald." http://theatln.tc/2zGv7rr

--"Love in the Time of Robots," by Alex Mar in Wired: "Hiroshi Ishiguro builds androids. Beautiful, realistic, uncannily convincing human replicas. Academically, he is using them to understand the mechanics of person-to-person interaction. But his true quest is to untangle the ineffable nature of connection itself." http://bit.ly/2gtGzOX

--"When the Revolution Came for Amy Cuddy," by Susan Dominus on the cover of today's N.Y. Times Magazine: "As a young social psychologist, she played by the rules and won big: an influential study, a viral TED talk, a prestigious job at Harvard. Then, suddenly, the rules changed." http://nyti.ms/2zFJ5tJ ... ***The cover*** http://bit.ly/2yGgJRF

Subject: Pruitt says climate study doesn't change his rollback plans

By Emily Holden

11/08/2017 11:21 AM EDT

EPA Administrator Scott Pruitt said a U.S. government report showing human activity is the main cause of climate change will not affect his decision to withdraw the Clean Power Plan, according to an interview with USA Today.

Pruitt proposed rolling back President Barack Obama's standards for power plants last month and said his agency is reconsidering the extent of its authority to regulate greenhouse gases.

"We're taking the very necessary step to evaluate our authority under the Clean Air Act and we'll take steps that are required to issue a subsequent rule. That's our focus," Pruitt told USA Today. "Does this report have any bearing on that? No it doesn't. It doesn't impact the withdrawal and it doesn't impact the replacement."

EPA is expected to release an advanced notice of proposed rulemaking weighing agency authority and considering a replacement that would allow states to set coal plant efficiency standards, rather than spurring them to shift toward more natural gas and renewable power.

Pruitt has questioned how much humans contribute to rising temperatures, arguing it can't be measured with precision and might not pose the risks most climate scientists expect. The National Climate Assessment, compiled by 13 agencies and reviewed by the National Academies, contradicts him, finding that human activity is "extremely likely" to be the dominant cause of climate change that is already intensifying extreme weather.

WHAT'S NEXT: EPA is taking comment on its proposed Clean Power Plan withdrawal through Jan. 16.

Driving the Day

Good Monday morning. Welcome to the 200th day of President Donald Trump's presidency. **THE PRESIDENT** has no public events scheduled today. He's in Bedminster, New Jersey.

-- FIRST IN PLAYBOOK: THE DCCC hits the GOP: **"House Republicans' 200 Day Agenda Goes Down in Spectacular Failure"** http://politi.co/2wyOEry

WAPO OPINIONS FEATURE -- "PRESIDENT TRUMP'S SECOND 100 DAYS: In his words and ours" http://wapo.st/2vEV630

WHAT TRUMP IS FOCUSED ON -- @realDonaldTrump at 9:22 p.m.: "Just completed call with President Moon of South Korea. Very happy and impressed with 15-0 United Nations vote on North Korea sanctions." ... **at 9:18 p.m.:** "The Fake News refuses to report the success of the first 6 months: S.C., surging economy & jobs,border & military security,ISIS & MS-13 etc."

BREAKING OVERNIGHT -- "MANILA, Philippines (AP) - Tillerson says he's told Russia that U.S. will respond by Sept. 1 to Moscow's move to expel U.S. diplomats."

WAPO'S CAROL MORELLO in **MANILA:** "Secretary of State Rex Tillerson said Monday that North Korea could show it is ready for negotiations by stopping missile launches, and said he told Russian diplomats that the Kremlin's meddling in U.S. elections had created 'serious mistrust' of them among Americans.

"In remarks to reporters at a regional conference in which North Korea's missile and

nuclear tests have dominated discussions, Tillerson held out an olive branch to Pyongyang by saying the United States will sit down for talks 'when conditions are right' to discuss denuclearization and steps to ensure North Korea can feel secure and prosperous. 'The best signal that North Korea could give us that they're prepared to talk would be to stop these missile launches,' he said. 'We've not had any extended period of time where they have not taken some type of provocative action by launching ballistic missiles. I think that would be the first and strongest signal they could send to us, would be to stop these missile launches.'" http://wapo.st/2ug2GNM

NOT SO FAST ... -- AP at 5:36 a.m.: **"North Korea vows harsh retaliation against new UN sanctions":** "North Korea vowed Monday to bolster its nuclear arsenal and launch 'thousands-fold' revenge against the United States in response to tough U.N. sanctions imposed after its recent intercontinental ballistic missile launches." http://bit.ly/2vwwfOY

FOR YOUR RADAR -- BREITBART is continuing to go after H.R. McMaster: **"McMaster Worked at Think Tank Backed by Soros-Funded Group that Helped Obama Sell Iran Nuclear Deal"** http://bit.ly/2vdC3dO

THE WASHINGTON POST and the **NYT** both have stories today about mistruths coming from the White House. **WAPO's MARGARET SULLIVAN**, in the style section: "**Here's a sword, General Kelly. Use it on the White House lies."** http://wapo.st/2vaUbXg ... **NYT's SHERYL STOLBERG**: **"Many Politicians Lie. But Trump Has Elevated the Art of Fabrication."** http://nyti.ms/2vbDRWt

A TAX REFORM SPEED BUMP -- "Tax writers see peril in Trump's Obamacare persistence," by Bernie Becker and Aaron Lorenzo: "Republicans acknowledge that the aggressive timeline they have set up for overhauling the tax code this fall leaves them little room for error. There could be one problem with that: Obamacare isn't going away. President Donald Trump has dropped hints that he might stop the Affordable Care Act's cost-sharing reduction payments, through which federal funds flow to insurance companies to keep down coverage costs for low-income people. At the same time, Sen. Lamar Alexander (R-Tenn.), the health committee chairman, is working with Democrats on potential measures to shore up the health care law.

"That's left key Senate tax writers frustrated that there's potentially another issue to take precious time away from their tax reform efforts. Senators left Washington on Thursday for a monthlong recess and will return to a September already overloaded with legislative deadlines. With key Trump administration officials and some congressional leaders having said they want to get a tax revamp signed into law this year, tax writers believe they'll need to make serious progress starting next month." http://politi.co/2wyRY5U

-- A REMINDER: Congress has still not passed a budget. That's a key precursor for tax reform.

-- ON THE HOMEFRONT: "Congressional Recess, Full Plate Keep the Heat on GOP Lawmakers: Pressure from constituents over health care could make it hard to focus on a tax overhaul," by WSJ's Siobhan Hughes and Janet Hook: "Congressional Republicans plan to use the next four weeks away from Washington making a public case for a sweeping rewrite of the tax code, an ambitious legislative undertaking they hope will heal divisions that opened when the party's signature health-care bill collapsed.

"But at home in their districts, they face pressures that could make it hard to focus on taxes. Many of their constituents and party activists blame Congress, more than President Donald Trump, for the health-care stalemate and are pressing them to find a resolution. And before they can do anything, lawmakers face a load of time-sensitive fiscal business: hashing out a budget, funding the government and raising the federal debt limit. The result is a party sent home for a month-long recess to face mixed messages from voters and an uncertain path forward in the fall.

"How Republican lawmakers respond to such frustration-and whether they move past the health defeat or get swept back into that fight-will determine whether the GOP-led Congress returns as a unified force. August is the longest recess of the year, and constituents can both energize and draw energy from lawmakers who appear at town halls and other meetings." http://on.wsj.com/2vw7LFG

-- ONE NOTE: It's not really constituents who need convincing that rewriting the tax code is the right thing. Most people who file taxes think it's confusing and burdensome. It's individual lawmakers who will get tripped up on the details of rewriting the code.

2018 WATCH -- "Chance to be governor lures members from House," by Heather Caygle and Kevin Robillard: "Fully half of the 18 members leaving the House next year jumped in order to run for governor in their states, looking to trade in legislative gridlock for executive orders - and the chance to play a dominating role in redrawing their colleagues' districts in four years.

"One House member, Rep. Ed Perlmutter (D-Colo.), has since dropped out of the governor's race in his state. But even so, more representatives are already seeking governorships than the seven who ran in 2010, the last time there were as many open gubernatorial races as there will be next year. A handful of others are also mulling runs of their own.

"But most of the aspiring governors are vacating the comfy confines of safe congressional districts for what, historically, has been a bad bet. The last time this many sitting representatives ran for governor, in 2006, twice as many lost as won. Lawmakers are motivated partly by the quest for more power - being one in a village of 435, especially in the Democratic minority, only gets you so far. They are also seeking the chance to assist or resist the Trump administration, depending on their party, in implementing new policy throughout the states. For Democrats in particular, the choice between another term in the House minority or the chance to lead their home states can

be an easy one." http://politi.co/2vbBXVT

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

BEYOND THE BELTWAY -- POLITICO'S ADAM BEHSUDI in **EAGLE GROVE, IOWA: "Trump's Trade Pullout Roils Rural America":** "On a cloud-swept landscape dotted with grain elevators, a meat producer called Prestage Farms is building a 700,000-square-foot processing plant. The gleaming new factory is both the great hope of Wright County, which voted by a 2-1 margin for Donald Trump, and the victim of one of Trump's first policy moves, his decision to pull out of the Trans-Pacific Partnership.

"For much of industrial America, the TPP was a suspect deal, the successor to the North American Free Trade Agreement, which some argue led to a massive offshoring of U.S. jobs to Mexico. But for the already struggling agricultural sector, the sprawling 12-nation TPP, covering 40 percent of the world's economy, was a lifeline. It was a chance to erase punishing tariffs that restricted the United States -- the onetime 'breadbasket of the world' -- from selling its meats, grains and dairy products to massive importers of foodstuffs such as Japan and Vietnam.

"The decision to pull out of the trade deal has become a double hit on places like Eagle Grove. The promised bump of $10 billion in agricultural output over 15 years, based on estimates by the U.S. International Trade Commission, won't materialize. But Trump's decision to withdraw from the pact also cleared the way for rival exporters such as Australia, New Zealand and the European Union to negotiate even lower tariffs with importing nations, creating potentially greater competitive advantages over U.S. exports." http://politi.co/2wm05n4

PROMISE KEPT -- NYT A1, "Under Trump, Coal Mining Gets New Life on U.S. Lands," by Eric Lipton and Barry Meier in Decker, Montana: "The Trump administration is wading into one of the oldest and most contentious debates in the West by encouraging more coal mining on lands owned by the federal government. It is part of an aggressive push to both invigorate the struggling American coal industry and more broadly exploit commercial opportunities on public lands. The intervention has roiled conservationists and many Democrats, exposing deep divisions about how best to manage the 643 million acres of federally owned land - most of which is in the West - an area more than six times the size of California.

"Not since the so-called Sagebrush Rebellion during the Reagan administration have companies and individuals with economic interests in the lands, mining companies among them, held such a strong upper hand. ... During the Obama administration, the Interior Department seized on the issue of climate change and temporarily banned new coal leases on public lands as it examined the consequences for the environment. The

Obama administration also drew protests from major mining companies by ordering them to pay higher royalties to the government.

"President Trump, along with roundly questioning climate change, has moved quickly to wipe out those measures with the support of coal companies and other commercial interests. Separately, Mr. Trump's Interior Department is drawing up plans to reduce wilderness and historic areas that are now protected as national monuments, creating even more opportunities for profit." http://nyti.ms/2ugvRAu

GOING SOLO -- "Trump's unprecedented hands-on messaging carries risks," by AP's Jonathan Lemire: "For the third time in six months, President Donald Trump is on the hunt for a new communications director. But in practice, the job is filled. It's Trump who's the White House's leading expert and the final word on what and how he communicates with the public. Despite decrying most negative media coverage as 'fake news' and personally insulting members of the media, he has inserted himself into the White House's press operations in an unprecedented fashion for a president.

"Trump has dictated news releases and pushed those who speak for him to bend the facts to bolster his claims. He has ignored the advice of his legal team and thrown out carefully planned legislative strategies with a single 140-character tweet. His direct, hands-on style helped him win the White House and still thrills his supporters. It also, however, poses increasing political and potentially legal risks. The clearest example is his involvement in crafting a statement for son Donald Jr. about a meeting with a Kremlin-connected lawyer. That declaration was quickly proven erroneous and raised questions about whether the president was trying to cover for his son." http://bit.ly/2uy2tF2

THE JUSTICE DEPARTMENT'S NEW MANDATE -- BuzzFeed's Jason Leopold **(@JasonLeopold):** "[H]ere is a media leak questionnaire agencies fill out and send to DOJ when classified info is published" http://bit.ly/2vEwXJY

-- NYT: "Reporters Not Being Pursued in Leak Investigations, Justice Dept. Says" http://nyti.ms/2uhLjQL

FOGGY BOTTOM READ -- NYT A1, "Diplomats Question Tactics of Tillerson, the Executive Turned Secretary of State," by Gardiner Harris: "Several times a week the State Department sends a greeting to a foreign country on the occasion of its national day. By tradition, the salutations have been written by low-level diplomats and routinely approved by their superiors. But not anymore. Now the messages go through Secretary of State Rex W. Tillerson's office, where his top assistants insist on vetting them, and where they often sit for weeks before coming back with extensive editing changes, according to several department officials. To these officials, it is a classic case of micromanagement - and emblematic of the way Mr. Tillerson has approached running the State Department. ...

"[H]e has failed to nominate anyone to most of the department's 38 highest-ranking

jobs, leaving many critical departments without direction, while working with a few personal aides reviewing many of the ways the department has operated for decades rather than developing a coherent foreign policy. ... Mr. Tillerson's diplomatic accomplishments have been mixed at best. His biggest achievement came Saturday when the United Nations Security Council voted unanimously to impose sanctions on North Korea for its recent tests of intercontinental ballistic missiles, which required bringing along the Russians and the Chinese. But his effort to resolve the struggle between Saudi Arabia, along with other Sunni powers, and Qatar has made little progress; his department is considered dysfunctional by the Europeans; and policy is entrusted to a tiny group. ...

"Senior diplomats have left in droves, depleting the building of historical memory. ... In another example of just how much Mr. Tillerson is sweating the details, he recently insisted that his staff members submit a memorandum justifying each proposed hiring of a diplomatic spouse in the embassies in Baghdad and Kabul, Afghanistan. Such spousal jobs are an important means of encouraging diplomats to take hardship posts and generally save the department the expense of sending and housing another American independently. Mr. Tillerson personally reviewed the necessity for every one of those jobs." http://nyti.ms/2vFUaMK

PLAYBOOK ON THE ROAD -- With everyone headed out of town on vacation, or back to their districts, we are starting a new August feature: Playbook on the Road. Send us a photo of yourself, or others reading Playbook during your travels this month and we will feature five photos every Friday. Participating Playbookers will automatically be entered into a drawing to win an original cartoon by POLITICO's Pulitzer winning cartoonist Matt Wuerker. Email photos to Daniel at daniel@politico.com . Or, Tweet them to @playbookplus with the hashtag #PlaybookLoyal.

DAILY MAIL -- "Cheery Hillary and Bill attend hedge-fund billionaire daughter's wedding alongside guests Huma Abedin AND Tiffany Trump in NYC": "The former President and First Lady were all smiles while at the wedding of Sophie Lasry, the daughter of Avenue Capital Group founder Marc Lasry, on Sunday night." Sophie Lasry, in business development at her father's firm, married investor Alex Swieca, a former college quarterback for the University of Michigan Wolverines. ***20 pix on one page*** http://dailym.ai/2hBOi0L

Playbook Reads

PHOTO DU JOUR: State Secretary Rex Tillerson links arms with ASEAN foreign ministers before the 10th Lower Mekong Initiative Ministerial Meeting, part of the Association of Southeast Asian Nations Regional Forum, in Manila, Philippines on Aug. 6. | Mohd Rasfan/Pool Photo via AP

IMPORTANT READ -- "U.S. Troops Train in Eastern Europe to Echoes of the Cold War," by Eric Schmitt in the Novo Selo Training Range, Bulgaria: "After more than a decade spent fighting Islamic insurgents in Iraq and Afghanistan, the United States Army is scrambling to relearn Cold War-era skills to confront potential threats from Russia here in Eastern Europe, territory formerly defended by the Soviet Army. The adjustments to the new threats are wide ranging. Hundreds of desert-tan battle tanks and armored fighting vehicles must be repainted dark green to blend into European terrain. Soldiers accustomed to operating from large, secure bases in Iraq and Afghanistan must now practice using camouflage netting to disguise their positions and dispersing into smaller groups to avoid sophisticated surveillance drones that could direct rocket or missile attacks against personnel or command posts.

"American troops no longer have unfettered right of way in the air or priority access on the ground, as they did across Iraqi river valleys and Afghan mountain ranges. In today's Europe, borders count in all matters military. On a recent Friday, an American Army supply convoy rushing ammunition from Germany to Romania was held up at the Austrian border until the next Monday by restrictions on military convoys during busy summer vacation travel periods." http://nyti.ms/2vaPc90

REMEMBERING MARK WHITE -- HOUSTON CHRONICLE: "Former Texas Gov. Mark White dead at 77": "As the 43rd governor of Texas, Mark White ushered in education reforms that still impact schools, including limits on elementary class size, 'no pass, no play' policy for high school athletes, and the first-ever statewide testing standards. For White, who died at his Houston home on Saturday at 77, those accomplishments were the highlight of a political career guided by a principle taken from Sam Houston: 'Do right and risk the consequences.'" http://bit.ly/2flDcwd

LAW AND ORDER -- "With rising homicides in big cities, Republican governors intensify police patrols," by WaPo's Tim Craig and Emma Ockerman in St. Louis: "On orders from [Missouri] Republican Gov. Eric Greitens ... about two dozen troopers have laid claim to St. Louis highways that slice through some of America's most dangerous neighborhoods, a move that has sparked concern among residents wary of heavy policing. It's the first time in decades that state troopers have patrolled the city, Greitens said. ... [I]n an era of increasingly polarized views on policing, Missouri's intervention is unsettling some local residents who question the governor's strategies and tone. How elected leaders define a 'gang,' use the word 'criminal' and deputize outside law enforcement agencies are emerging as flash points. The debate threatens to drive another wedge between some officials in heavily Democratic cities and GOP leaders in statehouses and in Washington." http://wapo.st/2hBbXhF

SUSAN GLASSER -- "What's It Like to See a Democracy Destroyed?": "Hannah Dreier spent years covering the implosion of Venezuela [for the AP]. Her takeaway is a sobering one: There's no rule that says that a miserable situation has to end, just because it's too miserable.'" http://politi.co/2vwzXZj ... *Dreier's last piece for the AP --* ***"Departing AP reporter looks back at Venezuela's slide"*** http://bit.ly/2vdThb7 ... ***Subscribe to Glasser's podcast "The Global Politico"*** http://apple.co/2ki98RY

-- "Maduro vows 'maximum penalty' for attack on Venezuela base," by AP's Juan Carlos Hernandez in Valencia, Venezuela: "President Nicolas Maduro vowed that a band of anti-government fighters who attacked a Venezuelan army base will get the 'maximum penalty' as his administration roots out his enemies. Troops killed two of the 20 intruders who slipped into the Paramacay base in the central city of Valencia early Sunday, apparently intent on fomenting a military uprising, Maduro said in his weekly broadcast on state television. One of the invaders was injured, seven captured and 10 got away, the embattled leader said." http://bit.ly/2vwtvRK

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

WHAT WALL STREET IS READING -- "Regulators' Penalties Against Wall Street Are Down Sharply in 2017," by WSJ's Jean Eaglesham, Dave Michaels and Danny Dougherty: "Wall Street regulators have imposed far lower penalties in the first six months of Donald Trump's presidency than they did during the first six months of 2016, a comparable period in the Obama administration, according to a Wall Street Journal analysis. Lawyers who defend financial cases said a shift to a business-friendly stance at regulatory agencies in the Trump administration is one of several reasons for the decrease. Other factors include delays resulting from the change in administrations and the winding down of cases from the financial crisis.

"Penalties levied against firms and individuals by the Securities and Exchange Commission, the Commodity Futures Trading Commission and the Financial Industry Regulatory Authority in the first half of 2017 were down nearly two-thirds compared with the first half of 2016-putting regulators on track for the lowest annual level of fines since at least 2010, the Journal found. Fines of $489 million in the first half of 2017 compared with $1.4 billion in the 2016 period." http://on.wsj.com/2hBRTM2

BEZOS CHANGES A NEIGHBORHOOD -- BOSTON GLOBE: "With Amazon and GE moving in, empty Fort Point storefronts gain interest," by Janelle Nanos: "Since Amazon announced its plans to bring 900 employees to Fort Point, real estate brokers say there's been an uptick in interest from companies looking to fill empty storefronts near Amazon's new office on Summer Street. It's evidence, they say, that the western corner of Fort Point is poised to undergo a transformation as corporate towers teeming with new workers drive foot traffic on the streets below." http://bit.ly/2wz582Y

VALLEY TALK -- "Google employee's anti-diversity memo prompts company rebuke," by Reuters' Sam Forgione: "Google executives over the weekend rushed to denounce an engineer's memo that ascribed gender inequality in the technology

industry to biological differences, a view that sparked outrage at the internet giant and inflamed tensions over sexual harassment and discrimination in Silicon Valley. The unnamed engineer asserted in the 3,000-word document that circulated inside the company last week that 'Google's left bias has created a politically correct monoculture' which prevented honest discussion of the issue. 'Distribution of preferences and abilities of men and women differ in part due to biological causes and that these differences may explain why we don't see equal representation of women in tech and leadership,' he wrote.

"The memo stoked the heated debate over treatment of women in the male-dominated Silicon Valley that has boiled for months following sexual harassment scandals at Uber and several venture capital firms. Google's recently hired vice president of diversity, integrity and governance, Danielle Brown, sent a memo in response to the furor, saying the engineer's essay 'advanced incorrect assumptions about gender.'" http://reut.rs/2vGnS3R ... ***Brown's memo*** http://bit.ly/2vEMEkh

WEEKEND WEDDING -- RODELL MOLLINEAU, a partner at Rokk Solutions and a Daschle, Pryor and Reid alum, and **SHEENA ARORA,** a senior manager at PwC and former SVP at the Revolution Agency, were married in a beachside ceremony at sunset on Saturday evening at The Wharf in Grand Cayman. Friends and family from Dayton,

Chicago, New Jersey, and as far as India, attended the wedding and spent the weekend celebrating on Seven Mile Beach. Pool report from Paul Kane: "They met through Susan McCue, Harry Reid's former chief of staff, whose firm had office space on the same floor as American Bridge in 2011-12, when Rodell ran Bridge.

"Their first trip together while dating was to the Grand Cayman, where they've since come at least once a year every year since, culminating in Saturday's wedding. Officiating the wedding was Bob Russell, the former chief of staff to Mark Pryor, the Arkansas Democrat who Rodell worked for early last decade. During that stint Pryor sent Rodell to South Carolina to work the presidential campaign of a fellow Arkansan, Wesley Clark, where he met a guy named Matthew Miller, the future DOJ spokesman/NBC contributor who served as best man.

"Arora first worked for McCue at the ONE Campaign, where she met Chandler Smith, the future communications director for the Senate Republican Conference, who served as maid of honor. After the couple's first dance, to 'Purple Reign', the crowd danced into the night, some feeding the tarpon fish gathered on the dock's edge while some went shirt optional. The reception ended, as others before have, with Doug Heye grabbing the mic when Sinatra's 'My Way' was played and taking over on vocals." ***Pics*** http://bit.ly/2hBhsgj ... http://bit.ly/2fllt7V ... http://bit.ly/2vEA9oQ ... http://bit.ly/2vdP4nC ... ***2.5 min. video of Doug singing*** http://bit.ly/2wlrc1J

SPOTTED: Bridesmaids Liesl Hickey, Cacki Barnard and Veronica Johnson, groomsmen Matt Miller, Kimani Little, Dave DuBois, and Ian Wasek, usher Mark Paustenbach, Ron and Sara Bonjean, Brian Walsh, Dan Ronayne, Michael and Mary Kathryn Steel (whose birthday is today), Kyle Downey, Jess McIntosh, Jenny Towns, Ben Clark, Steve Rochlin and Christina Sevilla, Jennifer Jose, Kasper Zeuthen, Christine Delargy, Nick Massella, Tyrone Gayle and Beth Foster, Chris Harris and Kate Conway, Ashley Spillane, Susan McCue, Anthony Coley and Robert Raben, Jay Newton Small, Sara DuBois, Kelli Farr and Megan Bartley, Kimani Little, Bob Russell, Chris Vandeventer, Jenny Townes.

ENGAGED -- Bruce Nilson, VP of Trump campaign's FEC compliance firm Red Curve Solutions and a Romney alum, proposed to **Nancy Weindruch** , VP of communications at the Council for Responsible Nutrition. Pool report from Charlie Spies: "He popped the question in Bishop's Garden after Sunday morning church at the National Cathedral. Friends and family gathered for Tex Mex and Margaritas at Cactus Cantina to celebrate afterwards. Among those spotted were Elizabeth Dexheimer of Bloomberg, Mark Stephenson of Red Oak, and Ashlee Rich Stephenson of WPA Intelligence." The couple met at Kramer Books in DuPont. ***Pic*** http://bit.ly/2fmboHJ

BIRTHWEEK (was yesterday): AP White House reporter Julie Bykowicz, who celebrated last night with an evening that included cupcakes, pool time and dinner at Kevin Plank's new Sagamore Pendry hotel in Baltimore's Fells Point neighborhood (hat tip: Annie Linskey)

BIRTHDAY OF THE DAY: Matt Dornic, VP of comms at CNN. **How he's celebrating:** "Perfecting my Instagram game, getting obnoxiously tan, and consuming alarming amounts of rum and seafood. It's going down at the Tryall Club in Jamaica with Jack and Susanna Quinn and a group of our friends." Read his Playbook Plus Q&A: http://politi.co/2vbCly1

Bill Lawrence ... Juven Jacob ... Cynthia Wieland-Meyer ... Kim Rogers ... Kim Molstre (h/ts Teresa Vilmain)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******
